Compared with plant protein, animal protein contains relatively complete nutrition. However, under the guidance of modern nutriology, we can develop compound food by mixing several plant proteins which contain different proportions of amino acids, thus enabling the plant proteins to complement each other and maintain a nutritional balance. We can develop fortified food, produce lysine and methionine, which plant protein lacks, with industrial methods and mix them into various plant proteins according to the proportion of amino acids in eggs and milk so as to raise their nutritive value.

The road of giving priority to the production of animal protein which is being taken by the developed countries provides relatively good nutrition but also has side effects which easily give rise to diseases, such as coronaries and obesity (Note: These side effects have become an important topic of social concern in the United States and Western Europe. Many scientists put forward plans for food structure which are aimed at reducing animal protein and increasing plant protein. Formerly, Japan's food structure was relatively similar to that of China. But over the last 2 decades, the food structure of Japan has advanced in the direction of giving priority to the development of animal protein, a road similar to that taken by the developed countries. According to recent investigations in Japan, 10 percent of Japanese youngsters suffered from high cholesterol. The shortcomings of this food structure can thus be fairly easily seen). Our country has a tradition of putting a vegetarian diet in first place. For this reason, we have basically avoided these side effects. However, incomplete nutrition of plant protein will also interfere with the improvement of the people's constitutions. The road we have proposed can simultaneously overcome the shortcomings in these two aspects. Of course, we do not in the least mean that we can neglect to expand the production of animal protein and the development of the production of animal husbandry and fishery. No misunderstanding is expected on this point.

To take this road, we must judge the value of various crops in accordance with nutriology rather than the output of the crops, and readjust the overall crop pattern and the whole agricultural structure of our country in a planned and orderly way. To take this road, we must mobilize the industrial and agricultural forces and the urban and rural forces to give equal priority to both industry and agriculture, to combine the city and the countryside, and to unite in our efforts to solve the food problem.

This road has opened up good prospects for solving the food problem of our country. Before the early 21st century, in view of the significant breakthroughs in science, such as biological fixation of nitrogen, genetic engineering and the synthesizing of protein, it will be possible to further improve the protein nutrition of the inhabitants of our country.

RECTIFY THE IDEOLOGICAL LINE, DEVELOP CONSTRUCTION IN MOUNTAIN AREAS

Beijing RED FLAG in Chinese No 8, 16 Apr 82 pp 20-24

[Article by Tie Ying [6993 3841]]

[Text] Within Zhejiang Province there is an endless chain of rolling hills and a wide expanse of mountainous terrain, all of which are rich in resources. But, compared with the plains, the mountain areas are relatively backward both economically and culturally.

Since the 3d Plenary Session of the 11th CCP Central Committee, construction in Zhejiang's mountain areas has taken a turn for the better. A marked change has taken place in the poverty-stricken and backward appearance of these areas. After more than 3 years of hard work, grain output in the areas has increased. Diversified economic forms have vigorously developed. Forestry production has achieved a definite degree of recovery and progress. Many communes, production brigades and production teams have begun to show signs of affluence. In 1981, compared with 1978, in the 26 counties of the mountain areas of the entire province, the gross output value of agriculture increased by 23.4 percent; the area planted with tea increased by 200,000 mu and the gross tea-leaf production increased by 51 percent; nearly 100,000 mu of land were added to the mulberry fields and the gross silk output increased by 60.8 percent; over 98,000 mu of land were added to the orange orchards and the gross orange output increased by over 3 times; the number of pigs, cattle and sheep increased respectively by 17, 3, and 14 percent, and the number of rabbits bred increased by 1.8 times; the gross industrial output value of the communes and production brigades or teams increased by 1.5 times; the installed generating capacity of small hydropower units increased by 58 percent; and 356 mu of land were afforestated. As a result of the development of diversified economic forms, the total quantity of state purchases of agricultural and sideline products increased by 57 percent. The standard of living of commune members was greatly improved. The per capita grain ration apportioned by the collectives increased from 525 jin to 567 jin; the per capita income distributed by the collectives increased from 79 yuan to 96 yuan; and, with income from household sideline production added, the per capita income amounted to 165 yuan and was as high as 280 yuan in some of the more affluent counties.

Reviewing the actual practice in the last 3 years and even over the past 20 years and more, we have come to fully realize that in order to develop construction in the mountain areas, the most basic conditions are that the ideological line must be rectified, that understanding must conform with reality, that guidelines and policies must also conform with reality, and that we must work in strict accordance with natural laws and economic laws.

I. Correctly Understand and Handle the Relationship Between the 70 Percent Mountains and 20 Percent Farmland; Put Construction in Mountain Areas in a Strategic Position

Zhejiang Province has a total area of 100,000 square kilometers of which mountain areas comprise about 70 percent, the plains areas about 23 percent and inland waterways about 7 percent. We generally speak of this situation as "70 percent mountains, 10 percent rivers and 20 percent farmland." Unfortunately, a great proportion of the mountain areas is economically backward and can produce little wealth or affluence. Take the 26 mountain counties for example: The gross value of their agricultural and industrial output in 1978 was only 16.67 percent of that of the province as a whole.

Formerly, many people considered the mountain areas as a burden and as a factor slowing the economic development of the whole province. Influenced by this idea, they frequently focused their attention on the plains, loosened their leadership work over the mountain areas and neglected construction in these areas. Some comrades in leadership organs seldom went to mountain areas to investigate or to do research, and many of the policies and measures were not in conformity with the realities of the mountain areas. Some comrades working in the mountain areas even "failed to see the mountains when opening their doors and did not care for the mountains even though they lived there." This was a one-sided and static viewpoint, and was the main ideological reason for the failure to develop construction in the mountain areas.

After the 3d Plenary Session of the 11th CCP Central Committee, in discussing the problem of developing a true standard which links together realities and summing up past experiences and lessons, we brought up the problem of studying anew the provincial conditions of Zhejiang. We emphasized the need to adopt a viewpoint calling for all-round development in treating the realities of the province. Everybody felt that despite the length of time we have worked in this province, some for a few years and some for over a decade, or as many as several decades, we still lack a clear understanding of Zhejiang's realities and its natural conditions and resources. This being the case, we are unable to offer correct guidelines or adopt appropriate measures. We cannot display our talents or evade shortcomings. We are bound to meet with setbacks. We have to take a zigzag course and thus waste time and miss chances. We have been saying all along that Zhejiang Province is a "land of plenty and the kingdom of wealth and affluence." Naturally this is all true and reflects Zhejiang's special attributes and superior features. At present, people of the entire province depend on the plains as the source of their food and clothing while the state also counts on the plains for part of its revenue. Hereafter, construction of the four modernizations in Zhejiang will have to depend on bringing the advantageous conditions and active role of the plains into full play. However, to stress the plains alone is not sufficient. The plains have a big population but little land. Comparatively speaking, the ground left unused is far less than that in the mountain areas. At the same time, economic construction in the plains cannot be separated from the mountain areas. The mountain areas must be depended upon for the supply of certain essential raw materials for industry, for construction materials, and for other important resources and materials. At present, very little of the aboveground or underground resources of the vast mountain areas has been opened up or utilized. In counties in the lower productive category, the output value per mu of hilly land ranges from 1 to 2 yuan while in counties in the higher productive category it is 6 to 7 yuan. The province has 8 million mu of hilly land suited to forest development. If a third of this land is subjected to intensive farming, then its gross output value would be equivalent to that of the present 27 million mu of cultivated land in the whole province. This shows that the hidden potential of mountain areas far surpasses that of plains. Mountains, rivers and farmland depend on each other and condition each other to form an integrated whole. The waterway system in Zhejiang Province has the defects of insufficient water at the source and too rapid a water flow. Because of this, the heavy erosion of soil and silt from the upper reaches of the rivers seriously damages farmland along the lower reaches. At present, many rivers have become more shallow and their navigable parts have been shortened. Much silt has collected in water reservoirs. A great proportion of farmland suffers from the threat of drought or waterlogging. All these things are the dire consequences of the prolonged neglect of construction work in the mountain areas.

Having rectified their ideological line, the provincial party committee and the provincial people's government adopted a series of measures to strengthen construction in the mountain areas. One of the measures is to make clear to all the idea of making construction in the mountains a strategic focal point in the construction of the four modernizations in the whole province and treating it as a promising factor in enriching the province. The party committees and people's governments at various levels have been requested to pay due regard to both the mountains and the sea. The second measure adopted is that organs ranging from the provincial to the county level have on various occasions conducted large-scale investigation of the mountain areas. In 1980 alone, throughout the province some 30 investigation teams, accompanied by the leadership, went to the mountain villages to conduct investigation and research. They produced several scores of investigative reports touching on conditions in the areas, analyzing them, and making recommendations. Still another measure adopted was the convening of two provincial work meetings on mountain areas. The meetings specially dwelt on the significance, the guidelines and the policy for construction in the mountain areas. Following the second work meeting on mountain areas, the province organized over 20,000 cadres to proceed to the communes and production brigades in the areas to establish authority, to issue permits and licenses, and to enforce the production responsibility system in the mountain and forest areas. The fourth measure taken was to take various steps to aid the development of the economy of the mountain areas such as providing guidance, economic policies and financial and material support.

II. Correctly Understand and Handle the Contradiction Between Forestry and Grain; Determine the Production Guidelines for the Mountain Areas According to Local Conditions

For a prolonged period of time the poverty-stricken and backward appearance of the mountain areas has not been changed and the practice of deforestation and reclamation has not been checked. What is the reason for this? In the past, we simply ascribed this phenomenon to the struggle between the two classes and the two lines but failed to look to the production guidelines to find the reason. Just what should be the guidelines for production in mountain areas? For a long time there has been much discussion on this topic, but so far a correct answer has not been found. In the investigation of mountain areas it has been found, in all places, that the contradiction between forestry and grain constitutes a practical problem that cannot be avoided. In the past, we neglected the realities of mountain areas. We copied in full the slogan of the plains to take "grain as the key link." In some localities, the unrealistic suggestion was made that "peasants in the mountains should not eat any commercial grain" and that "in several years' time we would be able to lift off the 'cap' of grain deficiency." In the process of examining, appraising and comparing the performance of peasants, only the quantity of grain output was taken into consideration, while the quantity of output of mountain and forest products was ignored. In this way the cadre masses in the mountain areas were subjected to great pressure. Manpower and material resources in the mountain areas were not used in the mountains, or in afforestation, or in promoting the development of the processing of the special products of forests. Rather, they were used in opening up mountains and reclaiming farmland, which, in effect, only "bothered the people and wasted public funds." Such conditions as weather, sunshine, soil composition and water resources in mountain areas were totally ignored, and the "triple cropping" system and planting of "double-crop" rice were uniformly practiced. In arranging production tasks, the guidance given was not in accordance with different categories or localities and scant attention was paid to work in mountain areas. Quoting cadres in the mountain areas, "Water buffaloes and oxen basked side by side in the sunshine." This guidance policy, which obviously violated objective laws, has had serious consequences. In some localities, reclamation work was carried out on mountain tops and the mountains were denuded of perfectly good forests. This caused serious soil erosion, closed forest production channels, and dampened the enthusiasm of the masses.

Since the 3d Plenary Session of the 11th CCP Central Committee, we have summed up the experiences and lessons derived from these sources and come to the understanding that one logical premise for transforming this malignant cycle to a benign cycle in production in mountain areas is to pay due attention to the contradiction between forestry and grain and to correctly handle the relations between developing grain production and developing the economy in the mountain areas. People in the mountain areas must fill their stomachs. Hence, grain production should be developed. But how can this objective be achieved? If we disregard the realities of mountain areas and one-sidedly stress the principle of "taking grain as the key link," and if we squeeze out the special products of mountains and forests, disrupt the ecological balance of mountain areas and adopt a farming system not in conformity with the realities of the localities, or, in other words, adopt a guideline of subjectivism, then the result will be barren hills, poor soil, poverty-stricken collectives, empty family coffers and a still lagging grain output. The years will roll by, but the situation of dependence on resold grain will stubbornly remain. People in mountain areas not only do not have money to spend but their grain ration is also very low. Before 1978, all those people in our province receiving an average income distribution from the collectives of 50 yuan or less and an average per capita grain ration of 450 jin or less, lived in counties in mountain areas. Commencing in 1979, we made it perfectly clear that, in general, communes and production brigades in the mountain areas should take forestry as their major profession but, since conditions vary, those suited to forestry should adhere to forestry, those suited to agriculture should take up agriculture, and those suited to animal husbandry should take up animal husbandry. To give people in mountain areas a chance to recuperate, reclamation was gradually stopped and afforestation was gradually resumed. The provincial people's government gave several hundred million jin of grain to be used for reducing the agricultural tax, reducing the state purchases and increasing sales, and subsidizing afforestation. Concerning grain production in mountain areas, the former uniformity in farming was abandoned and in its place a farming system suited to the special features of mountain areas was adopted. In some localities, the triple-crop system was changed to the double-crop system, while in other localities the planting of rice in paddy fields was changed to the planting of dry grain. The planting of beans and peas, potatoes, corn, sorghum, millet and other miscellaneous grains was promoted. Thus, the road of grain production became increasingly broad. In farmland capital construction, emphasis was put on transforming low-yield farmland. The result of this work was that grain production increased. The majority of mountain areas reported an increase in production every year, and the extent of the increase was much greater than that on the plains. With the help of "support grain" from the state, the grain ration and fodder grain of the people in the mountain areas were both generally increased. Qingtian County in the mountain area of southern Zhejiang Province used to feel a heavy burden in relation to grain. All along it has tried to remove the "cap" of grain deficiency but grain production never increased. Every year the county had to ask for an increase in "unified sales grain." In the last 2 years, they adjusted their production guidelines to local needs. They fully displayed the superiority of mountain areas and, as a result, forestry and diversified economic forms developed while grain production also increased. In 1981, after retaining sufficient grain ration and fodder grain for their own needs, the county was able to sell an extra quantity of over 2.3 million jin of surplus grain and reduced the quantity of "unified sales grain" by 7 million jin. Thus, facts have amply justified that if, to start with, we can keep in mind the realities of mountain areas and work according to objective laws, it will be possible to solve the longstanding contradiction between forestry and grain. Violating objective laws will result in both sides losing.

III. Correctly Understand and Handle the Relationship Between "Long" and "Short" in Production in the Mountain and Forest Areas; Insist Upon Using the "Short" To Support the "Long" and on the Union of the Two

The production cycle in mountain forests is a long one. It differs from other agricultural production precisely because of this feature. As the proverbial saying goes: "One generation plants the trees under the shade of which another generation rests." The forests that we have at present are mostly the fruits of the labor of our forefathers. Our work in planting trees and afforestation today is intended in most part for the welfare of our children and grandchildren. Once the forest resources are ruined, restoration will take several scores of years. This special feature of production of the mountain forests requires that we adopt a guideline calling for union of the "long" and the "short." On the one hand, we must protect the current interests of the masses in mountain areas in order to arouse their enthusiasm to devote their efforts to undertaking the building of timber forests which will not yield any benefits until a much later time. On the other hand, we must take a long-term view. Starting from now, we should expand the area of afforestation year after year to achieve the objective of the continuous existence of green hills, good for use forever and ever. We have consistently said: "Support the 'long' with the 'short,' and effect the union of the 'long' and the 'short.'"

In the past, in planting trees and in afforestation, we gave preference to timber forests. We began with the masson pine and followed up with the fir tree. Certain results were achieved. However, we did not at the same time get a grip on the economic forests, which can produce much quicker results. In consequence, the economy of mountain areas became a single-product economy and the income of the peasants was very low. Many cadres felt that "distant water cannot quench current thirst." They despaired because they planted trees every year but failed to benefit by any results.

Since the 3d Plenary Session of the 11th CCP Central Committee, concurrently with getting involved with the construction of forest base areas, we have emphatically got involved with the production of special mountain area products which can yield benefits in a short time or even within a year. This was because we felt that forestry production in our province was making slow progress and that peasant families in mountain areas were generally weak financially and urgently desired an increase in their income and an improvement in their standard of living. Counties in mountain areas analyzed the special features of the localities and summed up the experiences of certain advanced communes and production brigades which had transformed poverty into affluence. They raised the slogan "Heal poverty and get rich." For example, one slogan said: "To make Xin Chang rich, try planting tea and raising rabbits." Another slogan was: "Lin An has three treasures: tea leaves, dried bamboo shoots and hickory nuts." Many counties in mountain areas arranged "experience-exchange meetings" and printed and distributed small pamphlets. Their leading cadres solicited advice from wise people while the populace offered schemes and propositions. In short, a thousand ways and means were tried to open wide the door of production. In order to encourage people in mountain areas to develop their special products, the provincial people's government fixed definite base figures governing the quantity of the state purchases of such special products as tea leaves, silk, oranges, the "three seeds" (tung seeds, tea-oil seeds and tallow seeds), raw lacquer, and resin. Surplus production of these products may be retained on a percentage basis. Extra state purchases will be paid for at higher prices or by sales rewards of grain, chemical fertilizers, and cloth tickets. As a result, in the last few years, there has been a booming growth of such crops as tea, mulberry, tangerines, day lily and so on. Their growth rate has risen every year. Take tea leaves for example: Production in the whole province in 1979 increased by 130,000 dan over that of 1978, the 1980 output increased by 200,000 dan over that of 1979, and the increase in 1981 over that of 1980 was 240,000 dan.

As we see it now, the populace has showed a high degree of enthusiasm for developing the "short" but has not paid sufficient attention to developing the "long." Thus, this requires that we guide the enthusiasm of the masses toward the development of timber forests and other products requiring some years for growth, and to really accomplish the objective of supporting the "long" with the "short." In this connection, we must stress the adoption of the following measures: First, based on the natural resources and economic conditions of the various localities, we must formulate a plan for the overall development of the economy in mountain areas. The plan will grasp both the "long" and the "short." It will capitalize on the "many" but will not lose sight of the "few." The superiority of the localities will be displayed. Second, we must adopt a correct policy. Apart from giving special rewards for the purchases of certain special forest products, the policy we adopt must support the development of timber forests. The requirement is that the 300 people's communes in the mountain areas of the province develop, in the next 7 years, 5 million mu of timber forests. Local financial administrations will earmark a certain amount of funds to subsidize afforestation work. Third, during the course of developing timber forests and bamboo production, we must also pay attention to the combination of the "long" and the "short." For example, bases will be developed for the quick-growth and densely-grown fir, so that in 3 to 5 years time the trees will be ready for intercutting. In the bamboo hills, an area will be reserved specially for bamboo shoot production, so that the populace can more quickly reap the benefits and the development of "specialized bamboo hills" can be promoted. Fourth, we must develop the comprehensive utilization of forestry and sideline products, take the road of overall development of planting, growing, processing and marketing and endeavor to upgrade the economic value of mountain and forestry products. Our province has abundant forest resources. At the same time, its timber requirements are high, the extent of the extravagant use of timber is also great, and every year timber cutting far exceeds timber growth rate. Hence, the comprehensive utilization of timber is all the more important. Facts have also shown that much can be accomplished by comprehensive utilization. A plant making boards from wood shavings in Longchuan County made use of tree tops, tree branches, wood shavings and tree bark to produce 8,000 cubic meters of wood-shaving boards every year. This achieves savings of some 20,000 cubic meters of timber. Besides the comprehensive utilization of timber, the hidden potential is also very great for the comprehensive utilization of bamboo and other forestry and sideline products. Further processing work will enhance the value of these products. If this job is done well, then we not only can convert "wastes" to "treasures" but also enable the large number of skillful artisans in mountain areas to display their skills. Moreover, in so doing we can make and encourage the masses to treasure mountain and forest resources, to protect them, and to develop forestry production much more enthusiastically. As a matter of fact, in this regard we still have a "weak link," and more efforts must be made. Speaking from an even broader view, the opening up and construction of mountain areas should also include the tourist trade. Zhejiang Province has a host of scenic spots. Such tourist spots as Yandang Shan, Mokan Shan, Tianmu Shan, Putuo Shan, Fuchun River and Xinan River are known the world over. If we can link the construction of mountain areas with the protection of natural resources and development of the tourist trade, we can surely attract an even larger number of tourists.

IV. Correctly Understand and Handle the Relationship Between Unified Operation and Dispersed Operations; Arouse the Enthusiasm of the Collective and the Individual Commune Members

Communication is a difficult problem in the mountain areas. Houses are widely scattered and production conditions are backward. Developing construction there requires us to take two separate roads. One is to arouse the enthusiasm of the collectives and to display the superiority of unified management. The other is to arouse the enthusiasm of the individual commune members and display the good points of dispersed operations.

In Zhejiang Province, the great majority of mountain areas suitable for afforestation are owned by production brigades or production teams. Thus, with the exception of the self-retained hills of a small number of commune members, basically there is only one road to take, namely, that of unified operation by the collectives. Moreover, the production responsibility system in mountains and forests is not healthy. In some forests, there has been excessive felling of timber and little afforestation work has been done. In particular, there are over 30 million mu of barren mountains and hills that are sparsely forested. They have defied being "greened" for a long time. This is a problem which urgently requires a solution in the construction of mountain areas in our province.

Following several years of actual practice, people on all sides have acquired a comparatively fuller understanding of the production responsibility system in agriculture. But many cadres do not have any idea of how, taking into consideration the realities of mountain areas, to institute a production responsibility system there, and do not have a uniform understanding of the problem. Some cadres generalize that mountains and forests must be placed under unified management and operation. They neglect the importance of arousing the enthusiasm of commune members in diversified operations. Some comrades do not feel at all concerned about the sight of so many barren mountains, but when they hear that a portion of the mountains will be assigned to commune members to plant trees, they fear this and that. A large number of barren hills are in name under the management of and are operated by the collectives. In fact, no operation has been going on, and the collectives are not capable of doing this work. On the other hand, much labor power cannot find an outlet and cannot find places to work. If such a situation persists, how will it be possible to make so many barren hills green? Which is better--to have, or not to have, trees on mountains? Certainly, having trees there is much preferable. If we can arouse the enthusiasm of both the collectives and the individual members to plant trees, this will create wealth for the state. Our objective and our direction should be toward all mountains being green, toward water in all rivers being clear and toward all mountain areas enjoying affluence. All policies and measures beneficial to arousing the masses' enthusiasm for afforestation should be correct policies and measures.

Judging from the experiences of certain localities in Zhejiang Province, taking the road to the development of forestry production cannot depend on a single "leg" in the form of the collectives alone, or on the "leg" of individual commune members alone. Rather, both "legs" must be used to step forward smoothly and quickly. Having understood this point, people can then formulate concrete plans. Measures suited to local conditions can be shaped and we can pursue diversified economic forms. In mountain areas which are forested, an entire forest can continue to be placed under the unified management of the forest departments of production brigades or communes, or of their specialized teams or specialized units. But the responsibility system of specialized contracting and linking remuneration to output must be instituted. In the case of small forests, we can adopt the responsibility system of assigning the household, laborer, or unit full responsibility for task completion and linking remuneration to output. Unified planning must be done for barren or sparsely wooded hills. Apart from assigning some of them as self-retained hills for commune members, any hills which the collective is capable of managing should be managed by the collective. If the collective is incapable of doing the management work, then decisive measures must be taken and the responsibility for management must be assigned to the commune members, either singly by household or jointly by several households. There should be no change in the rights of ownership, but the household or households doing the planting or afforestation work should do the managing. The yield from interplanting or intercropping may be retained by the household itself, but receipts from the commercial forest should be divided on a percentage basis. This should be a long-term arrangement and should not be readily changed. In our opinion, the adoption of this policy can yield good results and involves no risk. Once the enthusiasm of the vast masses has been aroused, there is hope for making the hills green. We must emancipate our minds, carefully weigh advantages and disadvantages, decide on opportune times and brook no procrastination.

In the last few years, we have done much work in the construction of mountain areas and have achieved certain results. However, in the economy of the entire province, forestry is still a weak link. The "tree-cover" rate of forests is still relatively low, much soil has been eroded into waterways while the poor ecological condition has not been much improved. The task of making Zhejiang green and of constructing the mountain areas of the province is still a difficult one. We are determined to continuously rectify our ideological line. We will continue to conduct sufficient investigation and research so that we can understand better the realities of Zhejiang. Based on a general survey of the natural resources, we will do a good job of agricultural division and will mobilize the various counties, municipalities, communes and production brigades to formulate plans for construction of mountain areas. We will, in a down-to-earth way, endeavor to solve the problems confronting construction of mountain areas. In working in Zhejiang Province, we must keep in mind the welfare of the people of the province. We must do good deeds for them. We will do our utmost to quickly make the great earth green in Zhejiang. We will make the mountain areas of the province more beautiful and wealthy and make the necessary contributions to the socialist construction of the motherland.

HOW TO VIEW THE CHANGES IN PEOPLE'S LIVELIHOOD OVER THE PAST 3 YEARS

Beijing RED FLAG in Chinese No 8, 16 Apr 82 pp 25-28

[Article by Li Chengrui [2621 2052 3843] and Zhang Zhongji [4545 6945 1015]]

[Text] Since the convening of the 3d Plenary Session of the 11th CCP Central Committee, the party and the government have, under the situation in which our state finances are still faced with manv difficulties, taken various measures to improve the people's standard of living. The broad masses of people are deeply conscious of and grateful for these measures. But some people have raised some questions in this respect. For example, how much has the people's livelihood been improved over the past 3 years? Have increases in prices accorded with increases in wages? Are we doing too much or too little in improving people's livelihood? This article is intended, through facts and figures, to explain and probe into these questions.

People's Livelihood Has Been Considerably Improved Since the 3d Plenary Session of the 11th CCP Central Committee

For a long time in the past, because of the "leftist" mistakes and particularly because of the interference and sabotage by Lin Biao and the "gang of four" during the 10 turbulent years, our national economy was seriously out of balance and no appropriate measures were taken to improve the people's livelihood. Following the downfall of the "gang of four" and particularly since the convening of the 3d Plenary Session of the 11th CCP Central Committee, the party and government has taken measures to restore order. "Leftist" mistakes have been corrected; the proportionate relations between agriculture, light industry and heavy industry and various economic policies have been readjusted; and agricultural production and the production of consumer goods have been developed in a big way. At the same time, the excessively high accumulation rate has been lowered. With regard to the use of national revenue, the proportion of accumulation has lowered from 36.5 percent in 1978 to less than 30 percent in 1981 while the proportion for consumption was increased from over 63.5 percent to over 70 percent. Of the amount of capital construction investment in the units owned by the whole people, the amount of the investments in production construction dropped from 82.6 percent in 1978 to 58.9 percent in 1981. The investment in nonproduction construction such as that for housing, education, health and scientific research, and public utility undertakings increased from 17.4 to

41.1 percent. Over the past 3 years, the improvement in the people's material and cultural life is shown in the following:

First, peasants' incomes have increased drastically. An investigation made of the incomes of more than 18,000 households of commune members in 536 prefectures showed that the average per capita annual net income was estimated at more than 220 yuan, 80 yuan more than the 134 yuan in 1978, giving an annual increase of over 18 percent for 3 years. Over the past 2 to 3 years, great changes have taken place in both agricultural production and the livelihood of the commune members in some poor regions that were characterized by "relying on resold grain for food, on loans in production and on relief goods in livelihood." Of the total investigated peasant households across the country, the proportion of households with difficulties and with average per capita income of less than 100 yuan has dropped from 33 percent in 1978 to less than 10 percent in 1981.

The increases in the income of peasants is due on the one hand as a result of the implementation of the party's policies for rural areas and the introduction of various forms of the production responsibility system and the development of diversified economic management, and this brought about increases in both production and income. On the other hand, the state has increased the purchase prices of agricultural and sideline products and decreased some taxes in rural areas, and all these have also been helpful in increasing peasants' income. During the 3 years between 1979 and 1981, the peasants across the country gained a total additional income of more than 50 billion yuan because of the increases in the purchase prices of agricultural and sideline products and decreases in taxes.

Second, the income of workers and staff have increased. According to an investigation of the income of the more than 8,700 workers and staff households in urban areas in 46 municipalities across the country, the average per capita monthly amount of income that was used for living expenses in 1981 was 38.6 yuan, 46.8 percent higher than the 26.3 yuan in 1978. When this figure is reduced by the rate of increase in the cost of living of workers and staff, the actual increase in income would be 30.8 percent. As the families of workers and staff have more income, the proportion of households with an average monthly income to be used for living expenses of 20-25 yuan has dropped to 5.4 percent of the total households. The proportion of those with less than 20 yuan has dropped to 2.1 percent.

Over the past 3 years, the party has worked out and implemented various policies and measures to increase production and improve the standard of living of workers and staff. These include opening up more channels for employment. During these 3 years, more than 26 million people awaiting jobs have been employed. The majority of the great number of such people who accumulated over many years have been given jobs. With the expansion in employment, the average number of people (including the workers and staff themselves) that are supported by each worker or staff member dropped from 2.06 in 1978 to 1.77 in 1981. This means that the families of workers and staff have a lighter economic burden, their income has increased, and consequently this situation has promoted social stability and unity. Second, the wages of some of the workers and staff members have been readjusted and the bonus system has been introduced. The total wages paid by the units under the ownership of the whole people across the country and the units under collective ownership in cities and towns in 1981 came to 82 billion yuan, 25.1 billion yuan more than in 1978, with an average annual increase of 8.37 billion yuan. The average wages of workers and staff in 1981 were 772 yuan, 25.7 percent higher than the 614 yuan in 1978 and after deducting the cost of living increase, the actual wage increase was 11.9 percent. Third, the treatment of the cadres and workers and staff who have retired has been improved, and subsidies for family planning, having a single daughter or son, traveling expenses in visiting parents, traveling expenses in going to and returning from work, and haircut subsidies have been increased. All these mean an increase in the family income of workers and staff. The total expenditure on the welfare of the workers and staff of the units under the ownership of the whole people were 6.7 billion yuan in 1978 and 11.6 billion yuan in 1980. It further increased in 1981.

Third, the consumption by the urban and rural population has increased. Over the past 3 years, agricultural and sideline production and the production of daily consumer goods have increased, and consequently there are a greater quantity and more varieties of consumer goods on the market. The total retail sale volume of social commodities in 1981 was 235 billion yuan, 50.7 percent higher than the 155.9 billion yuan in 1978 (with a deduction for the increase in retail prices, the actual increase rate was 36.2 percent). The volume of major food, clothing and daily-use commodities has also increased. The per capita grain consumption in the whole of 1981 was 12 percent higher than in 1978, the consumption of edible vegetable oil increased by 87 percent, that of pork increased by 44 percent and that of cloth increased by 28 percent (the consumption of grain, edible oil, meat and cloth includes direct consumption by the population, the volume processed by catering, foodstuff and tailoring industries and publicly used cloth). The number of sewing machines owned by every 100 persons increased from 3.5 to 5.5, bicycles from 7.7 to 11.1, watches from 8.5 to 15.7 and radios from 7.8 to 14.9. Some families already have the "four big pieces" and they are now adding several "new big pieces." An investigation made of family incomes and expenditure of the workers and staff in urban areas showed that by the end of 1981, every 100 families on the average owned 58 television sets, 43 electric fans, 6.3 washing machines, 13 tape recorders, 4.3 cameras, 44 sofas and 86 big wardrobes.

Now, the consumer products the urban and rural population eat, water and use have not only increased in volume but also in quality. An investigation of the income and expenditure of commune members showed that the average per capita annual consumption of flour and rice in 1980 was 326 jin as against 245 jin in 1978, while the figure for coarse food grains dropped from 251 jin to 188 jin (calculated on the basis of unprocessed food grains). The consumption of quality commodities such as woolen fabrics, silks and satins, knitting wool and woolen sweaters in 1980 more than doubled the figure in 1978. With regard to clothing, in the past people were mainly interested in buying cheap and yet durable clothes, but now they have turned to mainly buying good quality, new style and medium- and high-priced clothing.

Fourth, housing conditions have been improved. Over the past 3 years, the state invested 29 billion yuan in housing; the floorspace of completed new housing facilities was 223 million square meters, an average of more than 74 million square meters every year and 3 times higher than the average annual figure of 18 million-plus square meters during the 10 years of the "Great Cultural Revolution." An investigation of the income and expenditure of the families of workers and staff in cities showed that the average living space of the members of such families increased considerably from 4.4 square meters in 1979 to 5.27 square meters in 1981. A "fever of house building" has emerged in rural areas. Having enough to eat and wear, many peasants have been developing their living conditions in a big way. Expenditure in building houses made up 3.2 percent of the total consumption expenditure in 1978 and jumped to 10.3 percent in 1981. The total floorspace of houses built by peasants themselves over the last 3 years was 1.4 billion square meters. Now the average living space in rural areas is about 10 square meters.

Fifth, the saving deposits of the urban and rural population have increased. The total savings deposits of the urban and rural population by the end of 1981 were more than 52.37 billion yuan, 31.31 billion yuan more than those in 1978 and an increase of 1.5 times. The savings deposits of the urban population were 35.41 billion yuan, an increase of 1.3 times, while the savings deposits of the rural population were 16.96 billion yuan, double that of 1978. The increase in the deposits not only represent increases in the income of the population but also show that the people are fully confident in the development of our economy.

The state has also strengthened the building of a commercial network and public utility facilities in urban areas so as to gradually relax such contradictions as the difficulties of finding a restaurant, buying vegetables, getting repairs done and riding on a bus. Health and education undertakings have also been restored and developed. The number of hospital beds and doctors at the end of 1981 was respectively 8.3 percent and 13.9 percent higher than in 1978; the number of college students was 1.28 million, an increase of 49.5 percent over the figure in 1978 and 33 percent more than 1960 which witnessed the biggest number of the students prior to the "Great Cultural Revolution." Polytechnic schools, broadcasting television universities, and spare-time industrial and agricultural education are developed vigorously. People's cultural life has become more active, the circulation of newspapers, magazines and other publications has increased drastically and broadcasting undertaking has also developed rapidly.

But we must understand that although the standard of living of our people has been improved considerably, it is not high enough and is unbalanced. At present, there are still a few peasants whose food problems have yet to be completely resolved and some workers and staff families are still living a fairly hard life. It is still common for the houses of workers and staff to be too crowded and the development of public utility facilities and scientific, cultural, education and health undertakings does not accord with objective needs. All these have to be gradually resolved along with the development of the economy.

The Growth in the Income of Workers and Staff Was Faster Than the Increase in Prices

Some comrades have said that although the income of workers and staff have been increased over the past few years, the increases have been offset by increases in prices. We have to concretely analyze the increases in prices. Generally speaking, it is true that market prices have increased over the past few years, but the prices of some industrial products were increased while the price of some other industrial products were decreased. For example, the prices of cigarettes, wines, furniture, bambooware and woolen fabrics were increased, but the prices of polyester and cotton fabrics, tape recorders, television sets, electric fans, wristwatches, refrigerators and Western medicines were decreased. The prices of state-rationed basic daily necessity goods such as grain and edible oil remained stable. What the masses have complained much about is the increases in the prices of vegetables and nonstaple foodstuffs. In addition, the nonstaple foodstuffs with state-fixed prices have been in short supply and consequently the commodities with negotiated prices and those available in free markets have increased in quantity. Therefore, compared with 1978, the price index (the average listed price, the negotiated price and the price on the free market) in 1981 was 32.1 percent higher. At the same time, some of the commodities which had their prices lowered are not often bought while those which had their prices increased are daily necessity nonstaple foodstuffs such as vegetables. As a result, the masses are more aware of the increases of prices. But nonstaple foodstuffs only make up less than 25 percent of the total retail volume of consumer goods. The staff and workers have other expenses for food, clothing, daily-use goods, haircutting, bathing and other services. Taken as a whole, in 1981 the price index in the living expenses of the workers and staff in 1981 was 12.3 percent higher than in 1978, and during the same period the average income which could be used for living expenses of the families of workers and staff increased by 46.8 percent. With a deduction of increases in cost of living, the actual income increased by 30.7 percent (if the calculation is based on the average wages of workers and staff, the actual income after deductions for price increases is an increase of 11.9 percent). Therefore, it can be seen that the growth in income which could be used for living expenses of workers and staff was faster than the price increases. Because the management of prices is not strict and some unhealthy tendencies in business ideology still exist in some enterprises, consequently there also exist such phenomenon as marketing low-quality commodities as high-quality commodities, giving short weights, actually increasing prices and changing costs at will. All these have increased the economic burden on the masses. However, it must be confirmed that the standard of living of workers and staff has been improved over the past 3 years. Otherwise, how can we explain the increases in the actual consumption of the families of workers and staff and their savings deposits? Some workers said that over the past few years they have earned more money and that although prices have increased, they found, after meticulous calculations, that their actual standard of living has improved. Such a situation is in line with the actual situations of the majority of workers and staff. A few workers and staff still have not had their wages increased for a long period of time and they have received little or no bonuses.

Therefore, with price increases, there has been little improvement or even a drop in their actual standard of living. Measures must be taken to give special consideration to these workers and staff.

Improvement of People's Livelihood Must Be Based on the Development of Production and Labor Productivity

Some comrades acknowledge the improvement in people's livelihood, but they demand that the improvement must be stepped up. Such a desire is understandable. But the pace of such improvement does not rest with our subjective desire. On the contrary, it rests with the possibility of objective conditions. This is because the pace in the improvement of people's livelihood must in no way exceed the growth in social labor productivity; otherwise our country will not be able to realize the great goal of modernization. In the final analysis, people's livelihood can in no way be improved excessively. Over the past 3 years, almost all of the growth of our state revenues has been used in increasing consumption funds. The growth of the income of commune members and workers and staff has exceeded the growth of the national revenue and industrial and agricultural production. It is necessary to do this because historically the people's livelihood had not been improved for quite a long period in the past. Such improvement has played a positive role in promoting social stability and unity, mobilizing the initiative of the masses in production, and in stepping up the revival and development of economy. But as we have made excessively large steps forward, there have emerged some problems that merit our attention.

First, the subsidies for price increases have become a heavy burden for state finances. In order to stabilize market selling prices and lighten the economic burden of the broad masses of people, the state has over the past few years resorted to financial subsidies for some basic daily necessity goods and for the means of agricultural production. Such a measure is absolutely necessary. Because of incomplete planning and because some places purchase agricultural and sideline products at lower prices, the situation of negotiated and increased prices has developed and consequently price subsidies provided from state finances have drastically increased. In 1981, price subsidies were as high as 32 billion yuan, more than 30 percent of the financial expenditure during the year.

Second, the growth of social purchasing power has exceeded the growth of commodity resources. The amount of currency issued in 1979 and 1980 increased by more than 20 percent each year. After efforts were made, the figure dropped to 14 percent last year, but it was still higher than the growth of the retail volume of social commodities and the total volume of the stock of commodities on hand.

Third, the growth of bonuses exceeded the growth of production by a big margin. The bonuses offered by the units under the ownership by the whole people and the units of collective ownership in cities and towns increased successively over the past 3 years. In 1979, bonuses were 4.6 billion yuan, but in 1981 they drastically increased to 7.8 billion yuan and this figure excluded the material and cash that were given to workers and staff in the name of bonuses. Over the past 3 years, gross industrial output value increased by 23 percent while the labor productivity of industrial workers and staff grew by 6.6 percent. But the bonuses for workers and staff increased by a staggering 6 times.

If these situations continue to develop in this way, the financial deficit will no doubt increase, market demand and supply will become unbalanced and prices will be unstable. As a result, the benefits that have been enjoyed by the urban and rural population will certainly be affected. Thus the steps taken to improve people's livelihood cannot be too big.

Comrade Chen Yun recently pointed out that people's livelihood must be improved. He said the people must not eat too poorly or eat too well. To eat is first and to construct is second. But if we eat everything, there will be no hope for our country. It is only when we have a surplus for carrying out production and construction after meeting the food needs that our country has hope. Thus, in simple words, Comrade Chen Yun profoundly expounded the dialectical relations between people's livelihood and state construction which promote and condition each other.

In the final analysis, the purpose of socialist production is to constantly meet the needs in people's material and cultural life. But the improvement of people's livelihood must be based on the development of production and the improvement of labor productivity. Now our national economy is being readjusted and our state finances are facing many difficulties. Therefore, the broad masses of people must put the interest of the state in first place, contribute their efforts to the country, strengthen their socialist initiative and the sense of responsibility as the masters of their own country, display the good tradition of hard work, and improve labor productivity and economic results so as to increase our state's financial revenues. By doing so, we will be able to form a reliable materialistic foundation for the improvement of the people's livelihood.

LETTER FROM COMRADE SONG SHILUN

Beijing RED FLAG in Chinese No 8, 16 Apr 82 p 28

[Text] In my article "Mao Zedong's Military Thinking Is Our Army's Guide to Victory" (published in issue No 16, 1981, of RED FLAG), owing to a mistake in my data, I mistakenly put down July 1941 as the date when Comrade Luo Ronghuan put forth in an article the term "Mao Zedong Thought," when it should have been July 1944. Please correct this error and accept my apologies.

Song Shilun

VIGOROUSLY STUDY ECONOMIC THEORY

Beijing RED FLAG in Chinese No 8, 16 Apr 82 pp 29-30

[Short commentary]

[Text] Vast numbers of cadres in the state have been studying economic theory in a general way since last February. To sum up, the result of their study has been relatively good. Through study they have initially grasped some basic Marxist political and economic principles; they have gained a better understanding of the experiences and lessons of economic construction since the founding of the republic; they have cleared up the influence of the "leftist" ideology; they have gained a deeper understanding of the party's line, guiding principles and policies adopted since the third plenary session; they have strengthened their confidence in achieving our socialist modernizations; and, on this basis, they have also paid close attention to relating the realities of our four modernizations, studied new conditions and resolved new problems. However, their progress is very imbalanced. They are only interested in studying practicable policies to which the party committee has attached great importance and over which it has exercised good leadership. They have made great progress and scored good results in studying these policies. But they are inactive when it comes to studying the policies to which the party committee has paid little attention. They make slow progress and score relatively poor results in studying such policies. Although some localities and units have made preparations for the study of theory, they do not have a sound system of examination and supervision. The tutorials they provide cannot keep pace with the progress of study, and thus the study period becomes a mere formality. Some localities and units have a poor study plan. They only study vigorously current policies. They ignore and slacken their study of economic theory. A small number of units have not even organized any study of theory. It is necessary for cadres at all levels and leading departments to examine the situation of the study of theory, tackle existing problems, adopt effective policies, urge cadres who are required to participate in the study of theory to finish studying the books listed for them as scheduled and to make real improvement.

Straightening out our understanding is the key to the vigorous study of the theory. First of all, the leading cadres should be far-sighted. They should be fully aware that cadre education in theory plays an important role in the construction of the cadre ranks. The enhancement of cadres' theoretical level has a decisive effect on the mental outlook of cadres, their ability to comprehend, their understanding of policies, and the quality and quantity of their work. Nowadays, the party has shifted its emphasis to economic construction. If we are not armed with Marxist economic theories and if we do not understand the objective law of socialist economic construction, it is obvious that we cannot do our own job well and score good results in the four modernizations. Cadres' failure to analyze correctly the situation and to understand and carry out the party's line, guiding principles and policies can often be explained by their lack of economic theory and knowledge. Cadres at all levels should, therefore, handle cadres' study of theory with a strategic view and take up the work with an attitude of being highly responsible to the revolution. They should also set a good example and take the lead in studying theory well.

Cadres at all levels should also adopt an effective policy on organization and establish and perfect the system of study so as to ensure the completion of the study plan. It is true that current tasks and missions are very intense. However, they should not hamper the organization of cadres' study of theory. In order to resolve the contradiction between work and study, some localities and units have adopted a method of "small concentration" to ensure a period of study and to speed up training in rotation. This method should be advocated as it can bring forth better results. Localities which do not possess such conditions should make appropriate arrangements to ensure a period of study. The study of current policies is very important and should be vigorously carried out. However, it cannot replace the study of theory. We should start the organization of study well and complete it well. We should not do it perfunctorily. We advocate that examination and assessment should be carried out when the study period ends.

The policy of relating theory and practice should be continuously put into effect to improve the quality and quantity of study. The books listed for study should be related to Comrade Mao Zedong's theory of socialist construction expounded in the "Resolution on Certain Questions in the History of Our Party Since the Founding of the PRC" and the fundamentals of our socialist modernizations, to the study of the 10 policies on socialist construction made by Comrade Zhao Ziyang in the government work report at the 4th Session of the 5th NPC, and to the speeches on current economic work made at the national conference on industry and communications on 4 March this year. At the same time, attention should also be paid to relating the practical problems in economic construction and cadres' practical ideological problems in study to improving our understanding and work and to resolving various new problems encountered in economic development. Since quite a few cadres do not have a basic understanding of politics and economics, their comprehension of the content of the study is affected. It is necessary to give them some basic knowledge and more guidance in study, so that they can keep pace with the progress of study.

It is entirely possible to speed up the progress of the study of economic theory to improve the quality and quantity of the study, to complete the study quantitatively and qualitatively as scheduled, and to create good conditions for the study of philosophy which will come next if cadres at all levels have a clear understanding of cadres' study of theory and have an effective policy.

TAKING PLANNED ECONOMY AS THE DOMINANT FACTOR AND REGULATION BY MARKET MECHANISM AS A SUPPLEMENT

Beijing RED FLAG in Chinese No 8, 16 Apr 82 pp 30-33

[Article by Xue Muqiao [5641 2550 2890]]

[Text] On 25 January of this year, Comrade Chen Yun invited the leading comrades of the State Planning Commission to discuss the question of ensuring that the planned economy plays the major role and regulation by market mechanism the supplementary role. Comrade Chen Yun pointed out: "Industry must use planned economy as the major factor; agriculture is no exception to this. Even after the production responsibility system has been introduced, the planned economy should still prevail." Adhering to taking planned economy as the dominant factor and regulation by market mechanism as a supplement is a major principle in developing the national economy. The broad masses of cadres should firmly maintain this viewpoint.

In recent years, in studying the reform of the national economic management system, we have expressed in many ways the relationship between planned economy and regulation by market mechanism. After testing them in practice, many comrades say that some of these ways are not precise and are apt to be misunderstood. The "Resolution on Certain Questions in the History of Our Party Since the Founding of the PRC," adopted by the 6th Plenary Session of the 11th CCP Central Committee, pointed out: "It is necessary to practice planned economy and at the same time give play to the supplementary, regulatory role of market mechanism on the basis of public ownership." Last year, Comrade Zhao Ziyang further expounded on the relationship between planned economy and market mechanism in his report entitled "The Present Economic Situation and the Principles for Future Economic Construction" delivered at the 4th Session of the 5th NPC. His exposition completely coincided with the resolution and the spirit of Comrade Chen Yun's speech.

The socialist economy is a planned economy. In economic activities, vital aspects related to the overall national economy, such as the scale of capital construction, the level of people's livelihood, the ratio between accumulation and consumption, and the major proportions of different departments in the national economy, should be strictly controlled by state planning. In order to maintain proper ratios between different departments, the arrangement of all major construction projects and the production and distribution of important products (especially those in short supply) must be subject to state plans. The production and operation of key enterprises should also be conducted in line with state plans. Planning is essential to industry as well as to agriculture. Industry and agriculture are interdependent. If planning is only extended to industry but not to agriculture, the national economy cannot develop proportionately. Meanwhile, it is also necessary to regulate our economy by market mechanism under the guidance of state planning because of the following facts: The development of productive forces in China is still at a low level and there is uneven development in different areas; in respect of economic forms, ownership by the whole people, which takes a leading position in the national economy, coexists with the collective economy, which covers a fairly wide sphere, and individual economy, which covers a smaller sphere (if peasants' household sideline undertakings are included, individual economy then covers quite a large sphere). Most industrial and agricultural products have to be exchanged through markets. The big commodities with limited varieties but great output value, which are vital to the national economy and people's livelihood, need to be produced in line with state plans, while the small commodities with small output value but tremendous varieties, which cannot be completely covered by state plans, can be produced freely according to market demands within the specified limits allowed by state plans.

Planned management requires both administrative and economic measures. Market mechanism can spontaneously regulate the economy according to objective economic laws, but the necessary administrative management cannot be abandoned. In the past, we mainly resorted to administrative measures and to the issuing of mandatory plans in our planned management. Industrial branches arranged production and commercial branches handled purchasing and sales in line with these plans. As a result of the nonconformity between production and market demands, some products were overproduced and others were in short supply, thus leading to serious waste. Therefore, even in implementing mandatory plans, economic measures must be adopted at the same time. That is, we should give thorough consideration to and make use of the law of value and lay down and adjust planned prices for products in the light of their value and market conditions. In order to give full play to economic measures, it can be considered that, after readjustment is largely completed and the balance between supply and demand is attained, although key products with limited varieties which are vital to the national economy will still require mandatory planning, we will not need to issue mandatory plans for the production and marketing of daily-use goods, but can switch over to guiding plans. This method means that the targets of production and marketing set by the state are only references for the production and marketing departments concerned. Commercial departments can purchase goods from industrial departments in line with both planned targets and market demands, while industrial departments can organize production in line with orders placed by commercial departments and market demands. When planned management is conducted in this way, it can reflect market demands better. So long as the major proportion of the products are unifiedly purchased and sold by state-owned commercial departments in accordance with planned prices set by the state, the economy is still being governed by planned management and not by regulation by market mechanism. Only free production within the limits allowed by the state, and those commodity prices which are not unifiedly fixed by the state but float freely according to market conditions, belong to the realm of market mechanism.

After guiding plans for reference are issued, their fulfillment should be guaranteed mainly by economic means and not by administrative means. We should lay down a proper pricing policy, under which the balance between supply of and demand for common products can be guaranteed largely by prices. For some products, this balance cannot be regulated completely by prices; in these cases, we can consider obtaining help from tax rates. For example, high tax rates should be imposed on cigarettes and alcoholic beverages because their consumption needs to be limited, while low tax rates can be imposed on people's daily necessities which can sometimes be exempt from taxes. The prices of a few items (such as grains) can be subsidized if necessary. Regulation sometimes can be carried out through bank loans. If the state needs to develop certain trades, more loans with lower interest rates can be offered to them. But for those trades which the state needs to limit, few or no loans should be made. Also loans can be made at high interest rates, so as to accelerate normal circulation of all sorts of products and diminish overstocking and waste. Mastering the method of applying economic levers, gradually reducing mandatory plans and replacing them with guiding plans for reference, is an important part of the future reforms of our planning system. At present, owing to the irrationality in system, structure and prices, it is difficult to adopt guiding plans, and so it is still necessary to intensify planned guidance and administrative intervention. Of course, even if we learn how to apply economic levers, mandatory plans cannot be completely abandoned. The investment in capital construction of some major projects, the production and distribution of a small number of important materials closely related to the national economy and people's livelihood, especially those in short supply (such as grains and energy sources), all need to be subject to mandatory plans for a long time in the future.

Besides mandatory plans and guiding plans for reference, planned management needs to be carried out in other diversified ways. For example, mandatory plans and guiding plans for reference can be adopted simultaneously; cooperative plans between different areas, trades and enterprises can be implemented. For steel and cotton cloth, the gross volume of production and marketing must be subject to mandatory plans. But the varieties, specifications and assortments, numbering in the tens of thousands, cannot all be set down in state plans and can only be specified through contracts. Some products in short supply must be unifiedly distributed by the state. But, after fulfilling state plans, a small quantity of them may be retained to allow the producing areas to cooperate with areas needing these products. Thus the producing areas can exchange these products for those which it is short of and which even the state is not able to supply. In recent years, coastal cities and industrial areas have invested in inland areas, jointly explored natural resources in inland areas, and assisted technical innovation of industry in inland areas. All this has achieved marked results. Unified plans of the central authorities pursued from above should be supplemented with cooperation plans between areas implemented from below. When working out cooperation plans from below, the fulfillment of product-transfer assignments laid down by the state must first be guaranteed. Cooperation plans between areas should be coordinated on a nationwide scale, thus making these plans a part of the state plan and properly maintaining an overall balance. Without an overall balance, a planned economy cannot exist. Although there is more flexibility in the above-mentioned planned management methods, they still cannot be considered regulation by market mechanism. This is because the cooperation between different areas or state-owned economic departments must be included in departmental or area plans, and is thus coordinated by the central planning department.

Owing to the extent of collective ownership in rural areas, planned management in these areas needs to take more complex forms. In the past, key agricultural products were subject to planned management mainly through pricing policies, thus falling under the scope of guiding plans for reference. When many key agricultural products were in short supply, besides utilizing pricing policies, we also adopted measures of requisition by purchase (for grains), monopoly purchase by the state (for cotton) and quota-assigned purchase by the state (for pigs and eggs) in order to guarantee fulfillment of the purchasing targets for these products. This can be regarded as a kind of planned management with mandatory assignments, adding administrative measures to economic measures. This method can be changed only when a balance between supply and demand is attained or when supply exceeds demand. As long as prices are set by the state, there is planned pricing and most products are unifiedly purchased by organs designated by the state, the adoption of pricing policies in seeking a balance between supply and demand still falls within the scope of planned management. Only the third category of agricultural and sideline products, for which the state does not fix prices, and those products that the state allows to be sold in country fairs or on urban agricultural and sideline product markets, are subject to regulation by market mechanism. State-owned commercial departments purchase agricultural and sideline products from peasants at negotiated prices. This is a necessary supplement to planned purchasing at the present stage. However, the scope of purchasing at negotiated prices must be strictly controlled, lest it adversely affects state purchasing plans.

In line with the above distinction, the production and exchange of most products in our country are subject to planned management; regulation by market mechanism only plays a supplementary role. However, from the viewpoint of varieties of products, there are many more products subject to regulation by market mechanism than there are products subject to planned management. Although the output value of the former is not large, they are still necessary for the people. Thus, regulation by market mechanism is a necessary complement to planned management. At the same time, it should be pointed out that we must apply the law of value when pursuing planned management. All consumer goods in our country are exchanged through markets and are freely bought by consumers according to their own choices. A considerable proportion of the means of production is also exchanged through markets. Thus economic personnel (including planning personnel) must regularly make market surveys and familiarize themselves with the laws operating in the market. In recent years, the reason we stressed the role of market mechanism in reforming the economic management system was that our economic personnel paid too little attention to market conditions and studying economic laws. It is wrong to juxtapose market mechanism and planning regulation without realizing that the latter is the main body. It is also wrong to think that planned management can be conducted without studying the role of regulation by market mechanism, or even to regard utilization of the role of market mechanism as a kind of capitalist liberalization. In order to eliminate the existing phenomenon in which production is separated from marketing, we must continue to thoroughly study market activities and forecast market trends, and promptly revise plans for production and purchasing. Upon discovering the nonconformity of production with demand, we must adjust planned prices. Over the last few years, in the reform of the economic management system, we have gradually implemented the following measures with regard to circulation:

First, the system of monopoly purchase and marketing by the state of many daily-use goods has been changed. Apart from grain, cotton and other vital consumer goods, and petroleum, coal, timber and other important means of production, common commodities can be subject to purchasing plans laid down by commercial departments according to market demands, to the production plans worked out by manufacturers in the light of market demands and to the purchasing plans of commercial departments. Factories without sufficient production assignments can change their products themselves and look for markets. Within limits set by the state, manufacturers can deal directly with retail shops in many items of daily-use goods which the state allows to be marketed in local areas. These transactions need not be handled through wholesale companies. Some commodities can be sold in stores set up by the manufacturers themselves. Commercial departments can purchase many daily-use goods. They can refuse to purchase products not readily marketable. Manufacturers can market products not purchased by commercial departments. Since monopoly purchase and marketing of daily-use goods by the state have been changed into selective purchase and self-marketing, the problems of having many products overstocked or out of stock for a long time have initially been solved, thus reducing waste.

Second, we have increased circulation channels and reduced circulation links. In the past, urban commerce was monopolized by state-owned commercial departments, rural commerce was monopolized by supply and marketing cooperatives, and import and export trade was monopolized by the state foreign trade departments. Thus, the market was excessively controlled and the national economy was hindered from growing healthily. At present, while the commercial departments continue to play a leading role in the market, manufacturers have been allowed to directly market some industrial goods. Some special companies set up by the industrial departments have also been allowed to directly market products (such as machinery and electrical appliances). Communes, production teams and peasants are allowed to sell their products, within the limits set by the state, in urban agricultural and sideline product markets. The state also allows some areas and factories to handle import and export under the unified leadership of the foreign trade departments, or to handle import and export jointly with special foreign trade companies. This reform has played an important role in promoting product exchange between urban and rural areas and between China and other countries. Of course, when we give play to market mechanism, it is difficult to avoid some illegal activities, such as speculation, smuggling and evading taxes. Therefore, the state has to intensify market management at the same time.

The correct handling of the relationship between planned economy and regulation by market mechanism is one of the important links in our reform of the system. We have appropriately expanded the scope of regulation by market mechanism and paid attention to utilizing economic levers in our planned management. Experience over the last 3 years has proved that these reforms have achieved marked results. In order to bring the positive roles of these reforms into play and to prevent negative roles, we must intensify planned management, properly utilize economic measures, use economic levers to handle the economy, step up economic legislation, and strengthen supervision and inspection by customs and industrial and commercial administrative bureaus. Just as the rule of law must be instituted in the practice of democracy, market control must be strengthened in the practice of market regulation. Failure to implement regulation by market mechanism or loosening market control are equally unfavorable to the development of the socialist economy.

IS THERE ANY CONTRADICTION BETWEEN THE APPROPRIATE RESTORATION AND DEVELOPMENT OF THE INDIVIDUAL ECONOMY AND THE PAST PRACTICE OF TRANSFORMING IT?

Beijing RED FLAG in Chinese No 8, 16 Apr 82 pp 33-34

[Article by He Jiangzhang [0149 1696 4545]]

[Text] The individual economy in cities and towns has been restored and has developed considerably over the past few years; the number of people employed jumped from 150,000 in 1978 to more than 1 million by the end of 1981. This change has caused some comrades to harbor a doubt: Does this situation not mean that the socialist transformation of the individual economy in the past was wrong? This is a question that must be clarified.

First of all, it must be affirmed that big achievements have been made in carrying out socialist transformation of capitalist industry and commerce. The "Resolution on Certain Questions in the History of Our Party Since the Founding of the PRC" points out that "it is a great historic victory." In 1952, the output value of state-owned industry accounted for 41.5 percent of the gross national output value, that of state-private joint industry for 4 percent, that of cooperative industry for 3.3 percent, that of capitalist industry for 30.6 percent and that of individual handicraft industry for 20.6 percent. State commerce accounted for 16.2 percent of the total retail volume of social commodities, state-private joint commerce for 0.4 percent, cooperative commerce for 18.2 percent, private commerce for 60.9 percent and peasants retail for 4.3 percent. That means that industry at that time, particularly the commercial sector, was under the dominance of the capitalist economy and the individual economy and that the question of "which will win" as between socialism and capitalism had yet to be answered. In order to overcome capitalism, it was imperative to carry out socialist transformation of the capitalist economy and individual economy, and there was an objective need for developing social productive forces. By that time, the capitalist relations of production were not in line with big economic construction, and it was difficult for the individual economy to develop because it was scattered, backward and lacked funds. Individual commerce and industry were almost at a standstill prior to socialist transformation. Between 1952 and 1955, the output value of individual handicraft industry dropped from 20.6 percent to 14.8 percent of the total industrial output value. Following gradual socialist transformation, the handicraft industry made rapid progress in production because of concentrated strength, division of work and more funds. For example, between 1953 and 1957, the labor productivity of the staff and workers of the handicraft cooperatives in Beijing Municipality grew an average of 16.3 percent annually. What is more important, the socialist transformation of individual industry and commerce helped get rid of the soil that bred capitalism, and it consolidated the position of socialism and answered the question of "which will win."

But at the same time some mistakes occurred in the process of socialist transformation. After the summer of 1955, the transformation of agricultural cooperatives, handicraft industry and individual commerce was done too hastily, roughly and dogmatically and, as a result, this work left a legacy of some problems that existed for quite a long period. What was the reason for these problems? Comrade Chen Yun pointed out at that time that, in the process of cooperativizing the handicraft industry, there was too much merging and there was unified calculation of profits. Consequently, the quality and varieties of some handicraft products dropped as compared with what they were in the period when everyone was managing his own business. Following merging, some handicraft units in the service sector were greatly inconvenienced, and so were residents. It was in this situation that Comrade Chen Yun proposed that "the production of a considerable part of industrial products, handicraft products and agricultural sideline products and commerce must be carried out dispersedly and with dispersed management"; "small businessmen and peddlers must manage their own businesses within the framework of cooperative groups, and this situation must be maintained for a long period of time." ("New Questions Following the Basic Completion of Socialist Transformation") He also said: "The situation of our socialist economy should be like this: With regard to industry and commerce, the state and collective management are primary but industry and commerce are supplemented by certain types of individual operations." (ibid.) It can be seen that the method that is used today for appropriately restoring and developing the individual economy was suggested by Comrade Chen Yun more than 2 decades ago. At that time, he suggested some measures to solve the partial shortcomings and mistakes under the premise of fully affirming the great and decisive victory of our socialist transformation. Today we are merely implementing these measures, and we are not denying the necessity and correctness of socialist transformation. By so doing we will be able to make the structure of all ownership at the present stage accord with our national conditions so that this structure will become more beneficial to activating the economy and to promoting the healthy development of our socialist construction.

Today we are appropriately restoring and developing the individual economy, but this does not mean that we are restoring it to the situation prior to socialist transformation. The range of the individual economy at the present stage is limited, while in the past it covered everything. Furthermore, after socialist transformation was basically completed, and particularly under today's circumstances in which the economy under the system of socialist public ownership predominates, the individual economy is no longer at a crossroads; it depends on and is a necessary complement to the socialist economy. We can resort to economic and administrative ways to bring the individual economy onto the path of serving socialist construction. Of course, the individual economy has its spontaneity and blindness and it might be contradictory to the planned development of the national economy. Therefore, in order to avoid passivity, it is necessary to strengthen control over the individual economy.

HOW DO WE UNDERSTAND THE COEXISTENCE OF DIVERSIFIED ECONOMIC FORMS AT THE PRESENT STAGE IN OUR COUNTRY?

Beijing RED FLAG in Chinese No 8, 16 Apr 82 pp 34-35

[Article by Wu Shuqing [0702 2885 7230]]

[Text] Since the 3d Plenary Session of the 11th CCP Central Committee and following the readjustment and transformation of the national economy, there have existed diversified economic forms in our country. Some comrades do not have a good understanding of this situation, and they even wonder whether the past socialist transformation might have been wrong and that we are retrogressing. In order to eliminate such doubts, it is imperative for us to compare the existence of diversified economic forms at the present stage with the existence of diversified economic forms prior to socialist transformation and analyze them.

First of all, there existed three basic economic sectors prior to the completion of socialist transformation. They were the socialist state economy, the individual economy of peasants and handicraftsmen, and the capitalist economy. It is true that at that time the socialist state sector of the economy had already grasped the major state economic lifelines and had even established a leading position in the struggle against the capitalist economy. But the socialist economic sector was not yet in a predominant position throughout the whole national economy. The individual peasant economy was still in the predominant position in agriculture, which was the basis of the national economy. The capitalist economy still dominated a considerable proportion of industrial production as well as the circulation of commodities and, at that stage, it still constituted a power that could in no way be neglected. Thus at that time, diversified economic forms "coexisted" under the situation in which the economy with public ownership was not in predominant position. Consequently, our society was still at the stage of transition and it was yet to become a socialist society.

But today, basic changes have taken place in the situation of our socialist economy. The socialist state economic sector and the collective economy are in predominant positions in regard to the volume of the means of production and funds, in the number of laborers employed as well as in providing society with products and labor services and in national revenues, and they have also become the basic economic forms of our country.

Marx pointed out: "In all social forms, there is a certain production which dominates the position and influence of all other production and therefore its relations dominate the position and influence of all other relations. It is a generally illuminating light and all other colors are submerged in it and consequently they change their features." ("Selected Works of Marx and Engels," Vol 2, p 109) At the present stage, socialist public ownership is this "illuminating light" in our socialist economy. As socialist public ownership is in a predominant position, the nature and features of other economic sectors have consequently changed drastically compared with the past.

With regard to the individual laborer economy that still exists within certain limits at the present stage, it is true that this kind of economy still only possesses a little of the means of production and, therefore, it has a nature of private ownership. However, it differs with the individual economy in the old society. Such individual laborer economy also has experienced big changes if it is compared with the individual economy that widely existed prior to the socialist transformation. The individual economy at that time was an economy at the crossroads. It might have taken the socialist road or might have combined with the capitalist economy to become a hotbed for the emergence of capitalism. Now, all the related aspects of the individual economy such as range, scale, mode, the resources of raw materials, sales prices, and the standard for charges are all conditioned and influenced by the socialist economy and are under the leadership and management of various government departments concerned. So the existence and development of such an economy depends on socialist public ownership; it is complementary to the economy with socialist public ownership and it displays a role of "making up for omissions and deficiencies."

Our country has allowed foreign economic institutions and individuals to invest and undertake various forms of economic cooperation under the laws and regulations of the PRC. All such foreign enterprises, economic institutions, and joint ventures between Chinese and foreign capital must abide by the laws, regulations and policies of our country. Because of this, they are all different from the capitalist economy in the past. Their existence will in no way affect our socialist economic system; on the contrary, they are in the interests of our modernization program.

Second, prior to the completion of socialist transformation, the contradiction between the socialist economy and the capitalist economy was the main contradiction of the transitional economy. The nature and the trend in the development of various nonsocialist economic sectors were contradictory to the growth and development of the socialist economy. Their contradiction with the socialist economy was the main contradiction and the question of "which will win" had not yet been resolved. This was the reason why it was imperative to carry out socialist transformation of the means of production with private ownership and realize the transition from new democracy to socialism.

The question of "which will win" between socialism and capitalism was basically resolved following the completion of socialist transformation, while the contradiction between people's increasing material and cultural needs and backward social production began to become the principal domestic contradiction. An important measure for resolving this contradiction was to carry out a socialist modernization program and develop social productive forces in a big way. Under such conditions, the contradiction between the socialist economy and other economic sectors became a secondary contradiction. Under the leadership, supervision and influence of the socialist economy, it was important to use these economic sectors to develop production and improve people's livelihood. For example, restoring and developing a certain quantity of individual economy is in the interests of increasing production, as are promoting market activities, arranging employment, bringing convenience to the masses, improving the management of the economy with public ownership and improving services. The spontaneous tendencies of this individual economy can be resolved through strengthening management. With regard to such economic forms as joint ventures between China and foreign companies and foreign capital, it is true that they have a feature of seeking profits, but what is more important is that the permission given for the existence of these economic forms is in the interest of absorbing foreign capital, importing new technology and equipment, and learning from advanced management systems. All this will benefit our socialist modernization program. But we must guard against the negative influences of these economic forms and the influence of decadent capitalist ideology and fight against their corrosive influence.

In short, the coexistence of diversified economic forms at the present stage in our country is totally different from the coexistence of diversified economic sectors prior to socialist transformation. The existence of diversified economic forms does not mean a "retrogression" to the situation prior to socialist transformation. It is in fact a necessary readjustment in production relations under the premise of upholding basic socialist principles and it is in line with our national conditions. The coexistence of diversified economic forms is not an expedient measure, it will continue for a long time to come.

STRENGTHEN RURAL PARTY ORGANIZATIONS AT THE BASIC LEVEL

Beijing RED FLAG in Chinese No 8, 16 Apr 82 pp 36-39, 43

[Article by Jing Dong [0079 2639]]

[Text] A very important problem at present is to strengthen the rural party organizations at the basic level, give full play to the role of rural party branches as fighting bastions and to the exemplary vanguard role of party members, and lead the rural cadres and commune members in building socialist material and spiritual civilizations.

Generally speaking, the party organizations at the basic level in China's broad rural areas are good. This must be fully acknowledged. The rural areas throughout the country are full of vitality. The commune members are full of joy. Development of agriculture is on the ascendant. How has this situation come about? First of all, the party's line, principles and policies are correct. In addition, this situation is inseparable from the efforts of rural party organizations at the basic level and of commune members. In the past few years, in various rural areas, the party organizations at the basic level and the commune members have gotten rid of "leftist" ideological trammels; enthusiastically propagated and implemented the party's line, principles and policies; persisted in socialist collectivization and in the public ownership of the basic means of production such as land; energetically carried out and perfected various forms of the production responsibility system; developed agricultural production in line with local conditions; and done a great deal of meticulous ideological and organizational work. Those who originally failed to see why various forms of the agricultural responsibility system had to be carried out have through practice seen the advantages of this system. They have gradually realized why this system must be carried out, and they have regained the initiative. There has been great improvement in the work style of party members and cadres. The relations between the party and the masses are becoming closer every day. In short, the great majority of the rural party organizations at the basic level are combatworthy.

Then, can we say that we do not have any problems? Of course not. We still have many problems, and the problems in some places are very serious. The rural party organizations at the basic level have the problem of slack and weak ideological work. For instance, owing to the long-term influence of "leftist" guiding thinking, there are still obstructions to the implementation of the party's and government's rural policies; since the carrying out of the production responsibility system, the problem of how to correctly handle the relations between the state, the collective and the individuals has become prominent; gambling and superstitious activities are rampant in some places; civil disputes and criminal offenses often take place; in particular, illegal and criminal activities such as corruption and embezzlement, speculation and profiteering, smuggling and appropriating collective and state property and materials are rampant in some places. To solve these problems, the rural party organizations at the basic level must be strong and have combat effectiveness. But some party organizations at the basic level are at their wit's end and powerless in the face of these problems. Some are even in a state of paralysis and disintegration, and many problems are not dealt with. This phenomenon merits attention.

Our party is in power. The rural party organizations at the basic level are the rural basic leading cores. The party's line, principles and policies must be propagated and implemented through the party organizations at the basic level. Work and tasks in the rural areas must be completed by the rural cadres and the peasant masses under the guidance of the party organizations at the basic level. Contradictions in the rural areas must be solved through profound investigation and study and meticulous ideological work carried out by party organizations at the basic level. Unhealthy trends in the rural areas, especially illegal and criminal activities in the economic field, must be combated by the rural basic-level cadres and peasant masses under the guidance of party organizations at the basic level. We must first do a good job in strengthening the rural party organizations at the basic level so that we can build socialist material and spiritual civilizations in the rural areas.

Since the extensive implementation of various forms of the production responsibility system in the rural areas, some comrades have felt that it is not so important to strengthen the rural party organizations at the basic level. Some people say: "Now that grain and cotton output quotas are fixed for each household, the party branches do not have to bother about production. Since each household is solely responsible for its own production, there is no longer any need for the leadership of the party branches." This view is obviously wrong. Since the implementation of various forms of the production responsibility system, the tasks of the rural party organizations at the basic level have not, in the slightest degree, become lighter. On the contrary, the organizations have heavier tasks because many new situations and problems have emerged since implementation of the production responsibility system. We will not be able to tackle these new situations and problems without the leadership of party organizations at the basic level. We know that implementation of the production responsibility system has brought into play the production initiative of the peasants. This is excellent. But because some people still have ideas and habits left over from the old society, and furthermore are influenced by the decadent bourgeois ideology and way of life, they sometimes show no consideration for the interests of the state and the collective. This must not be overlooked. There are the following phenomena: Some people have, disregarding the requirements of state plans, expanded the areas grown to those industrial crops from which a high income can be obtained; some people only care for selling their agricultural and sideline products on the free market at high prices regardless of whether state purchase quotas are fulfilled; some people are not enthusiastic about fulfilling the tasks of the collective, are not willing to participate in public welfare work and in the work of showing consideration for the families of armymen and martyrs, the "five guarantees" households and households with material difficulties, but only think of attaining individual wealth; and by doing harm to the interests of the state and the collective, some people try to get petty advantages at the expense of the state and collective economies under all kinds of pretexts, fleece the state and even violate the law and discipline. If these problems are not solved, the production responsibility system cannot be consolidated and perfected, nor can the rural economy develop healthily. Therefore, the party's ideological and political work in the rural areas must be strengthened; it cannot be weakened. Since implementation of the production responsibility system, the rural party organizations at the basic level have had a great deal of work to do. It is not true that they are not essential.

In the final analysis, the reason why the rural party organizations at the basic level still have problems and why the leadership of the party has been ignored and even abandoned since implementation of the production responsibility system is that the influence of the leftist erroneous tendency has not been eliminated. In the past, people always talked about "taking class struggle as the key link." They were accustomed to this way of doing things, and they had the old approach to their work. Since the 3d Plenary Session of the 11th CCP Central Committee, the focus of the work of the whole party has been shifted to socialist construction by centering on the four modernizations instead of on political movements. Some comrades have not been able to adapt themselves to this new situation. Since implementation of the production responsibility system, especially since many places began to implement the system of fixing output quotas for each household or of assigning work to each household, the past method of urging the peasants to carry out plowing and planting and of relying on administrative orders has become outmoded, and these comrades are not accustomed to the new system. It is just as some people say, "The old methods did not work, but we do not understand the new approach." As a result, they do not know how to take charge of their work. Many comrades have long been engaged in party work at the basic level, but under the influence of the leftist erroneous tendency, they amassed a lot of "experience" in carrying out class struggle and did a lot of administrative work instead of party work. In reality, they are not sufficiently experienced in party work. Therefore, party organizations at the basic level must eliminate the leftist erroneous tendency. They must shift the focus of their work not only from class struggle to economic construction, but also from administrative work and production activities to party work, learn how to carry out party work and strengthen party leadership.

What is party work? In the main it is building the party and carrying out ideological and political work. Rural party organizations at the basic level have the responsibility of leading other rural basic level organizations such as organs of political power, economic organizations and mass organizations. But this does not mean that party organizations at the basic level should take on everything. Being functions of collective economic units, the leading economic functions of production brigades and production teams must be retained. Being functions of organs of political power at the basic level, the functions of communes (towns) and production brigades (villages) must be strengthened. Commune party committees and production brigade party branches should support organs of political power and economic organizations at the basic level in shouldering their tasks, but they should not interfere in specific administrative affairs and production activities. Besides, by relying on the role of party members in various leading positions, the leadership of party organizations at the basic level over other basic level organizations and the broad masses in the rural areas is realized mainly through strengthening ideological and political work. In other words, party organizations at the basic level should at all times pay attention to their own building and frequently educate party members to maintain close ties with the masses, do ideological work and play an exemplary vanguard role among them, closely unite them around the party organizations and lead them in their advance. The reason why our party can shoulder the responsibility of leading the broad masses is that the party's line, principles and policies represent the interests of the broad masses and that, through propagation, the party's line, principles and policies can be implemented among the masses until the masses understand their own interests, unite and work hard for their own interests. Therefore, the fundamental way to bring into full play the leading role of rural party organizations at the basic level is to strengthen the building of these party organizations. Otherwise, strengthening party leadership will be nothing but empty talk.

Then, how should we strengthen party organizations at the basic level? We should start from the specific conditions of local places. Generally speaking, we must strengthen the leading groups, enhance the political quality of party members, strengthen the regular activities of party organizations, correct unhealthy trends and carry out the struggle against the corrosive influence of bourgeois ideology.

The key link for strengthening party organizations at the basic level is to do a good job in building the leading groups. Whether the party organizations at the basic level are firm and energetic or lax and weak is determined mainly by the status of the leading groups. Many party members in some leading groups are getting on in years. These comrades have been trained and educated by the party for many years. They are intrinsically good and have work experience. But they are not very vigorous. Furthermore, some of them have been deeply influenced by the "leftist" ideology, so they lag behind the situation and cannot efficiently carry out the party's line, principles and policies. Some leading groups have redundant personnel who cannot work with one mind and who always engage in disputes over trifles; they cannot form a firm and energetic leadership core. The cultural level of some members of leading groups is so low that they cannot even transmit to the masses the essence of instructions from the CCP Central

Committee or from a higher party committee, to say nothing of leading agricultural modernization. What merits special attention is that some members of leading groups are not pure. Some bad elements have sneaked in, or good members have degenerated because of the corrosive influence of bourgeois ideology and of the bourgeois way of life. They have embarked on the criminal road of engaging in graft and embezzlement, speculation and profiteering, smuggling, bribery and appropriation of state and collective property. Therefore, we must clear bad and degenerated elements out of the party so that we can build the leading groups well. Those who politically undermine the party's regular activities and who economically violate law and discipline must not be allowed to remain in the leading groups. In addition, we must find a way for the leading groups to solve the problem of their members being advanced in years, too large in number and too low in cultural level, and fill the leading groups with educated middle-aged and young party members who can resolutely implement the party's line, principles and policies. We must do the work of readjusting the leading groups strictly according to the election system stipulated in the party constitution, namely, party branch committees should be elected in a democratic way by party members. Generally speaking, it is not appropriate to adopt the methods designated by higher party committees. In some places, party branches have not been reelected for many years. These party branches should energetically create conditions and carry out reelections according to the stipulations of the party constitution. In the future, they will be required to have an election once a year. Through regular elections we can build firm and energetic leading cores which have strong party spirit and good work style.

The total number of rural party members throughout the country is large. Besides developing appropriately and in a planned way new party members who are really up to standard in those places where party organizations at the basic level are comparatively good, we must also educate the party members we now have and raise their levels. Comrade Deng Xiaoping pointed out 2 years ago that some of our party members did not have the requisite qualifications. This problem has not yet been totally solved. The great majority of rural party members are intrinsically good, but a certain number of them have low political consciousness, weak party spirit and low sense of organization. They have neither committed any mistake nor played any role. Since implementation of the production responsibility system, some party members have had the following idea: "Since output quotas are fixed for each household, everything we do is to make individuals well off; and since production tasks are assigned to each individual, everything we do is in regard to individual interests." They do not bother any more about the ideal of communism, the cause of the party, and the interests of the state and collective. Some party members do not want to be cadres any longer, saying that cadres are always at a disadvantage Some party members even say: "Eating and spending money require effort, but whether one is a party member does not make much difference." They are unwilling even to participate in the party's regular activities, let alone fulfilling the tasks assigned by the party. With regard to this phenomenon, we must strengthen the education of party members and change the situation in which some party members do not have the requisite qualifications. We must understand that implementation of the production responsibility system means that we must set higher requirements for party members and not vice versa. Party members must not only be like commune members in conscientiously implementing what is stipulated in the responsibility system, but also maintain close ties with the masses, do ideological work among the masses and energetically do propaganda work, and take the lead in implementing the party's principles and policies. They must take the lead in implementing contracts and fulfilling the purchase tasks of the state and the tasks assigned by production teams. They must take the lead in participating in public welfare labor and actively help households with material difficulties to solve their problems in production and livelihood. They must take the lead in observing law and discipline and in combating unhealthy trends, and guide the masses in becoming well off through manual labor. They must take the lead in cultural study and in the study of scientific knowledge, and popularize advanced agricultural technology. They must take the lead in carrying out family planning and in changing prevailing habits and customs. In short, they must play an exemplary vanguard role in everything they do. To do all this will be utterly impossible if we do not have the lofty ideal of communism and the socialist consciousness of loving the country and the collective, and if we do not have the revolutionary spirit of utter devotion to the public and of serving the people without thought of self. In order to build well party organizations at the basic level, we must adopt practical methods and improve the political quality of rural party members. Training party members by rotation is carried out in some places during the slack season in farming. Education on the party's basic knowledge, on the party's principles and policies and on the situation and tasks is also carried out in these places. Practice has proved that good results can be obtained in this way.

Perfecting the organizations' regular activities is an important part of strengthening party organizations at the basic level. Our party is the vanguard of the proletariat and is a united militant collective composed of advanced proletarians. One important reason why it has become the leading core of the broad masses and why it has invincible strength is that it is an organization. Engels said: "Organizations are the most important weapons." ("Collected Works of Marx and Engels," Vol 19, p 284) The combat effectiveness of rural party organizations at the basic level is to a great extent determined by whether the organizations' regular activities are perfected. If a party organization at the basic level does not have a strict system for its activities, or if it has had no activities for a long time, is it worthy of the name of organization? The system of "three meetings and one lecture" (the party branch committee meeting, the general meeting for all party members, the party group meeting and the party lecture) is indispensable for every party branch. Some party branches have not had a meeting for half a year or even a full year. They do not study or discuss the party's instructions, principles and policies. They do not investigate or study the problems in practical work or the ideological state of the cadres and masses. They do not propagate correct things; nor do they praise good people and good deeds. They do not criticize erroneous things; nor do they combat evildoers and evil deeds. If a party branch continues to act in such a way, how can it become a powerful fighting force? Some people say that since implementation of the responsibility system in production, people have been very particular about using their own time and that, therefore, the party's regular activities should be relaxed. This viewpoint is wrong. We must understand that since implementation of the production responsibility system, most party members and commune members have carried out their activities individually. It is necessary to carry out more strictly the system of regular activities. Otherwise, party members and commune members will become slack and perfunctory, and in the end the party organizations will be paralyzed and disorganized. This is very dangerous. Of course, we should be flexible in arranging time for holding meetings and for conducting party lectures. We should do our best not to take up, or to take up as little as possible, the time for productive labor. In short, if we want regular activities to be in line with the specific conditions of local places in a more appropriate way, we cannot but persist in the system of maintaining the party's regular activities.

Public security in some rural areas is bad, and so is the general mood of society. This is closely related to the unhealthy tendency or even criminal activities of some party members and cadres. If a party member or a cadre is light fingered, he will not be able to carry out mass work and change the general mood of society. Why is it that gambling, superstitious activities, and speculation and profiteering in some places, smuggling activities in some coastal areas and border regions, and abnormal religious activities in some regions of minority nationalities are so rampant? The reason is that either some party members and cadres have directly participated in these activities or that these activities are indirectly related to them. This phenomenon must not be allowed to continue. Correcting unhealthy tendencies in the party and seriously punishing party members and cadres who have broken the law and engaged in criminal activities have an important bearing on enhancing the party's combat effectiveness and changing the general mood of society. At present, we must regard the struggle against criminal activities in the economic field as an important part of strengthening the rural party organizations at the basic level. With regard to party members and cadres who indulge in unhealthy tendencies, we must criticize and educate them, and help them to realize their mistakes and resolutely correct them. With regard to a small number of party members and cadres who have violated law and discipline, we must seriously punish them according to party discipline and state law. We must not tolerate their crimes. Otherwise, evil will spell ruin if left unchecked, and party organizations at the basic level will not be able to be strengthened.

The task of strengthening rural party organizations at the basic level is arduous. How should we do it? In some places experiences have been accumulated. According to an investigation, the experiences are mainly as follows: Some leading groups of party organizations at the basic level have been rectified through summing up their experiences in work; some leading groups of party branches have been reelected in a democratic way according to the party constitution to realize rectification; and some party organizations at the basic level have carried out all-round rectification by turns and in groups. These methods have brought good results. They are feasible. When dealing with specific problems, the localities may try to find their own ways. No rigid uniformity should be sought. But one point must be stressed, namely, no matter what methods are adopted, higher party organizations should send their members to assist party organizations at the basic level. Particularly with regard to party organizations at the basic level which are already in a state of paralysis or semiparalysis, their problems will not be solved if they do not make great efforts, even though the higher party organizations might send their members to assist the rectification work at the basic level. Because various unhealthy tendencies are still growing and spreading over all these places, it is not easy to distinguish problems, and it is even more difficult to solve problems. We must not belittle these things.

To strengthen rural party organizations at the basic level, party committees at all levels must change the situation in which the party does not promote the party's cause. Although party committees have many things to attend to, they must not overlook the building of the party. Under the present circumstances in which rural party organizations at the basic level are confronted with many problems, we must devote more effort to strengthening our investigation and study, and carry out the work in this respect step by step, in a planned way and by stressing focal points. Particularly in places where the corrosive influence of capitalist ideology and the tendency of bourgeois liberalization are serious, we must do our best to rectify party organizations at the basic level which are in a state of paralysis or semiparalysis. Otherwise, the party organizations in these places will exist only in name but not in reality, and the communist methods will vanish. Some leading comrades of party committees only pay attention to economic work; the work of building the party has no place in their minds. This phenomenon must be changed. It is doubtlessly true that party committees must pay sufficient attention to economic work; the problem is how to carry out this work. The CCP Central Committee has pointed out that we must do a good job in dividing party and government work. This problem must be further solved. Party committees at all levels must emancipate themselves from their busy administrative affairs and from their vocational work, and put emphasis on doing a good job in building the party. Only if we do a good job in building the party, only if we give full play to the role of party committees as the leadership cores, only if we give full play to the role of party branches as fighting bastions and only if party members can play an exemplary vanguard role, will there be a reliable guarantee for fulfilling various tasks. Otherwise, the building of the party will be neglected, and the party organizations and party members will not be able to play their proper roles. As a result, no matter how specifically we carry out economic work or any other work, it will be very difficult to achieve any success. Of course, we cannot carry out party building in an isolated manner, but must carry it out in coordination with the central tasks at a given time and in a given place. The building of rural party organizations at the basic level must be carried out in combination with the work of consolidating and perfecting the production responsibility system. Otherwise, this work cannot be done well.

BE BROAD-MINDED ABOUT REJUVENATING THE CADRE RANKS

Beijing RED FLAG in Chinese No 8, 16 Apr 82 pp 40-43

[Article by Luo Yinghuai [5012 2019 2037]]

[Text] We are now faced with the extremely important task of selecting tens of thousands of middle-aged and young cadres to enter leading bodies at various levels and of making the leading bodies more revolutionary, younger, better educated and more professional. This is the most vital problem we must solve in restructuring organs. Ensuring that this task is done is the glorious duty of our veteran cadres. Our veteran cadres must clearly understand their responsibility, be broad-minded about rejuvenating the cadre ranks, withdraw with lofty sentiment to the second or third lines, and make a final historical contribution to the party and people.

I

To be broad-minded, we must first proceed from the overall and long-term interests of the party's cause and treat the problem of rejuvenating the cadre ranks with communist foresight and vision.

The object of our struggle is to build a strong and modern socialist country and then realize communism, the most lofty ideal of mankind. This is an extremely important and arduous undertaking requiring many generations of sustained struggle. The continuity and carrying forward of the revolutionary cause of the proletariat require that we keep passing the baton from generation to generation. This is a problem of old cadres handing their batons over to new cadres. Comrade Mao Zedong said: "If our party does not have a great many new cadres working in unity and cooperation with the old cadres, our cause will come to a dead end." ("Selected Works of Mao Zedong," Vol 3, p 782) The historical experience of our party has proved that the work of selecting and training revolutionary successors and letting outstanding middle-aged and young cadres take over from old cadres not only has a bearing on advancing the revolutionary cause pioneered by the older generation of proletarian revolutionaries but also a bearing on the future and destiny of the party and state.

Take our army for example. Here, it is even more important to speed up the rejuvenation of the cadre ranks. Our army is a strong pillar of the dictatorship of the proletariat. It shoulders the important task of defending the nation, and is ready at all times to strike at invaders. If war breaks out, it must fight large-scale battles, tough battles and battles under unfavorable conditions. Even in peacetime it must carry out arduous tasks. Therefore, this not only requires that the commanders and fighters at various levels have good military and political qualities, but also requires them to be physically fit and to be full of vim and vigor. Only in this way can they cope with possible emergencies. It has been more than half a century since the founding of our army. Many of the old cadres have spent a whole generation fighting all over the country. It is said that "old people still have high aspirations," but they are after all getting on in years and gradually losing their vigor. Replacing the leading members and rejuvenating the cadre ranks has become an extremely urgent historical task facing our army. If we do not step up the tempo, firmly grasp the "interplanting" of new "seedlings" in the leading bodies at various levels and conscientiously solve the problem of rejuvenating the cadre ranks, we will be unable to fulfill the arduous task entrusted to us by the party. In a military exercise held at a certain place in north China, the contrast was extremely vivid: Large numbers of middle-aged and young cadres in the prime of life were active at various levels of command. They were full of vim and vigor, full of spirit, were hard working in the tense and difficult situation, and displayed the vitality and talent of the young. However, although some of the overage comrades were full of high aspirations and worked tenaciously, they felt themselves unequal to the continuous tension and burden of work because of their physical conditions and energy levels. At the end of the exercise, some of the old comrades emotionally said: When we led the units into battle during the war years, we could go sleepless for several nights without feeling any fatigue. During this exercise, we have only taken a few extra shifts, but we are already feeling the strain. This is the result of age. If we are like this during an exercise, how can comrades who are old and in poor health lead units to fight large-scale battles, tough battles and battles under unfavorable conditions in war? If we have to change the commanding officer at a critical juncture in a battle, we are bound to suffer a great disadvantage. Many old comrades are deeply aware of this point. Valuing the interests of the party above everything else and proceeding from the long-term construction of the units, they are seriously considering and handling the problem of rejuvenating the cadre ranks. Their spirit of standing high and seeing farther ahead is worth advocating.

For the sake of selecting middle-aged and young cadres and bringing up successors to the revolutionary cause of the proletariat, our party has made unremitting efforts since the 1960's and paid a high price for valuable experience. In recent years, we have selected a number of cadres who are in the prime of life and possess both ability and political integrity to replenish leading bodies at various levels. However, judging from the situation as a whole, progress in this work is still not fast enough, and there is still no basic change in the age structure of leading bodies at various levels. If this situation were to continue, a temporary shortage of experienced cadres would be bound to appear, seriously jeopardizing our party's cause. Therefore, stepping up the work of making the cadre ranks more revolutionary, younger, better educated and more professional is not only a project of vital and lasting importance, but also a task of immediate urgency. At present, we already have the conditions for basically solving this problem. Since the smashing of the "gang of four," and particularly since the 3d Plenary Session of the 11th CCP Central Committee, our party has affirmed the correct political line, ideological line and organizational line, and we can place this problem on the agenda for solution. At the same time, many old comrades with higher consciousness are still alive, and they can set the pace as well as overcome resistance. As long as everyone unifies his understanding, acts selflessly and sets examples, this problem will not be difficult to solve.

Some of our old comrades are highly dedicated to the cause of the revolution. They feel that they are still in good health and can still work for a few more years and make more contributions to the party. This spirit is indeed highly commendable. However, we should think a bit further ahead. The number of establishment personnel in a leading body is limited. The greater the number of old cadres, the less openings there will be for outstanding young cadres. Some old comrades are definitely still able to work for a few more years. However, if they work for a few more years, not only will the young cadres have several less years of tempering, but this will also create an "aging cycle" in the cadre ranks. If the old cadres vacate their posts and let the outstanding young cadres receive tempering earlier, the time they work for the party will not be several years but will be 10 or 20 years. In this way we will be able to organizationally guarantee the continuity of the line, policies and principles of the party, there will be successors to our cause, and our cause will prosper and develop. Therefore, promptly allowing young people to shoulder the burden and withdrawing to the second or third line to pass on experience, give help and set an example are a manifestation of farsightedness and concern for the party's cause. At present, this is the foremost responsibility entrusted to our old comrades by history. This plays a more significant role than working with all one's might for a few more years.

II

To be broad-minded, we must have a correct attitude toward the young cadres after they have taken up leadership posts, and we must enthusiastically believe in, support, show concern for and help them.

First, we must believe that the young cadres are capable of shouldering the burden of the revolutionary cause. Stalin said: "The youth are our future and our hope. The youth have to take our place, the place of old people. They have to carry our banner to final victory." ("Collected Works of Stalin," Vol 13, p 226) Comrade Mao Zedong compared the young people to the sun at 8 or 9 in the morning and placed his hope on them. However, because of the force of habit, even now there are still people within our ranks who look down on young people. They are worried that after taking up leadership posts "these young people will make mistakes because of their lack of experience, will let things fall apart because they are not authoritative enough and will make a mess of things by failing to carry out work properly." Actually, such anxieties and worries are groundless. The old comrades should think back on the process of their own growth. During the revolutionary war years, were many of our present old comrades not commanding a division or an army in battle against the enemy at the age of 20 or 30? Chen Haisong, an army political commissar and also an outstanding young commander of the 9th Red Army, was a regimental political commissar at 18, a divisional political commissar at 19 and an army political commissar at 20. He was only 22 when he died, but he had already commanded units in many brilliant battles. At that time, the leadership had such great faith in us and allowed us to shoulder important leadership work. At present, in the new generation growing up under the education and training of the party, many people are politically and ideologically much better than we were at that time, especially in the field of cultural and scientific knowledge. As long as we believe in them and boldly allow them to temper themselves in leadership posts, they will grow up very quickly. As a matter of fact, many of the middle-aged and young cadres have been very outstanding in their work after taking up leadership posts. Divisional commanders and political commissars of about 40, regimental commanders and political commissars of about 30, and battalion commanders and political instructors in their 20's are mostly able to lead units well. In a military exercise held in a certain part of north China, the overwhelming majority of middle-aged and young cadres displayed fairly high command ability and creativeness. Four young regimental commanders of a certain division fulfilled their tasks in an outstanding manner, and all of them rendered meritorious service and received awards. This is a very good example.

Second, we must energetically support the work of middle-aged and young cadres. Old comrades, educated for a long time by the party, have richer experience. Whether enthusiastic support and help can be given to young cadres has a very important bearing on whether they are able to grow up as quickly as possible. The overwhelming majority of our old cadres have done very well in this respect. They are deeply conscious of the righteousness of the cause and have actively created conditions for the growth of young cadres. They are enthusiastically and patiently passing on experience, giving help and setting an example. However, there is also a small handful of comrades who are able to enthusiastically support the work of young cadres working under them, but when the young cadres are of the same grade or have outstripped them, they do not feel so comfortable. This is incorrect. Zheng Banqiao of the Qing dynasty said in a poem: "The new bamboo branches are taller than the old bamboo branches. They depend wholly on the support of the old stems. Next year there will be more new branches. Bamboo a hundred feet tall surrounds the pond." The new bamboo branches are taller than the old bamboo branches and the new branches of tomorrow will grow into bamboo a hundred feet tall because of the support of the old bamboo branches and old stems. The growth of young cadres is the same. Indigo blue is extracted from the indigo plant but is bluer than the plant it comes from. That those who come after surpass the old-timers is a universal law governing the development of things. This is a manifestation of the prosperity and development of our party's cause, and the old comrades should feel heartened. We must take delight in and be good at becoming "a human ladder," help the young cadres "climb" to leadership posts at various levels, and allow them to give full play to their wisdom and ability at appropriate posts and in a broad field.

Furthermore, we must correctly handle the shortcomings of young cadres. Comrade Mao Zedong repeatedly taught us that we must allow cadres to make mistakes and to correct their mistakes. In everything, one divides into two. The same as other cadres, young cadres cannot help having this or that kind of shortcoming, or making this or that mistake in their work. Particularly when they lack experience, it is easier for this or that kind of problem to appear. This is a normal phenomenon. However, there is a kind of abnormal condition at present, namely, when a shortcoming occurs or a mistake is made by old cadres, it can easily be forgiven but when the same shortcoming occurs or mistake is made by a young cadre, it will invariably lead to endless discussions and might even create a scandal. It might be correct to set stricter demands on the young cadres, but "there is no pure gold and no one is perfect." Not allowing them to have shortcomings and make mistakes is asking too much from them, and this is metaphysical and wrong. The correct attitude in dealing with young cadres is to judge the whole of their work and particularly their essence and principal aspects. When they have shortcomings and make mistakes, the old cadres must help them to analyze the cause, sum up past experiences and lessons, and study ways to improve, and when necessary, help them shoulder responsibility so that they will not become overcautious just because of problems in their work. At the same time, the old cadres must encourage them to boldly temper themselves, learn from "a fall into the pit, a gain in the wit," and continue to mature.

Naturally, we must strictly examine and carefully choose the young cadres preparing to enter leading bodies. We must pay close attention to selection standards. We must select cadres in accordance with the criteria put forth by the CCP Central Committee and thoroughly and carefully examine them one by one. We must understand clearly the whole of their history, mainly their stand during the "Great Cultural Revolution" and particularly their attitude toward the line, principles and policies of the party since the 3d Plenary Session of the 11th CCP Central Committee. We must ensure that young cadres entering leading bodies will be politically of one heart and mind with the CCP Central Committee, and will be pure and dependable. We absolutely cannot allow those who got their start through rebellion, who are seriously affected by the factionalist mentality, who have taken part in beating, smashing and looting, and who resist the line, principles and policies of the party, to get into the leading body. At the same time, we must also pay attention to their military skills and vocational levels. We must select cadres on the basis of the unity of their ability and political integrity. If old comrades do not make the effort in selecting the right people or do not properly hand over the work of the revolution, they will be making an historical mistake.

III

To be broad-minded, we must also handle correctly the question of withdrawing to the second or third lines. To select and utilize outstanding young cadres and make the leading body revolutionary, younger, better educated and more professional, we must arrange for some of the old cadres to leave their posts to convalesce, retire or withdraw to the second line. There will be people coming in and going out, and going out is for the sake of making room for people coming in. This is the demand of the development of the revolutionary cause. There is a question of how to properly settle and look after these old comrades. We have already done a great deal of work in this respect as well as made quite a bit of progress, but there are still many problems. This is mainly because "when a person leaves, the tea gets cold" and the attention given to old comrades who have withdrawn to the second or third lines has not been as good as when they were in office, and this has caused anxieties among some of the old comrades who are about to leave their posts to convalesce or to retire. The reason for this situation is mainly because some comrades do not have a correct understanding of why the old comrades are withdrawing to the second or third lines. In particular, the bad habit of "snobbishness" of the former society is still reflected in the question of dealing with old cadres leaving their posts to convalesce or retire. These comrades do not understand that, in working for scores of years in the service of the country, these old comrades have made tremendous contributions to the liberation of the motherland and the cause of socialist construction. The old cadres are the hardcore force of the cause of the party and the meritorious officers of the state, and they should be respected and looked after when they become old or senile. Moreover, the bad habit of "snobbishness" is opposed to our fine national tradition of honoring the old and the virtuous. It runs counter to our party's policy for old cadres and is the moribund consciousness of the exploiting class. On the other hand, a handful of old comrades also sense that they have "lost stature" since leaving a leading body and feel "ashamed." This is a wrong impression. Old comrades who withdraw to the second or third lines and vacate their posts for middle-aged and young cadres are making an important contribution to rejuvenating a leading body. This is a glorious thing and should be acclaimed by society. After withdrawing to the second or third lines, the old cadres are still a very important political force in our party and state, and if health permits, they can still continue to play their role. Especially after casting off daily routine, the old cadres can devote their energy toward offering ideas and making suggestions on major issues of party, state and army building. At the same time, many of them have an intimate understanding of the glorious tradition of the party and are familiar with the glorious history of our party and our army. By writing memoirs and teaching by personal example as well as verbal instruction, they can contribute to the construction of socialist spiritual civilization. In fact, some old comrades have already made achievements in this respect, and this is a role which can hardly be played by other people.

The CCP Central Committee, the State Council and the Military Commission of the Central Committee have already adopted many effective measures for looking after the livelihood of the old comrades leaving their posts to convalesce or retiring, and they are now studying, perfecting and setting up the necessary rules and regulations. However, because the level of productive forces in our country is still not high and the state is still faced with many difficulties, some of these problems cannot be solved right away. Our old comrades must make allowance for the difficulties of the state and adopt a correct attitude toward them. When our old comrades joined the revolution, their only thought was to emancipate themselves and seek liberation. Who gave a thought to a high position and a handsome salary at a future date?!

Numerous revolutionary martyrs lost their heads, shed blood and sacrificed their lives without even tasting the joy of revolutionary victory. Compared to them, how can we, the lucky survivors, fuss about material treatment? We communists consider it our duty to liberate all mankind, and we have vowed to persevere in the course of working for the interests of the people. While in office we must conscientiously work to the best of our ability. After withdrawing to the second or third lines, we must still work hard and maintain revolutionary integrity in our later years.

ON THE QUESTION OF HUMAN RIGHTS IN THE INTERNATIONAL ARENA

Beijing RED FLAG in Chinese No 8, 16 Apr 82 pp 44-48

[Article by Shen Baoxiang [3088 1405 6116], Wang Chengquan [3769 6134 2938] and Li Zerui [2621 3419 6904]]

[Text] In current international activities, the problem of human rights occupies a certain place. Discussing or examining the problem of human rights is one aspect of the activities of the United Nations. States with different social systems, different political interests and different degrees of economic development, and groups and persons with different political leanings, have put forward their own ideas of human rights. Therefore, the problem of human rights is of an unprecedentedly comprehensive and complicated nature. Concerning the current complicated struggle about the problem of human rights on the international scene, we must make a serious analysis or study. We must adhere to our own principled stand and strive to maintain world peace and safeguard the right of self-determination and the fundamental human rights of the people of various countries.

Origin of Human Rights

To clarify the current problem of human rights on the international scene, we must review the development of the history of human rights.

Human rights represented the theory, idea or slogan put forth by the Western bourgeoisie 2 or 3 centuries ago. To counter the privileges and divine rights of feudal aristocrats and monks and priests in the Middle Ages, enlightened bourgeois thinkers originated the idea of "innate human rights" and of freedom, equality, the pursuit of happiness and other human rights. Such an idea became an effective ideological weapon of the rising bourgeoisie in fighting feudal despotic rule. In 1776, the "Declaration of Independence" of the United States of America stated that "all men are created equal; that they are endowed by their Creator with certain inalienable rights; that among them are life, liberty and the pursuit of happiness." This was the first time that the bourgeoisie had affirmed, in the form of a political program, the idea of human rights that it had conceived. Marx considered this document as the "first declaration of human rights." In 1789, the constitutional congress produced by the French bourgeois revolution adopted the "Declaration of the Rights of Man and of the Citizen," or what people usually call the "Declaration of Human Rights." It declared: "People are born free and equal and are meant to always remain so." People's innate rights are "freedom, property, safety and resistance against oppression." This declaration became the preface to the French Constitution. It advanced for the first time the slogan of "human rights" in the form of law. The "Declaration of Human Rights" declared an end to the rule of the feudal privileged class in the Middle Ages and the establishment of the ruling position of bourgeois politics.

The idea or slogan of human rights played a very positive role in history. It reflected the features of an historical period. For a long period of time, this slogan had a far-reaching influence on the capitalist world. The slogan of human rights supposedly covered all people--people who shared common rights. It was a slogan of a universal nature. But, actually, the bourgeois slogan of human rights gave expression to the demands of the rising bourgeoisie in the most general terms of rights. In the name of human rights, the bourgeoisie replaced the feudal lords' special privileges and hereditary privileges with its own moneyed privileges. The so-called right to freedom is chiefly the freedom to own private property. The so-called right to pursue happiness is actually the right to exploit labor in an unrestricted way and the right to pursue wealth. Just as Marx pointed out: "Human rights are privileges in themselves." ("Collected Works of Marx and Engels," Vol 3, p 229) In capitalist society, human rights for the proletariat and the masses of laboring people are of a highly fraudulent and deceptive nature.

For a very long period of time, human rights existed merely as principles for political life and legislation in some countries. The widespread application of human rights in international relations, and the universal acceptance by international society of human rights as a standard, began during World War II and especially after the founding of the United Nations. During World War II, the fascist outrages of Germany, Italy and Japan, which ruthlessly killed the people of various countries, aroused the anger of the world. There was a widespread demand for the protection of human rights and a call for respecting fundamental human rights as the aim of postwar international relations. The "United Nations Charter," adopted in 1945, declared: It was decided to save "future generations from again suffering the catastrophic effects of war twice experienced by the present generation and to reaffirm fundamental human rights, human dignity and values and also the faith in the right of equality between men and women and between big and small countries." Respect for human rights has since become an important problem in international political struggle.

New Developments in the Concept of Human Rights

The concept of rights has always developed in accordance with the development of history. Human rights are no exception. As time marches on, given changes in the economic and political situation, the emergence of new political forces and the development of various struggles in international society, the concept of human rights inevitably breaks out of the confines of the original Western bourgeois version. At present, the concept of human rights advocated on the international scene, chiefly within the framework of the United Nations, is a far cry from the version put forth and upheld by the bourgeoisie in the 17th and 18th centuries. It is marked by important changes in the following two respects.

1. For a long period of time, the bourgeoisie upheld the right to possess private property as the most important of its human rights. On the other hand, it ruthlessly exploited workers leaving them in dire straits. After World War II, the struggle of the working class in capitalist countries which asserted its rights reached an unprecedented height. This forced the bourgeoisie to adopt domestically some so-called welfare policies, but actually "in the long run, people paid for what they got." On the international scene, economic, social and cultural rights were also incorporated into the UN pact on human rights. In 1966, the United Nations adopted two important conventions on human rights: the "International Convention on Civil Rights and Political Rights" and the "International Convention on Economic, Social and Cultural Rights." (These two conventions together with the "World Declaration of Human Rights" are generally known as the "International Constitution on Human Rights.") The latter stipulates that everyone should have the right to work and be assured of proper and good working conditions and of the right to organize trade unions, the right to receive education, the right to share in cultural life, the right to enjoy social protection, and other rights. The advancement of economic rights and social and cultural rights has caused the concept of human rights to break out of the narrow confines of its original version.

2. Another important change in the concept of human rights was the addition of the right of self-determination and the right of development for the people of colonies and dependencies in Asia, Africa and Latin America. When the bourgeoisie was vigorously advocating human rights in the mother countries of capital, they were carrying out ruthless exploitation and naked robbery in a large number of colonies, semicolonies and dependencies. The colonialists and imperialists never recognized any human rights for the people of these countries and areas. After World War II, the national liberation movements among the people of colonies grew. Many colonies won independence and joined the United Nations. They participated in international political activities and put forth their own ideas of human rights. In recent years, the Third World countries have voiced in more clearcut terms their opposition to "any people monopolizing the interpretation of human rights" and their opposition to the human rights activities of the United Nations "being guided only by European standards, as in the past." The 7th UN General Assembly [UNGA] in 1952 and the Asian-African conference held in Bandung in 1955 affirmed national self-determination as "the prerequisite for fundamental human rights." Thus, the protection of human rights was linked with national self-determination for the people of colonies. In 1960, thanks to the efforts of newly independent countries in Asia, Africa and Latin America, UNGA adopted the "Declaration Granting Independence to Colonial Countries and People," and announced that "all people have the right to self-determination." It was pointed out that "subjecting a people to conquest, rule and exploitation by foreign countries is a negation of fundamental human rights and a violation of the UN Charter." This declaration affirms in clearcut terms that the right of self-determination for the

people of colonies was a fundamental human right. In the 1970's, the struggle in the United Nations of the Third World countries in the field of human rights grew fiercer. The concept of human rights was continuously injected with new content. In 1977, the 32d UNGA passed with an overwhelming majority vote a resolution (Resolution No 32/130) on the new concept of human rights put forth by the Third World countries. A concept was advanced for the United Nations to take into consideration in the future the promotion of human rights and basic freedoms. This resolution shows that human rights do not just mean individual rights and basic freedoms; they also cover the rights and basic freedoms of a nation and its people. The resolution stresses that in UN human rights activities, priority should be given to solving "matters of serious and large-scale encroachment on the human rights of the people and individuals of countries which have been affected by racial segregation; all forms of racial discrimination, colonialism, foreign rule and foreign occupation and aggression; threats to national sovereignty, national unity and territorial integrity; and refusal to recognize national self-determination and the fundamental right of countries to exercise full sovereignty over their own wealth and natural resources." This spirit is in line with the prevailing conditions of international society and is therefore correct. The resolution also pointed out that sustained progress in the area of human rights depends on rational and effective domestic and international policies for economic and social development. The continuous existence of an unfair international economic order seriously hampers the exercise of economic, social and cultural rights by developing countries. The establishment of a new international economic order is a factor in effectively promoting human rights and basic freedoms. In 1979, the UN Commission on Human Rights passed a resolution stressing the right of development as a fundamental human right. Thus, the concept of human rights took on additional meaning: the upholding of national independence by the people of various countries, chiefly Third World countries, the exercise of the freedom to control their natural wealth and resources and to develop their economy, and their opposition to foreign aggression and oppression. Thus, the struggle to win and uphold human rights was linked with the struggle against imperialism, colonialism and hegemonism.

This new concept of human rights has reflected the historical features of this era of ours from a certain point of view. But where the problem of human rights is concerned, the echoes of the old era can sometimes still be heard.

Political activists and scholars in certain Western countries have adhered to the traditional narrow concept of human rights and one-sidedly stressed the individual's human rights, advocating absolute freedom for the individual and claiming that the individual's human rights provide "basic conditions for economic development." This shows contempt for the realities of international politics. It might be asked: How can there be individual rights and freedom when a nation has been deprived of its right of self-determination, or a country has been occupied by aggressors, or the whole nation and the people are in slavery, and when a country has been deprived of its sovereignty over its wealth and natural resources and is under the shackles of colonialism? Given such a situation, how can there be basic conditions for economic development? The fact is that in the world today, certain countries and nations are still placed in such a state owing to the havoc caused by hegemonism, imperialism and colonialism. Obviously, upholding national rights in these areas is a primary prerequisite for respecting the individual's human rights. If the fact of national rights being seriously encroached upon is ignored and much is made of the individual's human rights, then this can only be interpreted as hypocrisy and deception.

Complicated Struggle Under the Banner of Human Rights

Human rights activities within the framework of the United Nations represent the main aspect of the international struggle for human rights. But the area of struggle for human rights is actually much wider. The complicated struggle for human rights on the international scene is chiefly marked by the following several situations, with various essential differences.

First, the efforts of a large number of Third World countries and some countries upholding justice in revealing and fighting large-scale encroachment on human rights by hegemonism, imperialism and colonialism and by certain autocratic regimes. In recent years, the UN Human Rights Committee has adopted resolutions condemning the foreign armed invasions of Afghanistan and Kampuchea, interference with national self-determination, the creation of large numbers of refugees, and large-scale and serious encroachment on human rights. At UN conferences, the representatives of Third World countries have also condemned the policy of apartheid and racial discrimination pursued by the South African authorities and Israel's persecution of the Palestinian people, which represent large-scale and serious encroachment upon human rights.

Second, there is the struggle of the Third World countries in opposing the rich countries' exploitation of their poor counterparts and achieving the right of development in order to establish a new international economic order. Thanks to the efforts of Third World countries, UN conferences adopted declarations and resolutions explicitly calling for the establishment of a new international economic order, stipulating the right of every country to freely exercise full and permanent sovereignty over its wealth and natural resources, and urging the adoption of measures to improve the economic conditions of developing countries. But such a proper demand for the development of human rights has met with stiff opposition from rich countries that make a ballyhoo about human rights. Therefore, the actual results have been limited.

Third, there is the promotion of human rights activities in social, humanitarian, cultural and other fields. There are such activities as: elimination of discrimination against women, realization of the right of equality between men and women, concern for the growth of youth and children, improvement of the lives of old or crippled people, stimulation of educational and scientific development, and so forth. In these respects, the United Nations has adopted a series of declarations and formulated many international conventions, such as the "Declaration of Social Progress and Development," the "Declaration of Juvenile Rights," the "Declaration of

Promotion Among Young People of the Ideals of Peace, Mutual Respect and Understanding Between the Peoples of Various Countries," the "Convention on the Political Rights of Women," the "International Convention on Eliminating All Forms of Discrimination Against Women," the "Declaration of the Rights of the Crippled," the "Pact on the Position of Refugees," and pacts calling for the prohibition of trading in human beings, forced prostitution, and so forth. Focusing on these social and humanitarian matters, the United Nations and many countries have launched extensive activities along various lines.

Fourth, there is the dispute between two superpowers centering on human rights. At UN and other international conferences, the two superpowers, the Soviet Union and the United States, have constantly seized on the problem of human rights as an excuse to attack each other. The United States has accused the Soviet Union of encroaching upon the fundamental human rights of East European countries. The Soviet Union on its part has accused the United States of staging a "human rights propaganda war." The Soviet Union has also collected data and made a countercharge about U.S. encroachment on human rights. All the heated exchanges between the Soviet Union and the United States centering on the problem of human rights are by no means prompted by real concern over human rights. They are motivated rather by what they seek in their contest for hegemony. Hegemonism itself is a negation of fundamental human rights. The Soviet Union's defense of the Vietnamese authorities' large-scale eviction of refugees, which is a serious encroachment upon human rights, and the United States' consistent support for South Africa's policy of apartheid and for Israeli expansionism show that all the ballyhoo they make about human rights is hypocritical.

Fifth, the bourgeoisie and others who have ulterior motives use human rights to attack socialism. Imperialism and the bourgeoisie of the West have never eased up in using human rights to attack and slander our country, aiming to score an ideological penetration against us. The propaganda machine of the West have been continuously distorting their reporting on the social and human rights situations in our country. They have slandered our socialist democratic system as a violation of the so-called "human rights." Some people have even fanned and supported those people in our country who want to see the world plunged into chaos and who engage in illegal activities under the pretext of human rights. These situations existed not only in the past, but also at present. They will continue to exist in the future. We must constantly guard against them.

Adhere to a Principled Stand on the Problem of Human Rights

As early as in 1955, Premier Zhou Enlai, who had led a Chinese delegation back from the Asian-African Bandung conference, pointed out in a report at an enlarged meeting of the NPC Standing Committee that the 10 principles embodied in the declaration of the Asian-African conference "cover also such principles as respecting fundamental human rights, respecting the principles and aims of the UN Charter, respecting justice and international obligations, the peaceful settlement of international disputes, and so forth. All these have been consistently advocated by the Chinese people and have been consistently followed by China." Our attitude toward the aims and principles of the UN Charter, including respect for fundamental human rights, is clearcut.

Human rights are not a hollow slogan. Nor do they represent an isolated problem. Instead, they are associated with the main problem of international politics. At present, the main factors underlying the tense and uncertain international situation, the threat to the safety of mankind and large-scale encroachment upon fundamental human rights, are hegemonism, imperialism and colonialism, and especially the contest for hegemony between the two superpowers, the Soviet Union and the United States. The struggle to safeguard fundamental human rights must be linked with the struggle against hegemonism, imperialism and colonialism and be made part of this struggle. Only in this way can the struggle be meaningful and achieve results.

Opposing the hegemonists' foreign aggression and large-scale and serious encroachment upon human rights is the primary duty of international society. The Soviet Union's dispatch of troops to occupy Afghanistan, forcing several millions of Afghan people to flee their own motherland as refugees, is a serious encroachment upon the fundamental human rights of the Afghan people. Soviet support for the Vietnamese hegemonists' invasion of Kampuchea and their slaughter of patriotic Kampuchean militarymen and civilians has deprived the Kampuchean people of the least semblance of human rights. The acts of aggression on the part of Soviet and Vietnamese hegemonists contravene the aims and principles of the United Nations and are a gross violation of the international charter on human rights. U.S. support for Israel's serious encroachment upon the rights of the Palestinian people and U.S. support for the South African racists is common knowledge. Such acts on their part have naturally been justly condemned by international opinion and have similarly met with the opposition of the Chinese government and people.

The struggle of a large number of Third World countries for the right of economic development is another major task on the international scene to stimulate and safeguard fundamental human rights. With the rich countries exploiting the poor ones, the people of a large number of Third World countries are still in a state of poverty and backwardness. The people of certain of the least developed countries fare even worse. This is hard reality. Therefore, to safeguard the Third World countries' right to develop their national economies and change the impoverished state of the people of these countries is a problem especially worthy of note in international human rights activities and is a duty that falls squarely upon the United Nations, various international organizations and various countries, particularly the developed ones.

Human rights activities promoted by the United Nations and certain international organs in social, cultural and other fields, such as the elimination of discrimination against women, protection of children, concern for old or crippled people, elimination of illiteracy, promotion of scientific and technical development, and so forth, are also human rights problems of concern to international society. In these respects, we should strive to make our own contributions. This is also in line with our existing policy.

In international activities, the act of using the slogan of human rights as an excuse to interfere in the internal affairs of other countries cannot be allowed. We have resolutely upheld the five principles of peaceful coexistence and have never interfered in the internal affairs of other countries. Similarly, we consider that the act of using the problem of human rights as an excuse to slander and attack our country and to interfere in the judicial and administrative affairs of our country is an unfriendly gesture to our country and people and an encroachment upon our sovereignty. This will, of course, meet with our rejection and opposition.

Socialism and Human Rights

The human rights put forth by the bourgeoisie played a positive role in history. But such human rights are narrow and limited. They chiefly serve to meet the demands of the bourgeoisie. For the working class and other laboring people, they are of a highly fraudulent and deceptive nature. Class exploitation is the most serious case of inequality in society. The system of exploitation is the main cause of various phenomena of unequality in society. Under a social system in which one man exploits another, the masses' demand for rights cannot really be met. Marxists hold that only by fully developing social productive forces on the basis of the exploitation system having been eliminated can we enable the broadest mass of people to enjoy rights in political, economic, social, cultural and other fields. And only in this way can we achieve rights on a universal basis.

The socialist experience of China provides eloquent proof that only the socialist system can safeguard the full realization of the various rights of the people. Our revolution led to the overthrow of the rule of imperialism and feudalism in China, a change in the political system of dictatorship by the big landlords and the big bourgeoisie, and the founding of the regime of people's democracy. With the system of exploitation having been eliminated by us, the social productive forces have developed greatly. Scientific, educational and cultural undertakings have also made great progress. All this has brought about a fundamental change in our people's political and economic statuses. These results of our revolution and these rights won by the people have been solemnly incorporated in our constitution. In our constitution, the stipulations about the inviolability of public property, the prohibition of exploitation, the protection of remuneration for an individual's labor, and the realization of the principle of "nothing to those who contribute no work" have provided a most solid basis for the protection of fundamental human rights in our country. All unbiased people can see that the citizens' rights specified in our constitution cannot be compared with the rights of the individual advocated by the Western bourgeoisie. Of course, apart from being restrained first of all by the social system, the rights enjoyed by the citizens of a country are restricted by economic, cultural and other objective conditions. Therefore, for a developing socialist country like ours, the full realization of various civil rights must naturally follow a process.

Our revolution has its own lofty ideals and objectives. Meanwhile, we have also consistently fought to uphold human rights. Socialism is synonymous with human rights. In our country, it is impossible to detach ourselves from our socialist democracy and legal system and from socialist modernization in promoting what is called the problem of human rights. With the continuous improvement of our socialist democracy and legal system and the development of modernization, the various rights enjoyed by the people of our country will surely continuously grow to a new level. Facts will provide ever more convincing proof that the socialist system is also a reliable guarantee for the full realization of human rights.

IS THIS REALLY FOR THE GOOD OF ALL AND THE COLLECTIVE?

Beijing RED FLAG in Chinese No 8, 16 Apr 82 inside back cover

[Article by Li Zhuqi [2621 0031 0366]]

[Text] "We should be willing to spend any amount of money for the people"; "Anything we do for the collective is perfectly justified." Such are the fashionable excuses used by certain leaders of units, mines, shops and schools who, having no regard for the nation's laws, openly violate regulations concerning financial administration, and seek to feather their own nest at the nation's expense.

Shielded by the banners of "for the good of all" and "for the collective," they completely ignore the fundamental and long-term interests of the country and the people and are willing to spend any amount of money and engage in any activity: they unscrupulously hold back profits or other funds, and recklessly issue bonuses, subsidies and overtime payments; they misappropriate "fringe benefits" under all sorts of pretexts, and secretly use them for their own personal ends; they rack their brains for ways to force other units to pay "additional charges," siphoning off a portion of the ill-gotten wealth for themselves.... Activities such as these reduce the nation's financial income, damage the party's fine work style, corrupt the thinking of some of the cadres and masses, and have aroused angry opposition among the broad masses of staff, workers and cadres.

Why is it that these leading cadres have been trying to fleece the nation by raising the banners of "for the good of all" and "for the collective." The main reason is simply that these cadres, having yielded to the pressure of various unhealthy trends and evil practices, have begun pandering to the backward consciousness of a part of the masses. Worse than this, however, is that they are unable to resist the allurement of money and material goods and hope to make a profit out of what they see as the "impunity of the masses." They have calculated that rather than take both sides into consideration, bearing responsibility toward the state and trying to satisfy the "masses," it is better to throw their lot in with the "people." In this way they can both "enjoy the support of the people" and gain material benefits. These people have completely forgotten about the responsibility that must be shouldered by every Communist Party member and revolutionary. To put it bluntly, they appear on the surface to be acting "for the good of all" and "for the collective"; in reality, however, they think only of themselves.

We are now engaged in building socialism and as far as ultimate aims are concerned, everything is for the people and for the collective. We must at all times concern ourselves with the lives of the masses. If we are to truly act in the interests of the people and the collective, however, we must look at the situation as a whole. It is imperative that we uphold the principle of "taking into account the interests of the state, the collective and the individual," and that we protect the nation's public property. The life of the people must be gradually improved in line with the ceaseless development of production. At present, our country's level of production is still too low, the nation's finances are still in the red and the people are by no means wealthy. Equipped with a firm sense of being masters of their own affairs, however, millions of cadres and masses are working to overcome difficulties and build socialism. Leading cadres should lead the masses in their own units in sharing the state's burdens and making a contribution to the four modernizations. There are certain people, however, who have rejected the interests of the whole and are like mice gnawing at the very foundations of socialism. In this way large amounts of property and money belonging to the state have been appropriated through both "legal" and illegal means. Some people say: "This is for the good of all and the collective. It certainly won't end up in my pocket." Even though this might be the case, one cannot escape the true facts of the situation. Such notions of "the good of all" and "the collective" combined with actions which harm the overall interests of the nation will invariably lead to damage on a more serious scale. All such actions violate the regulations concerning finance and seriously threaten the socialist cause.

"One ant hole might cause the collapse of a thousand-li dike." It is imperative that we go all out to block up the "mouse holes" in our country's socialist foundations. If we fail to get rid of these "mouse holes" it will be difficult to achieve the objective of the four modernizations. There is a danger that the fruits of revolution and construction for which several generations have fought will be snatched away. Every cadre who truly has the interests of the people at heart must accept the wide scope of his own duties and must firmly defend the socialist cause. We also urge all people who speak about the "good of all and the collective" while acting to the detriment of the interests of both the people and the collective, to quickly wake up to the truth and stop trying to fool us. It is dangerous!

OPEN UP NEW PROSPECTS FOR UNITED FRONT WORK

Beijing RED FLAG in Chinese No 9, 1 May 82 pp 2-6, 42

[Article by Editorial Department]

[Text] What have we achieved in carrying out our party's united front work in the last 5-odd years since the smashing of the "gang of four"? It can be said that the work has been done quite well and the achievements have been very great. There has been a basic transformation compared with 5 years ago.

Owing to the 10-year turbulence, 5 1/2 years ago the united front--one of the three magic weapons for the Chinese revolution that Comrade Mao Zedong developed for our party--was destroyed almost completely by the Lin Biao and Jiang Qing counterrevolutionary cliques. In the past 5 1/2 years, and especially since the 3d Plenary Session of the 11th CCP Central Committee, the party's united front policies have been gradually revived and lively prospects have taken shape; in certain respects the policies have developed somewhat. Now, the majority of our friends outside the party have peace of mind (although not complete peace of mind), and their patriotic enthusiasm is gradually surging upward. Witnessing the implementation of our party's united front policies and the improvement of the united front situation in our country, patriots in Taiwan, Hong Kong and Macao, and patriotic Overseas Chinese feel contented and relieved; and many foreign friends have expressed their admiration and approval. Because the united front situation has been revived and developed, the political unity in our country has also been greatly strengthened.

The basic transformation of the united front situation is one of the great achievements which our whole party has made in setting to rights things which had been thrown into disorder through unswervingly carrying out the CCP Central Committee's line, principles and policies. However, while affirming the successes, we must also see the deficiencies in the work. Our united front work has not been done "to excess" but not enough; it has not been done "too much" but too little; and it has not been done with perfection but with discrepancies and errors. Only in reviewing the problem in this way can we keep a cool head and can more united front work be better and more thoroughly carried out in the future.

How Should the Whole Party View United Front Work?

In order to do a good job in united front work, we must first of all solve a problem, that is, to fully understand the extreme importance of united front work in the new historical period. At present, many of our comrades, including many comrades who are doing united front work, do not have sufficient understanding of this problem.

It has been completely proven by history that we relied on the three magic weapons, including the united front, in winning the great victory of the democratic revolution during the long struggle of the democratic revolution. Do we still need the magic weapon of the united front in the new historical period of building a powerful and modernized socialist country? The CCP Central Committee has clearly and emphatically expounded on this problem many times. The united front will remain essential and important, with great vitality, and will remain our party's magic weapon in the new historical period and for a very long historical period to come. Do we not stress fulfilling the three great historical tasks of building the motherland, completing the reunification of the motherland, and, internationally, opposing hegemonism? It is absolutely impossible to accomplish these tasks without the magic weapon of the united front. If we overlook or even give up the united front, we will inevitably encounter tremendous difficulties, or even suffer serious setbacks and defeats. More precisely, so long as classes have not been totally eliminated in our country, it is still necessary to have the CCP--the vanguard of the proletariat--and, consequently, the united front under our party's leadership.

We now have two united fronts, one is the international antihegemonist united front, and the other is the domestic patriotic united front. To put it a bit more plainly, the latter is the broadest united front comprising the whole body of socialist laborers and patriots who support socialism and the reunification of the motherland. The comrades of the whole party must pay profound attention to this point: they must absolutely not just rely on the proletariat as an isolated force for fighting bravely, or think that the huge tasks facing us can be accomplished just by adding the peasant class to the proletariat. Closed-doorism and adventurism are certain to lead to grief. Historical and practical experiences have told us again and again that our cause will only be invincible as long as we can intensify the cooperation between our party and the people outside the party, consolidate the patriotic united front under the leadership of the party, unite with as many people as possible, and strive to win their support based on the intimate unity among the workers, peasants and intellectuals. Therefore, for a long period in the future, there will be more and more people whom we are to unite with, and the scope which united front work covers will be wider and wider.

As far as the domestic patriotic united front is concerned, the scope of our work is exceedingly broad. Generally speaking, this work covers the following sectors: 1) the democratic parties; 2) well-known nonparty figures; 3) nonparty intellectual cadres; 4) former Kuomintang military officers who came over to us; 5) former industrialists and businessmen;

6) upper-strata figures among the minority nationalities; 7) patriotic religious leaders; 8) dependents, relatives and friends living on the mainland of people who went to Taiwan; 9) Hong Kong and Macao compatriots and Taiwan compatriots; and 10) returned Overseas Chinese compatriots and Overseas Chinese living abroad. How many people do these 10 sectors comprise? It is not just a few million or a few tens of millions, but as many as 100 million. We must stress unity with them and take the initiative to carry out positive and very careful work regarding them.

This issue is not just limited to the numbers of people in these 10 sectors; it is a fact that there are many superior features among the targets of our work in these 100 million people. There are three main features: 1) they have relatively good knowledge; 2) they have relatively extensive social contacts; and 3) they have a strong desire to work hard for the country. These three features constitute the main current among them, and are extremely important features which we must by no means neglect. It is true that certain people among them have some weak points, or even some stains. However, in light of a comprehensive appraisal, all these weaknesses and stains are minor points, and most of them have now become history. If we just stress these latter features of theirs and disregard the main current, we will become overcautious and put ourselves in a passive position, and therefore we will not dare to go all out to unite with them and win them over, and we will not be able to truly open up new prospects in united front work. Therefore, in view of the actual situation of united front work, what we should stress at present is that we must continue to eliminate the influence of "leftist" thinking, and prevent and overcome the attitude of exclusiveness and the wrong tendency of closed-doorism and adventurism.

We must understand that the internal relations in the united front led by our party are in essence a political alliance between the party and people not in the party. The comrades of the whole party first face a problem of taking a correct view of themselves on this issue. From the overall point of view, our party's contributions to the Chinese revolution greatly exceed those of any other political force in revolutionary movements in recent Chinese history; this is a fundamental and irrefutable fact about the Chinese revolution. Otherwise, how was our party able to qualify for leadership and become the leading party? Of course, we do not mean that because our party is such a great leading party, every party member will naturally be wiser than our friends outside the party. From the individual point of view, there are quite a number of party members who are not necessarily wiser than democratic figures outside the party. Certain party members are even far inferior to democratic figures outside the party! So far as knowledge is concerned, some people who claim to be Communist Party members are not knowledgeable; and so far as mass relations go, they do not get along well with the masses. As for patriotic sentiment, they always criticize our country in every aspect and think that we are inferior to others! Moreover, some of our party members are divorced from the masses. They lack self-knowledge although they are despised by the masses. This is really dangerous. We must take a correct view of the targets for our work among these 100 million people, and also take a correct view of ourselves. The comrades of the whole party must clearly understand that for a time in the past, under the guidance of erroneous "leftist" ideology, we were unfair to our friends outside the party in many respects; it was not the case that they were unfair to us. We must get rid of the "government office" work style and run the party's united front departments as houses of friends. We must certainly not fear difficulties, fear acting in a rightist fashion, and fear having to face a reckoning. We must unswervingly carry out the party's correct principles and policies. We must certainly not act in a domineering fashion; we must take a comradely attitude to our friends outside the party--treating them as equals and promoting mutual consultation and learning. In a word, we must establish and develop relations of utter devotion and of sharing honor and disgrace. Of course, to make all comrades in the party understand this truth is not a task which can be accomplished overnight. But the situation will be much better if we can convince all our leading cadres at all levels in the party, in particular those comrades in charge of united front work, and urge them to keep this truth in their minds.

What Tasks Should We Promote in Dealing With Domestic United Front Work at Present?

Currently we should tackle the following four main tasks:

The first main task is to step up education in the whole party concerning the united front policies for the new period and eliminate the pernicious influence of "leftism."

How to correctly understand the content, significance and function of the united front under the new historical conditions remains a big problem for many comrades. This requires us to vigorously enhance, in terms of ideology, theory and policy, the level of understanding of the whole party, first of all of the leading cadres at different levels, including comrades working in all departments, of united front work.

How should we deepen our understanding of united front work in the new historical period? The fundamental way is to closely integrate the theoretical principles of Marxism-Leninism-Mao Zedong Thought and our party's historical experiences with today's new historical conditions and our party's tasks in the new period, and to carry out reeducation in united front theory and policies. We should organize comrades who are engaged in united front work in various fields to conscientiously study the party's guidelines adopted since the third plenary session. We should also organize them to restudy Comrade Mao Zedong's brilliant works on problems concerning the united front. In pursuing his studies on problems concerning the united front, Comrade Mao Zedong enriched and made great contributions to Marxism-Leninism. We should by no means overlook or even give up the scientific ideological wealth left behind by Comrade Mao Zedong just because of the serious mistakes he made during his later years. We must absorb wisdom and strength from Comrade Mao Zedong's brilliant works and push ahead with united front work in the days to come.

The second main task is to allow all democratic parties and other popular bodies possessing a united front nature to work independently and to bring their enthusiasm into full play.

We must say that this is an extremely important part of the mass line we are adopting in united front work, and one of our extremely important forms of uniting with the vast number of friends outside the party and urging them to contribute to the building of socialist modernization.

Under the new situation in which the Chinese revolution was entering the period of the war of resistance against Japan, Comrade Mao Zedong pointed out in good time that we were bound to adapt to the circumstances by changing our usual armed force deployment, organizing and building up a mighty force, including all possible revolutionary friendly forces, with the aid of the weapon of the united front. This correct principle of Comrade Mao Zedong's guided our party to great successes. In summing up the experiences gained in the struggle in north and central China during the early period of the war of resistance against Japan, Comrade Liu Shaoqi profoundly pointed out that the reason why we failed then to open up a new prospect in our struggle against the Japanese invaders was because some responsible comrades, unable to adapt to rapid historical developments, failed to change in good time their work style and work boldly and resolutely. Today's new historical period can be regarded as the starting period of the resurgence of our cause. Our comrades must adapt to the needs of the great changes and developments in this period, make every effort to create a new way of working which will help to activate an unprecedentedly enormous contingent and open up new prospects. As long as we are adept at working in the new way, including giving full play to the roles of democratic parties and other people's organizations of a united front nature, we will be able to multiply our forces and thus do several times more good deeds than we have done so far. In the past, we gave free rein to the initiative of the China Democratic National Construction Association and the All-China Federation of Industry and Commerce, and thus mobilized them to actively assist the party and the government in making proper arrangements for employing former industrialists and businessmen. Is this not a convincing example? Historical facts have repeatedly shown that it is perfectly possible for democratic parties and other people's organizations of a united front nature to do a great deal of good deeds so long as we give free rein to their initiative and, in the meantime, appropriately help them in terms of guiding principle, policies and methods. Therefore, giving full play to the wisdom and ability of hundreds of thousands of figures outside the party is a key link for us in learning scientific leadership methods, improving our relations with figures outside the party, and consolidating the political alliance between the party and the nonparty figures.

In short, we must be adept at deploying our available mighty forces. In the early period of the war of resistance against Japan, we had only several tens of thousands of party members. However, as the correct guideline and policies were adopted and a vast number of intellectuals, patriotic veteran military officers and patriotic political forces were mobilized, we eventually formed a truly mighty army and thus rapidly opened up new prospects. These historical experiences are worth summing up properly, carrying on and developing under the new historical conditions.

The third main task is to vigorously grasp the implementation of policies, including those on democratic parties, intellectuals, Kuomintang personnel who have come over to us, former industrialists and businessmen, dependents of people who went to Taiwan, minority nationalities, people in religious circles, returned Overseas Chinese, dependents of Overseas Chinese living abroad, and so on.

During the 10 years of upheaval, many of our party members and friends were accused of being "counterrevolutionary." This seriously sabotaged our party's political prestige. The "gang of four" has been smashed for more than 5 years now, but a lot of problems are still left unsolved as far as the implementation of policies is concerned. The policy toward old cadres has probably been well implemented, but other policies have not been well implemented. In some areas, as soon as implementation of policies is mentioned, it means difficulties and demands for money. As a matter of fact, implementation of policies is not always so difficult and does not always require money. For instance, how much does it cost and how difficult is it to make conclusions, rehabilitate people's reputation and make job arrangements? Making job arrangements does not necessarily mean spending more money. We can do it by means of expanding the collective ownership system and developing the individual ownership system. A more difficult problem is the problem of housing, and it is necessary for us to solve this problem step by step. Therefore, it is wrong for us to complain and sigh all the time about the problem of implementing policies. If it is really that difficult, how could some provinces and municipalities have done so well in implementing policies?

An important factor accounting for the fact that the implementation of policies has not been well promoted is that some leading organs do not sufficiently understand local conditions and do not dare to uphold justice. Comrade Zhou Enlai said it well--"understand the situation, study policies, make personnel arrangements, readjust relations." It so happens that at present, some of our leading comrades, including comrades of the united front work department, fail to do this. Some comrades are still worried about making "leftist" or rightist mistakes. Is such a state of mind able to promote united front work? These comrades should change their state of mind and discard their endless worries. Our comrades should always bear in mind that it is our unshirkable duty to do a good job of united front work. We shoulder the unshirkable duty of promoting socialism, building the great motherland and realizing the reunification of the motherland. We must go all out and do a good job in our work for the sake of our cause of socialist modernization. Certainly, besides the problem of state of mind, we must maintain vigilance against people who are still connected with the "gang of four." These people stubbornly delay the implementation of policies and pose a problem of a different nature. We must punish these people with party discipline and absolutely cannot tolerate or be soft toward them.

When acting as governor of Chaozhou Prefecture, Han Yu, a Tang dynasty man of letters, wrote an "Elegiac Address to the Crocodile," giving the crocodile, a local pest, a deadline for departing and going into the sea. He said: "If it can't be done in 3 days, then it can in 5. If it can't be done in 5 days, then it can in 7. If it can't be done in 7, this means the crocodile is not willing to go," in which case the crocodile is "impenetrably thickheaded" and must be punished for refusing to obey orders. There is no harm in our now copying Han Yu's expression. We say, if you don't implement the policies in 1 year, then you will in 3; if you won't do it in 3 years, then you will in 5; and if you won't do it in 5, then you will do it in 7. This is the sixth year since the "gang of four" was smashed, and next year will be the seventh year. If you still don't implement the policies in 7 years, then we will say you are impenetrably thickheaded. This is in essence a major question of principle of whether you are maintaining political unity with the CCP Central Committee. Can we have a vague understanding of such an important question of principle?

Our comrades must fully understand that the question of implementing policies is related to the state's political situation of stability and unity, the strengthening, prosperity and reunification of the motherland, the consolidation and development of the patriotic united work front and the smooth progress of socialist modernization. Despite the scope involved and the workload, we must be determined to do a good job of implementing the various policies. Our party pays much attention to reputation. We adopt a serious attitude toward everything and mean what we say. So how are we going to answer our friends both inside and outside the country if we still cannot do a good job of implementing the policies this year and the following year!

The fourth main task is that we must make proper arrangements for figures outside the party and improve relations of cooperation with them.

What Should We Learn From Comrade Zhou Enlai?

In order to open up a new situation in united front work, we propose to all comrades of the united front that it is necessary to work hard and learn from the good thinking, good work style and good moral quality of Comrade Zhou Enlai.

As we all know, in summing up the experiences of the Chinese revolution, Comrade Mao Zedong laid down three great magic weapons for our party, one of which was the united front. However, as far as actual struggle is concerned, during the decades of the Chinese democratic revolution period and the socialist period, Comrade Zhou Enlai was the one who made the greatest contributions to the establishment, consolidation and development of the revolutionary united front under the leadership of the party. Comrade Zhou Enlai is worthy of the title of an outstanding model in united front work since the building of our party. He won over, united, and educated batches and batches of friends outside the party for the good of our party and the cause of the Chinese revolution. He enjoyed high prestige among his friends both inside and outside the country and added color to our party.

However, when our party made mistakes and suffered setbacks in the course of struggle, many friends understood and forgave many of our mistakes and expressed sympathy and strengthened their confidence in us because there was the lofty image of Comrade Zhou Enlai. The great contributions of Comrade Zhou Enlai to the Chinese revolutionary united front, his glorious figure and mental power will live forever. Therefore, all of us and, in particular, comrades of the united front should strive to learn from the example of Comrade Zhou Enlai.

What should we learn from him? In general, we must learn the following four things:

First, we must learn from Comrade Zhou Enlai's farsightedness and revolutionary breadth of spirit.

Marx and Engels said in the "Communist Manifesto" that all that the proletarians lose during the revolution is their chains and in return they gain the whole world. Marx added that only by emancipating the whole of mankind can the proletariat ultimately emancipate themselves. It is because Comrade Zhou Enlai had such Marxist farsightedness and revolutionary breadth of spirit, and could handle all kinds of practical work including united front work with such farsightedness and revolutionary breadth of spirit, that he could adopt a firm stand, fear no dangers, and be unshakable in working in the most dangerous, most difficult and complicated areas during the tortuous and great struggle of the Chinese revolution. It is also because Comrade Zhou Enlai had farsightedness and revolutionary breadth of spirit that he could consistently uphold his lofty ideals and pure sentiments under complicated circumstances and could emerge unstained from filth. In addition, he also had a vast field of vision and stood on the high plane of emancipating the whole of mankind to win over, unite and transform all those who could be won over, fully displaying a proletarian revolutionary's mental power in thinking, politics, morality and justice.

Second, we must learn from Comrade Zhou Enlai's democratic spirit of treating people as equals.

Comrade Zhou Enlai was a hero of indomitable spirit in the face of any strong enemies, but he never put on airs in front of the people and the friends of the people. He always treated others as equals, taught others with skill and patience, discussed problems with friends and never looked down on others during discussions. As a result, people never felt uneasy under his leadership. He deeply realized that a leading position is insufficient for one to obtain knowledge and experience, and, therefore, he always turned his face to the masses, made a lot of friends, and improved his own knowledge by absorbing the masses' wisdom through frequent and close contacts with the masses and various forms of frank talks. At the same time, he enthusiastically helped his friends and encouraged others to advance. It is because of this that Comrade Zhou Enlai could avoid rigid ways of thinking and could ceaselessly advance until the day he died.

Third, we must learn from Comrade Zhou Enlai's revolutionary character in being ready to take up the cudgel for a just cause.

Comrade Zhou Enlai not only dared to take responsibility for the toughest tasks during the revolutionary struggles, but also upheld justice in dealing with the questions of right and wrong among the revolutionary contingents. He was bold in insisting on right things, criticizing his own mistakes, helping others when they made mistakes, speaking out from a sense of justice when people were wrongly accused, and taking responsibility for problems which emerged within his scope of leadership. As a result, he aroused the enthusiasm of the broad masses of cadres. All this means being ready to take up the cudgel for a just cause! All our party comrades have deeply realized what valuable contributions Comrade Zhou Enlai made to protect the party and the people under very complicated historical conditions such as those during the "Great Cultural Revolution." No matter what happens, we must uphold justice and be ready to take up the cudgel for a just cause. This is a character all Communist Party members should have.

Fourth, we must learn from Comrade Zhou Enlai's lofty quality of setting strict demands on himself.

Comrade Zhou Enlai always realized his own shortcomings and therefore always set strict demands on himself. "One is never too old to learn or reform." This is what he always said and he did what he said. This should become a motto for all our party members. He paid much attention to teaching others by his own example, earnestly practiced what he preached and set strict demands on comrades who worked with him. He worked hard around the clock every day and did not slacken his efforts even when seriously ill. His spirit not only is unforgettable to the Chinese people but also has deeply touched many foreign friends.

Comrade Zhou Enlai has left us for more than 6 years now. However, his great contributions to united front work during his lifetime, his spirit, work style, and moral quality will live forever. All of us, and in particular comrades engaged in united front work, should be his students. Today, all our cadres of the United Front Work Department are the successors to our party's united front cause which was opened up and cultivated by Comrade Zhou Enlai. We should feel no qualms about our predecessors and should refrain from being inert and from being weak and incompetent. In the new historical era, we are confident, capable and can find a way to open up new prospects in united front work.

A MAJOR EVENT IN THE STATE'S POLITICAL LIFE

Beijing RED FLAG in Chinese No 9, 1 May 82 pp 7-8, 12

[Editorial]

[Text] The "draft of the revised constitution of the PRC" has been examined and approved by the national constitutional revision committee, and a resolution has been passed by the 23d Meeting of the 5th NPC Standing Committee for its publication and for its discussion by the people of all nationalities throughout the country. This is a major event in the state's political life. We must do a good job of the nationwide discussion of the "draft of the revised constitution."

The "draft of the revised constitution" makes substantial revisions to the current constitution. The current constitution of our country was approved at the First Session of the Fifth NPC in March 1978. At that time, the "gang of four" had been smashed only a short time before and the 3d Plenary Session of the 11th CCP Central Committee had not been convened. Owing to the limitations of the historical conditions at that time, there was not enough time to make a comprehensive summing-up of the experiences and lessons of the socialist revolution and construction in the 30 years after the founding of the PRC, and there was not enough time to thoroughly eliminate the influence of some "leftist" ideas emerging during the decade of turmoil on the articles of the constitution. Consequently, in the current constitution there are quite a few elements that reflect outdated and erroneous political theories and viewpoints and quite a few regulations that do not conform to the practical situation. Although the second and third sessions of the Fifth NPC had made some amendments to one or two articles, no great changes had been made. Since the 3d Plenary Session of the 11th CCP Central Committee in December 1978, great changes have taken place and major progress has been made in the political, economic and cultural life of our country. The party and state have shifted the focal point of the work, the party has made a new and scientific analysis of the class situation in the country, the state has scored major achievements in building a socialist democratic system and has set forth further demands, and major reforms of the state leading system and the national economic system are being carried out. The "Resolution on Certain Questions in the History of Our Party Since the Founding of the PRC" approved by the 6th Plenary Session of the 11th CCP Central Committee in particular has accomplished the task of bringing order out of chaos in the guiding ideology, comprehensively summed up the historical experiences in the socialist revolution and construction and explicitly defined a path and some major points for achieving socialist modernization that are applicable to the situation in our country. All this was not and could not have been reflected in the current constitution. Moreover, as a fundamental law of the state, many of the articles and stipulations in the current constitution are also not complete, well-knit, specific and explicit. In brief, the constitution approved in 1978 does not keep abreast of the political, economic and cultural reality of our country or suit the needs of the modernization drive of our country. In September 1980, at the suggestion of the CCP Central Committee, the Third Session of the Fifth NPC passed a resolution on setting up a constitutional revision committee to take charge of the work of revising the current constitution. In the past year and more, under the solicitude and leadership of the CCP Central Committee, the constitutional revision committee and its secretariat, acting on the principles that "the leadership should integrate itself with the masses" and that "the experiences of our own country should be integrated with international ones" and proceeding from the fundamental interests of the people of the whole country, have carried out extensive investigations and studies to collect opinions from various quarters. After repeated deliberations and discussions, they have set forth the "draft of the revised constitution" for discussion. After examining and revising the draft for discussion chapter by chapter and article by article, the NPC Standing Committee passed a resolution for its publication. After extensive discussions by the people of the whole country and further revisions, it will be submitted to the Fifth Session of the NPC to be held this year for examination and official approval. Revising the constitution is a very serious and earnest job. It is a project of far-reaching significance in building our country politically during the new historical period.

Of the three constitutions we had before, the one approved by the First Session of the First NPC in September 1954 was a fairly good and consummate one. At that time, under the leadership of the CCP Central Committee and Comrade Mao Zedong, the work of drawing up the constitution was carried out in a very serious and solemn manner. It was during the "Great Cultural Revolution" that the constitution was practically annulled. The next two constitutions reflected in different degrees the abnormal situation in the state's life, but they were very imperfect. However, in 1954, when the work of socialist transformation had just started, it was naturally impossible for a constitution that came into being at that time to reflect the situation of the state after the completion of the socialist transformation. The current "draft of the revised constitution" has retained many of the stipulations of the 1954 constitution that are still applicable today. At the same time, in the light of the great changes in the situation of the country since then and under the guidance of the "Resolution on Certain Questions in the History of Our Party Since the Founding of the PRC," it has paid full attention to summing up the great achievements and basic experiences of the socialist revolution and construction in our country in the past three decades and added many new stipulations. The "draft of the revised constitution" has summed up the fundamental experiences in our history in the past 100 years and more, particularly since the beginning of this century, and recorded the achievements of the people of the whole country in their protracted struggle in the course of the new democratic revolution, the socialist revolution and socialist construction. The draft takes as its general guiding ideology the upholding of the four basic principles and, in the form of a fundamental law, defines the fundamental task of the people of the whole country as the building of our country into a modernized state with a high degree of democracy and civilization. It has also showed clearly the domestic guarantee and the international conditions for accomplishing this task--strengthening the unity of all nationalities throughout the country and the unification of the country at home and, in international affairs, upholding the correct foreign policy, strengthening mutual support with the peoples of various countries, safeguarding world peace and promoting the progressive cause of mankind. Acting on historical experiences and proceeding from reality, the draft has defined fairly completely the fundamental political and economic systems of the state and the principles for developing culture and building spiritual civilization and enriched the contents of the fundamental rights and duties of citizens. In accordance with the principle of democratic centralism and the needs of the new historical period, the draft pays attention to strengthening the building of state organs and makes some important new stipulations on state organization. In brief, the "draft of the revised constitution" has been revised and drawn up under a correct guiding principle after our party had accomplished the task of bringing order out of chaos in the guiding ideology. It has absorbed quite amply historical experiences and lessons and has recorded quite amply the great progress our country has made in various aspects and the orientation of reforms since the third plenary session of the party. It is therefore a fairly consummate and well-considered draft.

As a result of the efforts of the people of the whole country in the past few years, the various aspects of the country have now been restored to normal and have become stable, and the long-term objective of struggle has also been made clear. After being extensively discussed by the people of the whole country, who will sum up their ideas and make further amendments, and after being examined and approved by the NPC, the draft will become the fundamental law of our country during the new historical period. It will be a stable and solemn fundamental law that will function over a very long historical period. It will play a far-reaching and important role in ensuring the long-term stability of our country, in building and improving our socialist political, economic and cultural systems, in ensuring the consolidation of the state and the democratic rights of the people, in achieving the institutionalization of socialist democracy and in building the socialist legal system. Owing to changes in the actual situation, it will perhaps be necessary to make some amendments in the future, but they will only be amendments or supplements to individual articles. The more prudent and careful we are in revising the constitution now, the more likely we are to have a constitution of long-term stability.

It is precisely for this reason that the current discussion of the "draft of the revised constitution" by the whole party is of very great significance. First of all, discussion by the whole people will make the new constitution more complete. A constitution gives expression to the will of the people of the whole country. The revision of the constitution should not be done by a small number of people and it is imperative to sum up correct ideas on the basis of a high degree of democracy. When the people of all nationalities, all localities and all strata throughout the country are engaged in extensive and fully democratic discussions, drawing on collective wisdom and absorbing all useful ideas, the constitution will be in a better position to reflect the conditions of the whole country and the will and aspirations of the entire people. Secondly, the discussion of the "draft of the revised constitution" by the whole people is also a nationwide study or self-education in the fundamental law of the state. Owing to the fact that socialist democracy and the legal system in our country are still incomplete and that, over a considerably long period of time in the past, the constitution has been cast aside or has been incomplete, with the result that no attention has been paid to it, there is quite an extensive lack of knowledge and sense of a constitutional and legal system among the people of our country. It is necessary, by means of discussion by the whole people, to raise the understanding of the cadres at various levels and the broad masses on the status and function of the constitution in the state's life and raise their consciousness in abiding by and defending the honor of the constitution. The discussion of the constitution by the whole people serves as a school for the cadres at various levels and the broad masses to study and grasp the basic spirit and main content of the constitution. It is necessary, by means of discussion by the whole people, to raise the understanding of the cadres at various levels and the broad masses on the four basic principles and the fundamental tasks of the people of the whole country in the future, on our socialist political, economic and cultural systems and the major principles of the state and on the fundamental rights and duties of citizens, and make clear the relationship between an individual citizen and the state as well as his due responsibility and duties to the state and society. Finally, the discussion by the whole people is in itself a study and training by the entire people in correctly exercising their democratic rights and promoting their democratic life. In building socialist democracy, it is necessary, on the one hand, to institute and improve the various democratic systems. On the other hand, it is necessary to demand that the numerous cadres and the broad masses learn to correctly exercise their democratic rights and respect the democratic rights of other people and that they cultivate the habits of democratic life. The accomplishment of this point is a long-term process of study and training. It is stipulated in the "draft of the revised constitution" that the people have the right "to manage state affairs, manage economic and cultural undertakings and manage social affairs through various channels and forms." The fact that it will take the people of the whole country several months to discuss the fundamental law of the state fully reflects the socialist democratic nature of our country. It is at the same time an opportunity for the people to learn to manage state affairs. Through their concern for and discussions of the "draft of the revised constitution" the broad masses will be able to raise their sense of responsibility as masters of the country, learn to manage state affairs and cultivate the habits of democratic life.

In brief, doing a good job of discussing the "draft of the revised constitution" is of long-term and great significance to our country. We should attach great importance to this work and, under the leadership of the party, take an active part in the nationwide discussion and revise and draw up the fundamental law of our country together.

EXPECTATIONS OF THE PEOPLE AND THE PARTY--A TALK WITH NEWLY PROMOTED CADRES

Beijing RED FLAG in Chinese No 9, 1 May 82 pp 9-12

[Article by Commentator]

[Text] At present, a number of middle-aged and young people who combine ability with political integrity and are in the prime of life have taken up their leadership posts. In 2 or 3 years, there will be more such fine cadres promoted in large numbers to leadership posts. They are taking up important leadership work in party and state organs at all levels. The historical mission of carrying forward and promoting our cause will gradually fall on the shoulders of the masses of middle-aged and young cadres.

The task of the current era is to carry on and develop the glorious cause pioneered by proletarian revolutionaries of the older generation and build our country into a modern, highly democratic and highly civilized powerful socialist country. Can the newly promoted comrades assume their own leadership duties and dare to shoulder the heavy burdens of their new posts and accomplish something great? Can they, like the comrades of former years, unite closely with the people in accomplishing the historical mission with which we are charged by the era? Can they refuse to be influenced by others' flatteries, refrain from serving private ends, adhere to the proletarian principle of party spirit and become reliable successors to the proletarian revolutionary cause? This is really a severe test for newly promoted comrades. We trust that newly promoted comrades can stand such a test.

Since the downfall of the "gang of four" and especially since the 3d Plenary Session of the 11th CCP Central Committee, our party, after hard work, has completed the process of turning chaos into order where guiding ideology is concerned. It has restored the Marxist ideological, political and organizational lines and formulated a series of general and specific policies geared to the national conditions of our country. A correct direction of advance is thus provided for us. After positive education and education by negative examples, our people have raised their socialist awareness. They show concern over the future of the state and support for the party's policy. They are filled with great ambitions concerning the socialist cause. This has provided us with a solid foundation for the proper handling of our work. Our older comrades still committed to first line work or already withdrawn to the second line are giving the newly promoted comrades the benefit of their experience, "passing on skills, lending a helping hand and setting examples." This has again provided our work with strong support. Therefore, the comrades newly promoted to leadership posts must, on the one hand, see the arduous nature of the historic mission on their shoulders. On the other, they must have full confidence and consciously and bravely take up this arduous and glorious historical mission.

Like the revolutionaries of the older generation, the newly promoted comrades must first of all cherish the pioneering spirit of being selfless and fearless. In their new posts, they must start with fervent revolutionary enthusiasm, a selfless spirit of dedication and a work style of being realistic and leading a simple life. Now, we have a large amount of work to do and many problems to solve. If we are afraid of difficulties and are fearful and indecisive in action, our enthusiasm and initiative cannot be brought into full play. This will make it impossible for us to accomplish something great. Of course, on the other hand, we must not act recklessly, ignore reality and seek immediate success. By so doing, we will also come to grief. The correct approach is to combine revolutionary spirit with a down-to-earth spirit of working hard. We must adhere to the party's four basic principles. In line with the party's correct guiding ideology, and after careful investigation and study, we must think out ideas and work out ways and means--ingeniously and unhesitatingly translating the party's line and general and specific policies into action in every task we supervise.

Newly promoted comrades face the problem of how to create a new situation. Our party's history tells us that whether a new situation can be created at a turning point in history has a great bearing on the development of the revolutionary cause. To create a new situation, we must, like the proletarian revolutionaries of the older generation, uphold firmly and unswervingly strategic ideas. We must have the strategic foresight to view the situation as a whole and show indomitable revolutionary will. That is, we must display the spirit of daring to act and to hold ourselves responsible. Furthermore, in observing and handling any problem in work, we must act with the whole and not the partial situation in mind. We must have long-term plans. We must keep the main goal in sight and keep busy with daily tasks. We must wage a two-line struggle. We must meet the demands of tremendous changes and great developments and strive to create a new method of work. We must use the major principle reflecting the nature of things to guide various minor principles. Only by so doing, can we avoid being held spellbound by partial, incidental and superficial phenomena (including certain false ones). And only in this way can we remain clearheaded, can we combine political firmness with scientific foresight, and can we gain new leadership experience and create a new situation in work.

Newly promoted comrades all face the same problem: they must quickly grasp all there is to know about a new job and get used to new leadership work. Changes in work environments and conditions should also be accompanied by appropriate changes in the standpoint from which we view a problem and even changes in work methods. Some comrades are well acquainted with the conditions of a given bureau. But if they act as leadership cadres, their knowledge and their accumulated experience will surely prove inadequate. They must have leadership experience covering a wider field. This task requires us to make investigations and studies in order to have a better and an overall idea of the conditions of a given department and a given area. Of course, to acquaint ourselves with conditions, we can scan documents, study data and listen to reports. But the most important thing is to get involved with reality and with the masses to make investigations and studies. "We must constantly ascertain social conditions and make investigations and studies." ("Selected Readings From the Works of Mao Zedong," type-A edition, p 25) Only in this way can we have firsthand data at our fingertips and really have the right and the initiative to speak. Comrade Mao Zedong included the kind of people who refrained from making investigations and studies but lost themselves in thinking. He held that a small number of people who confined themselves to their rooms "figuring out ways and means" and "thinking out ideas" would surely come up with wrong methods and wrong ideas. Our party has traditionally attached importance to investigation and study and has said that this is of primary importance to leaders. The leading comrades of our party Central Committee have played an exemplary role in this respect. Despite the heavy pressure of work, they constantly take time out to get close to the masses to make investigations and studies. Newly promoted comrades are generally in the prime of life and should constantly go deep among the masses to get acquainted with conditions and do a good job of making investigations and studies.

An important aspect of leadership work is to unite cadres, make proper use of cadres and build the contingent of cadres well. Only by so doing can everyone speak the same language, can there be friendly relations and mutual support and understanding between comrades, can we really achieve the aim of working toward the same goal, and can we arouse the enthusiasm of the entire rank of cadres to bring about stability and unity and do various tasks well. In using cadres, we must act according to the principle of party spirit, insist on playing fair and square and using people on their sheer merits. We must make a point of uniting these people who oppose us and who oppose those who have erred. So long as those comrades who have erred admit their mistakes and correct themselves in practice, we should refrain from discriminating against them. Concerning old comrades who have retired, we must respect them, humbly learn from them and take the initiative to listen to their opinions. This is an important prerequisite for the proper handling of the unity of cadres. Regarding the contradictions and cases of disunity that have arisen among cadres for historical reasons, we cannot listen to the story of only one side and must do more work aimed at solving misunderstandings. The aim is to arouse them to get united in the process of advance. In our new posts, we are likely to encounter people who do not take the overall interests of the state into consideration, people who show no cooperation or support for our work, and even individuals who make things difficult for us, ridicule us and try to strike at and get rid of us. In the face of all these conditions, we must keep cool and take a correct approach. It is wrong to resign ourselves to a state of anxiety or allow ourselves to become depressed. We must not give up doing ideological and political work with unity in mind, nor must we use the wrong methods to cope with what is wrong. This will only end in our isolation. In the period of the Three Kingdoms, Old General Cheng Pu did not reconcile himself to the promotion of Zhou Yu as governor and often threw his weight around, making things difficult for others. But Zhou Yu did not repay in kind. Instead he used correct methods to make Cheng Pu wake up. Later, the two became the best of friends. They played an important role in consolidating the regime of Eastern Wu. Ancients could act like this. We Communist Party members should go one step further. Newly promoted comrades must devote themselves to serving the public heart and soul, pay close attention to the building of the ranks of cadres and strive to distinguish between right and wrong, between what deserves punishment or praise, and between rewards and penalties. If we can unite the great majority of comrades, we can direct the overwhelming majority of cadres' thoughts and talent toward work.

As far as the leadership post is concerned, there is the problem of keeping in close touch with the masses. The mass line is our party's fundamental line. Keeping in close touch with the masses is a mark that distinguishes our Communist Party from other political parties. The only source of our knowledge is the practice of the masses of people and their collective wisdom and collective experience. Newly promoted comrades cannot throw their weight around and put on airs, drifting apart from the masses just because they have been promoted and become "officials." Moreover, we must note that given a promotion and a change in our duties some people are not likely to behave and talk as freely as they did to us before. Therefore, a newly appointed leader must consciously overcome these obstacles and show more initiative in getting close to the cadres and people at lower levels, talking more with them, supporting their supervision. If we do not do so, we are unlikely to hear of differing views. It is all the more difficult for us to hear of any criticism from the masses of the defects and mistakes in our work. We are thus liable to blindly believe that everything we have done is right. This is highly dangerous.

After we assume new leadership duties, people will ingratiate themselves with us in this way or that. Flattery is a vulgar practice of the exploiting class and also "a sugar-coated bullet." We must remain clearheaded and refuse to be moved. Flattering remarks are of course not to be taken seriously, still less should an exaggeration that boosts one's ego be accepted. The reasons for this are given. In the "Record of the Warring States" is a story about Zou Ji's ridiculing ruler Qi's acceptance of an admonition. Zou Ji's wife, his concubine and his guests all praised him as being more handsome than Duke Xu. Actually, he was just no match for Duke Xu in looks. He pondered over it throughout the night. It dawned on him that "my wife says that I am handsome because she is biased toward me. My concubine says that I am handsome because she is afraid of me. My guests say that I am handsome because they have something to ask of me." All those people that respond to flatteries will surely be deceived. As time goes on, they will make the mistake of drifting apart from the masses. In the world, this situation is unknown: given a promotion, a person's ability and his level automatically rise. Therefore, we must always make a one-divides-into-two analysis of ourselves, so that we can always maintain the style of being humble and modest and free from arrogance and rashness. We must always remain the respectful pupils of the masses of people and cadres. In the revolutionary ranks, there are many heroic figures, model workers and leading cadres who originally distinguished themselves by their outstanding achievements. But yielding to "flatteries," they have waxed arrogant. They remain at the same level without making any progress and end up drifting apart from the masses. Some have even consigned themselves to oblivion. Mr Lu Xun once mentioned the serious harm of flattery. He said that flattery can have the effect of ruining the career of someone of consequence and making it impossible for him to stage a comeback for many years. This should particularly arouse the vigilance of those comrades newly assigned to leadership posts. In no way should they give the flatterer an opportunity to get his way.

Now, there prevails on the social scene an unhealthy practice of "asking favors." Some of our cadres command no respect among the people. What they say goes unheeded. This is often because in handling major and minor issues concerning their own interests and their own relatives, they compromise themselves in all cases of "asking favors" and fail to uphold the party's principles. Some comrades think nothing of these so-called trifles. These trifles seem like nothing and seem forgivable in light of the large amount of work they have contributed. Therefore, they assume the wrong attitude of excusing and giving themselves encouragement. They do not know that these "trifles" reflect how firm an individual is in upholding his concept of public and private interests and the principle of party spirit. If in times of peace these trivial matters in private life cannot be properly taken care of, how can we unhesitatingly sacrifice ourselves in wartime or at a time when we are called on to risk death? Today, stopping the practice of "asking favors" is no minor problem. It is a problem concerning the reputation of the party and its purity which must be protected. Many serious economic crimes show that some leading cadres' involvement, their lapse into mistakes and even their degeneration began as matters of compromising out of personal consideration. Wholehearted devotion to duty in serving the people is our party's basic aim. Every cadre of our party has only the obligation of wholeheartedly and assiduously serving the people, and never the right to abuse authority to serve the interests of any individual or small group. What Comrade Zhou Enlai said on many occasions about cadres standing the five tests (the ideological test, the political test, the test of personal considerations, the social test and the test of life) is really significant. His glorious and great life--as exemplified by his cautious and conscientious approach, his devotion to the public without any thought for self, his adherence to principle without being swayed by personal considerations and his defiance of death--is in itself a shining example for us to follow. Comrades newly promoted to leadership posts cannot avoid experiencing various incidents of "asking favors." In our approach to such matters, we must emulate Comrade Zhou Enlai and resolutely uphold the party's principles. We must display the militant spirit of Communist Party members, uphold what is right and resist what is wrong.

To do a good job of leadership work in the historical conditions of today, we must have scientific and cultural knowledge and technical knowledge. We must cherish the spirit of doggedly, perseveringly and fearlessly doing research. Now there is serious waste by the state. There are so many loopholes in the management system. Actual work is marked by lack of a scientific basis and originality. All this has to do with our inadequate scientific and cultural knowledge and our inadequate knowledge of scientific management. We must of course learn how to build projects in the course of construction. We must also squeeze time out to study and research the subjects that we need to know about in our own fields. As far as comrades with some fundamental knowledge are concerned, they also must not remain satisfied. They must keep taking time out to study and to do research. In the new historical period, leaders must be politically advanced and professionally trained. This is an important requirement for the proper handling of our work. Using the pressure of work as an excuse to relax our efforts in acquiring technical knowledge is also a manifestation of lack of enthusiasm and fear of difficulties. This must be resolutely corrected.

In any leadership post, a newly promoted comrade must take up the duty of seriously studying Marxism-Leninism-Mao Zedong Thought. Such a study effort must be combined with the cultivation of ideological awareness in a serious effort to transform the world outlook. Only in this way can we grasp revolutionary theory as a weapon. Only in this way can we raise the ability to distinguish between right and wrong and to correctly solve various problems encountered in the process of revolution and construction, and can we avoid going astray in the face of complicated phenomena and maintain the communist purity of Communist Party members. Also only in this way can we become sober-minded, resolute Marxists. As far as a leader is concerned, he has little future if not armed with theory. A well-known remark from Comrade Zhou Enlai: "We must live to learn and to transform ourselves," must be cherished as our motto.

The people and the party committee have vested a weighty mission in the new generation and have great expectations for them. We proletarian revolutionaries of the older generation and numerous revolutionary veterans have made our contributions in the glorious history of founding the new China. Newly promoted comrades should use their own revolutionary experience and fervently keep working toward creating the glorious history of building a modern and powerful socialist country. Several decades hence, when our descendants speak of this era of ours, they will, just as we do with the proletarian revolutionaries of the older generation and many old comrades today, say: They are the pride of the party and a generation of worthy proletarian revolutionary fighters.

AN INVIOLABLE BASIC PRINCIPLE--SOME UNDERSTANDING ON UPHOLDING THE POLICY OF RELYING MAINLY ON THE PLANNED ECONOMY AND SUPPLEMENTING IT WITH REGULATION BY MARKET MECHANISM

Beijing RED FLAG in Chinese No 9, 1 May 82 pp 13-19

[Article by Fang Weizhong [2075 4850 0022]]

[Text] I. Several Talks by Comrade Chen Yun

The idea of a socialist economy having to mainly rely on planned economy while making regulation by market mechanism subsidiary was advanced long ago by our party.

After the basic completion of socialist transformation in 1956, Comrade Chen Yun explained this point at the 1st Plenary Session of the 8th CCP Central Committee:

"The situation of our socialist economy will be: In industrial and commercial management, state management and collective management will be the principal part of our industry and commerce, but there will also be a certain amount of individual management. This individual management will be supplementary to state management and collective management. In production planning, the principal portion of industrial and agricultural products of the whole country will be based on planned production, but at the same time, there will be free production of some products based on market changes and within the extent permitted by the state plan. Planned production will be the mainstay of industrial and agricultural production, and free production based on market changes and within the scope permitted by the state plan will be a supplement to planned production. Therefore, our market will absolutely not be a capitalist free market but will be a socialist unified market. In the socialist unified market, the mainstay will be the state market, but there will be to a certain extent a free market under state leadership. This free market will be a supplement to the state market under the leadership of the state. Therefore, it will be a component of the socialist unified market."

This talk by Comrade Chen Yun completely expounded the idea of mainly relying on the planned economy while making regulation by market mechanism subsidiary. Unfortunately, this idea was later subjected to leftist interference and could not be properly implemented.

In the early part of 1979, Comrade Chen Yun reiterated more explicitly the principle of mainly relying on the planned economy while making regulation by market mechanism subsidiary, and pointed out that there must be two parts in the national economy throughout the socialist period: 1) the planned economy part (planned and proportionate part); 2) the part involving regulation by market mechanism (or the unplanned part based on self-regulatory market demands). The first part is basic and primary; the second part is subordinate and secondary, but also necessary. He pointed out that what we have done by adhering to planned and proportionate development in our planning work is correct, and the only shortcoming is that "planned and proportionate" does not include "regulation by market mechanism." He pointed out that the present planning is too rigid and includes too many things, regulation by market mechanism is being restricted, production cannot become rich and colorful, and the articles of daily life required by the people have become very drab.

Here, Comrade Chen Yun stressed the need to improve our planning system, called for giving play to the supplementary role of regulation by market mechanism while adhering to the principle of mainly relying on the planned economy, and criticized some comrades for not understanding the inevitability and necessity for doing so.

Since 1979, we have made some improvements in the economic system. To a certain extent, we have corrected the shortcomings of excessive planning and over rigid control and have paid attention to giving play to the role of regulation by market mechanism. Our general orientation is correct. For some time there have been mentions of "integrating regulation by planning mechanism and regulation by market mechanism" in some documents. This formulation has played a positive role in changing the situation of not paying attention to regulation by market mechanism. However, placing regulation by market mechanism and regulation by planning mechanism side by side can easily lead to misunderstanding. In December 1980, Comrade Chen Yun pointed out at the central work conference: "Our state takes the planned economy as the mainstay." According to Comrade Chen Yun, the "Resolution on Certain Questions in the History of Our Party Since the Founding of the PRC," adopted at the 6th Plenary Session of the 11th CCP Central Committee in June 1981, clearly stated: "It is necessary to give play to the supplementary, regulatory role of the market on the basis of public ownership."

In December 1981, Comrade Chen Yun, at a meeting of first secretaries of provincial, municipal and autonomous regional party committees, pointed out that the agricultural economy is an important part of the national economy and it is also necessary for agricultural economy to mainly rely on planned economy while making regulation by market mechanism subsidiary. Only in this way can it contribute to the long-term interests of the peasants and enable the state to carry out construction. At this meeting, he also talked about coordinating the construction of the nation like pieces in a chess game and working according to plan.

On 25 January 1982, in his talk with responsible comrades of the State Planning Commission, Comrade Chen Yun again discussed the subject of mainly relying on the planned economy while making regulation by market mechanism subsidiary. He pointed out that after carrying out the responsibility system in agriculture, there cannot be any exception to adhering to the above-mentioned principle. For example, the suburbs must plant vegetables according to plan, hog-raising tasks must be assigned, the acreage planted to tobacco must not be further increased, and the area sown to grain must not be further reduced. He pointed out that in order to properly grasp the relationship between construction and livelihood, the people must first have enough to eat and construction comes second.

From the emphasis in Comrade Chen Yun's recent talks on the importance of the planned economy, we can see that regulation by market mechanism can only be flexibly applied within the scope permitted by the state plan. Otherwise, it will shatter the state plan.

II. Great Practical Significance

Since the 3d Plenary Session of the 11th CCP Central Committee, we have carried out a preliminary restructuring of our economic system and achieved very good results in carrying out the policy of opening the door to foreign countries and invigorating the economy at home. People are beginning to manage the economy in accordance with economic laws. The gradual improvement in economic life has aroused the enthusiasm of the localities, enterprises, and the broad masses of workers and peasants for production and has promoted the development of the national economy. Practice has proved that such reforms are necessary because they conform with the wishes of the masses. Without such reforms there could not be today's excellent situation.

In the process of discussing and carrying out the restructuring of the economic system, many comrades have published articles analyzing the existing state of our economic system, exploring the orientation for restructuring the system and smashing some outmoded concepts, and the main trend is good. In the process of exploration, the appearance of some incorrect formulations is unavoidable. However, some articles have put forth some incorrect ideas and views which will lead to weakening and breaking away from the planned economy. For example, they have exaggerated the shortcomings of the planned economy and regarded blind command and ossification as the inevitable products and results of unified planning. They have refused to recognize the existence of the law of planned development and inappropriately exaggerated the role of the law of value. They have negated the instructiveness of planning and the necessity of administrative intervention and have advocated turning enterprises into independent economic entities. They have stressed that planning is bound to fail and regulation by market mechanism is bound to succeed, and have advocated establishing a planned economy on the basis of regulation by market mechanism. They have advocated that regulation by planning mechanism should only control macroeconomics and that microeconomics should completely rely on regulation by market mechanism. These ideas and views are divorced from the actual conditions in China and do not conform to the principle of mainly relying on the planned economy while making regulation by market mechanism subsidiary.

Generally speaking, the restructuring of our economic system and all our economic activities have been carried out with the orientation of mainly relying on the planned economy while making regulation by market mechanism subsidiary. However, because of the inability of management work to follow up, the lines of demarcation between some policies are not distinct and certain reform measures cannot be fitted in. On top of that, with the rise of departmentalism and decentralism in some units, certain tendencies of breaking away from and weakening the planned economy have also appeared in actual economic activities. For example, in agriculture, the quantity of important farm products, which come under requisition by purchase, fixed purchase quota and turnover to higher authorities, has become less and less. Some localities have dropped the unified purchase and fixed purchase quota tasks altogether, and this has resulted in a reduction of the area sown to grain. Some localities have lost control over the area planted to cash crops; consequently, some cities are not getting enough vegetables. In industry, some units are unwilling to accept the production plan and the allocation plan set by the state. They have willfully retained products in short supply on the market and arbitrarily expanded the extent of their own marketing, and have overfulfilled the planned production of the state on some highly profitable products in excessive supply. This has resulted in overstocking and false financial figures. In capital construction, the inability to control construction using self-raised funds and construction using bank loans has developed into blind construction in some places. In the field of circulation, because "all the workers, peasants, soldiers, students and traders want to be in business," they have blindly competed with each other, blocked each other, ruined the unified market of the country, and disrupted the planned supply and marketing of materials and the circulation of commodities. In the distribution of income, some enterprises have casually increased the proportion of profit retained and indiscriminately apportioned costs. The phenomenon of evading and not paying taxes is quite serious, and there is no control over cash awards and various welfare subsidies. In foreign economic activities, instead of adopting a unified policy and uniting against foreigners, they have each gone their own way, undercut each other's price and cut the ground from under each other. The profit of the locality and the enterprise is small, but the loss to the state is enormous. What merits pointing out is that these economic criminals, who have taken advantage of the loopholes in our economic management to engage in such sinister activities as smuggling and illegal transactions, corruption and graft, speculation and swindling, and embezzlement of state and collective property, are already running quite rampant.

The tendency of breaking away from and weakening the planned economy appearing in the above-mentioned theoretical propaganda and in actual economic activities should not be exaggerated, but this tendency definitely exists. If we ignore it and allow it to develop, it will become worse and worse and there could be a danger of shattering the state plan.

The great practical significance of Comrade Chen Yun's recent talks is that they make us clearheaded so that we can take measures to solve emerging problems. In restructuring the economic system, we must adhere to the policy of opening the door to foreign countries and invigorating the economy at home, and correct the tendency of weakening and breaking away from the planned economy. We must never allow the tendency of liberalization to run wild. Only in this way can we create conditions for consolidating the position of economic planning and further restructuring the economic system.

III. The Two Kinds of Economy Cannot Be Confused

According to the Marxist standpoint, there are two principal kinds of economy in the world today: one is the market economy built on the basis of capitalist private ownership, and the other is the planned economy built on the basis of socialist public ownership.

It is fundamentally impossible to build a planned economy on the basis of capitalist private ownership. As long as contradictions exist between the socialist nature of production and the private nature of ownership, there will be no way to solve the state of anarchy in social production. Similarly, a capitalist market economy cannot be carried out on the basis of socialist public ownership. The giving up of the planned economy will inevitably destroy socialist public ownership and ultimately result in a retrogression to capitalism.

There cannot be any confusion or uncertainty regarding this basic Marxist standpoint.

We should recognize that, as a result of the development of capitalist contradictions, the bourgeois governments have to a certain extent strengthened intervention and planned guidance over the capitalist market economy. In Japan, some people call their economy a system of economic planning based on the market economy. In West Germany, some people call their economy a social market economy, or the addition of social balancing and government intervention on the basis of the market economy. However, the intervention and guidance of the bourgeois government make no change in the capitalist ownership of the means of production. Therefore, they also cannot basically solve the state of anarchy produced by the whole society. This kind of government intervention and planned guidance are essentially different from the planned economy built on the basis of socialist public ownership.

The practice of socialist planned economy has negated the viewpoint that commodity relationships and a market do not exist in socialist economy. To a certain extent, it has taken advantage of the regulatory role of market mechanism and allowed the spontaneous production and marketing of some commodities based on the relationship of supply and demand on the market to supplement the production and supply of products not provided for in the plan. At the same time, it has made use of the law of value and the economic levers in a planned manner to regulate social production and changed unitary administrative means into the simultaneous use of administrative means and economic means. However, that part of regulation by market mechanism within a given framework of the socialist economy is a component of the socialist unified market. There is a basic distinction between the socialist market and the capitalist market.

In recent years, such formulations as "giving the same importance to the planned economy and the market economy" and "the planned economy must be built on the basis of the market economy" have also appeared in some articles published in the country. The implications of these formulations are neither distinct nor precise and can be easily confused with the bourgeois economic theory of the West and lead to ideological confusion. The articles which frankly advocate that China is not in a situation to carry out a planned economy and should carry out a market economy are basically mistaken.

IV. We Must Not Forget the Superiority of the Socialist Planned Economy, and We Must Not Attribute the Economic Losses Caused by Mistakes in Guiding Ideology and Political Turbulence to the System of a Planned Economy

The superiority of the socialist planned economy is tremendous.

1. The state has the necessary means and is able to make arrangements for the production and needs of the whole society in a unified way. This promotes the coordinated development of the economy and reduces waste and blind production.

2. When the economy is in a state of imbalance, it is possible for the state to take overall or partial measures for readjustment to restore the balance of the economy more rapidly.

However, the capitalist economy does not possess this kind of superiority. It has planned guidance and government intervention to mitigate contradictions and crises in the capitalist economy, but is unable to basically resolve them. Beneath the prosperous exterior of capitalism, numerous insurmountable contradictions are concealed. The fact that currency inflation and economic stagnation are either interwoven or coexist is an obvious example.

Over the past 30 and more years since nationwide liberation, by relying on the planned economy we have established an independent and comparatively complete industrial system and a national economic system to guarantee the basic food and clothing needs of 1 billion people. We have eliminated the gap between poor and rich, basically solved the problem of unemployment, stabilized prices on the market and maintained the independence of our country. Without a planned economic system, it would have been impossible to make these achievements. Over the past 30 years and more, several major imbalances have appeared in the national economy. However, because of the effective measures adopted to carry out planned readjustments, we have been able to gradually resolve these imbalances and to demonstrate the tremendous power of the planned economy in triumphing over difficulties.

It cannot be denied that we have suffered many setbacks in our socialist construction which resulted in serious losses to the economy. However, these losses were not caused by the implementation of the system of a planned economy. Why was the economy able to develop more harmoniously during the periods of national economic recovery and the first 5-year plan but suffered setbacks in economic development from 1958 to 1960 and after 1967? As shown by economic analysis, the most important reason was because, in our anxiety for quick results, we set overambitious targets in production and construction under the guidance of "leftist" ideas. Plans became seriously divorced from reality, and correct planning systems and methods were attacked and destroyed. The problem which appeared under the guidance of "leftist" ideas was precisely not wanting a comprehensive balance or proportionate results but just the opposite. During the past 30 years and more, the first 2 years were good, the years in between were full of ups and downs and there was not much time to really concentrate on carrying out planned construction in an earnest and conventional manner. In particular, during the 10 years of political turbulence of the "Great Cultural Revolution," there was no way of smoothly carrying out a planned economy or bringing into play the superiority of a socialist planned economy. If not for that, our achievements in construction would certainly be much better than those at present.

Why have some people lost their confidence in the planned economy? An important reason is that they have not conscientiously analyzed the root cause of the setbacks in our past economic development and have attributed the responsibility, which should not be shouldered by the planning system, to the planning system. The planned economy is a bright pearl that has been covered with dust. If the dust is removed, the planned economy will shine brightly.

V. We Must Improve the Planning System But We Cannot Carry Things So Far as To Start All Over Again

The planning system formulated after the founding of the PRC is basically correct and is in line with the demands of economic planning.

First, the main economic activities of society, including production, construction, circulation and distribution, and also the important components of cultural, educational and sanitation undertakings, are incorporated in state plans, with all departments striving toward planned and proportionate development.

Second, mandatory plans are imposed on the principal products of major enterprises, so that the state can exercise direct control over the production and distribution of important products bearing on the state's economic life and the activities of important enterprises, in order to ensure the satisfaction of the needs of the state and the people in their everyday life.

Third, carry out the principle of unified planning and split-level management allowing the centralization of big power and the dispersion of little power.

The problems and defects of the planning system are chiefly:

1. We stress the need for a plan to be complete and detailed and try to incorporate everything in it without paying attention to the necessity of regulation by market mechanism, or without allowing the spontaneous regulation of a part of production by the law of value.

2. We impose excessive and overrigid control over the planned sector, without paying attention to arousing local and departmental enthusiasm. We overlook an enterprise's proper rights, so that the development of its initiative and enthusiasm suffers.

3. We mainly rely on administrative means without paying attention to or being good at using economic means, or without using the economic levers to regulate production.

Given a low level of planning and lack of experience in controlling social mass production, the planning organs are kept so busy with the daily routine of management that they cannot take care of everything. On the other hand, enterprises are living off the state and "eating out of one big pot." Gaps between supply and demand often occur, seriously interfering with the improvement of economic results and hampering the development of the superior features of the socialist planned economy.

To deal with the above problems, in line with the principle of reforming the economic system set forth in the government work report given by Premier Zhao Ziyang at the 4th Session of the 5th NPC, our planning system calls for improvement and reform in the following respects:

First, in line with the principle of taking planned economy as the primary factor and regulation by market mechanism as the subsidiary one, we must follow the system of combining mandatory plans and guiding plans. For a number of products and enterprises, the state does not hand down plans but allows free production by enterprises, in order to make up for what is lacking in state plans.

Mandatory plans are arranged by the state in a unified manner and must be strictly observed and carried out by planning units and plan enforcement units at all levels. Plans in this category mainly refer to tasks concerning the national economy as a whole, such as planned state purchases and fixed purchase quotas, the transfer of products into or out of an area, the production, purchase, distribution and inward or outward transfer of important industrial products, the total amount of investment in fixed assets and large and medium-sized construction projects, the volume of transportation of major commodities, the total volume of import and export trade, the state's financial income and expenditure, banks' credit receipts and payments, the international balance of payments, the total number of workers in state enterprises and the total amount of their wages, the prices of important products, and so forth.

Guiding plans refer to those relatively important projects in the development of the national economy and plans formulated and handed down by people's governments at all levels which serve to guide the direction of development and which are not compulsory. Based on guiding plans, the enforcement units work out plans by combining social needs with the actual conditions of a given unit and report to the department in charge of planning as a matter of form.

Concerning the development of other economic enterprises outside plans in the above two categories, the state does not set plans or targets. Basic-level units are allowed to make their own arrangements according to social needs where the state's policies and decrees permit. This represents a sector subject to regulation by market mechanism.

Second, in line with the principle of unified planning, split-level management, and centralizing big power while dispersing little power, we must correctly define the limits of central and local plans and correctly prescribe the power assigned to people for controlling enterprise plans. Take industrial production for example.

For important and relatively important products bearing on national planning and the people's livelihood which must be purchased and distributed under central plans, the central authorities should directly set plans in the form of central instructions. For those important and relatively important products bearing on national planning and the people's livelihood which must be purchased and distributed under regional plans, plans are set by various regions in the form of regional instructions. Regions must obey unified national plans. In working out plans, departments at the central level must take regional features and proper regional rights into consideration. Based on their different roles in the national economy, enterprises must follow different management patterns, some directly under the control of the central department in charge and some under regional control. Of the kinds of products produced by enterprises, some must be produced according to mandatory state plans. Some must be mostly produced according to state plans and partly produced according to arrangements made by the enterprises themselves. Some may be partly produced according to state plans and mostly produced according to the enterprises' own arrangements. Some are to be organized by enterprises with regard to production.

Third, in light of the role of the economy of a socialist country and the objective laws of development of the socialist economy, we must adopt the method of combining administrative means with economic means. To enforce mandatory plans, we must chiefly rely on the state's administrative means to exercise management. But in formulating plans, we must take market demand into consideration and take the production costs of products and their prices into account. Guiding plans are not compulsory. The state chiefly gives guidance through economic policies, economic levers and economic regulations and resorts to administrative means as a supplement where necessary. Products regulated by market mechanism can be freely produced and exchanged where state laws and decrees permit, but the state must strengthen market control and prevent the expansion and spread of their negative role.

To effect improvements and reforms in the above three respects, we can promote what is correct in the planning system previously followed and overcome its drawbacks and defects. Of course, what is involved here is a large number of problems concerning both theory and practice that call for solution.

One school of thought holds that once plans are followed everything goes wrong and that once regulation by market mechanism is promoted everything comes to life. Those who hold this view, therefore, call for the cancellation of mandatory plans and administrative interference and the promotion of "regulation of macroeconomics by planning mechanism and regulation of microeconomics by market mechanism." This actually means that all plans must be realized through regulation by market mechanism. It seems that we can thus avoid bureaucratism, blind commands and inflexibility and that the national economy can thus be enlivened with the realization of planned and proportionate development.

Is there some sense to this viewpoint? It should be said that there is. In the past, plans were followed too rigidly. Now, they should be made more flexible. In the past, no attention was paid to giving full play to the supplementary role of regulation by market mechanism. Now, such a role should be brought into full play. But a conclusion thus drawn means that mandatory plans and administrative means should be abolished and that everything should be made dependent on regulation by market mechanism. This is wrong. Experience has proved that if we make proper use of the market mechanism as a regulatory factor, the economy can be made more active. But if we do a bad job in this respect, the economy can get in trouble. What can really enliven the economy is not the regulatory role of market mechanism but a unified state plan compatible with reality. Only by properly arranging and coordinating various proportionate relations and linking immediate development with long-term development within the framework of the whole plan for the national economy and carrying through unified national plans, can the whole national economy, given the proper regulatory role of the market mechanism, be really made to thrive. To realize unified state plans, we must combine mandatory plans with guiding plans and administrative means with economic means. If we do not do so and let all enterprises resign themselves to the action of the market mechanism, and treat the enforcement of national plans as a matter of choice, then unified national plans would be reduced to nothing but a mere formality and any talk about "regulation by macroeconomic plans" would also become just nonsense with no microeconomic activities falling into line. We must learn how to use the economic levers and especially learn how to properly handle plans for the national economy. In the past, we suffered because we did not know how to use the economic levers. But what made us suffer most was that we did not know how to handle or were not equipped to handle economic plans well. If we do not strive to raise the level of planning work and the level of economic work, the sole reliance on mandatory plans would land us in trouble and cause the economy to be dislocated or out of order. Reliance on market mechanism as a regulatory factor would also give trouble and cause the dislocation of the economy.

The proper conclusion to draw is that the fundamental principle of a planned economy must be adhered to and the planning system must be improved. We must pay attention to developing the supplementary role of regulation of market mechanism, pay attention to the proper dispersion of the power to make economic decisions, and pay attention to using economic policies, the economic levers and economic rules. We must not deviate from the principle of taking the planned economy as the main factor. Nor can we give up plans of a guiding nature. Nor can we give up centralization and unification. Nor can we give up administrative means. This is to say that while stressing planned economy as the main factor, we cannot overlook the supplementary role of regulation by market mechanism. While stressing the regulatory role of the market mechanism, we cannot weaken the role of the planned economy.

VI. Sober-Minded and Healthy Reforms

It is highly necessary to reform the economic system, including the planning system, but the reform should be sober-minded and healthy.

First, we must take correct theory as a guide. Any display of one-sidedness in a theoretical sense and any deviation from reality will naturally lead to errors and mistakes in action.

Second, we must follow a clearcut direction reform. This is to say that, as pointed out by Comrade Chen Yun, we must take the planned economy as the main factor and regulation by market mechanism as the subsidiary one, and practice big planning, small freedoms, big centralization and small dispersions. In no way can we act to the contrary, or do one thing to the neglect of another.

Third, in light of the actual conditions of our country, we must formulate perfect reform programs, work out a general scheme that takes everything into consideration, and put forth practical and feasible measures and steps. We must avoid having to stop to watch every step of the way and avoid stressing one thing to the neglect of another, and even the appearance of contradictions and clashes, in the course of implementing reform programs.

Fourth, we must proceed in a planned and orderly manner, after conducting trial point and feasibility studies. We must enable administrative work to catch up and avoid doing everything all at once.

Fifth, concerning some reforms already in progress, we must sum up experiences promptly so that the problems that have cropped up can be solved promptly and satisfactorily. We can never press forward rashly. Nor can we beat a hasty retreat once a problem crops up. This is in order to avoid the reappearance of a situation marked by chaos following relaxation and this chaos requiring a tightening up.

Sixth, before a new program has been formulated, the old ways of doing things must not be freely changed or dropped. We must adhere to the principle of destroying nothing where something new has not been created and must avoid chaos and prevent the appearance of a state of anarchy with everyone going his own way.

The leading comrades of the party Central Committee and the State Council recently again stressed the importance of summing up experiences and the importance of formulating general reform plans. By seriously doing things in this way, the reform of our economic system can surely be sober-minded, healthy and successful.

VII. Strengthen and Improve Planning Work

Persistence in taking the planned economy as the main factor and regulation by market mechanism as the subsidiary factor has imposed a more exacting demand on planning work. The present level of our planning work is extremely incompatible with this demand. Improving the planning system does not equal doing a good job of planning work. To do a good job of planning work and enable a plan to be both farsighted and practicable, there is much more work for us to do and we must exert tremendous efforts. At present, there remain many problems concerning the ideas of planning, ways of planning, the organization of plans, the training of working personnel, and so forth. Without solving these problems, we cannot improve and strengthen planning work.

In the past, many errors appeared in planning work. The planning departments were chiefly responsible for these errors. The planning departments often had a vague idea of conditions, did a very poor job in their efforts to achieve a comprehensive balance, and acted against the principle of being down to earth, acting according to capabilities, proceeding in a steady and orderly manner, and seeking practical results. Owing to errors in planning work, the development of the national economy suffered greatly. As we recall this, we feel a great sadness. That some people have no confidence in planning has to do with our failure to do planning work well in the past. But it should be noted that planning work is not bound to be a failure. The laws of economic development can be grasped. After many years of construction effort, we have accumulated a wealth of experience. So long as we insist on proceeding from the national conditions of China, respect objective laws, arouse our spirits and are down to earth, we can do planning work on the basis of continuously summing up experiences and enable the national economy to develop in a sustained and steady manner.

ON THE PRINCIPLE OF DEMOCRACY IN THE RELATIONSHIP BETWEEN THE LEADERS AND THE MASSES

Beijing RED FLAG in Chinese No 9, 1 May 82 pp 20-26

[Article by Xiong Fu [3574 1788]]

[Text] At present the whole party is concerned about the question of rectifying party style. The CCP Central Committee has already called for a distinct improvement in party style this year. This question touches on the relationship between the leadership and the masses and also embraces the relationship between all party members and cadres in the party leadership--especially those who have assumed responsibilities and duties--and the masses. In my essay "On the Position and Role of the Party in State Affairs," I pointed out: "The question of the relationship between the party and the masses is the essence and basis of the implementation of party leadership." This essay seeks to probe further into the question of the relationship between the leadership and the masses.

To be sure, the relationship between the leadership and the masses is one between leaders and subordinates. However, under socialist conditions, and with our party in a position of power, this understanding alone is insufficient. This is because the question hinges on how we should implement the party's leadership over state affairs without turning it into direct management of state affairs. We must, in particular, prevent individual organizations and people from using leadership positions to place themselves as rulers above the masses. We should further realize that, under socialist conditions, and with the party in its position of power, the most essential content and requirement of the leadership of the party in state affairs is to organize the masses to be masters of their own future and to give them support to this end. Therefore, the relationship between the leadership and the masses should be established and developed from beginning to end according to the principle of democracy. At present, the ideological style and work style of certain comrades are not correct. On the one hand, they are used to giving orders and imposing their individual will on the masses. On the other hand, they display laxity and weakness and an inability to carry out a struggle against the various erroneous ideological tendencies and unhealthy influences. In both these respects, they have divorced themselves from the masses and have hindered the bringing into play of their socialist initiative. One of the main reasons for this is that, in their knowledge and practice, they have turned their backs on the democratic principles governing the relationship between the leadership and the masses.

I

Equality is the first democratic principle governing the relationship between the leadership and the masses. That is to say, no party member or party cadre, especially those who have assumed responsibilities and duties, is in any way superior to the masses. We must establish and develop the relationship between the leadership and the masses according to the principle of equality. This principle is decided by the nature of our country's socialist economic base and superstructure.

First, as far as economic position is concerned, leaders are equal with the masses. This is because, on the basis of the socialist public ownership of the means of production, all the people, through the various forms of ownership by the whole people and collective ownership, share equally in the right of ownership of the means of production. Nobody has any right or reason to turn public property into private property to satisfy individual desires or to claim the fruits of social labor as their own without having paid for them. CCP members and cadres who make use of party and state power for private gain violate this principle right off the bat. They have degenerated. "Rulers" who live off the backs of the masses frequently start like this.

Second, as far as political position is concerned, leaders are also equal with the masses. This is because, under the socialist economic and political systems, every citizen shares equally in the basic rights conferred by the state constitution. At the same time, he shares equally in the basic duties laid down by the state constitution. Nobody has any right or reason to enjoy civil rights without performing civil duties or to distort certain civil rights in such a way that they become unrestrained "absolute freedoms." As for CCP members and party cadres, their greatest right and duty is to have a higher degree of self-consciousness than the masses when it comes to protecting the interests of the people and sacrificing personal interests.

Third, as far as legal status is concerned, leaders are also equal with the masses. This is because our country's law was formulated by the whole body of people themselves and embodies the determination of the people to protect their own interests. Every man is equal before the law. Nobody has any right or reason to violate the law without being punished as he deserves. CCP members and party cadres are not "special citizens." They can only be models of abiding by state law. Criminal cadres who are corrupt and dishonest, speculate, offer and accept bribes, smuggle and well contraband, and who appropriate vast quantities of public property for private use, especially those who usurp important positions, must be severely punished according to law.

Fourth, as far as social status is concerned, leaders are also equal with the masses. This is because communist morality basically denies such class concepts as so-called "noble or lowly," "superior or inferior," "high-grade or low-grade" and "upper class or lower class." It only recognizes the elimination of classes, joint labor organized on the basis of eliminating classes and the social division of labor suited to this kind of labor. This is to say that it only recognizes the relationship of equality among men in this sense. Consequently, one of its basic requirements is that, in all aspects of social life, we respect the labor of everyone, respect the dignity of everyone and treat everyone as an equal. Nobody has any right or reason to consider himself a cut above the rest and to belittle others and in order to uphold his own "dignity." CCP members and party cadres also fall into the category of laboring people. No matter what office they might assume and no matter how high the office might be, they should, in the capacity of ordinary laborers, relate to the broad masses by laboring as equals.

However, not everyone has a clear understanding of this relationship of equality between the leadership and the masses. Owing to the fact that our society has only just emerged from the semifeudal, semicolonial old society, the ideology of the exploiter class and the old concept of class is still subtly eroding people's minds. This, together with the fact that the Lin Biao and Jiang Qing counterrevolutionary cliques created much confusion surrounding this question during the "Great Cultural Revolution," has caused the role of power to get to the point in some people's heads where it has been transformed into a distorted concept: apparently, power is not conferred by the people; apparently, once power is in their hands, they are a cut above the rest; apparently, the masses are the mere appendages of power. Some people, although they verbally admit that leaders and the masses are equal, in fact regard the masses as merely the negative, passive instruments of the leaders' desire. Some even abuse their power, turning power into "privilege," oppressing the masses, or harming the interests of the state, and seek to make private profits for the individual or for a small clique. Under these circumstances, how can they truly, and not merely verbally, give conscious support and protection to the principle of the masses being masters of their own future?

Indeed, under socialist conditions and with our party in a position of power, our party members and cadres, especially those who have assumed responsibilities and duties, have taken upon themselves an important responsibility in social life. Under the unified leadership of the party, they are responsible for organizing and guiding the economic, political and cultural life of the whole society, and for guiding and leading the masses in their implementation of various party and state policies, principles and plans. At first sight, this "position" seems to take them above the masses. However, this is not the nature of things.

Comrade Chen Yun said: "The role of the individual is undeniable, but a person must not overrate himself. Anyone who has divorced himself from the people and the party is incapable of doing anything. This is how a person should think." This is an extremely profound and earnest comment. From this we can correctly understand the truth about the relationship between the leadership and the masses.

Why did Chen Yun say what he did? First, where does a leader's power come from? It can only derive from the masses. The power wielded by leaders as representatives of the masses merely implies a political responsibility of serving the people and of being responsible for the people and an obligation to discharge this responsibility. On no account should they say that their position is "higher" than that of the masses. Only when the leaders use the power conferred by the masses wholly for the purpose of serving the people and of organizing and supporting the principle of the masses being masters of their own future, can this power truly embody its original essence and bring its strength into play. On the other hand, if they abandon the corresponding responsibilities and obligations, this power will degenerate into a source of disaster and will lead them, whether consciously or not, onto the path of abuse of power and crimes against the people, and they will be punished accordingly. Second, where do the leaders' correct ideology, viewpoints, plans and schemes come from? They can only come from the practical experience of the people and from relying on the practical experience of the people for replenishment and development. The collective wisdom and experience displayed by the masses in the course of their practice tower above that of anyone else. All the leaders do is to do their own work in the process of recognizing and implementing truth by "taking it from the masses and concentrating it, and then going to the masses, persevering in it, and carrying it through." Third, supposing the leaders do a bit of work and do it quite well, how should we assess this labor? First, the leaders must have done work to meet the needs of the revolution, the situation and the masses. In order for the leaders to have done this, they must have relied on the correctness of the party's line, principles and policies and on the practice of the broad masses obtained under the guidance of the correct line, principles and policies.

What conclusion can we draw from this? The conclusion that, under socialist conditions, our party members and cadres, especially those who have assumed responsibilities and duties, do not and cannot hold "positions" that place them above the masses. It is only by respecting the masses, believing in the masses, relying on the masses and treating the masses as equals, that we can fully arouse the sense of responsibility for making the masses masters of their own future and bring into play their initiative for building a new socialist life. It is precisely because of this that we say that, in handling the relationship between leaders and the masses, an important prerequisite to cementing the ties between the leaders and masses is to adhere to and implement the principle of equality.

II

Under conditions of socialism the masses are the true masters of the state and society. Our party members and cadres, especially those in positions of responsibility, are not only equal with the people in terms of position but are also the people's public servants. This view was put forth by Marx in his summary of the experiences of the Paris Commune.

Why should we compare leaders with public servants? Or to put it another way, what is the essence of Marx' comparison. The crux of the matter lies in the basic distinction between leaders under conditions of a proletarian dictatorship and rulers under all other previous exploiting systems. Rulers under exploiting systems are always the exploiters and oppressors of the masses. They ride roughshod over the interests of the masses, doing whatever they please, and cruelly oppress the ordinary people. Leaders under the dictatorship of the proletariat, however, are the people's servants. They must unconditionally serve the people, and must hold themselves responsible to the people. Firmly upholding and implementing the principle that the people should be masters of their own affairs, they must make the fundamental interests of the people the foundation of their own words and deeds.

As public servants they must first of all acknowledge the people's position as masters and must consciously place themselves in the position of the people's servants. People who equate responsibility with social status, believing that the heavier the responsibility the higher the social status, are not public servants. They take delight in issuing orders and commands and are no more than power-hungry office seekers. Leaders who use their authority for personal ends, enriching themselves at the expense of the public and embezzling large amounts of state property, should be seen as out-and-out "worms" rather than public servants. Our party's principal aim is to serve the people wholeheartedly. The true qualities of the people's public servant can only be displayed in the spirit of working selflessly, diligently and tirelessly to serve the people. This is what a line from one of Dong Biwu's poems calls "ashamed of office yet eager to serve." The older generation of our party's proletarian revolutionaries are the true practitioners of the sentiment expressed in this line. It is therefore entirely natural that they should be respected and cherished by the people. Since the 3d Plenary Session of the 11th CCP Central Committee, leading comrades of the Central Committee have improved the work style of other leading cadres and have set an example by establishing close ties with the masses. Each of us should take the older generation of proletarian revolutionaries as our model, working diligently to revive and develop the fine traditions of our party.

The most basic demand placed on the people's public servants is that they must represent the interests of the masses as a whole. When we say the masses we do not mean a single individual, several people or even a group of people. We are referring to the whole nation's masses in the broadest sense possible. Is there no need to represent minority interests? Provided that such interests are legitimate they should, of course, be represented. These legitimate minority interests, however, must satisfy the precondition of being in accord with the interests of the masses as a whole. It is incorrect to one-sidedly pursue the interests of an individual, several people or a group and to deviate from the interests of the masses as a whole. The political responsibility of the leaders should derive from the basic interests of the nation's people. They must resolutely uphold principle and do a good job of their work. They must criticize, educate and assist backward elements of the people whose views are incorrect. They should under no circumstances allow such views to go unchecked.

Leading comrades in the Central Committee have recently criticized the mistaken departmentalism of people who fail to adopt an overall view of the situation and are unable to act in the interests of the overall situation. While comrades who make this mistake may wave the banner of representing the interests of the masses, they either refuse to implement or deliberately delay carrying out the plans and decisions that were formulated by higher levels on the basis of the fundamental interests of the nation's people. There are other comrades who are clearly involved in various unhealthy practices but who can talk plausibly and at length about their activities, saying, "Anything is reasonable as long as it is for the 'collective'!" and "No expense should be spared for the good of 'all.'" Using excuses such as these, they cheat the state of goods and materials, embezzle state funds, divert profits from state enterprises, and arbitrarily issue rewards and bonuses. Does this represent the interests of the masses? It does not! It represents the backward mentality of a small segment of the masses, a mentality which seeks to fleece the state and damage the interests of the masses as a whole. It is imperative that our comrades keep a clear head and firmly uphold the principle of taking the interests of the state, the collective and the laborers into account. While we should not be insensitive to or ignore the partial and local interests of our own unit or department, it is more important that we should never damage the overall interests of the nation's people in order to satisfy the partial and local interests of a minority. While we must not turn a deaf ear to the opinions, suggestions and demands of the masses, they should be subjected to analysis and should not be accepted indiscriminately.

What conclusion can we draw from all this? The conclusion we draw is that, under conditions of socialism, our party members and cadres, especially those in positions of responsibility, must be--and can only be--the people's public servants. As public servants the basic political responsibility of leaders consists of serving the people unconditionally, holding themselves responsible to the people at all times, proceeding from both the partial and overall interests of the masses, and uniting long- and short-term interests. Only when leaders have succeeded in discharging this responsibility will they be able to earn the support of the masses or to strengthen their ties with the masses. It is for this reason that the crux of the question of intimate ties between the leaders and masses lies in upholding and implementing the principle that all words and deeds should be based on the fundamental interests of the broad masses of people.

III

Our party is the vanguard of the Chinese working class. The basic ranks of the masses are composed of the Chinese working class, their allies, and the broad masses of the Chinese people, including workers, peasants, intellectuals and all other patriotic supporters of socialism. An important aspect of the relationship between the leaders and the masses is the relationship between this vanguard and the basic ranks of the masses. Every one of our party members and cadres, especially those in positions of responsibility, must correctly understand and handle this relationship.

We must never forget one of the basic principles of Marxism, which is that the complete liberation of the people can never depend on any "spirit, emperor or savior," but must depend solely on the liberation struggle of the people themselves. The fruits of this struggle, moreover, can never be won or bestowed by any single individual, small group or political clique, no matter how outstanding certain individuals might be. This also holds true for our party. The line, principles and policies of our party will play a significant role only when they represent the highest interests of the broad masses of people, when they are both understood and supported by the masses, and when they have been converted into conscious organization and struggle for the protection of the people's own interests. The broad masses of the people should provide the foundation for the leadership of this vanguard. The vanguard must never separate itself from the basic ranks of the masses, for such separation will leave them isolated and alone, causing untold damage to the revolutionary cause. The whole history of our country's revolutionary cause has proved this to be true.

At the same time, we must not forget another of the basic principles of Marxism: the workers' movement is incapable of spontaneously creating or achieving Marxism. For this reason Marxism must be infused into the workers' movement from without. If the broad masses of people are to become more than a disorganized mass, if they are to avoid defeat and rise up to seize victory for themselves, and if they are to endure the long and tortuous path and reach their goal of final liberation, they must have their own vanguard to unite, guide and lead them in their struggle. As such a vanguard, the Chinese Communist Party has as its most fundamental political responsibility the need to imbue the Chinese masses with Marxism-Leninism-Mao Zedong Thought. Only when the masses have been armed with this advanced scientific ideological system can they be organized to form a vast and mighty revolutionary army. The vanguard is a guide and leader and must never forget for a single moment the need to carry out this most important political responsibility. Otherwise, it will be impossible to unite, lead and guide the masses to achieve victory for the revolutionary cause. The truth of this has been amply proved by the whole history of our country's revolutionary cause.

We should at this point pay close attention to an important historical experience. This is that our party's discharging of this political responsibility has never depended solely on propaganda and teaching but has also depended on the actual actions of our party members and cadres. The exemplary and leadership roles played by our party members and cadres and the fact that their actions have always matched their promises, are the clearest and most unmistakable expression of our party's nature, aims and propositions; they are also the most accurate and reliable evidence of our party's success in winning the trust and support of the broad masses of people. The broad masses of party members and cadres must soberly acknowledge that because our party is now in power our function as a model is of particularly great significance. If we should abdicate our political responsibility, be undisciplined in ideological and political work, and show ourselves to be incapable of carrying out a resolute struggle against erroneous ideology and unhealthy trends, we will certainly find ourselves cut off from the masses. If we say things only because they sound nice and are incapable of either playing a model role or of sharing the comforts and hardships of the masses we will also certainly cut ourselves off from the masses. It can be said with even greater certainty that if we embark upon the road of degeneration and corruption we will be cast aside by the people. Should any of the circumstances mentioned above ever arise, the party's reputation will suffer serious damage, and the people's trust in the party will be seriously weakened, causing great damage to the party's and the people's revolutionary cause.

As embodiments of the leadership of the party, all our party members and cadres, especially those in positions of responsibility, must be firm and clearheaded. As Marxists they must use the communist ideological system as the norm for all their words and actions and must always preserve the purity of communism. The standards we impose on the vanguard can never be allowed to drop. We should pay close attention to the fact that there has been a tendency recently among party members and cadres to allow the standards of the vanguard to drop to the level of those of the ordinary masses.

Some comrades have adopted a negative, uncaring and irresponsible attitude toward the implementation of the party's line, principles and policies. This is a spiritual state of liberalism. We are now in a period of great change and development, a period of transition from chaos to order and from poverty to wealth, and we are faced with many difficulties, contradictions and problems. Because of the multifaceted nature and complexity of objective events and the differences in people's experiences, consciousness, position and approach to questions, it is entirely normal that people should have different views on these problems, contradictions and questions, and that there should be differences of opinion. We should not be surprised by the fact that the masses occasionally complain or make cynical remarks about certain difficulties, contradictions or problems. It is the responsibility of our leaders to try and discover where shortcomings and weaknesses in our work lie and to swiftly correct them. In the case of practical difficulties which cannot be completely solved for the time being, the masses will be very understanding so long as the leaders set an example, share their hardships and offer appropriate explanations and guidance. However, there are certain comrades who do not act in this way. Faced with difficulties or contradictions, some are negative and uncaring, others refuse to accept responsibility and are content to just muddle through. There are still others who pose as "ordinary folk," and who do nothing but complain and grumble, blaming everyone but themselves for the problem.

All party members and cadres, especially those in positions of responsibility, must fully appreciate the political responsibility they have as members of the vanguard. Only when we have given full play to our exemplary role, placing progress and hardship before retreat and luxury, and fighting courageously for the good of all, will we be able to unite, guide and lead the masses. The strength, revolutionary will and revolutionary zeal of the broad masses of people, their collective wisdom and creative ability, and their enthusiasm and initiative can only find full expression and development under the unity, guidance and leadership of the vanguard. Under socialist conditions, the organization and support of the people in their struggle to be the masters of their own affairs is a concentrated expression of the flesh-and-blood ties that exist between the masses of people and the vanguard.

What conclusions can we draw from all this? Under conditions of socialism, our party members and cadres, especially those in positions of responsibility, must make full use of their exemplary role to unite, influence and guide the masses. Only if we live up to our promises, set an example and lead the way, will we be able to win the trust and support of the masses and lead the broad masses of people in their struggle to reach the lofty goal of socialist modernization. It is precisely because of this that in handling the relationship between leaders and the masses, an important prerequisite to cementing the ties between the leaders and the masses is to uphold the principle that leaders should set an example.

IV

Under the conditions of socialism, in order to enforce the party's leadership, the vast number of our party members and cadres, especially those party members and cadres who hold office, are responsible for the important task of educating the masses. We must stick to the key link of ideological education--educating the masses and doing our best to help the masses understand and accept Marxism-Leninism-Mao Zedong Thought. But, at the same time, we also have to fulfill our obligation in unremittingly receiving education from the masses of people.

Comrade Mao Zedong repeatedly reminded us of this principle. He said, "Only by learning from the masses first can we teach them in turn." Why did he say this? Because since the masses of the people are the masters and our leaders are public servants, the masters naturally have the right to supervise and examine the work of their own "public servants," to find out whether the latter have followed their will and represented their interests; since the leaders are vanguards, their function as vanguards in uniting with and leading the masses of people can only be improved, perfected and developed by constantly learning from the experiences of the collective practices of the masses of people and subjecting themselves to their supervision. The epistemology of Marxism tells us that knowledge can only come from practice; and this practice is not in the isolated activities of any individual, but the struggle carried out by the masses to transform the world and society. During this struggle, leaders can only obtain a certain one-sided knowledge from their own vantage point. Therefore, their knowledge is inevitably rather limited compared with the overall practice of the masses. In order to break through this limitation and provide correct leadership, the leaders have to subject themselves to the supervision of the masses of people. They should humbly learn from the masses, take lessons from the masses' practice, or more to the point, accept education from the masses of people.

We must understand that receiving education from the masses is of special significance in strengthening the relationship between the leadership and the masses.

First, only by holding to the stand of the people and to truth can a leader educate and lead the people. Learning from the masses and following their direction is the basis for a leader's understanding. For this reason, receiving education by the masses of people is, in a certain sense, the prerequisite for a leader to educate in turn the broad masses of people and exercise his leadership.

Second, what we have mentioned above--that we must respect the masses of people, that we must proceed in all cases from the fundamental interests of the broad masses of people, that we must set ourselves as the examples for the masses, that we must follow the direction of the masses' practice, and so on--all these things are naturally the basic requirements for being a leader. However, to fulfill or to observe these basic requirements, a leader not only needs to rely upon his self-consciousness but also to subject himself to a binding force, so as to examine himself, find out and correct at any time all his tendencies, malpractices and mistakes which go against or deviate from these basic requirements. In a word, this binding force comes from the masses' supervision or the education by them.

Third, according to the constitution and the law, the masses of people, being the masters of the state and the society, enjoy various rights under the socialist conditions. These rights include discussion, suggestion, inspection, criticism, accusation, exposition, complaint, interrogation, election, impeachment, recall, and so on. The masses of people can exercise their right of supervision of their leaders through various agents such as the people's congresses, the CPPCC, congresses of representatives of staff and workers (or peasants), federations of trade unions, peasant associations, women's federations, youth federations and other social organizations, and various channels such as newspapers, publications, broadcasting stations and so on. With such an extensive social supervision which is exercised by the whole people, and which covers all aspects of society and penetrates to all walks of life, a strong and enduring public opinion can be formed. It will play an important part in developing socialist democracy and perfecting the socialist legal system. Of course, such an education by the masses of people can by no means easily perform its function. It calls for a great deal of arduous effort. And in particular, some systems have to be reformed and some necessary decrees must be promulgated, so that those rights of the masses of people can be safeguarded, in terms of system and law, against violation.

What conclusion can we draw from this? It is that leaders must learn from the broad masses of people and place themselves under the supervision and education of the masses. Only by fully relying on the masses' supervision and education can we give better play to the masses' role of being masters of their own houses and more effectively prevent the leaders from transforming themselves from the people's servants into the people's masters. And only by so doing, can the leaders correct shortcomings and mistakes in their work as soon as they occur and better perform their political duties. It is because of this that we say that upholding the principle of the masses' supervision and education in handling the relationship between the leaders and the masses is a guarantee for bringing closer the relationship between them.

* * *

In light of the four aspects mentioned above, we can see that, under socialist conditions, a main trend still runs through the relationship between the leaders and the masses--the broad masses of people are masters of their own houses. The principles of democracy which must be upheld in the relationship between the leaders and the masses are the principle of equality, the principle that the leaders take the fundamental interest of the masses as the standpoint and starting point of their own words and deeds, the principle that leaders set good examples for the masses, and the principle that the leaders place themselves under the supervision and education of the masses. Our country's socialist practice over the past 30 years and more has already proved that whenever we have a more explicit understanding of this question and whenever we pay more attention to this question in our actual practice, there will be development in the relationship between the leaders and the masses. It has also been proved that whenever we have a vague understanding of this question and neglect this question in our actual practice, the leaders will be isolated and divorced from the masses.

Since the 3d Plenary Session of the 11th CCP Central Committee, the Central Committee has attached great importance to protecting the masses' right to be masters of their own houses and has paid much attention to standardizing, systematizing and legalizing the democratic relations between the leaders and the masses. Consequently, the "Guiding Principles for Inner-Party Political Life" and the "Regulations on Wages and Benefits of High-Ranking Cadres" have been formulated, the party's discipline inspection commissions at all levels have been established, and the scope of direct election has been expanded, which strengthens the power of the people's congresses and their standing committees and promotes the position of the CPPCC and other mass organizations in the life of the state. At the same time, the constitution of the PRC is being revised and the draft has already been submitted for discussion to people throughout the country. Recently, the reform in the state's leadership system has been gradually pushed forward, which includes streamlining the government structure, conducting rotational training for cadres, implementing the retirement system for old cadres, promoting cadres who are in their prime of life and who have both ability and integrity to leading posts at all levels, and other important measures. All this is fundamentally integrating the flesh and blood relations between the leaders and the masses, ensuring that the broad masses of our cadres, the party's cadres and primarily the leading cadres will not be transformed, and providing a guarantee for our party's and state's unchangeable and far-reaching strategic measures. In light of all this, we see a prosperous future: there is a practical guarantee for realizing a fundamental change for the better in the party work style and a fundamental improvement in the relationship between our party's leadership and the masses.

COMMUNISTS SHOULD NEVER 'RETIRE'

Beijing RED FLAG in Chinese No 9, 1 May 82 pp 27-28

[Article by Wang Guangmei]

[Text] It is a matter of far-reaching strategic significance to build up a contingent of revolutionary, well-educated, professionally competent and younger leading cadres.

Our veteran revolutionaries and comrades have made many important contributions to the revolutionary cause and the construction of our motherland. Today, under the new circumstances, the party and the people require us to make new contributions and fulfill the glorious task that history has entrusted to us, that is, to do a good job in handing over our work to reliable successors, to young and middle-aged comrades who truly support the party's line, policies and principles mapped out since the 3d Plenary Session of the 11th CCP Central Committee.

Either in modern or ancient times, in China or elsewhere, great leaders usually manifested their remarkable talent when they were very young. Many of our old comrades were regiment commanders, county CCP committee secretaries or leaders of worker, peasant and student movements when they were about 20. Comrade Deng Xiaoping was secretary general of the CCP Central Committee when he was only 23. Led by the party, some minority nationality comrades also did outstanding jobs for the revolution and became good leaders when they were young. Are there not talented young comrades at present? Actually, there are many among the 1 billion people. It is true that owing to the sabotage of the Lin Biao and Jiang Qing counterrevolutionary cliques, our work of training and selecting young and middle-aged cadres has been delayed. But during more than 10 years of upheaval, they were also tempered. They were brought up in the complicated circumstances and struggles and have become mature. We must make every effort to foster the growth of these young and middle-aged cadres, boldly promote them to important posts and support their work. We must pass on experiences and set an example to bring them up. I am convinced that our young cadres will certainly be worthy successors.

Relief from duty is a normal process. It is an important matter concerning the destiny and future of our country. All party members, cadres and people are showing great concern for it. So, no matter what difficulties we may encounter, we must carry out this work well. In the past, we followed a roundabout road in this respect and caused the country and people to suffer a lot. We must draw a lesson from this. Under the leadership of the party, we must continue to adhere to the mass line, select and appoint talented people and hand the power over to reliable successors.

Being prompted by a strong sense of responsibility toward the people, we joined in the revolution dozens of years ago. We all made the pledge on being admitted to the party: for the cause of communism, we will not hesitate to sacrifice our all, including our lives. Now the development of our party's cause confronts us with another severe test. It is also an opportunity for us to make new contributions to the party. I am convinced that our veteran cadres will certainly do a good job in handing over their work to the next generation and thus add a new page to the record of meritorious service compiled by the people.

In comparison with many old comrades, I am a party member of shorter standing and have made fewer contributions. But I am already 60. Like many other comrades, I was deprived of the right to work for the people during my most capable years. How we thirsted for work at that time! However, soon afterward we regained the right to work, and now that we are working energetically, we have become old and it is time for us to hand over the work. I do not think that young and middle-aged comrades could understand what we are feeling now. It is extremely painful that the law of nature has made us unable to make up for lost time. So far as bitter experiences in the "Great Cultural Revolution" are concerned, we should say that our veteran cadres are those who were most seriously harmed during that period of time and have lost the most precious time, that of their prime years. Since we have experienced such pain, we should be more willing to hand over our work to the younger generation and do our best to help them do a good job. In this way we can make up for their own losses during the 10-odd years while fulfilling our unfinished tasks to make up for the losses suffered by the party and state, and they will not suffer the pain that we suffered. This naturally requires a lofty sentiment, a broad vision and a strong sense of responsibility toward revolution.

To one who makes revolution all one's life, it is very painful to leave one's present post. What shall we do after we leave our posts? This reminds me of a past event. In 1952, Comrade Liu Shaoqi and I paid a visit to a subtropical botanical garden in Sochi in the Soviet Union. The cadre in charge of the botanical garden, who accompanied us on the visit, was an old Bolshevik. He was a retired Red Army man who had rendered outstanding service. After retirement he volunteered to work in the botanical garden. Comrade Liu Shaoqi expressed admiration for his deeds and said: "Being a revolutionary who makes revolution all this life, it is very painful to completely retire and convalesce without continuing to do anything for the revolution and without spiritual sustenance. If my physical condition and energies fail me in doing my present work, I would like to work as a teacher of party history or philosophy. If I am not able to teach, I would like to go with you to a tree farm! Then we shall work together to select seeds, raise seedlings and spread fertilizer on the soil...." Comrade Liu Shaoqi was only 54 then. But for reasons known to all, he was unable to realize his ideals.

Now the important task of handing over our work to the younger generation has fallen on our shoulders. If we really understand the importance of this strategic policy decision of the CCP Central Committee, we are sure to do the job well. There are still a lot of jobs for us to do after retirement! We can work as voluntary after-school advisers for students, do some reading and sum up our experiences, or work as tree farm workers. How nice it will be to keep ourselves busy all the time! No matter what jobs we are going to do, if we work as advisers on the second and third lines or even if we do not hold any post, we are revolutionaries and workers at all times. It is our lifelong task to "select seeds, grow seedlings... and take an active interest in the growth of trees." We must fight for the cause of communism as long as we have a breath. Communists should never "retire"!

The present situation is good. But there are still many difficulties, and our conditions are very complicated. The greatest disaster the Lin Biao and Jiang Qing counterrevolutionary cliques brought to us is disrupting our unity, the unity between the party and the masses, between the cadres and the masses and between the army and the people, as well as the unity of the cadres, the unity of the masses and the unity of all nationalities. Therefore, we must strengthen our unity under the leadership of the CCP Central Committee and overcome all difficulties step by step to make our socialist motherland a powerful and prosperous country so that the great cause pioneered by the revolutionaries of the older generation can be carried on from generation to generation, and the hard-won great achievements of countless revolutionary martyrs and fighters can be passed on to posterity!

THE USE AND PROSPECTS OF STRUCTURAL CHEMISTRY

Beijing RED FLAG in Chinese No 9, 1 May 82 pp 29-33

[Article by Lu Jiaxi [4151 0857 6932]]

[Text] Synopsis: This article expounds on the history, scientific features and prospects of structural chemistry and points out that this science plays an important role in our modernization program and that it can provide a theoretical basis for seeking new materials, new technology and new processes in promoting the development of industrial and agricultural production as well as national defense construction; it also puts forth some views about the guiding principles in developing sciences.

The task of structural chemistry is to study, at the level of atoms and molecules, the mutual relationship between the microscopic structure (including the forms of combination, space structure and the mode of electron movement) and the macroscopic structure of chemical substances. Structural chemistry is an important specialized branch of modern science. This article is intended to probe into the guiding principles for the development of structural chemistry in our country from the three aspects of recalling the history of structural chemistry, expounding on the role of structural chemistry in the development and production of chemistry, and expounding on the prospects of structural chemistry.

I. Brief History of Structural Chemistry

Mankind is in a position to make use of and transform the substances that exist in nature and produce new products with many different features to meet the needs of social production and livelihood and the development of scientific technology. In this process, chemistry has emerged and developed. Europe began to enter the era of bourgeois revolution in the 17th century. Because of the needs for the development of capitalist production, chemistry has like other sciences accumulated very rich experimental materials. On this basis and through protracted and repeated discussions, various theories have been put forth one after another. Among these theories are the theory of element by R. Boyle, atomic and molecular theory by J. Dalton and A. Ayogadro and the periodic law of element by D. E. Mendelev, and these theories have correctly answered the questions about the smallest particles of chemical substances and their composition. These achievements show us that all chemical substances are composed of atoms of known elements that cannot be separated again by any chemical reaction. When atoms are being formed into substances, eventually there exist the unity and coherence of one "molecule"; in addition, there also exists a certain coordinated relationship among the atoms of a molecule while a chemical reaction is nothing more than a movement process in which a new combination of atoms of the original molecule or several molecules is brought about or a new formation of one or more molecules results. Basically speaking, many products needed by mankind can be obtained through chemical changes by making use of natural and artificial raw materials. Thus, with such a viewpoint, people have been able to correctly explain many chemical changes, systematically sum up a large amount of chemical reference materials that have been accumulated in the past and, as a result, chemistry has become an independent science that has been able to display its important guiding role in the chemical industry and in the production of materials.

The above-mentioned theories successfully solved the problems of the composition of chemical substances. But certain properties of substances are determined not only by their composition but also by their inner structures. People noticed long ago that in nature there exists the three distinctive physical substances of diamonds, graphites and amorphous carbons, and yet these three are made up of simple structural carbon that is composed of carbon atoms. In the mid-19th century, examples of such isomeric molecules emerged one after another in the process of studying chemical compounds and particularly organic substances. As the conditions for experiments were still limited at that time, the method of analytic reasoning was used to determine the possible existence of chemical structural forms (including different fixed stereo structural forms) and explain all objective phenomena of isomerisms. In 1861, A. M. Butlerov definitely put forth the theory of molecular structure. He pointed out that the chemical properties of a substance are determined by the chemical structure of this substance and that by studying chemical properties it is possible to determine chemical structure; conversely, chemical properties can be predicted on the basis of understanding chemical structure. In 1857, F. A. Kekule pointed out that carbon has four valences while carbon atoms may be combined with other carbon atoms to form carbon chains; in 1865, he put forth the concept of the annular structure of benzene. In 1874, J. H. van't Hoff and J. A. le Bel respectively put forth the theory that the four valences and bonds point in the direction of the top of a square, and as a result they successfully explained the phenomenon of optical rotational isomerism of some organisms. Thus, based on such concepts, the classical theory of the structure of organic chemistry was established, and this theory has played an important role in the development of organic chemistry and the organic chemical industry. In 1893, A. Werner put forth the theory of the coordination of the complex compound of metal elements, and he expounded his views on the chemical structures of inorganic complex compounds and on the stereo isomerism of such compounds to promote the development of complex compound chemistry.

But it was not until early in this century that modern physics discovered that atoms are composed of atomic molecules and electrons, and only following the emergence of the theories of the atom and the molecule was it possible that this development could directly be used as an experimental basis and theoretical method in studying the microscopic structure of chemical substances. On the one hand, progress has been made in physical experimental technology and on the basis of different effects of the interaction between substances and detecting measures such as light, electricity and magnetism, many experimental measures have been adopted for determining molecular structure and for providing data on understanding electron movements, and all these have provided good conditions for studying molecular structure and the relationship between structure and property. On the other hand, the theory of quantum physics, which emerged in the 1920's, can be used to probe into the law of the movement of microscopic particles. Starting with the most simple structure of hydrogen molecules, quantum physics has been successfully used in explaining the law of the movement of electrons within molecules and the nature of the chemical activity of combinating atoms into molecules that represents chemical bonds. Consequently, there has emerged quantum chemistry that serves as a powerful theory for the study of various properties that depend on the law of atomic movement. Following decades of hard work, various basic problems such as how to combine the power of various different types of atomic substructures such as valences and bonds, ionic bonds and metallic bonds and the experimental results of applied force on molecules have been incorrectly expounded to a great extent. As a result, the various theories of quantum chemistry such as the theory of valence and bond, the theory of molecular tracks and the theory of coordination ground have been established and developed. Experimental technology and theoretical method affect and promote each other, and this situation has resulted in modern structural chemistry developing into a new stage.

II. The Role of Structural Chemistry in Chemical Development and Production

The establishment and development of structural chemistry has played a big promoting and guiding role in expanding the structural features of chemical substances and their relationships with properties, in promoting the development of chemical sciences and in effectively probing into new ways for synthesizing new products with particular properties. There are countless examples in this aspect.

Following the establishment of the theory of benzene annular structure, aromatic organic chemistry has made tremendous development since the 1860's. Aromatic organic chemistry has played a guiding role in comprehensively using coal tar and in producing various dyestuffs, drugs, essences and explosives.

The three prevalent molecular industries of plastics, synthetic fiber and synthetic rubber have a close relationship with people's livelihood, industrial and agricultural production, and the national defense industry. Due to achievements in the study of the mutual relationship between complex molecular structures and their properties, the complex molecular industry has been developing vigorously. For example, it was pointed out as early as in the 1920's that natural rubber and natural fibers are not simple annular polymers but complex chain polymers. People have correctly understood that the requirement for natural rubber complex polymer is very strict, and as a result there emerged a concept of stereoregular polymer that made it possible to produce "synthetic rubber."

Since the beginning of this century, the use of such experimenting methods as X-ray diffraction technology has resulted in defining a great number of inorganic ionic compounds, including structural statistics of many series of natural ore crystals. From this development, L. Pauling summed up the principles of ionic compounds to successfully explain the relationship between the chemical composition of silicate and its structure. In addition, we also know that new technical crystalline materials constitute an important material condition for developing many sophisticated technologies. It would not have been successful in seeking working substances (most are inorganic compound crystals) such as laser and electric light if there were no rich statistics about the structure of inorganic crystals.

Under the theoretical guidance of the structure of organic chemistry and by using chemical methods and X-ray diffraction technology or a combination of these two, the molecular structures of many complicated natural organisms and antibiotic drugs (such as penicillin and aureomycin) have been delineated. This achievement has not only provided pharmacologists with a technical foundation for atomic-molecular level in expanding pharmacology but has also formed a reliable base for synthesizing such drugs to expand medical resources. Herbal medicine is a valuable heritage of the medical sciences of our country. Over the past few years, our structural chemical workers have studied and analyzed how to extract information on chemical structure and space structure for Chinese herbal medicines. The research articles on this study show the mutual relationship between structural features and pharmacology. For example, the defining of an effective antimalaria drug essence of artemisia apiacea and the three kinds of crystalline structures of its derivatives prove that the effectiveness of the drug is related only to two kinds of peroxide radicals and some other particular structures. Work is being done to determine the crystal structure of the protein base of the roots of Chinese trichosanthes. Initial achievements in this study have drawn the attention of foreign countries. Clinical tests prove that the roots are highly effective in gestation during the midpregnancy period, and it can also be used in treating such diseases as ectopic pregnancy and vesicular moles. It can be predicted that as long as we are able to work hard and accumulate experiences and to closely cooperate with pharmacologists, the ancient Chinese herbal medicinal treasure of our country will no doubt make great contributions to the medical and health cause of our country and the health of our people.

The research which has led to the successful synthesizing of some new structural compounds has not only pointed out the way for the further development of structural chemistry but will also be able to meet needs in the development of scientific technology. For example, in the 1950's, W. N. Lipscomb correctly expounded the "three central bonds" of the borichydrogen compound to make outstanding contributions to the development of this compound. A complex borichydrogen compound that can be used as a highly efficient fuel has at last been synthesized.

The role of quantum chemistry is very apparent in explaining those properties that are related with the law of electron movement within molecules as well as in synthesizing new compounds. N. Bartlett investigated chemical bonds and their function, and in 1962 he successfully synthesized the first historically significant "inert element compound"--the fluoride platinum acid, xenon, which shattered the longstanding view that inert elements could not produce chemical compounds and consequently he opened up a new area of study known as "inert element chemistry."

The molecular structure of vitamin B-12 is very complex because it has 512 possible isomerisms. In the process of synthesizing B-12, R. B. Woodward resorted to his rich practical experience that he had accumulated in the process of synthesizing complex compounds such as bioalkali. In synthesizing such compounds he summed up the reasons for his failures, found out the mechanism for achieving such a reaction, and effectively controlled the stereo structure of substances during the reaction. Consequently, he synthesized the vitamin. During this process, he also had some ideas about the symmetry conservation of molecular tracks. Later, R. M. Hoffmann carried out analysis and study on the basis of quantum chemical theory, and consequently he put forth the famous Woodward-Hoffmann symmetry conservation law of molecular tracks. As a result, quantum chemistry moved into the study of chemical reaction. The symmetry conservation law of molecular tracks has displayed and will continue to display its important role in studying stereo regular reaction and in synthesizing complex compounds such as bioalkali and drugs.

Biology made no progress for quite a long period in the past, and it remained at a level of carrying out submacroscopic studies with the use of microscopes. Following the research on carbohydrates, proteins and nucleic acids and particularly over the past two to three decades, the introduction of X-ray diffraction in coordination with the chemical method has made it possible to directly determine the molecular space structure of cells and consequently there has emerged molecular biology and quantum biology. For example, the structure of more than 20 kinds of major amino acids (the basic units of protein) and nearly 10 kinds of simple peptide bonds (composed of several amino acids) was determined early this century. On this basis, L. Pauling and R. B. Corey put forth two basic principles about the structure of amino peptide bonds. Using these two principles, L. Pauling pointed out in 1950 that protein has two kinds of helix structures: the alpha helix structure and the beta helix structure. It was proven later that the alpha helix structure is an important form of the second-grade structure of protein. Then, J. D. Watson and F. H. C. Crick developed the model of double spiral structure of deoxyribonucleic acid (DNA), which is the important genetic material base, and this achievement has played an important role in molecular genetics. The activities of analyzing the crystalline structure of protein that began with whale muscle red protein [jing ji hong danbai 7650 5133 4767 5751 4101] and horse blood red protein [ma xue hong danbai 7456 5877 4767 5751 4101] are still very active today. In 1965, our scientific workers succeeded in completely synthesizing bovine insulin with the chemical method. It was the first time that this method was used in producing artificial bovine insulin. Recently, they have synthesized ferment ammonia acid-turned-ribonucleic acid that is able to catalyze the biological activity of propionic ammonia acid and this achievement showed that our country continues to be in the forefront in this field. We have also made brilliant achievements in determining the structure of swine insulin. The accumulation of all this synthesizing work as well as the work in determining structure have provided a foundation for studying, on the basis of the atomic-molecular level, such phenomena as muscular contractions, nerves, photosynthesis and genetics.

Nitride is a very important raw material for such products as nitrogen fertilizer and explosives that are very important for industry, agriculture and national defense. But the nitrogen that abundantly exists in the atmosphere is far from active and, at present, it is only under the condition of high temperature and high pressure that it can be fixed and turned into chemical compounds which can be used. Interestingly enough, there exist in nature some microbes such as the root nodule bacteria of leguminous plants that can achieve nitrogen fixation under normal temperature and pressure. Following the synthesization of the first molecular nitrogen complex compound under normal temperature and pressure in 1965, there appeared a worldwide fervor for studying nitrogen fixation through chemical simulation biology to open up a new frontier for science--chemical bionics. Since 1971, our country has organized the scientific strength from various sectors to carry out enormous work from different angles. According to theoretical study and deductive reasoning, we have put forth a series of views that complement each other about necessary structural conditions for the center of activity of nitrogen-fixing ferment as the biological catalyst for nitrogen fixation. Proceeding from complex compound structural chemistry of large metal atomic clusters and from the angle of catalyst, we analyzed the active conditions for the complex composition of nitrogen molecules. In 1973 and 1978 we put forth the "string bag" structural models--"Fuzhou model I" of molybdenum-iron-sulphur atomic cluster of the center of activity of the fermentation catalyst for fixing nitrogen, and these two "string bags" were formed back to back into the twin combination of "Fuzhou model II"--and analyzed various forms of the possible complex composition of applied substratum. At the same time, other scholars in our country proceeded from different viewpoints and put forth structural models of the similar active center of nitrogen-fixing fermentation. We also carried out activities to determine the stimuli of the above-mentioned models and the composition and structure of the related complex compounds of atomic clusters and to carry out experiments on acetylene, nitrogen and other applied substratum. We have made encouraging achievements in this aspect and we introduced them at international academic symposiums on nitrogen fixation over the past few years. Foreign scientists held that our scientists were forward looking when they were the first to put forth the view that the active center of nitrogen-fixing ferment has an atomic clustered structure. At present, a series of the results of this study have convinced scientists that there is a definite requirement for atomic clustered "string bag" in nitrogen fixation.

Since the establishment of the Nobel Prize in 1901, the prizes have been given to 98 chemists on 73 occasions, with an exception of 8 years because of certain reasons, of these, on 20 occasions to 28 chemists who made great contributions in structural chemistry. Some chemists have won the prizes in physics and biology. The former recipients included W. H. Bragg and his son W. L. Bragg who both made important contributions in introducing and developing the analytical method of the crystal line structural X-ray diffraction while among the latter were J. D. Watson and F. H. C. Crick, who introduced DNA double helix. Therefore, it can be seen that structural chemistry is becoming increasingly important in drawing more and more attention on the part of scientific and technical circles.

III. The Prospects of Modern Structural Chemistry

The continuous development of modern physics (both in experiments and theory) and the timely use of newly emerging technology (computer technology and laser technology) have constantly provided new tools and new methods for the study of structural chemistry and enabled the handling of the recording and testing statistics of messages to become more and more automatic and higher and higher in speed and consequently, it is possible to make accurate determination and calculation of the crystal structure, molecular structure, molecular energy level and the distribution of the electron cloud that are becoming more and more complicated. For example, one to two decades ago people began to study the dynamic structure of the process of reaction and the microregional structure of the surface of solid substance; new development has been made in this study and it is expected that important progress will be made in the near future. Modern structural chemistry has developed into a new stage; it can systematically and precisely prove and grasp the methods and laws of atoms and atomic radicals in becoming chemical substances and of changes of inductive chemistry. Modern structural chemistry is also in a position, through such laws, to understand and determine the nature and properties of the dynamic and static state of substances. Structural chemistry is developing the whole of chemical science from classic and fixed sciences into modern and quantum sciences. The study of the interdependence and mutual conditioning between the properties of chemical structures and chemical reactions of classical chemistry has already developed into the research topic of exploring the mutual relationships between the "nonchemical" properties and the properties of microscopic structures and macroscopic chemistry of modern chemistry. Consequently, in the trend of its development, modern chemistry has the following features of developing from macroscopic to microscopic, from description to reasoning, from the air and crystal phase to the amorphous phase, liquid phase and liquid-crystal phase, from the body phase to the surface phase, from the properties of chemical reaction to various nonchemical properties, from the static state to the dynamic state, from constant proportion to inconstant proportion, and from stable to substable and even unstable. Chemistry has also developed into a new stage in breadth and depth. On the other hand, structural chemistry, solid state physics, material science, biology and pharmacology permeate each other and are intertwined, and these situations have promoted the development of these sciences. More and more branches of borderline science such as molecular biology, chemical bionics and molecular design have been applied or are emerging and all these sciences have bright prospects.

In order to develop structural chemistry in our country, it is imperative to grasp well the features of this chemistry which is a basic science, to grasp the trend of its development and to resort to correct guiding principles. Of course, by solely studying and determining structure and without studying and developing synthesis means that we are setting up a retail department of structural analysis and consequently we will not be able to develop structural chemistry; if we study microscopic properties (chemical or nonchemical), then the basic study of microscopic structure would depart from the production and science of the macroscopic realm; if we merely study the mutual relationship between structure and property and neglect the molecular design of materials and reaction, we will remain in the stage of just understanding the objective world. This means that we are not working to change the objective world, and consequently we will not be able to realize the basic tasks of chemical science. We must understand the trend in the development of structural chemistry, and at the same time we must acquaint ourselves with the needs of our country in the near future and the features of our resources, strengthen weak links, fill in gaps, select major topics of study through which major developments or breakthroughs can be made by the end of this century, establish and develop modern study methods, closely combine and promote the study of structural and property synthesis and determination, and work hard to reach the great goal in which our structural chemistry enters the world's advanced level so as to make our contribution to the modernization program of our country.

Science is a productive force, but it is not a common and direct productive force; rather, it is an indirect productive force. Through science we will be able to bring happiness to the coming generations of our country as well as to the people throughout the world, to strengthen the competitiveness of our motherland in international affairs and step up our strength in defense of world peace. As a basic science, structural chemistry has developed and gradually matured through gradual accumulation and through the process of exchanges of experiences and contention among various academic branches. Therefore, we cannot demand that each subject of study must directly display its role in production. We must understand that when conditions are ripe and when the works of basic study make an important breakthrough, our study will certainly bring great basic changes to chemistry and to the related production departments. But it must be pointed out that we must not therefore neglect the use of the achievements we have made in structural chemistry so that we will be able to solve urgent problems in both national economic construction and the construction of national defense. Premier Zhao Ziyang pointed out in his report to the 4th Plenary Session of the 5th NPC: "There are many branches of science and technology and they must serve various aspects. We can in no way weaken basic study. But the main purpose in the development of all science and technology is to serve economic construction and particularly to solve the key problems with major economic effects in the national economy. Our present task is to display still better the role of science and technology so that they will become a powerful productive force and a tremendous strength for developing the economy." In fact, the existing theories and knowledge of structural chemistry in the broad industrial and agricultural sectors that are closely related to chemistry have already provided theoretical guidance in seeking new materials, new technologies and new processes and have already promoted production. Structural chemistry develops in the process of promoting the national economy and consequently it will display still more powerful strength. It is also wrong to neglect this point.

GO AMONG THE MASSES!

Beijing RED FLAG in Chinese No 9, 1 May 82 pp 34-35, 28

[Article by Ding Ling [0002 3781]]

[Text] Over the past few years, culture and art work has substantially flourished and developed, but there are still problems which were left over or newly emerged which call for solutions through discussions and studies by bringing the problems out into the open and having frank and sincere exchanges of views. Such discussion meetings have been held on numerous occasions with the participation of leading comrades who delivered speeches at them, and these meetings have produced positive results. However, quite a few problems still exist in the minds of literary and art workers. In the new situation, some literary and art departments and individual literary and art workers still have an abnormal understanding or sentiments when approaching some problems and have failed to completely manage to approach problems in the manner of being selfless and fearless, matching words with deeds, and thinking and acting one and the same way as a communist or a writer who has a sense of justice. As for party-member writers, they should take this matter into account, and now particularly since the forum on the problems on the ideological front has been held, they must not remain aloof and indifferent to this situation. Over the last 3 years, on various matters I have written articles, made some remarks, stated my opinions and made statements of my position. This year is the 40th anniversary of the publication of Comrade Mao Zedong's "Talks at the Yanan Forum on Literature and Art." After pondering, the words which I can use to advise my fellow writers and to spur myself on are still: To continue to go among the masses. This means that when the numerous problems are put to the masses, we can find good solutions to them by going among the masses to "observe and learn from real life and be engaged in creation." A writer, no matter on what subjects he writes, whether on history, mountains and waters, people, struggles or on love affairs, invariably reflects his own ideas and his own view of life, society and the accepted modes of human conduct. It is impossible for a writer to write on those things for which he has neither love nor hate and for which he has no feelings. If he forces himself to do so, what he writes will not be profound, vivid or moving. Therefore, before a writer produces a work, he must have rich raw material gathered from life, some training in writing techniques and what is more important, he must have the necessary ideological level to analyze society and interpret life. These three aspects of self-cultivation are not isolated and contradictory and also cannot be acquired by stages. The three aspects of self-cultivation must be linked, each complementing the other; must be carried out simultaneously, gradually improved, gradually deepened and gradually purified until they are merged into one. Only then can we reach the realm of real emancipation in ideology and freedom in creation; can we write works which suit the needs of the broad masses, and can our creations become works of art which will raise the people's moral character and develop the social spiritual civilization and can we be free from the fear of making a mistake or being criticized.

Like other theories and policies, our literary and art theories and policies are all summed up and refined from the social life and struggle of the masses. If we divorce ourselves from the masses and lack a practical understanding of the people's life, we will be unable to profoundly understand why such theories and policies are needed. At the same time, it is only through the social practice of the masses that we can test our theories and determine whether our policies are correct. If theories and policies are repeatedly examined in studies and forums, the historians and philosophers with practical experience may possibly make new discoveries and create new works. However, if writers who create works of art and write living history do not personally go into and experience as well as observe and learn from the lives of the masses, they will be unable to produce works which present realistic characters, plots, stories, and human mental activities, and relationships between man and man, the good and the bad, as well as the beautiful and the ugly in people's lives. Even if we can recite from memory many clauses and technical terms in words and in terms in the most effusive way, appearing erudite and recondite, in fact we are no more than a phonograph or a duplicator. The principles you want to write about are already known to all and your work merely echoes others' views, thus there is lack of originality in your writing. A writer must carry out creative work on the basis of the lives of the masses rather than repeat principles in books. So is the case of literary and art theoreticians. Instead of merely presenting a verbatim transcript of newspaper editorials and invariably copying the speeches of leading comrades or the talks of others, we must go all out in discovering and developing our writings in regard to the concrete problems in actual life. Otherwise, it would be sufficient for readers to simply read newspapers. Is it worth the trouble to reread shallow, dull and fragmentary articles?

Only when we have an understanding of and a thorough knowledge and grasp of theories and policies, can we truly make them ours; can we have keen insight; can we find out about problems at all times and anywhere in the kaleidoscope of life; can we dare to think independently; can we not wait to see which way the wind blows, not to equivocate and not to vacillate; and can we make a contribution and discharge our responsibility. But how can we grasp thoroughly theories and policies? So long as we bring what we read from books and what we learn from speeches to life and fight, engage in construction, experience all kinds of contradictions and find solutions to the contradictions together with the masses, we can then push society forward. With our practical experiences among the masses, we may then turn around to ruminate and digest the theories. A man with experience and a man without experience simultaneously study theories and what they learned from them varies greatly. The former manages to understand the theories with a little direction while the latter will not understand the theories even if he is given some direction. Conversely, a man with correct theories and a man without theories go into real life and what they learn from life is also substantially different. The former can find out, in life, myriads of precious deposits which are too dazzling in color and beautiful to be absorbed all at once that he can pick and choose a small part of them to write a good work. Having been drawn into the ocean of life, the latter can see nothing and find nothing attractive and touching that will arouse his interest, and thus for him to be able to create is out of the question. Even if he sees odd bits in life, he can only enumerate the events rather than grasp the principal problems. Having no strong zeal for life will spoil source material. Some people regard this state of affairs as the difference between having talent or not. In my opinion, there is in fact a lack of self-cultivation of politics and theories. If he does not have this key--politics--in his mind (please do not vulgarize politics as the stratagems of politicians or as a synonym for a political stick), there will be no ideological content. This is like having no soul. Such being the case, a writer will find it hard to know his own mind; either he will not dare to write or, basing himself on his personal thoughts and feelings which have not yet been sorted out, he will write in an unlimitedly free manner and at great length. This will most likely lead to some errors (those who always have blind faith in Westernization, like vulgar things and try to depart from the socialist political orbit must be, of course, classified separately). Naturally, it is not a serious matter to make some mistakes. So long as we draw a lesson from them, go deep into real life again, do some penetrating thinking and continue to temper ourselves, we will still be able to write good works.

What I have attempted to show is that a writer must be diligent in practicing his craft and, what is more, must temper himself. He must put himself among the broad masses and get in touch with people of all walks of life; through the exchange of feelings between man and man, he must adapt advanced political ideology to his outlook. A writer is a creator, who produces images and describes feelings but at the same time he is also a politician. He must dissolve politics into images and feelings which he describes with high-level political zeal so that the readers will see it as only literature. Thus, this attractive and exquisite literature will play a political role.

It is not easy for a writer to do so. It is not an easy job for a writer to produce works which are full of fervor and extremely touching on the one hand and mirror the spirit of our time on the other hand, but it is attainable. Many writers have managed to do so or almost managed to do so. Writers must always encourage one another to get rid of selfishness. They must seek neither fame nor gain and neither position nor power and influence; must be free from prejudice and factionalism and be honest and upright; must not be controlled by their personal emotions and must have a breadth of vision. It is necessary to loyally treat the people's cause and to be diligent and conscientious, indefatigable and not to be at all self-satisfied, and it is necessary to start with this basis to make steady progress and find pleasure in so doing. To accomplish this, it is naturally necessary to go among the masses and breathe, share weal and woe, fight and advance together with the people.

My suggestions are few and not new. While celebrating the 40th anniversary of the "Talks at the Yanan Forum on Literature and Art," I would like to offer them with full respect to my fellow writers and young friends. I will learn from those who are in the same profession as I and who have more profound ideas and have created better works and have achieved greater successes than I. In the impressions of the postscript of "A Scene of Northern Shaanxi," published in 1950, I wrote:

"I experienced a lot of self-induced pain in northern Shaanxi before I began to know, squarely face, correct and remold myself. This experience cannot be explained in a few simple words. But ultimately it brought me the greatest pleasure. I feel that it is not easy for me to travel the road which I have taken; to go from being ignorant to being more sensible, from being somewhat perceptual to rational, from being unstable to being stable, from being weak to being staunch and from being remorseful to being relaxed.... I think that anyone who has taken a similar road will realize that this road is both rugged and smooth. However, each of us progresses in this way.

"Some people were born revolutionaries; some are revolutionaries who leap at one stroke from a backward state to an advanced one; others have never made any mistakes. These fortunate few are admired by all. However, I am still willing to march on my two legs step by step to the place where I will really become useful to some extent and really become a man without thought of self, a man who has really acquired some knowledge and truth...."

Instead of complaining about being decrepit and slow-witted, I am now willing to continue to forge ahead step by step along with the large contingent of marchers. However, having undergone a trudge of 30 years from the 1950's to 1980's, I feel happy rather than regretful. I will march step by step behind the young people cheerfully and unremittingly.

INCREASE CONSCIOUSNESS IN STUDYING THEORY

Beijing RED FLAG in Chinese No 9, 1 May 82 pp 36-39

[Article by Ru Zhi [1172 4249]]

[Text] Marxism-Leninism-Mao Zedong Thought is a revolutionary scientific theory. The laws governing social development which it brought to light and its world outlook and methodology are our guide in action. Our party is united on the basis of this theory, and the victories in the cause of our revolution and construction were achieved under its guidance. At present, many new conditions and new problems which arose in the course of our modernization program call for scientific explanation and correct guidance. The practice of the new historical stage has once again put the study and research of revolutionary theories in an extremely important position. To keep abreast of the current situation, all of our cadres must increase their consciousness and study hard Marxism-Leninism-Mao Zedong Thought.

Recalling the history of the Chinese revolution, it can be very clearly seen that whether there is correct theoretical guidance and whether the cadres of the whole party study and apply Marxism-Leninism well concern the success or failure of the cause of revolution and construction. In modern Chinese history, the dissemination of Marxism-Leninism into China was an epoch-making turning point. Prior to this, in order to save the country and nation from the danger of elimination, the Chinese people and its advanced elements waged repeated heroic struggles, but through all of them they failed to find the correct road for liberation and every struggle ended in failure. Things were significantly different after Marxism-Leninism reached China. The Chinese advanced elements warmly welcomed this theory, enthusiastically studied and disseminated it and integrated it with the rising workers' movement. As a result, the great CCP came into being and a great revolution on a grand and spectacular scale was waged. Thousands upon thousands of revolutionaries saw the dawn of a new era and absorbed incomparable confidence and power from this revolutionary theory, and with this the Chinese revolution took on a totally new aspect.

The period from the Zunyi conference to the Yanan rectification movement was another great turning point in the history of the Chinese revolution. Prior to this, the CCP had led the people in accordance with

Marxism-Leninism in waging more than 10 years of struggles and had traversed a zigzag road. During this period, the revolution suffered failures and setbacks many times, but this precisely showed the importance of truly mastering and correctly applying revolutionary theory rather than proving that Marxism-Leninism did not work or was not important. Just as Comrade Liu Shaoqi said, these failures resulted from the infancy of and mistakes in the theoretical guidance rather than failures in ordinary work. The practice of the revolution required us to integrate Marxism-Leninism with the reality of China, and in the light of the characteristics of Chinese society to find a correct road for the Chinese revolution and to seek creation and development in theory. The Chinese communists headed by Comrade Mao Zedong solved this problem in their long years of plain living and hard struggle. In this way the great Mao Zedong Thought came into being. This scientific theory with Chinese characteristics became mature at the stage of the Yanan rectification movement and was widely popularized. The cadres of the whole party studied this theory with immense zeal and a scientific approach, acquired a fundamental understanding of the correct path for the Chinese revolution and the principles and policies that should be adopted, and thus substantially raised their own level of Marxism-Leninism. This brought about an incalculable force propelling the revolution forward, ensured the smooth course of struggle and, resulted in successive victories in the war of resistance against Japan, the war of people's liberation and the birth of the PRC. As the saying goes, the founding of new China was the victory of Marxism-Leninism-Mao Zedong Thought. This is a very real truth.

Victory in the new democratic revolution vividly displayed, with facts universally acknowledged, the unparalleled power of Marxism-Leninism. This state of affairs caused the most intense attention to be paid to theory by people throughout the nation.

In the early 1950's, there emerged an upsurge of studying revolutionary theory among the broad masses of cadres, youths and intellectuals. This was when there was a wide popularization of Marxism-Leninism-Mao Zedong Thought throughout the country. The fact that large numbers of cadres and masses mastered revolutionary theories greatly promoted the smooth development of the various types of work at that time.

After the serious setbacks suffered in the "Great Cultural Revolution," the 3d Plenary Session of the 11th CCP Central Committee began another great turning point, which similarly shows the importance of theoretical guidance. "Leftist" mistakes committed in the past, and especially the mistake of the "Great Cultural Revolution," were primarily the result of mistakes made in theoretical guidance. Therefore, the historical turning point, which was manifested by the 3d Plenary Session of the 11th CCP Central Committee, had to make the bringing of order out of chaos in theory a prerequisite. By stressing practice as the only criterion for testing truth, we precisely mean to discard the sort of "leftist" theories which have been proved to be erroneous, to reaffirm the principle of uniting the universal truth of Marxism-Leninism with China's reality, and to open up a path for developing the party's correct theory in new practice rather than to negate or ignore the role of theory.

Of course, correctly and satisfactorily providing answers to the various problems which lie ahead of us in the new historical stage will be an arduous process. In this process, the explorative deeds of those who blaze a new trail will be inevitably mingled with the perplexity of those who waver, and there will be a small number of people who show indifference toward theory. It will be difficult to completely avoid this state of affairs. The key lies in the fact that our party's ranks and particularly the vast numbers of cadres must work hard to increase consciousness in studying theory. It must be noted that only Marxism-Leninism-Mao Zedong Thought can help us attain a clear understanding of the orientation and path of socialist construction and be full of confidence in our cause; can help us acquire the correct stand, standpoint and method, correctly understand and implement the party's principles and policies and carefully and skillfully handle various problems; can help us effectively educate and mobilize the masses, unite the revolutionary ranks and bring every positive factor into play; can help us, communists and state functionaries, preserve the purity of communism and resist the corrosive influence of the ideology of the bourgeoisie and other exploiting classes. In brief, only if there is a study of theory can our cadres become firm and sober-minded Marxists who can accomplish things. Moreover, having large batches of such cadres is an important condition for enhancing the fighting capacity of the party and for leading the broad masses in triumphant advance. Today large numbers of middle-aged and young cadres are assuming the leading posts at various levels to shoulder various important tasks and to fill the posts of veteran cadres. It is of even more urgent significance to strengthen theoretical study by the middle-aged and young cadres and urge them to manage to master Marxist-Leninist theories in a relatively systematic and practical manner.

At present, many cadres have, through practice, realized the importance of theory. They have immense zeal and enthusiasm for studying theory. However, some cadres attach insufficient importance to theory and hold that whether we study theory is of no importance and even regard that which has been learned as of no use. If we do not clarify those confused ideas, it will be difficult to increase consciousness in studying theory.

Some people say: "Theory is changeable and you cannot depend on it. Things can be interpreted in any way." They try to use this argument to prove that it is useless to study theory. In fact the argument concentrates only on the surface of matters and fails to make a correct analysis of them. It must be acknolwedged that at the stage when leftist mistakes were committed in the past, and particularly during the 10 years of internal disorder, theory was indeed ever changing. At the same time, what was regarded to be correct yesterday became the targets of criticism today, and what was regarded to be correct today might possibly become erroneous things tomorrow. The propaganda of many theories was easily swayed by the political requirements at different stages. This state of affairs caused the greatest damage to the reputation of the party's theoretical work and ideological and political work. But many theories at that time were erroneous theories and even pragmatism and sophism rather than Marxist-Leninist scientific theories. Studying those kinds of theories is indeed not only useless but harmful. However, things today are fundamentally different. From the 3d Plenary Session to the 6th Plenary Session of the 11th CCP Central Committee, our party brought order out of chaos in its guiding ideology; some major theoretical problems were clarified and the true face of Marxism-Leninism-Mao Zedong Thought was restored. We must not judge today's situation by old standards and experiences. Next, we must make an analysis of "theory being changeable." In the past, people used to argue in favor of their erroneous political propositions by resorting to theory to repudiate as mistakes that which was formerly correct. This was a "change." At present, bringing order out of chaos and repudiating and correcting the previous "leftist" theories is another "change." The two must not be mixed together. Here lies a question of whether it is something which is correct changing to something which is wrong or vice versa. The criterion to judge the right and wrong of the change is still practice. So we must not indiscriminately negate all kinds of changes. We must warmly welcome correct changes, that is, the bringing of order out of chaos in theory, and promote its accomplishment through study. Furthermore, we cannot integrate overnight the universal principles of Marxism-Leninism-Mao Zedong Thought with the new conditions and new tasks facing us now and create mature theories suited to China's national conditions. It is necessary to sum up our experiences in practice and ceaselessly replenish, revive and substantiate some existing conclusions in practice so as to explore and probe new conclusions. This is also a "change." This change constitutes development. This change is invariably normal under any circumstances and it is particularly needed now. Otherwise, our theories will become rigid and cease to develop. In short, as long as we make a concrete and historical analysis of the phenomenon of the so-called "theory being changeable," we will absolutely not reach the conclusion that "what has been learned is of no use" and instead will derive from this a more profound understanding of the importance of theoretical study.

Some people say: "Studying theory cannot solve problems in practical work." This argument implies a misunderstanding of the role of theory. Theory is important, but no theory is a miraculous cure. Nor can it provide us with readymade answers to the various concrete and practical problems which we encounter. First, what is brought to light by a theory is, in general, matters of a universal and regular nature. Only from these can we find out knowledge about laws and the methods for observing and handling matters. The various concrete and practical problems in our work must depend on us for solution in accordance with the party's principles and policies and in the light of reality. Some people might argue: "Such being the case, it is all right just to implement the party's principles and policies and carry out the tasks assigned by the higher authorities. Why should we bother ourselves about studying theory again?" They fail to see that, although concrete problems depend on us for solution, whether ideologically we have a correct theoretical guide makes a world of difference. This is because the party's principles and policies are formulated on the basis of Marxist-Leninist theory. Without the basic knowledge of Marxist-Leninist theory, one will be unable to correctly understand these principles and policies and also be unable to implement them in a flexible and creative way in the light of one's own local actual conditions. Second, Marxist-Leninist theory must be combined with the actual conditions at our new stage, must bring to light the laws of our socialist construction and construction, and must scientifically elucidate major problems of principles in practical life. In this sense, at present there are indeed many practical problems which have not been theoretically solved and call for further systematic and scientific answers. However, this state of affairs shows all the more that it is necessary to study theory, integrate it with practice, and develop revolutionary theory rather than showing that "what has been learned is of no use." Some people might think: "This is a matter for the central leadership and theoreticians and has nothing to do with us." As for our cadres, although their work might be broad or limited in scope and the responsibilities they shoulder might be heavy or light, they have, in fact, a common task to combine general theory and principles with the actual conditions of their own localities and units through study and to explore the laws governing their own work. Even in terms of the whole country and the whole party, it is also absolutely not the affair of only a small number of people to integrate Marxism-Leninism with the reality of China, probing the laws governing our construction and advancing our party's theory are absolutely not the affairs of only a small number of people. Doing all this depends on the accumulation of the practical experiences of the whole party and the universal improvement of the theoretical level. In this sense, each one of our cadres has a share of responsibility for developing the party's theories. To fulfill this share of responsibility, it is first imperative to study seriously.

There are other people who say: "Even if we have studied theory, we are still not in a position to avoid making mistakes. In the past, we were called on to study theory. Some people even had a high theoretical level but committed mistakes just the same." This argument looks at problems in an oversimplified way. Correct theoretical guidance is very important in avoiding mistakes but cannot guarantee a cure for all diseases. This is because a person making a mistake is a complicated phenomenon and the reasons for it are often many-sided. In terms of theoretical guidance alone, in order to manage not to make a mistake, one must at least have the following conditions: 1) the theory itself must be correct; 2) it is necessary for one to carry out practical activities under its guidance; and 3) the theory needs to be continuously tested by practice and developed in practice. In the past, when theoretical guidance tallied with these conditions, we did our work in a relatively correct way and achieved successes. The reason why we sometimes made mistakes was either that the theory was basically wrong or that the theory was correct but divorced from practice. If the theory is itself wrong, the practice will naturally be wrong. For instance, there was a theory of "continuing the revolution under the dictatorship of the proletariat." The "Great Cultural Revolution" emerged from this. As good as the theory is, if it is not followed in practice, one will still make mistakes. For example, in theory, democratic centralism and the mass line should be practiced, but in reality the idea of what one says being what counts was practiced, thus resulting in subjectivism and cutting oneself off from the masses. It can thus be seen that the past mistakes committed by the leadership of the party prove the importance of preserving the correctness of theory and of uniting theory with reality, rather than prove that theories are useless. One of the important causes of our cadres following suit in making mistakes in the past was their low theoretical level and their lack of the ability to distinguish, in theory, between right and wrong on major principles. Under those circumstances, the reason why some cadres could keep a clear head and resist mistakes was not unconnected with their relatively high theoretical level and comparatively great ability to differentiate between right and wrong. This further shows the importance of the broad masses of cadres studying theories and increasing their consciousness.

Marx said: "The process of putting a theory into practice in a country is determined by the process of the theory fulfilling the requirements of this country." ("Selected Works of Marx and Engels," Vol 1, p 10) Comrade Mao Zedong also said: "The reason why Marxism-Leninism could play such a great role after it reached China is that China's social conditions already had a need for it." ("Selected Works of Mao Zedong," Vol 4, p 1452) The quotations from Marx and Mao Zedong clearly show the relationship between a theory and the actual need for it in a country. The liberation of the Chinese people badly needed, and present Chinese social development badly needs, the guidance of scientific theories. When our theories are correct and meet the needs of the Chinese people in transforming the country, the revolutionary cause will be greatly developed on the one hand and revolutionary theories themselves will be substantially developed, spread and be warmly welcomed by the broad masses of people on the other hand. But when some erroneous theories bring harm to our society instead of meeting its needs, these theories naturally will be detested by the people. At present, since bringing order out of chaos, the party's theoretical guidance has once again got onto the correct path and reestablished normal contact with actual needs. We are confident that the needs of our socialist construction will again arouse an interest in theory by the broad masses of the people and push Marxist-Leninist scientific theories forward. Our cadres must try hard to increase consciousness in studying theory, stand in the forefront and enthusiastically promote this process.

WHAT A THEORETICAL TEST SHOWS

Beijing RED FLAG in Chinese No 9, 1 May 82 pp 39-41

[Article by Qin Li [4440 0500]]

[Text] In order to meet the needs of cadres' philosophical study in the second half of this year, a party school has recently run a training course for philosophy instructors. Of the more than 100 participants, some were leading cadres from propaganda departments at the prefecture and county levels and leading cadres from party schools and cadre schools, but the great majority were theoretical teachers and ordinary propaganda cadres. After enrollment, the students were given an assessment test on the two subjects they were going to study. To some extent, the results of this test reflected the theoretical level of some theoretical cadres who are currently engaged in educational work and of some propaganda cadres. They have also shown why it is so important and urgent to strengthen cadres' theoretical study, particularly the study by theoretical and propaganda cadres at the grassroots level.

Five philosophical questions were posed on this test: 1) What are the basic questions in philosophy and which two aspects do they include? 2) Why do we say that the law of the unity of opposites is the essence and core of materialist dialectics? 3) What does the Marxist concept of practice imply? 4) What is the ideological line of the party, and what are the relations between ideological and political lines? 5) What Marxist philosophical works have you studied, and what philosophical lessons have you lectured on?

The first four questions were posed for the purpose of examining their basic knowledge of philosophy. The results of the test showed that those who could satisfactorily and accurately answer the questions accounted for about 20 percent; those whose answers were basically correct but not satisfactory and accurate accounted for about 40 percent; those who did very poorly accounted for about 40 percent, of which many participants could not answer some isolated questions, and some handed in their examination papers unanswered. Outstanding wrong answers to the basic questions in philosophy were "world outlook and methodology" or "the combination of theory with practice and the unity of opposites." With regard to the two aspects of the basic questions in philosophy, some participants answered that they were "political economics and scientific socialism." Half of the participants could not answer the question about the implications of the Marxist concept of practice and the question why the law of the unity of opposites was the essence and core of materialist dialectics; 25 percent of the participants could not answer the question about the ideological line of the party and the question about the relationship between ideological and political lines, which are often propagated in newspapers.

The fifth question was posed for the purpose of investigation. From the answers given by the participants, we could see that those who have studied philosophy or those who had done so in a comparatively systematic way accounted for about 57 percent and those who had not studied philosophy accounted for about 43 percent.

With regard to the history of the CCP, four questions were posed: 1) What are the fundamental differences between China's new democratic revolution and old democratic revolution? 2) What is Mao Zedong Thought, and what is the living soul of Mao Zedong Thought? 3) What is the great significance of the 3d Plenary Session of the 11th CCP Central Committee? 4) Please write a brief account of your past study of and lectures on the history of the CCP.

The purpose of the first three questions was to examine the basic knowledge of the party's history. The results of the test showed that those who could answer the questions satisfactorily and accurately accounted for about 9 percent; those whose answers were basically correct accounted for about 31 percent; those who could not answer satisfactorily and had many mistakes in their answers accounted for about 45 percent; and those who could not answer some isolated questions or whose answers were full of holes and even completely wrong accounted for about 15 percent. Some markedly wrong answers were given on their papers. For instance, with regard to the fundamental differences between China's new democratic revolution and old democratic revolution, some participants answered: "The old democratic revolution was not guided by unified thinking. Its sole purpose was to fight against the rich and assist the poor...and was waged for the livelihood of one family and one person and carried a very strong flavor of the bourgeoisie." With regard to the great significance of the 3d Plenary Session of the 11th CCP Central Committee, some participants did not know what the session was about, answering that the significance was that "classes do not exist, and although class struggle exists, the main contradictions are contradictions among the people." Comparatively speaking, their answers to the questions about Mao Zedong Thought and the living soul of Mao Zedong Thought were somewhat better, but many participants could not give accurate answers, and the answers of six participants were basically wrong.

The fourth question was asked for the purpose of investigation. The answers showed that those who had systematically studied the history of the CCP accounted for about 17 percent; those who had taken part in a short-term study course on or studied independently some party history accounted for about 26 percent; and those who had never studied the party history accounted for about 57 percent.

The above-mentioned material is to a certain extent representative. We know that there have been similar results in tests and investigation materials in some provinces. These materials show that a certain number of cadres who engage in theoretical and propaganda work at the grassroots level possess very little Marxist knowledge and have a low theoretical level and that it is very difficult for them to meet the requirements of the work. Of course, there are many causes for this phenomenon, but in the main it is owing to the disruption by Lin Biao and the "gang of four" and to some extent to the shortcomings in our work. Therefore, we should not simply blame our cadres. But under no circumstances must this phenomenon be allowed to continue. It is our urgent task to energetically raise the theoretical level of these cadres.

How can we solve this problem?

First, leading institutions in charge of theoretical and propaganda work must put special emphasis on the building of theoretical and propaganda contingents. Our party and state take Marxism-Leninism-Mao Zedong Thought as their guiding thought, and theoretical and propaganda work is an important part of the party's work. A strong and energetic theoretical and propaganda contingent is an indispensable force for pushing forward the work of party committees at all levels. Our comrades who engage in theoretical and propaganda work at the grassroots level get in touch with the cadres at the basic level and the masses almost every day. They directly shoulder the task of propagating Marxism-Leninism-Mao Zedong Thought among the masses and educating them with Marxism-Leninism-Mao Zedong Thought. Educators must first receive education. The theoretical level and quality of work of these comrades directly affect the raising of the ideological and political level and the completion of the tasks of the cadres at the basic level and of the broad masses. Therefore, we must put special emphasis on raising the theoretical level of the theoretical and propaganda cadres at the basic level. We must put this question on the agenda, adopt effective measures, and be determined to devote a certain amount of manpower and material resources to the training of theoretical and propaganda cadres in order to solve the problem of finding the teachers required for theoretical study and the problem of finding study materials and study time. In addition, we must be strict on cadres and carry out the necessary supervision and examination of their work. We must check not only their work but also their study. We must encourage them to study hard, to carry out investigations and to aim high.

Second, the cadres who engage in theoretical and propaganda work must be conscientious in their study. This is the crux of the problem. Some basic theoretical knowledge is not difficult to master so long as we conscientiously read some books and pay attention to the relevant articles in the newspapers and magazines. We should say that the study conditions of our cadres now are better than those in any period in the party's history. But no matter how good the objective conditions might be, they will be useless if we do not study hard. Since the 3d Plenary Session of the 11th CCP Central Committee, under the leadership of the party, theoretical and propaganda cadres have been conscientious in their study and have made a contribution to the party's theoretical and propaganda work. But owing to the long-term disruption by Lin Biao and the "gang of four," Marxist theory and the party's propaganda work have enjoyed less prestige. Some people think that theory is useless so they ignore it. It is necessary to carry out arduous ideological and political work to solve this problem. Decades of experience have told us that Marxism-Leninism-Mao Zedong Thought is an objective truth and that it is the only banner that can guide us in our advance to victory. Before we ask others to have a firm belief in Marxism-Leninism-Mao Zedong Thought, we ourselves must first have a firm belief in it. Our comrades who engage in theoretical and propaganda work must firmly believe in the correctness of Marxism-Leninism-Mao Zedong Thought, correctly sum up historical experiences and draw a practical scientific understanding from them. With a correct understanding of theoretical and propaganda work, we can have the spirit to study theory. So long as we are conscientious in our study, energetically raise our theoretical level and enthusiastically do a good job in our work, we can certainly bring into full play the power of theory and make greater contributions to educating and arming the masses with Marxism-Leninism-Mao Zedong Thought.

WHY IS IT IMPERATIVE TO OPPOSE REGIONAL ECONOMIC BLOCKADES?

Beijing RED FLAG in Chinese No 9, 1 May 82 pp 41-42

[Article by Qi Xiangwu [7871 0686 2976] and Hou Yunchun [0186 0061 2504]]

[Text] Regional economic blockades refer to some localities and departments, proceeding from their respective partial interests and abusing their power, closing their markets, and blocking the supply of their raw materials and technology to others. At present, the main manifestations of regional economic blockades are as follows. Some local authorities force the marketing in their own areas of locally produced general machinery, electric equipment and farm machinery which are poor in quality and performance, even though the users are reluctant to adopt them. At the same time, these authorities also arbitrarily forbid users in their own areas from purchasing similar products of high quality from other areas. Some raw material-producing areas refuse to transfer their raw materials in line with state plans, and process these raw materials by themselves or sell them at high prices without authorization. Some keep their technology secret and block the popularization and application of advanced technology.

Economic blockades are a backward phenomenon of feudalism. One of the tasks in the bourgeois revolution is to smash these economic blockades and thus open a unified domestic market for the development of capitalism. Ours is a socialist state, where a unified domestic market is an essential condition for running a unified planned economy on the basis of public ownership. Practicing economic blockade will lead to historical retrogression and do great harm to the development of the socialist economy.

First, this action will undermine unified plans and markets. If an economic blockade is put in force, goods and materials cannot be smoothly circulated and cannot be fully utilized because they are blocked from being transferred in or out. Thus, commodity circulation is harmed and forced to diverge from state plans and the unified market is disturbed. In this situation, the state will certainly lose control of the overall economy and all economic activities will fall into chaos.

Second, this action will lead to blind production and construction and affect the improvement of economic results. Socialist production is socialized mass production. There should be not only division of labor but also close relationships between different enterprises, trades, departments and areas. Only when they assist each other and closely cooperate can production be handled normally. But, as a result of economic blockades, the internal relations of socialized mass production are artificially broken down. If one refuses to allow in those products that one can make, then inferior goods cannot be replaced in a timely way. If one insists on starting to make things one has never made before, this will cause blind production and blind construction and an enormous waste in manpower, materials, financial resources and transport power.

Third, this action will impede the development of technology. As a result of economic blockades, the products of high quality and low price made in other areas are unable to enter local markets, and their sales are affected. Thus, these products cannot be fully developed. Inferior local products, however, can monopolize the market because there is no other competitor. Thus, enterprises will lack outside pressure to carry out technical innovation and their products will hardly change for dozens of years running. Therefore, economic blockades, in fact, reject advanced things and protect backward things.

Economic blockades are not only extremely harmful to the overall national economy, but, in the long run, also harm the development of the local economy. If localities practice economic blockades, they will not only block others but will be blocked by others. Meanwhile, when backward local products are protected by means of economic blockade, not only will the enterprises producing these products lose the impetus to improve product quality and upgrade their products, but the area will also incur losses owing to high consumption and waste, poor efficiency and performance caused by the use of these inferior products. Therefore, economic blockades, though bringing some ostensible and temporary benefits to localities, are in fact an action of binding oneself, which is not only harmful to the state and other areas but also to oneself.

When we encourage breaking economic blockades, protecting proper competition and guaranteeing smooth circulation of goods and materials, does this mean that all products should be transferred in from the advanced areas, and that nothing can be done by the underdeveloped areas? No. In fact, each area has its own advantages as well as disadvantages. Not everything is advanced in advanced areas; nor is everything backward in underdeveloped areas. As long as underdeveloped areas can bring their advantages into full play while overcoming their disadvantages, and make efforts to adopt advanced techniques and technology and improve operation and management, they will be absolutely competent to compete with advanced areas and to strengthen themselves in the course of competition. Even if their product quality cannot reach a high level for a time, they should not exclude advanced products and protect their inferior products by means of closing their market. What they should do is to devote great efforts to catching up. Of course, advanced areas must guarantee that what they sell to the other areas are products of high quality, low prices and good service. They should also take the responsibility of helping underdeveloped areas in the fields of equipment and technology. At the same time, the state should also actively support and help underdeveloped areas. By means of taxes, interest rates and other economic levels, conditions should be created for underdeveloped areas to compete with advanced areas.

STRENGTHEN IDEOLOGICAL AND POLITICAL WORK IN ENTERPRISES

Beijing RED FLAG in Chinese No 9, 1 May 82 pp 43-45

[Article by Wang Shengyi [3769 0581 5030], deputy secretary of the CCP Committee of the Anshan Iron and Steel Company]

[Text] Strengthening and improving ideological and political work in enterprises and further promoting the building of socialist civilization and spiritual civilization is an important task confronting enterprise party organizations. Over the last few years, we have deeply realized that to do this work well, the most important thing is to solve the problem of how to view ideological and political work. One argument holds that because the economic responsibility system has been introduced in the enterprises, it is advisable not to have any more ideological and political work. The advocates of this position say: "No matter what you say, you still have to give out banknotes" and "No matter how much you talk, it is still money that makes the world go round," and even that so long as secretary "Qian" [money] gives a mobilization talk anf factory director "Jiang" [bonus] makes a summary, the enthusiasm of the staff and workers will at once be aroused. This poses to people questions that call for immediate answers: In the four modernizations program, is there any need to uphold ideological and political work? What role does ideological and political work actually play? Only when these questions are correctly answered can the broad masses of cadres have a sense of urgency and enthusiasm for doing ideological and political work.

It must be acknowledged that the implementation of the economic responsibility system in enterprises and the appropriate issuing of bonuses play an important role in mobilizing the enthusiasm of the staff and workers. However, we must by no means think that the more bonuses issued, the higher the enthusiasm, and still less should we replace ideological and political work with bonuses. The implementation of the economic responsibility system is aimed at strengthening rather than abolishing ideological and political work. Viewed from the actual conditions of enterprises, there are economic factors, ideological and political factors, and many other factors, such as the contradictions within the family and other practical difficulties which affect the enthusiasm of the staff and workers. These cannot all be resolved by relying exclusively on the economic responsibility system and bonuses. At present, in the enterprises, bonuses must be issued but it will not do to arbitrarily distribute them. Bonuses play a large role for some people, but for others they are less important. There are some young people who have good family economic conditions, who will not take any notice if they spend 10 or 20 yuan more or 10 or 20 yuan less a month. For instance, in the Anshan Iron and Steel Company, many of the people who work in the open-hearth furnace workshops are absent from duty in the high-temperature season. Some young workers "take a summer holiday" at home, saying I would rather not get the scores of yuan of bonuses than get a toasting. Obviously, this kind of problem can only be solved by relying on ideological and political work rather than by relying on bonuses. This is because the comrades of the iron and steel mill carried out positive enlightenment work and painstakingly explained to the young workers, through paying visits to their parents and other ways, the relationship between making steel and the four modernizations program and helped them gain enlightenment from correct ideas. Thus the young workers eventually went back to work. This shows that while carrying out the economic responsibility system and utilizing such methods as the bonus system, it is imperative to carry out vigorous ideological and political work and to arm the masses of workers with revolutionary ideals and revolutionary spirit to better arouse their enthusiasm.

At present in the enterprises there exists the following phenomenon: when encouragement is mentioned, attention is more often than not centered on material encouragement while insufficient importance is attached to spiritual encouragement. We must not indulge in the idea of the "spirit being omnipotent," but we must also not negate the role of spiritual encouragement and indulge in the idea of "money is all-important." There was a young finished-product packer in the naphthalenic acid workshop of the chemical general plant who always stayed away from work without leave, or came late, left early and, while at work, slept like a log. Despite not getting any bonuses for 10 our of 12 months, in an uncaring manner, he said: "You may deduct my bonuses as you please. I will ask my father for money when I have used up all my money." Later, the workshop changed its method and started doing ideological work, adopting the method of giving priority to encouragement and commendation. This kindled his enthusiasm for work and his spirit of making progress, and eventually brought about a change in him. On the one hand, he won the "championship" in a finished-product packing exhibition match and was cited with a meritorious service certificate, second class and on the other, he was elected group leader of the packing group. The parents of many young workers say: "Giving my son a certificate of merit will have a greater effect on him than giving him 100 yuan. Money will be used up in several days while a certificate of merit, which will always hang on the wall, will give him the impetus to continue to devote his efforts to doing better." Of course, spiritual encouragement must not be carried out in isolation, divorced from people's material benefits. Marxism holds that all things for which people struggle are directly or indirectly related to their interests. People's interests include the rights and interests in all fields, such as political work, and we must not deviate from the rights and interests of the public in trying to analyze various ideological problems. Nor must we deviate from these rights and interests of the public in trying to find solutions to various ideological problems. In terms of economic life, for example, all the problems such as housing, employment for their sons and daughters, and the distribution of bonuses, have an impact on people's thoughts and feelings. Therefore, while enthusiastically solving the ideological problems of the masses, we must also pay attention to seeking earnest solutions to some practical problems of the masses. Of course, while solving these problems, we must take personal opinions and requirements into account and, at the same time, give consideration to the actual condition and capabilities of the state and solve them in a realistic and practical way. Over the last 2 years, the Anshan Iron and Steel Company has built additional floorspace of nearly 1 million square meters; more than 20,000 households of staff and workers have moved into their new houses; and most of the sons and daughters of the staff and workers throughout the company have been assigned jobs. These tangible material benefits have enhanced the confidence and power of the staff and workers in accomplishing the four modernizations program and have also made ideological and political work more convincing.

The fundamental task of the propaganda work and ideological and political work of enterprises is to carry out propaganda and education in Marxism-Leninism-Mao Zedong Thought among the staff and workers. It is necessary to help the masses of staff and workers to heighten their confidence in the superiority of socialism and satisfactorily solve the problems of upholding the socialist road and of fostering communist ideals. It is necessary to help the masses of staff and workers to realize their position of being the masters of the country, carry on the spirit of being the masters of the country, correctly handle the relationship between the state, the enterprises and the individual, and make greater contributions to the socialist modernization program.

The Anshan Iron and Steel Company has the glorious tradition of handling the relationship between the state, the collective and the individual in a manner of the people being the masters of the country. At present, this tradition is being revived and developed. However, in the new situation, some phenomena have emerged in enterprises which warrant special attention. For instance, some units indulge in selfish departmentalism and disregard the interests of the state. The main manifestations of this are: exerting more efforts for big profits and less efforts for meager profits; concentrating on profit sharing to the neglect of holding oneself responsible to the state; practicing fraud and retaining profits which ought to be turned over to the state; and concocting various pretexts for recklessly issuing bonuses. In the production process, the manifestation is disputing over trifles and counteracting each other's efforts rather than working in coordination by tacit agreement between different factories, workshops, teams and groups and having coordination between the upper and lower working procedures. Furthermore, in regard to staff and workers, some people, influenced by the hired hand mentality, hold the view that a person will do no more than he is paid for; some concentrate on quantity at the expense of quality, pay one-sided attention to production to the neglect of equipment and only look after themselves and disregard others; and in order to get more bonuses some even make false reports on figures and seize every chance to gain advantage by trickery. There was an electrician who, while checking the operations of machines, found that three of the foundation screws of a motor had become loose. He was aware that this would interfere with the normal operation of the equipment. According to reason, he should have tightened the screws. But the first thing that came to his mind was that the foundation screws becoming loose was the business of the electrical pincers team. If anything went wrong, bonus deductions would be made from other teams and he himself might be entitled to more bonuses. As a result, he neither tightened them nor reported to the departments concerned. As for these phenomena, we must, of course, not make a great fuss over them but they must not be allowed to go unchecked. In our ideological and political work, to deal with problems in this respect, it is necessary to imbue the masses of staff and workers with proletarian ideas including Marxist political thought, philosophical and legal thinking, moral concepts and so on in a constant, repeated and highly effective way. Only by so doing can we kindle the staff and workers' revolutionary spirit of loving the country and of being the masters of the country, heighten their sense of being the masters of the country, help the enterprises and the staff and workers put the overall interests of the proletariat and the interests of the state and the collective in first place, and help our enterprises to uphold the socialist orientation.

In order to help the staff and workers to carry on the spirit of being the masters of the country and correctly arrange the relationship of the individual with the state and the collective, many units of our Anshan Iron and Steel Company have carried out ideological educational activities in the "three comparisons and three understandings" in a deep-going manner. First, compare the new society with the old one and clearly show that their position of being the masters of the country was hard-won; second, compare socialism with capitalism and clearly show the essential difference between the workers being the masters of the country and the relationship of workers being hired under capitalism; and third, compare the situation before the "Great Cultural Revolution" with the situation after it and clearly show that the 10 years of internal disorder was one of the reasons for the blunted sense of responsibility of workers being the masters of the country among some workers. This year we have launched activities of settling accounts in the economic field on a company-wide scale. Like the Capital Iron and Steel Company, we have also widely calculated accounts in several aspects: First, we have calculated what was taken from the people and what was used in the interests of the people by the state so that the staff and workers will recognize the principle that the fundamental interests of the state, the collective and the individual are identical. Second, we have calculated the relationship between individual positions and the whole so as to foster the view that the economic results and the partial and local interests of enterprises must be subordinated to the overall interests. Third, we have calculated personal contribution by contrasting individuals with the advanced. We have carried out ideological and political work closely centered on the problem of how to handle the relationship between the state, the collective and the individual; as a result, great changes have taken place in the appearance of the staff and workers. At present, the number of those who conscientiously work without remuneration and enthusiastically make greater contributions to the state has increased, and the number of those who square accounts in every detail and do everything "for the sake of money" has decreased; the number of those who concern themselves with the collective and pay attention to both style and cooperation has increased, and the number of those who only look after themselves and indulge in selfish departmentalism has decreased. A contingent of iron and steel staff and workers who cooperate in unity and in accomplishing the four modernizations is taking shape, a contingent which is ideologically advanced, technically proficient and highly disciplined.

In economic work, stress should be put on the improvement of economic results and, similarly, immediate attention should be paid to the effect of ideological and political work. That is to say, it is necessary to really clear up doubts and suspicions in the minds of the staff and workers, and clarify all sorts of confused ideas so that everybody will make progress ideologically and improve.

To do this, it is no good to rely on empty talk and bragging, and it is worse to indulge in false statements which do not tally with objective reality. What is most convincing is facts, and what is most touching is true statements. Dull and dry preaching and force-fed inculcation will result in nothing. The aim of ideological and political work is to work for the people. Man's thinking is complicated and varied as well as growing and changing. This requires us to have a serious understanding of the new conditions, study new problems and probe new methods, and carry out ideological and political work with certain aims in mind. At present, do not some comrades feel that "the old methods are no good while the new ones have not yet been clearly defined"? Feasible methods stem from the investigation and study conducted by immersing oneself among the masses. So long as we have a clear picture of the different ideologies of different objects, we will already have solutions to the problems. While conducting an investigation in Liaoning Province, Comrade Hu Yaobang pointed out that without conducting investigations and study, it is difficult to do away with old restrictions. Investigation and study as well as examination and supervision are all learned from reality. To learn from practice is the best study. If our ideological and political work deviates from the investigation and study conducted by going deep into the realities of life, it will become random shooting. Furthermore, random shooting will inevitably give rise to indulging in either falsehoods or empty talk. This will surely lead to failure.

Over the last few years, on the basis of investigations and study and in the light of the different ideologies of different objects, we have adopted multifarious forms in doing enlightenment work and have tried hard to convince people by reasoning and influence them by tender sentiments. We have frequently provided people with clear concepts and distinctive images so that they will know what they must or must not do and how they must or must not behave. We have again publicized Anshan's veteran hero Meng Tai's spirit of being the master of the country, a spirit of plain living and hard struggling and loving the country as his own family; Wang Chonglun's spirit of forging ahead; Song Xuewen's spirit of keeping on working as long as he lives; Zhao Yulin's spirit of defying personal danger for the revolution; Zhao Chengshun's spirit of daring to scale new heights in science and technology; and Wang Wenpiqsyjs spirit of serving the people wholeheartedly. While publicizing old models, the Anshan Iron and Steel Company has set up large batches of new models. The company has set up 102 advanced party branches, 152 advanced party groups and 201 fine party members as models; in the field of the building of spiritual civilization, the company has set up a batch of models, such as young woman worker Chang Li of the No 2 blooming mill. We organized these models to separately give 117 lectures to 102 units. These activities enabled people to see that they have examples to learn from, that there is much room for them to exert their efforts and develop their abilities, and that they will be cited for meritorious service. Within the past year alone, there emerged 2,769 advanced producers and advanced workers, 578 advanced collective units and 5,473 shock workers in the new Long March.

To make ideological and political work a success, it is still necessary to have specific programs and feasible measures. For instance, within a year, how many rotational training courses for cadres will be held and what level will be attained? How many less advanced young workers will be helped to make progress? What level will be reached in a year in terms of spiritual civilization? All these call for specific requirements. Over the last few years, the problem of educating youths has become a serious problem. Everybody is now paying a good deal of attention to it. Before 1981, in the Anshan Iron and Steel Company there were 3,233 young people who were less advanced or had done evil things. These people "polluted" society and had simply become serious social polluters. In order to solve this problem, the whole company organized over 2,000 helping-teaching groups composed of more than 5,000 party members, CYL members and veteran workers. Within a year, they helped 1,528 less advanced young people to make progress and 1,119 young people who had taken a wrong step in life to cease their illegal and criminal activities. Of these, 247 have entered the advanced ranks. In the future, in accordance with the requirements of the CCP Central Committee and on the basis of earnestly summing up experiences, we, the Anshan Iron and Steel Company, will conscientiously find out where we lag behind and further firmly grasp ideological and political work.

PROCEED FROM THE CONDITIONS OF A CITY IN IMPROVING ECONOMIC RESULTS--A TALK ON THE METHOD OF LEADERSHIP ADOPTED BY THE NANTONG MUNICIPAL CCP COMMITTEE

Beijing RED FLAG in Chinese No 9, 1 May 82 pp 46-48

[Article by Di Long [5441 7127]; passages enclosed in slantlines printed in boldface]

[Text] Proceeding from reality is a basic viewpoint of dialectical materialism. It is also an important matter in carrying out our leadership well.

In recent years, under the guidance of the spirit of the 3d Plenary Session of the 11th CCP Central Committee, the Nantong Municipal CCP Committee has paid conscientious attention to this matter.

Whenever they decide to set up a new enterprise or to introduce new equipment, they consider whether this is in conformity with local conditions and characteristics and whether this can yield satisfactory economic returns. In their own words, they will "try by every possible means to accomplish feasible projects which conform to the local realities, while refusing to be attracted by infeasible projects, even if they are as attractive as gold and silver." These simple but lively words reflect that what they think and what they do are in accord with the materialist line.

Nantong is a medium-sized industrial city located in the lower reaches and on the northern bank of the Changjiang River. To its north, there is the vast Subei plain. Its urban districts cover 18 square kilometers. There is a population of 210,000 (not including people in suburban farming villages). There are 370 industrial enterprises with a total of 163,000 workers and staff. A modern textile industry has existed in this city for more than 80 years. Several similar medium-sized cities can be found in Jiangsu Province, and more can be found in the whole country. Compared with many other medium-sized cities, besides having features common to all of them, Nantong has its own specific characteristics in industrial production. The Nantong Municipal CCP Committee did not clearly realize their specific local conditions for a long time in the past. From time to time, they blindly organized and led industrial production. In the 10 years of chaos, this blindness in action was especially serious. In those days, owing to the influence of the "leftist" guiding ideology, they did quite a number of stupid things that did not conform to local conditions. For example, without making an investigation and study, they invested several million yuan in mining coal in another area in order to solve the coal problem; without thorough consideration, they embarked on infeasible projects such as fractional distillation of petroleum and producing reagents for developing color film. Investment worth tens of millions of yuan was thus like a huge stone dropped into the Changjiang River. As a result, some projects had to be stopped before they were completed, some could not yield benefits after they were completed, and others just became heavy burdens. Though this was not a small "educational expense," some leaders did not draw the proper lessons. In the period after the "gang of four" was smashed, the municipal committee still intended to develop heavy industry. They planned to build a heavy machine-building factory and put forward some unrealizable slogans and plans, such as "setting up an integrated industrial system" and "four bases." This showed that the municipal committee had not freed itself from the shackles of "leftist" ideas and had not clearly realized how to develop a city like Nantong. This was a basic reason why they took a roundabout course in developing Nantong's industry.

After the 3d Plenary Session of the 11th CCP Central Committee, the Nantong Municipal CCP Committee conscientiously summed up their positive and negative experiences in the course of implementing the policy of readjusting the national economy. They deeply felt that all kinds of work should be centered on production because the whole party was shifting the focus of its work, while production should be handled in line with local conditions and not be based on subjective will. Of course, the local conditions of Nantong are complex and varied. After repeated investigation and study, by inviting experts, professors and engineering technicians for discussions many times, the Nantong Municipal CCP Committee initially realized that the specific characteristics of Nantong could be summarized into the "three haves" and the "three have-nots," the so-called "three haves" are:
1) Nantong already has a foundation of production, technology and management for the textile industry, which has existed for more than 80 years. They have accumulated some experience over many years in this industry, and the proportion of light and textile industry is over 70 percent. 2) Nantong has abundant farming and sideline product resources which provide light and textile industry with sufficient raw materials. This is because Nantong is situated in one of the country's major cotton-producing areas.
3) Because Nantong is very near Shanghai, Suzhou, Wuxi and Changzhou, where light and textile industry is fairly developed, Nantong has favorable conditions for learning advanced experience from these cities. Moreover, Nantong has 22 kilometers of river bank which is beneficial to water transport. The so-called "three have-nots" are: Nantong has no mineral resources, no nearby fuel supply bases and no railway transport. These "three haves" and "three have-nots" generally reflect Nantong's specific local conditions.

These specific actual conditions are a major basis for working out all schemes and plans. While working out an overall plan for urban construction in line with the local characteristics, the Nantong Municipal CCP Committee decided to build Nantong into an industrial city with light and textile industry as the main body and into a future harbor city. They clearly put forth a slogan of "embarking on, guaranteeing, and promoting the development of light and textile industry" and blazed a new trail in developing industry in line with local conditions. This new trail not only gives full play to the existing advantages in light and textile industry, but also avoids the disadvantages arising from the shortage of mineral products and energy resources. This results in low investment and low energy consumption, rapid completion of projects, speedy circulation of funds and satisfactory economic results. Examples can be found in the development of bicycle production and the electronics industry. The production of bicycles, which are in short supply now, can reap quick returns. They can acquire sufficient raw materials for this purpose from the state and only consume small quantities of coal and power in the production. After determining the orientation, the municipal committee mobilized the strength in all fields to give all-out support in manpower, finance and materials and thus production has grown rapidly every year. The output of Changjiang bicycles last year was 140,000. These products were sold in 260 cities and counties of 22 provinces, municipalities and autonomous regions. In doing this, Nantong avoided its disadvantage of having a shortage of mineral resources and energy resources and gave play to its advantages.

Though the way for developing industry in line with local conditions has been found, it cannot be considered that all contradictions in taking this way have been resolved. In the course of "embarking on, guaranteeing, and promoting the development of light and textile industry,' Nantong has continuously met new problems. The municipal committee takes an active attitude and devotes efforts to analyzing and properly handling the following matters, thus bringing their advantages into full play.

/Persisting in expanding reproduction mainly in an intensive manner and doing a good job of tapping potential, renovating and transforming equipment./ The so-called "expanding reproduction intensively" means that the aim of developing production and expanding capacity is attained by intensive operation and improving technology but not by increasing investment. This results in less money spent but greater benefits. In the past, some comrades thought that only by increasing manpower, investment and equipment could conditions be created for expanding reproduction. That is, in essence, to expand reproduction in an extensive manner. The state cannot make a large investment in this city each year; thus it is impossible to build many new enterprises from the very beginning. Proceeding from the specific conditions of little state investment but many old enterprises, the municipal committee has stressed reforming these old enterprises and achieved initial results. From this they realize that by raising the production level and the technical level of existing enterprises by tapping their potential, and by renewing, renovating and reforming their equipment, they can bring their proper economic efficiency into full play and thus attain the aim of expanding production. Therefore, in developing light and textile industry, the municipal committee persists in placing reliance on existing enterprises and expanding reproduction mainly in an intensive manner. The major measures for doing so are: renovating and reforming old equipment, actively popularizing new techniques and technology to strive for production with high output and low consumption and providing readily marketable products of high quality, filling up gaps; creating distinctive local features for enhancing the level and competitive force of their products, and economizing on energy and tapping labor potential. There are several old plants in the textile trade in this city which had old equipment and were backward in technology and low in productivity. After technical transformation, their old equipment has been thoroughly modernized and the old enterprises have taken on a new look with a higher degree of mechanization, automation and continuity.

/While adhering to self-reliance, actively and reasonably utilizing foreign capital./ The Nantong Municipal CCP Committee adheres to relying on their own strength in construction and takes this as a major policy. But they never refuse to make use of foreign capital beneficial to construction. Proceeding from the local conditions of Nantong, they have made use of foreign trade loans, compensation trade, joint ventures with foreign companies and the processing of imported materials, so as to speed up the development of local industry. They believe that the utilization of foreign capital can not only economize on state investment, speed up the development of our industry and satisfy the needs of people's material life, but can also step up accumulation of funds for national construction. It is a measure which can yield multiple results. It exactly embodies the policy of "relying mainly on one's own efforts while making external assistance subsidiary." The No 2 National Cotton Mill has, since December 1979, imported 23,400 spindles and assembled by itself 988 looms by utilizing loans offered by an American company. It took only 21 months to complete the whole project, which had yielded a net foreign exchange return of $3.6 million by the end of last year. It is expected that the whole capital outlay can be recouped within 5 years, and then all the imported equipment and capital will be owned by this factory. As a leading comrade of the municipal committee has said, "It is a profitable measure to use foreign capital and to import advanced equipment. The key lies in borrowing money skillfully, utilizing it properly and getting a quick return."

/Developing other industries while "starting, guaranteeing and promoting the development of [illegible] t and textile industry."/ The development of light and textile industry is the crux of Nantong's economic construction. The municipal committee, however, has not neglected guidance and organization for other industries. Centering on developing light and textile industry, they have actively changed the service orientation of the machine-building industry and the chemical industry and encouraged the production of light industrial products. The machine-building and chemical industries have also raised the slogan "Support light and textile industry and strengthening ourselves." They have reduced the number of long-term projects and intensified the short-term projects, making use of their respective advantages to provide light and textile industry with technology, equipment, raw materials and subsidiary materials and serving light and textile industry conscientiously. The electronic instrument plant has actively developed instruments for light and textile industry; at the same time, they have changed their product ranges in line with market conditions and produced electronic appliances. During the readjustment, machine tool plants are generally short of production assignments, but the Nantong Machine Tool Plant is still developing. They have continuously improved designs for a kind of multiple-use miller which is now suited to maintenance and production and also to making light industrial molds in various enterprises. These products not only have supported the development of local light and textile industry, but have also been exported to other countries. Thus the production there is becoming more and more prosperous.

/Actively developing collective-owned enterprises in the course of readjusting the economic structure./ Quite a few people in society look down on enterprises under collective ownership. It seems to them that collective-owned enterprises are inferior to state-owned enterprises. To counter this tendency the Nantong Municipal CCP Committee continuously overcomes the wrong idea of "looking up to enterprises under the system of ownership by the whole people while looking down on enterprises under the system of ownership by the collective." They treat the latter as a fresh force in the construction of modernization and help develop them with great efforts. They also actively support the enterprises run by neighborhoods, suburban communes and production teams. Of 370 factories in the whole city, 261 of them are enterprises under the collective ownership system, accounting for 70.5 percent of the enterprises. Particularly in the second light industry department and the electronic instruments trade, collective-owned enterprises account for 91 percent of the enterprises. These factories are characterized by a small scale, flexible operation and high adaptability. They can rely on funds raised by themselves to expand reproduction, and thus can achieve a fairly great development in the course of competition. In recent years, the growth of the industrial output value created by collective-owned enterprises in this city has greatly exceeded that created by enterprises under ownership by the whole people. As a result of greatly developing collective-owned enterprises, not only can the social labor force be fully used to develop the production of consumer goods, thus satisfying the needs of people's life in both urban and rural areas, but more employment opportunities can be created, thus promoting the unity and stability of society.

Because the Nantong Municipal CCP Committee persists in starting from local specific conditions, continuously analyzes and studies new situations, and finds solutions for new problems, industrial production in this city has achieved a fairly high growth rate and good economic returns. Last year, the gross industrial output value of the whole city was as high as 2.15 million yuan, or nearly double that in 1976; the per capita output value was thus increased to 11,197 yuan. The employment problem of this city has basically been solved--77.7 percent of the population is employed. This means that each employed worker now only supports 0.3 person. This is rarely seen anywhere in the country.

The great change that has occurred in Nantong is closely related to the improvement of the leading organ's work style. The leaders of the municipal committee hold that, in order to push ahead the production of light and textile industry, it is necessary to change the leadership style--leaders should go out of their offices to help grassroots units solve their actual problems. In recent years, leaders of the party's municipal committee and the municipal people's government have introduced a system of "jointly working on the spot," which has been welcomed by the grassroots in general. Under this system, leading comrades of the party's municipal committee and the municipal government personally take the lead and organize other leading members of the departments concerned in going down to bureaus and factories. They find out the situation there and solve problems personally on the spot. This is both a change in leadership style and an improvement in the art of leadership. It can effectively link a general call with concrete guidance. Last year, the municipal authorities loaned 3.96 million yuan to the Nantong Bicycle General Factory. In order to get a return on this investment as quickly as possible, leading comrades of the municipal party committee and the municipal government led more than 50 leading members from over 20 departments concerned, including planning, economic, construction and finance departments, and went to work in the bicycle factory. They confronted over a dozen problems which were apt to cause disputes between different departments, problems such as those concerning funds, land requisition, capital construction and equipment. They made on-the-spot decisions that were recorded, and the parties concerned were charged to complete their tasks within a time limit. The cadres and masses of this bicycle factory were pleased and said: "So long as this system of leading members of the municipal committee going down to work in a factory can be persisted in, it is certain that the construction of modernization in our city can be speeded up."

Seeing the existing good results, the Nantong Municipal CCP Committee soberly realizes that, as compared with Shanghai, Changzhou and other advanced cities, they still have a long way to go, have lots of things to do and a lot of problems to solve. They know that if one rests content with things as they are, one will never make further progress. At the beginning of 1982, the municipal committee put forth higher goals for the people of the whole city and placed higher demands on itself. A vigorous, down-to-earth and mutually encouraging spirit is now spreading through the city.

VOLUNTARILY ASCEND LIANGSHAN MOUNTAIN

Beijing RED FLAG in Chinese No 9, 1 May 82 inside back cover

[Article by Liu Zijiu [0491 1311 0036]]

[Text] The saying "voluntarily ascend Liangshan Mountain" was derived from the idiom "being driven to ascend Liangshan Mountain." In today's political vocabulary, "being driven to ascend Liangshan Mountain" means the people are forced to rise and wage revolution. As it is known, in history, due to the cruel oppression and exploitation by slave owners, slaves are driven to wage revolutions; for the same reason, peasants are driven to wage revolution against landlords and the proletariat is driven to wage revolution against the bourgeoisie. National revolutions throughout the world are all forced by the aggression, oppression and exploitation of alien nations. The idiom "being driven to ascend Liangshan Mountain" is a highly general summary of all class revolutions and national revolutions in modern or ancient times, in China or elsewhere.

At present, we are devoting great efforts to reforming our organization; this is also a revolution. But this revolution is not forced by a class enemy, nor by a national enemy. It is waged by ourselves, of our own accord, under the party central authorities' mobilization and leadership. So, we say that this revolution can be described as "voluntarily ascending Liangshan Mountain." However, this revolution is not directed at people but at the system. A revolution of the system will certainly lead to the promotion of self-education and self-revolution in the aspects of ideology, organization, politics and work style.

Why should we wage such a revolution? That is because some unhealthy phenomena, such as duplicate and overstaffed leading organs, unclear division of duties and responsibility and being divorced from the masses and reality, have been formed in the long period of a peaceful environment. This has severely blocked the growth of productive force and social progress and has reached such an intolerable degree that reform must be carried out by means of revolution. In order to give an impetus to the development of productive force and social progress, our party central authorities have made up their minds to carry this revolution through to the end. This is a very necessary and very timely decision.

Reforming our organization is a revolution in the realm of the superstructure. That is designed to solve the problem that a part of our superstructure is not suited to the economic foundation and is impeding production from developing. The superstructure should, in essence, serve the economic foundation on which it is built, and ultimately, it should serve the development of production. If a part of the superstructure begins to lose its function of serving the economic foundation and the development of production, then this superstructure faces the danger of losing its right to exist. If this contradiction is not solved promptly, it will cause a series of frictions and troubles inside society, thus resulting in enormous waste, and even stagnation and retrogression. In history, no other social system or ruling class has been able to overcome this contradiction which often develops into an incurable disease and perishes together with those social systems and ruling classes. Only the socialist system and the proletariat and the Communist Party can solve this problem conscientiously and promptly. That means that they can, on their own initiative, adjust those unsuitable links in the relations between productive force and production relations and between the economic foundation and the superstructure, so as to continuously perfect the system and improve leadership. That is where the superiority of the socialist system lies and where the revolutionary, scientific and advanced nature of the leadership of the proletariat and the Communist Party lies. To sum up this matter, it can be called a kind of self-revolution or "voluntarily ascending Liangshan Mountain" as I have mentioned above.

This self-revolution of "voluntarily ascending Liangshan Mountain" is exactly a problem of correct handling of contradictions among the people. Its essence is correctly handling the relations between individual interests and overall interests and between immediate interests and long-term interests. While contradictions occur between individuals, current interests and overall, long-term interests, the former should spontaneously obey the latter--that is the sole correct way to handle this contradiction among the people, in particular, a ruling party should act in this way in the period of peaceful construction. Are there not quite a lot of people who have suffered setbacks because they cannot properly handle this contradiction? Of course, it is not only a question of individual fate, but a question concerning the country and the party's fate. Therefore, we regard this revolution--the reform of the organization--as a test for the broad masses of cadres, and we believe that they are able to stand up to this test and successfully carry out this revolution.

OUR BANNER IS COMMUNISM

Beijing RED FLAG in Chinese No 10, 16 May 82 pp 2-6

[Article by Editorial Department]

[Text] Recently, the facts of numerous illegalities and crimes in the economic field have told us that we are facing a serious struggle under new conditions between capitalist ideological corruption and socialist ideological opposition to corruption. This struggle is protracted. All communists and party cadres will have to stand up to new, rigid tests repeatedly during the struggle.

The Central Committee of the Chinese Communist Party has pointed out solemnly to the whole party: We must persist in the party's policy of pursuing open policies toward foreign countries and flexible economic policies domestically to speed up our socialist modernization; while at the same time we must persist in carrying on the struggle against corrosion by bourgeois ideology and uphold the communist integrity of our party forever. All members and cadres of our party must firmly remember the fundamental aim of our party to serve the people wholeheartedly, the eventual aim of our party to realize the lofty ideal of communism, and the fundamental nature of our party as the vanguard of the working class. Should any member or cadre of the party waver on this fundamental point, he certainly has been affected by the corruptive bourgeois ideology. If he refuses to repent, he is not qualified to be a Communist Party member and is betraying the communist cause.

Communism means, in the first instance, the social system of communism, and, in the second instance, the communist movement under the guidance of the communist ideological system. We have conducted the communist movement organizationally and with political programs in China ever since the founding of the party. We have completed the task of the new democratic revolution, the task of the socialist transformation of the ownership of the means of production, begun socialist construction on a huge scale and entered a new historical period of all-round socialist modernization. We have also completed the tasks of a few historical stages in the communist movement. What we are embarking on now is no longer a communist movement in an ordinary sense, which means that the proletariat has not yet won its revolution, has not yet seized political power and has not yet become the ruling class. We are now conducting a communist movement after we have already set up a socialist system, that is, the first stage of the communist system. We, members of the CCP and party cadres, should be proud of this.

Our tasks of revolution are far from having been accomplished. This was clearly pointed out in the "Resolution on Certain Questions in the History of Our Party Since the Founding of the PRC": "In firmly correcting the mistake of the so-called 'continuous revolution under the dictatorship of the proletariat,' a slogan which was advanced during the 'Great Cultural Revolution' and which called for the overthrow of one class by another, we absolutely do not mean that the tasks of the revolution have been accomplished and that there is no need to carry on revolutionary struggles with determination. Socialism aims not just at eliminating all systems of exploitation and all exploiting classes but also at greatly expanding the productive forces, improving and developing the socialist relations of production and the superstructure and, on this basis, gradually eliminating all class differences and all major social distinctions and inequalities which are chiefly due to the inadequate development of the productive forces until communism is finally realized. This is a great revolution, unprecedented in human history." While working at their posts, all party members and cadres must contribute their due share toward this great revolutionary movement.

If the communist movement is to advance continuously and to win victories, our party must conduct communist ideological education among the various nationalities of the whole country, but first of all, among party members and cadres. Party members, especially party cadres, should carry on their work with communist spirit. They should shape their words and deeds to communist thinking and morality. Some comrades maintain that we are now in a socialist society, so we should promote only socialist morality and should not promote communist morality. This is wrong. In the stage of the new democratic revolution, Comrade Mao Zedong put forth the need to publicize communist thinking and Comrade Liu Shaoqi also proposed that communists should have communist morality. Why should communist morality not be advocated in a socialist society? It is true that in a socialist society, the consumer goods should be allocated to the laborers according to the principle of from each according to his ability and to each according to his work. We must continuously implement this principle, improve it while carrying out the policies, and overcome the malady of egalitarianism. However, in implementing this principle, we do not reject the communist attitude toward labor. On the contrary, it is necessary to encourage the people to adopt this attitude. In particular, the party members and cadres should be encouraged to actively participate in voluntary, unpaid labor without fixed quotas. As a matter of fact, many members in our party, as well as many model workers and other advanced persons in our country are engaging in noble communist labor every day, every month and every year. There is no contradiction between upholding the principle of to each according to his work and advocating the communist attitude toward labor. They supplement each other. Advocating the communist attitude toward labor and the application of communist morality in handling the social relationships of various forms will not hinder the implementation of the system of to each according to his work and the implementation of the various social policies at the present stage of socialism, but will generate an indispensable force to promote such implementation. These precious communist elements in socialist society are significant in resisting corrosion by capitalist ideology, enhancing enthusiasm and creativeness of the working people and promoting healthy development of socialist modernization.

Every member of the party joins the party voluntarily. That is, beginning with the day he takes the oath to join the party, he has pledged his determination to struggle all his life for the realization of communism and to submit consciously to the restraint of party discipline. This voluntariness includes the determination to abandon all things harmful to the interests of the party and to sacrifice his life when he is required to do so. Every party member should correctly handle the relationship between discipline and creativeness. The two coincide if observed from the communist ideological perspective. Our proletarian revolutionaries of the older generation and our martyrs set examples in many ways. Comrade Zhou Enlai was a good example. All his life he seldom acted in his own way. He did whatever the party assigned him to do, and did it assiduously. He achieved great success in what he did. Some of our comrades hold that the presentation of the four basic principles would prevent the emancipation of the mind and the development of creativeness and subsequently they did not dare to think, speak and act. For party members, the emancipation of their minds, the development of their creativeness, and their daring to think, speak and act should not deviate from the guidance of communist ideology. If we separate emancipation of the mind, creativeness and daring to think, speak and act from Marxist theory, we shall be deviating from the principled stand of Communist Party members and shall invariably sink into the quagmire of bourgeois ideology.

Historical lessons merit attention. During the "Great Cultural Revolution," the Lin Biao and Jiang Qing counterrevolutionary cliques assumed the ultraleftist outlook, or rather, came from the ultraleft to sabotage our party's communist movement, thereby greatly impairing the nature of our party as the vanguard force of the working class and the communist integrity of our party members. Their pernicious influence is far from being completely wiped out and is corroding some people. For example, they said that "when one is in power, one will have everything." This viewpoint was very harmful. Upholding this wrong viewpoint, some people expressed the filthiest things in their innermost being by a theoretical form, so as to provide a "theoretical basis" for all their filthy activities which deviated from the principle of party spirit. Incited by this wrong viewpoint, some adventurers, speculators and dregs of society came from the top downward, from the bottom upward and from every direction to establish ties to seize power from the old revolutionaries, veteran cadres and party members. Before the "Great Cultural Revolution," some comrades inside our party sometimes showed individualism but, more often than not, they told themselves that individualism was undesirable and, therefore, dared not show it to the party organization. However, during the "Great Cultural Revolution," abetted by the Lin Biao and Jiang Qing counterrevolutionary cliques, individualism swelled to a serious extent. If I do not like the look of you, I shall shove you to the ground; it is better for me to hold power than you; my faction will take a share proportionate to its strength; I want to hold open negotiations and have a showdown. These deeds completely bared some people's filthy innermost being. Even up to the present, some people regard anarchism and extreme individualism as something natural. They regard them with pride instead of shame. This historical lesson shows how important it is for party members and cadres to maintain their communist integrity.

Since the 3d Plenary Session of the 11th CCP Central Committee, a series of social policies have been adopted under new conditions. For instance, externally, we have introduced the open policies of taking in foreign capital, running joint ventures with foreign capital, processing materials for foreign businessmen, carrying out compensatory trade and conducting business in labor cooperation. Internally, we have adopted flexible economic policies. For example, we will permit the various forms of economic undertakings and business management to exist for a long time under the precondition of giving absolute superiority to socialist public ownership; in the countryside, we have instituted various forms of the production responsibility system, developed a diversified economy, expanded the acreage of land for personal needs and opened trade fairs; in the cities and towns, we have carried out the economic responsibility system and developed the collective economy; with regard to financial policy, the localities are allowed to "eat in separate kitchens" and the enterprises are allowed to retain a portion of their profits and restore the bonus system; and many other social policies have been adopted. Practice has proved that these policies are essential, correct and effective. We must uphold these policies and make further efforts to implement and perfect them. However, we should see that, due to domestic factors and international influence, class struggle still exists in China to a certain extent. The present campaign against serious criminal activities in the economic field is an important manifestation of class struggle in the economic field. Class enemies at home and abroad are trying by every possible means to sabotage our socialist modernization and disrupt our communist movement. The criminals who engage in smuggling, trading in smuggled goods, giving and taking bribes, speculation and cheating, and who seek private gain at public expense and take forcible possession of state property, have gone to an unbearable extent in shamelessly devising all possible means to achieve their ends. Capitalists make reckless moves in pursuit of profit; they dare to commit any crime, and even risk the gallows. What difference is there between capitalists like this and the elements in our country who commit serious crimes in the economic field? Is there any socialist road in these people's minds? Is there any communism there? Is there any patriotism? Is there any national dignity? Is there any national and personal moral character? There is not a trace of these things!

The realities at present show more clearly that it is extremely important for party members to maintain their communist integrity. To do so, they must carry out the struggle between the two fronts. They must wipe out the pernicious influence of the Lin Biao and Jiang Qing cliques and of the "leftist" ideas. They must also combat bourgeois liberalization and particularly at present combat corrosion by capitalist ideas.

We must have all-round, clear understanding about the various aspects of the corrosion of the party organizations, party members and cadres. As a whole, the CCP is good and has combat effectiveness. During the period from the third plenary session to the sixth plenary session, we had already accomplished the historical task of setting the guiding ideology to rights, reiterated and established the Marxist ideological, political and organizational lines, formulated and carried out a series of correct principles and policies for dealing with domestic and foreign affairs and won remarkable success. The political maturity of our party Central Committee and, in particular, its Marxist leadership level shown in the socialist modernization, which has been carried out according to the national conditions, have been recognized by all outside and inside the party and have attracted worldwide attention. Our faith in this point should never waver.

However, we should also see the other aspects. First, communist ideology has weakened in varying degrees in the minds of a very few old party members and old cadres. As for some of them, their ideal of and faith in communism wavered because the party's guiding ideology had been erroneous for some time or because the state had met serious difficulties. Others were poisoned by the fallacy that "power will be invalid after the specified date" as professed by the "gang of four" so that after being reinstated, they forgot their original intention of fighting their whole lives for communism and became intent on seeking personal interests for their sons and daughters. Second, the many young party members who joined during the "Great Cultural Revolution" lacked education in the basic knowledge of communism, and some of them joined the party as speculators. These two conditions gave rise to some unsteady elements in our ranks of party members and party cadres. Corruptive bourgeois ideology can be disseminated in the party through these unsteady elements. Some of them have actually been hit by the "sugar-coated bullets" of the bourgeoisie and have taken the road to decadence and degeneracy.

At present, our party is facing many new problems and new tasks in the ideological, political and organizational fields which we have to scrutinize and solve in the light of communist ideology.

Our party has been emphasizing the emancipation of the mind since the 3d plenary session of its 11th Central Committee. Emancipation of the mind means making our thinking and understanding tally with objective reality. At that time, it was aimed mainly at shaking off the long-term yoke of "leftist" ideas, for our cause would not advance if this yoke were not removed. The profound and lasting significance of the emancipation of the mind should in no way be underestimated. At the moment, some people have not completely shaken off the yoke of "leftist" ideas. Yet it should be soberly realized that at the same time corrosion by capitalist thinking is becoming increasingly serious. This can be shown by the fact that the ideas of bourgeois liberalization have spread unchecked. The Central Committee of the party has always been explicit about the meaning of emancipation of the mind. It has been clearly elucidated and repeatedly stressed in the relevant documents of the party Central Committee and the speeches delivered by leading comrades at the central level that emancipation of the mind means seeking truth from facts. Yet, this slogan "emancipate the mind" has actually encountered boycott from the "left" and distortion from the right.

In recent years, we have been increasingly expanding our academic exchanges with foreign countries. We have absorbed good managerial experience and advanced science and technology from other countries and have gained knowledge in academic fields from the outside world that we did not have in the past. We have widened our field of vision and have broadened our mental horizon. This should be affirmed. But, we must also admit that in the course of academic exchanges, certain comrades, due to lack of thorough understanding and study, are short of scientific analysis of certain foreign things. Some people are writing articles and making speeches blindly publicizing ideas which had already been criticized by Marx, Engels, Lenin and Stalin in their times. Certain ideological trends which are in vogue in the West, such as existentialism, are viewed with much interest by some of our younger people. Some young people are indeed groping for knowledge, but in general they lack the theoretical preparation of Marxism. Because the Lin Biao and Jiang Qing counterrevolutionary cliques had left our country in a terrible state, the socialist system was damaged, the party's image was impaired and the problems which were left behind could not be solved at one blow. In this situation, the young people who lack the theoretical preparation of Marxism and do not know the histories of our party and state lost their confidence in Marxism and the socialist system. They felt that they had found a new way out once they contacted the Western ideological trends. Therefore, if we are to uphold the party's correct principles on the ideological front, we should, while criticizing "leftist" things, adopt a Marxist attitude toward certain prevalent Western ideological trends, analytically point out their rational parts and make convincing criticism against the parts which are erroneous.

The proletariat is the most revolutionary class and is the most adept in learning. We must not only study Marxism but also learn from all foreign countries the things which are useful to us. But the class and the people whom our party represents do not permit us to alter and weaken our party's nature as the vanguard force of the working class and our faith and trust in communism. They do not permit the party members to be corroded by capitalist ideology. On the contrary, they invariably demand that the party members preserve their communist integrity, that we uphold the party's fine traditions and that we persist in putting the communist thinking in a ruling position in the ideological sphere.

In the past 60 years and more, our party took a tortuous path many times and suffered defeats several times, but it continued to firmly carry out the historical tasks of the proletariat. We won countless victories but we did not stand still after winning a victory. Instead, we always marched forward to win a new victory. In his article "The Situation and Tasks in the War of Resistance Against Japan After the Fall of Shanghai and Taiyuan," Comrade Mao Zedong castigated class capitulationism and national capitulationism and pointed out that in one respect we should hold the ground we had already won, for this ground was our strategic point of departure, but our chief purpose was to extend the ground already won and to seize new ground. It is precisely in this way that our cause and communist movement have always advanced step by step toward our great ideal.

Let us read the "Report on the Review of the Program and on Changing the Name of the Party" which Lenin delivered to the Seventh Congress of the Russian Communist Party (Bolshevik). This report is of great significance to us today in upholding the ideal of communism and communist thinking. He called for making a clean break with the anarchists and with social-chauvinism in the Social Democratic Party. He said: "When the workers set up their own state they realized that the old concept of democracy--bourgeois democracy--had been surpassed in the process of the development of our revolution. We have arrived at a type of democracy that has never existed anywhere in Western Europe." ("Collected Works of Lenin," Vol 27, p 114) That was to say, he combined the resumption of the name of the Communist Party with a new type of democratic government which had been established. We have called our party the Communist Party right from its inception. We have already established a government under the people's democratic dictatorship. There are conditions and it is necessary for us to distinctively put forth the question of holding high the banner of communism in the party. The "resolution" adopted by the 6th Plenary Session of the 11th CCP Central Committee pointed out: "Our present endeavor to build a modern socialist China constitutes but one stage of this great revolution. Differing from the revolutions before the overthrow of the system of exploitation, this revolution is carried out not through fierce class confrontation and conflict, but through the strength of the socialist system itself, under leadership, step by step and in an orderly way. This revolution, which has entered the period of peaceful development, is more profound and arduous than any previous revolution and will not only take a very long historical period to accomplish but will also demand many generations of unswerving and disciplined hard work and heroic sacrifice. In this historical period of peaceful development, revolution can never be plain sailing. There are still overt and covert enemies and other saboteurs watching for opportunities to create trouble. We must maintain high revolutionary vigilance and be ready at all times to come out boldly to safeguard the interests of the revolution. In this new historical period, the entire membership of the CCP and the entire people must never cease to cherish lofty revolutionary ideals, maintain a dynamic revolutionary fighting spirit and carry China's great socialist revolution and socialist construction through to the end." We must adhere to this orientation pointed out by the "resolution"; adhering to this orientation means holding high the banner of communism.

We hold high the banner of communism and uphold the communist integrity of party members. But we certainly do not mean to immediately put into practice the policies that will come with the advanced stage of communism. In "On New Democracy," Comrade Mao Zedong said: "Beyond all doubt, now is the time to spread communist ideas more widely and put more energy into the study of Marxism-Leninism, or otherwise we shall not only be unable to lead the Chinese revolution forward to the future stage of socialism, but shall also be unable to guide the present democratic revolution to victory. However, we must keep the spreading of communist ideas and propaganda about the communist social system distinct from the practical application of the new democratic program of action; we must also keep the communist theory and method of investigating problems, undertaking research, handling work and training cadres distinct from the new democratic line for national culture as a whole. It is undoubtedly inappropriate to mix the two up." ("Selected Works of Mao Zedong," Vol 2, p 666) The conditions at present are entirely different from those at that time. However, the principles which Mao Zedong talked about are still applicable. We are now engaging in the socialist cause. Being the first stage of communism, socialism should also be called communism. There is of course a great difference between the present socialist system and the advanced stage of communism. Moreover, we have adopted some social policies which comply with the actual situation. For example, the individual economy is permitted to exist under the condition of putting public ownership in a position of absolute superiority; the individual economy of working people is an appendage and a necessary complement to the socialist economy. These policies are not socialist in nature. For this reason, on the one hand, we should uphold communist thinking and should not turn away from it even a little bit on the ground that certain social policies have been adopted; on the other hand, we should formulate policies under the guidance of communist thinking and in accordance with the actual situation and should not immediately put into practice the policies of the advanced stage of communism just for the sake of upholding communist thinking.

In short, all our members and cadres of the Communist Party must apply communist thinking in observing and dealing with all social problems. Actual life tells us that if we approach and carry out the party's policies under the guidance of communist thinking, we shall come to conditions and results greatly different from those which we may come to if we approach and carry out the party's policies by deviating from communist thinking. To each of our party members and cadres, holding high the banner of communism means using communist thinking to guide and govern their words and deeds. Only thus will it be possible to maintain the communist integrity of our party and guarantee that our party's cause will continue to gain new developments and win new victories.

RECALLING A LETTER BY MAO ZEDONG

Beijing RED FLAG in Chinese No 10, 16 May 82 pp 7-8

[Article by Ouyang Shan [2962 7122 1472]]

[Text] In April 1944, Yu Xun and I were transferred from the third department of the Central Party School to the Association of Literary and Art Circles of the border area to take up literary writing. Not long afterward, Ding Ling and Chen Ming were also transferred there. Ding Ling and I attended a conference of model collective workers of the border area. In the first coverage of what we had learned, she wrote a documentary article entitled "Tian Baolin" and I wrote a sketch entitled "Life in the New Society," both of which appeared in JIEFANG RIBAO on 30 June. We could never have anticipated that these two short articles, reflecting two short profiles of the life of actual struggle in the border area, which were so crudely written, would actually arouse the interest and attention of Comrade Mao Zedong, who at that time was shouldering the burden of leading the struggle of the whole people. After reading the articles, he immediately wrote us a congratulatory letter and also found time from his heavy schedule to meet us. This spirit of not overlooking anything no matter how trifling for the sake of the people was indeed very touching.

There is no doubt about the importance of the literary sketch. It is terse and forceful, reflects things quickly and is full of militancy as well as having a mass character. Like sketching in painting, it is a basic skill in the activity of creating literature and art which should not be underestimated by those engaged in writing. At present, some of the long, medium-length and short novels have tried their utmost to only piece together stories but have left the personalities of the characters pale and weak. One of the reasons for this is precisely the lack of this basic skill. There were a great deal of sketches during the 1930's and 1940's, and they were welcomed by the masses. Such a politician as Comrade Mao Zedong would of course advocate a certain form of literature beneficial to the people, but he might not necessarily have just had this point in mind.

As for myself, this sketch "Life in the New Society" was written in 1941 after my arrival in Yan'an. It was my first contact with the new society, the new life and the new masters--the workers, peasants, soldiers and masses led by the proletariat. At the same time, it was also my first attempt to use a certain literary form to portray, express and reflect them. It could be described as the first tentative step, exercise or attempt since throwing myself into the heat of the new struggle. Despite the fact that the work was not mature but was very flimsy, it was nevertheless on this major road. Could it be possible that it was precisely on this point and on this point alone that Chairman Mao divided some of his valuable energy to affirm, support and encourage it? I believed that this might be closer to his original intent. In other words, what should be affirmed, supported and encouraged was not this short article itself, but a certain tendency, intent, path and orientation that it displayed. It seemed as if he had earnestly said to me: "Although you are not making much progress, your road is still correct." To have the ability to see such profound significance from such an ordinary piece of writing--how great indeed was Comrade Mao Zedong's breadth of vision!

True, in "Talks at the Yan'an Forum on Literature and Art," he brilliantly delineated a new era of serving the workers, peasants and soldiers for Chinese literature and art. This was something known to everyone. The reason he had been able to point out the orientation of serving the workers, peasants and soldiers was because this concrete fact that workers, peasants and soldiers were the masters of the new society already existed in the new society of that time. Unfortunately, not all the young writers and artists in Yan'an knew this at that time, were in touch with this fact, conscientiously recognized this fact or were moved by this fact. Therefore, they could not eliminate the feeling, which seems extremely ridiculous in today's light, of complaining of no opportunity to use their talent or blaming everyone and everything but themselves. They walked up and down the sole fountainhead of literature and art. I was also one of these young people. Naturally, after participating in the Yan'an forum on literature and art and following the great rectification movement, the situation began to change and I also started to move. No one could have anticipated that after taking the first step I would receive such serious attention and loving care. Each time I thought of Comrade Mao Zedong's letter, I felt a deep force spurring on and encouraging me. I was only afraid that I might not give a good showing or might not produce presentable works for the masters of the new society, and could not help feeling deeply ashamed.

In the last 40 years, a tremendous change has taken place in the actual life of the country. The brilliant idea presented in "Talks at the Yan'an Forum on Literature and Art" has already withstood 40 years of rigorous tests in historical practice and has been confirmed as an immense and mighty truth. At present, it has further developed from the orientation of serving the workers, peasants and soldiers to the even broader orientation of serving the people and serving socialist society.

Although there have been several setbacks in the development and prosperity of Chinese literature and art in the last 40 years, at the same time, they have also borne out the correctness of Mao Zedong's orientation for literature and art. Whenever literary and art works have been under the guidance of this correct orientation, definite achievements have been obtained. They have a certain vitality, are welcomed to a certain extent by the people and play to a certain extent the role of pushing forward the development of actual life. On the other hand, if we adopt the erroneous "leftist" or rightist attitude of opposing, dissociating, avoiding and distorting this correct orientation, we would become devoid of accomplishments, become weak and incompetent, and would ultimately be defeated as well as spurned by the masses and ridiculed by history. The several seething struggles, reflected by such things as giving priority to the main theme, giving prominence to three things and going in for high targets, large in size and complete in everything, absolute freedom, self-expression and egotism, have all suffered ignominous defeat. All these are sufficient to prove the lamentable results of deviating from this correct orientation. Every time I think of Comrade Mao Zedong's letter, all sorts of emotions well up in my mind.

BE AN HONEST SPOKESMAN OF THE MASSES

Beijing RED FLAG in Chinese No 10, 16 May 82 pp 9-12

[Article by Wei Jianlin [5898 1694 2651]]

[Text]

I

Comrade Mao Zedong's "Talks at the Yan'an Forum on Literature and Art," as a product of combining the general truth of Marxism with the literary and art practice in China, and as a scientific summation of the new literary and art movement in China and literary and art cause led by our party since the May 4 movement, deserves to be called a mature and typical work of Mao Zedong Thought on the problem of literature and art and the first programmatic document on our party's Marxist literary and art theories and policies. This article expounds and proves in a practical way the nature, tasks and orientation of literature and art in China, their social and historical characters, as well as a series of problems and policies connected with them. The great achievements of Chinese revolutionary literature and art over the past few years or so have been made under the guidance of the basic theories and principles put forth in the article.

The relationship between writers and artists and the masses occupies an important position in these basic theories and principles. Comrade Mao Zedong pointed out: We should esteem specialists because they are very valuable to our cause. "But we should tell them that no revolutionary writer or artist can do any meaningful work unless he is closely linked with the masses, gives expression to their thoughts and feelings, and serves them as a loyal spokesman." This demand put forth by Comrade Mao Zedong should become the fundamental stand and starting point of all activities of all revolutionary writers and artists.

Old China was economically and culturally backward. To carry out revolutionary struggle with the ultimate goal of communism in such a country, we need the participation of intellectuals, including writers and artists, at every stage and step. In accordance with the nature, historical tasks and guiding thought of the revolution led by the proletariat, and its profound and extensive development, we make incomparably strict demands on intellectuals. They should become common members of the masses and must be good at consciously understanding, mastering, reflecting and upholding the immediate and long-term interests of the masses and become their faithful representatives ideologically, theoretically and morally.

More than one generation of Chinese writers and artists brought up by the "Talks" have acquired the good tradition of linking themselves closely with the masses. Taking root among the masses, mastering the orientation of literary and art creation through the people's life and struggle, deriving creative power from literature and art, and bringing the role of literature and art into full play were from the beginning important Marxist theories on literature and art. These principles have taken root in the Chinese literary and art movement since the publication of Comrade Mao Zedong's "Talks" and have been systematically, comprehensively and accurately expounded and developed into theories through this article. Over the past 40 years or so, how our writers and artists identify themselves with the masses has determined the ideological and artistic success or failure of every one of their works.

The times and social conditions in which the "Talks" was published were greatly different from those of today. The life and demands of the people and their mutual relations, feelings, ideals and aesthetic purposes have also greatly changed. Those writers and artists who are familiar with the people of the period of the new democratic revolution will not necessarily be able to create excellent works which are warmly welcomed by the people of the socialist era. Those writers and artists who are familiar with the people of the period of the "Great Cultural Revolution" will not necessarily be able to correctly reflect the charming manner and varied spiritual life of the people who are carrying out socialist modernization.

II

During the period of the "Talks" or even nowadays, we might encounter some phenomena that intentionally or unintentionally play down the importance of the masses and break away from them to varying degrees. Comrade Mao Zedong explicitly pointed out: "We must identify ourselves with the new masses without any hesitation." Since the 3d Plenary Session of the 11th CCP Central Committee, our party has resolutely corrected the "leftist" mistakes in guiding thought and hopes that writers and artists will further identify themselves with the masses of the new era. It has adopted a number of effective measures in this respect. Only by integrating with the masses can writers and artists make their ideas constantly conform to the objective reality. The more their ideas conform to objective reality, the more their ideas can represent the masses. Conversely, if the writers and artists are divorced from the masses and reality and only know some concepts from books, they will only be able to write literary works which tend to formularize and generalize even if their concepts are correct. This is because they will not be able to fuse these concepts with their experience in life. Although these works portray the lofty images of characters, it is difficult for them to affect the readers and touch their souls because they lack, after all, the rich flavor of life and artistic charm. In works like this, it is better to say that writers and artists purely regard the images of characters as a bugle call rather than to say that the writers and artists are the faithful representatives of the masses. At the same time, if writers and artists consider themselves superior to the masses, they will go astray. For example, they will seek so-called "self-expression," which is disconnected from the process of socialist modernization and the practice of the masses. They will also completely separate popularization from the raising of standards, saying that they would rather write "Spring Snow" for a small number of people than "Song of the Rustic Poor" for the broad masses of people. They will negate the correct slogan of "going deeply among workers, peasants and soldiers" by using the argument that intellectuals have become part of the working class. They will also be content to be familiar with a small number of the masses and will be unwilling to lay a broader foundation of life. Frankly speaking, if these writers and artists do not change their minds, it will be difficult for them to become honest spokesmen of the masses.

Following are two problems that are closely related:

1. With regard to writers and artists, even if they have a wide range of life and acquire profound social and historical knowledge and are completely familiar with historical facts, the vividness of their descriptions cannot be compared with reality itself. In other words, not all people of the different classes, strata and groups of society of different ages, sex, occupation and experience can be equally depicted by writers and artists with the same ideological and artistic skills. A writer or artist might be more familiar with this or that part of the masses, or somewhat or completely unfamiliar with the rest of the people. Such instances have frequently occurred in the history of literature and art. Therefore, in accordance with their personal experiences accumulated in life, writers and artists should concentrate their efforts on describing the life of a part of the masses in one or several of their works or in a certain period or in most of the creative activities in their life. We should not blame them, because this will often become one of the conditions for establishing a unique style. In recent years, we have had a number of writers and artists who are fairly familiar with the life of workers and peasants or intellectuals. At the same time, we should also realize that if our writers and artists do not lay a broader foundation for their creative works and fail to master a certain aspect in life based on historical movements and broad social contacts, and if they remain content to "dig a well" in their personal narrow field of vision, it will be difficult to ensure that there will be an inexhaustible supply of water in their deep well and that they will successfully depict distinctive and appealing figures throbbing with the pulse of our times based on their many-sided and flesh-and-blood contacts with practical life. Under such circumstances, even if they are familiar with the subject matter of literary works, they might not be able to fully and effectively use it. Going deeply among workers, peasants and soldiers does not mean that writers and artists should not be especially familiar with a certain subject matter and that they are not allowed to depict anyone except workers, peasants or soldiers. Going deeply among workers, peasants and soldiers, first of all, means that writers and artists should think highly of the majority of laboring people in society, that they should not forget their interests and demands, and that they

should not depict other masses in an isolated way without keeping the majority of people in mind. Writers and artists should not confine themselves to a never-changing field. They should constantly open up new fields for their creations and continuously dig new and deep wells. All this should be done by writers and artists themselves. At the same time, this is also an unavoidable demand put on them by the development of the literary and art cause.

2. The common and fundamental interests of the people of various nationalities in our country are to attain the magnificent goal of socialist modernization under the leadership of the Communist Party. Our writers and artists may select this or that kind of subject matter and depict this or that segment of the masses. However, they are not allowed to abuse their freedom of creation by disregarding these fundamental interests and goals. Marxists always oppose the idea of regarding the masses as an "entity" without the slightest differences or inner contradictions and struggles. Even in the socialist society, this Marxist viewpoint is still of guiding significance. Some of the masses are advanced, and others are in an intermediate or backward state. Writers and artists should not downgrade themselves to the level of the masses who are in an intermediate or backward state. When depicting peasants, if they only take delight in talking about the selfish ideas of certain peasants or persist in appreciating the aloofness and arrogançe of certain intellectuals without using literary and art means to help them raise their consciousness and make progress, these writers and artists will be far from meeting the historical demands of the broad masses of people, including the above-mentioned people.

III

There is a misunderstanding: It seems that once we stress that writers and artists must become honest spokesmen of the masses, we will, or are liable to, obliterate individual characters in their creations. This view is wrong, because people with this view fail to realize the close and dialectical relationship between the healthy and creative work of writers and artists and their status of being honest spokesmen of the masses.

All fair-minded writers and artists devoted to their work have done their best to reflect the demands of the masses of their own times and strived to create individual characters in their literary works. Their achievements and historical positions have been determined by their efforts in these two aspects. The establishment of the socialist system, the guiding position of Marxist ideology, the coincidence of the basic interests of writers, artists with those of the broadest masses of people, and the development of literary and art history itself have provided writers and artists with unprecedented and mature conditions so that they are able to combine and unify their efforts in the above-mentioned aspects of their creations. The socialist reality, the historical and creative activities of the masses for the victory of the socialist cause, and their constantly increasing and rich spiritual life have helped writers and artists to open up a vast field for the development of individual characters in artistic creation and have also put strict demands on them. The bourgeoisie has done everything possible to slander socialism as obliterating individual characters. The "Communist Manifesto" replies to them in this way: "By individual you mean no other person than the bourgeoisie, than the middle-class owner of property." While sternly repudiating dogmatism, Comrade Mao Zedong pointed out: Marxism resolutely destroys creative moods that are feudal, bourgeois, petit-bourgeois, liberalistic, individualist, nihilist, art-for-art's sake, aristocratic, decadent or pessimistic and every other creative mood that is alien to the masses of people and to the proletariat. The tremendous constructive force of socialism and Marxism lies in its efforts to bring up new people and establish new characters, new social relationships, new moral concepts and new aesthetic objectives based on public ownership. This enables writers and artists to truly attain a solid and practical basis to develop individual characters in their creations, a scientific cognitive base and a correct historical orientation. In other words, being an honest spokesman in socialist literature and art means that writers and artists should constantly enhance their own artistic accomplishment and power of artistic revelation. By so doing, they will continuously develop and enrich the specific characters in their creations. Lenin said that over-simplified methods of repudiating individual creations and individual tastes, and mechanically advocating egalitarianism, uniformity and the practice of the minority being subordinate to the majority will eventually separate writers and artists from the masses. However, there is another aspect to the problem. In other words, we are not allowed to raise the issue of individual characters in creations if we depart from the basic principle of being an honest spokesman of the masses. A writer was correct when he said: Writers should regard themselves as the "Echo Wall" of the world and dissolve themselves in society and the masses. If they are always preoccupied with their studies and rely on the weak sparks of inspiration which they themselves have struck, their thinking will dry up and their sparks of inspiration will die out. In our times, if a writer or artist is unwilling to be an honest spokesman of the masses and madly clings to individual characters for his creations, which practice runs counter to the interests of the masses, it is unimaginable that he can create works which are recognized by society and which have an active influence on the practical life of the masses. In his "Talks," Comrade Mao Zedong failed to pay sufficient attention to the problem of individual characters in literary and art creation. This had an adverse effect on the development of literature and art during a certain period of time. However, his inference concerning the relationship between literature and art and the people's life, the relationship between popularization and the raising of standards, the problem of truthfulness and artistic quality of literature and art is very enlightening in finding a correct and overall solution to this problem. Writers and artists should become honest spokesmen of the masses. At the same time, they should develop individual characters in their creations. The organic integration of their efforts devoted to these two aspects is not only a condensation of the basic experience and lessons of the development of modern literature and art in our country but also a historical characteristic of socialist literature and art. This is where the vitality of our literature and art lies, the vitality which promotes its healthy development and increasing enrichment.

IV

We should follow the slogan that literature and art should serve the people and society, which was put forth in accordance with the spirit of the third plenary session. This slogan has been proved correct and has been wholeheartedly supported by the broad masses of writers, artists and people of the whole country. One of the substantial aspects of this slogan is that writers and artists should be honest spokesmen of the masses. In our times, the fate of the people is closely connected with socialism. Without socialism, there will be no happiness or prospects for the people. Therefore, literature and art that serve socialism also serve the people. Literature and art that serve the people can, in turn, be nothing but literature and art that serve socialism. If literary and art works depart from the socialist road, people will have a sufficient reason to discard them. If literature and art no longer serve the people, this means that their socialist nature has completely changed.

The reason we discuss the mutual relations of the two aspects of the slogan is that in practice some people have separated them to varying degrees and are not good at mastering their identity. There were some literary works which were harmful to the consolidation and development of the socialist system and ran counter to the morals and habits of socialism under the signboard of "pleading on the people's behalf." We should know that under the new historical conditions, if we depart from the socialist road, we will completely violate the interests of the people. If we put the laurel of "affility with the people" on literary works which harm socialism, we will only distort and insult our people. Only by acquiring a Marxist world outlook and making great efforts so that their literary works conform to principle of the party spirit can writers and artists faithfully represent the people. For a long time in the past, we used the concept of "affinity with the people" in literature and art to explain certain literary and art phenomena. It was understandable for us to do so. However, we should on no account regard it as a principle of socialist literature and science. Socialist literature and art can only be guided by the Marxist world outlook and reflect the historical process in which human society will inevitably march toward socialism. This kind of literature and art is also in accord with the principle of the party spirit of working class literature and art, and is a concentrated and generalized manifestation of the advanced nature of the working class. In a socialist society, there is no such thing as an affinity with the people which departs from the party spirit or a so-called art and literature representing the people which runs counter to the party spirit. Comrade Mao Zedong said: "China's new culture at the present stage is an anti-imperialist, antifeudal culture of the masses of people under the leadership of the proletariat. Today, anything that is truly of the masses must necessarily be led by the proletariat. Whatever is under the leadership of the bourgeoisie cannot possibly be of the masses. Naturally, the same applies to the new literature and art which are part of the new culture." To serve the people, literature and art should take the standpoint of the proletariat. To socialist writers and artists who are determined to be honest spokesmen of the masses, this is the motto they should bear in mind all their life.

ON EULOGY AND EXPOSURE

Beijing RED FLAG in Chinese No 10, 16 May 82 pp 13-16

[Article by Ding Zhenhai [0002 2182 3189]]

[Text] Eulogy and exposure in literature and art is an old problem and also a new one. The new historical situation has infused it with new content and imposed new demands on it. Correctly understanding and handling the relationship between eulogy and exposure in the course of molding our thinking on literature and art and in literary and artistic creation will play an extremely important role in bringing about greater prosperity in socialist literature and art.

Literature and art in any era and of any class is a kind of spiritual creative activity which greatly affects the social life of mankind. It performs the two social functions of eulogy and exposure. The theory of Chinese classical literature always stressed "praise" and "satire," which actually meant eulogy and exposure. Gorky said: "The nature of art is the struggle between approval and opposition. There is no, and cannot possibly be, art that is indifferent." Eulogy and exposure supplement each other, and neither is indispensable. This also applies to proletarian literature and art. Comrade Mao Zedong pointed out clearly: "All reactionary forces harmful to the people must be exposed and all revolutionary struggles of the people must be eulogized. This is the fundamental task of revolutionary writers and artists." Here, it must be pointed out emphatically that the nature and scope of the two social functions of literature and art vary greatly in different historical periods and under different social systems.

Marxists hold that the various social systems which appeared one after another in human history based their existence on certain historical conditions, and they comprised the stages of emergence, development and withering. During the period of development, there emerged some valuable literary and artistic works which mainly played the role of eulogy and conformed to the social system. However, no matter how different they were in form, the various social systems which existed in recorded history prior to the establishment of the socialist system had one basic point in common, that is, the exploitation and oppression of the majority by the minority. For this reason, even during the period of development of the social systems, the writers and artists who sided with the exploited classes and sympathized with them would express their discontent with the times and the society through their literary and artistic creations. With the decline and decay of the system of exploitation, the function of exposure performed by literature and art became more and more important, and laying emphasis on exposure become the main stream of progressive literature and art. No matter whether the writers and artists were aware of it or not, their works objectively played the role of denouncing the things which impeded the advance of history, arousing people's discontent with the system of exploitation and the realities in society, and stimulating the people to cherish the ideas and perform the deeds of changing the realities. Therefore, they had progressive historical significance.

The conditions for literature and art are different during the socialist period. The socialist period is an unprecedented, new historical period during which exploitation has been wiped out and the people are the masters of their country. The newborn, beautiful things have occupied a more and more prominent position in daily life. The development of realities in society have opened up boundlessly wide prospects for the people. For this reason, as an important mark of progressive literature and art in the past centuries, the characteristic of being antagonistic to the times will invariably be replaced by a new type of relationship between literature and art on one side and the times on the other. As a whole, emphasis is put on eulogy and "portrayal of the bright side." This is an invariable historic change, brought about by the fundamental nature of the socialist system, to literature and art. The viewpoints which hold that "writers and poets are discontented with the times in which they live" and that in revolutionary literature and art, eulogy and exposure "are equal in proportion" and "are on a par" are undoubtedly groundless in fact and in theory. It is certainly untrue to say that the socialist society is a paradise where there is only happiness and brightness and there is no sorrow and darkness. Brightness and darkness are correlative. Lenin cited Hegels' words: "In pure brightness, as in pure darkness, you can see nothing clearly." These words explain very clearly the dialectical relationship between brightness and darkness. During the socialist period, compared with the former times, brightness and darkness have exchanged positions but there is still the dark side. Moreover, as a thoroughgoing materialist class, the proletariat should be more adept in using literature and art as a weapon to expose and denounce all decadent and backward things, so as to continuously clear its road of advance. In this sense, the party and the people affirmed the great number of revelatory works which appeared after the downfall of the "gang of four" and which portrayed the widening of the scope of the attack on rightists, the "struggle against rightist deviations" and the decade-long turmoil. Comrade Hu Qiaomu pointed out in his article entitled "Several Current Questions on the Ideological Front," that "it is natural that a great number of works on this theme have appeared in the past few years. The overwhelming majority of writers created these works out of their sense of responsibility to history and the people and out of their revolutionary fervor. On the whole, these works are beneficial and play a positive role in gaining a clear understanding of history, criticizing the 'leftist' errors, exposing the crimes of the Lin Biao and Jiang Qing counterrevolutionary cliques and portraying the brave fights put up by the party members and the masses who took a correct stand." However, it should also be seen that the emergence of the great number of revelatory works in the past few years is only a short-lived, special historical phenomenon. The reason is that, in the long historical course of socialist revolution and construction, the widening of the scope of the attack on rightists, the mistake of the "struggle against rightist deviations" and even the decade-long turmoil and other comprehensive, long-drawn-out and grave "leftist" blunders are only short-lived episodes and backwash. They cannot change the basic fact that, on the whole, the bright side is greater than the dark side. While affirming the ideological significance and social function of these revelatory works and putting them in an appropriate historical position, we should not forget the still more important task and function of socialist literature and art, that is, "all revolutionary struggles of the people must be eulogized." Moreover, the wheel of history is rolling forward speedily. Countless facts since the 3d Plenary Session of the 11th CCP Central Committee have eloquently proved that our party has all the abilities to rely on the superiority of the socialist system and its own strength to correct the past mistakes and to get back onto the path to healthy development. The important purpose of the "Resolution on Certain Questions in the History of Our Party Since the Founding of the PRC" adopted by the 6th Plenary Session of the 11th CCP Central Committee was to bid farewell to the past mistakes so that the whole party and the people of the whole country would work concertedly to build their socialist country. As a matter of fact, scenes of people fighting to build a new life for themselves are being unfolded ever more vigorously and spectacularly before our writers and artists. In the face of the new situation and new prospects, if they are given excessively to sad memories and feelings of the past, their wide field of vision will be dimmed by their bewilderment and they will be unable to correctly understand and reflect the new look of the people's militant life during the new period. They will be unable to make literature and art play the glorious role as an advocate of the times and a guide of everyday life. Precisely for this reason, in his speech Comrade Hu Qiaomu time and again expressed "the hope that writers and artists all over the country will shift the focus of their creative activities to the current struggle of building a new life for the people."

Correctly solving the question of shifting the focus of current literary and artistic creation will inevitably involve the selection and expression of subject matter. The "gang of four" wantonly criticized the "opposition to the theory that 'subject matter is the decisive matter.'" It mapped out various "forbidden zones" of subject matter, thereby not only fettering the the writers but also negating the role played by a writer's world outlook in guiding his creation (we may as well leave alone the special meaning of what they called "important subject matter"). Is it, on the other hand, correct to say that "subject matter does not make any difference"? No, it is incorrect. The reason is that the various things, personalities and phenomena in everyday life are different in social nature and have different objective meanings. They occupy different positions and play different roles in social life. Reflected in literary and artistic works, they naturally will have different ideological contents and aesthetic values. In the socialist period, newborn and progressive things always express more directly the nature of society and the trends of historical development. For this reason, generally speaking, if the ideological and artistic levels remain unchanged, subject matter reflecting seething new life has greater social significance than other subject matter which reflects the passive aspects of society. It creates greater possibilities for the writer to reveal the nature of social life as a whole and the stirring scenes of the times. Subject matter involving the widening of the scope of the attack on rightists, the "struggle against rightist deviations" and the decade-long turmoil will certainly have unique ideological value and educational meaning if the writers depict them by standing on a high plane. However, compared with other subject matter reflecting the new struggle to realize socialist modernization, this subject matter has limited content and therefore cannot fulfill the tasks of directly reflecting the new times and eulogizing the new personalities. Furthermore, if the works on this subject matter form the main stream of literary and artistic creation and long prevail in the sphere of literature and art during the new period, then our literature and art cannot reflect very well the nature and full view of social life in the new period of socialist construction. Neither will they conform with the spiritual needs of the people fighting bravely to build a powerful modern socialist country. Comrade Hu Yaobang pointed out in his "Speech at the Forum on Playwriting" that "generally speaking, if literature and art only or always reflect the backward and dark aspects, I feel that they cannot fully and accurately reflect the nature of our society and will not conform with the facts of society as a whole." Applying the basic principles of historical materialism and proceeding from the interrelationship between the general outlook of socialist literature and art and the facts of socialist society as a whole, this thesis has elucidated the important meaning of the progressive, bright things in our society.

Of course, the selection of subject matter is not the most important thing in determining whether a piece of literary and artistic work is successful. A more important thing is whether the ideological contents and aesthetic values of the subject matter have been fully revealed and raised to a higher level. "Be strict in selecting subject matter"--this is of course an important link. But the key is that "the subject matter must be revealed to a great depth." Lu Xun said this very well: "In my opinion, the basic question is whether the author is a 'revolutionary.' If he is, his writing is 'revolutionary literature,' whatever incident he portrays and whatever material he uses." In a speech on the conditions and questions concerning literary and artistic creation in the past few years, Comrade Hu Qiaomu specifically expounded the decisive role played by the correct stand and world outlook of writers and artists in depicting subject matter of various kinds.

First, being a socialist writer, it is necessary to "uphold the correct stand" and produce works "with a high sense of responsibility toward history and the people." The practice in literary and artistic creation over the past few years shows that when a writer or an artist produces his works with a sense of responsibility toward socialism, whether he eulogizes or exposes things, his works can directly or indirectly play an active role in promoting the unity of the whole party, the whole army and the people of all nationalities in the modernization drive. On the contrary, if he does not uphold a correct stand, does not cherish a correct feeling or just produces literary works for private gain, no matter what he has written, either "what a splendid scene it is with the water flowing in the river, with the beautiful lotus in the green ponds and with the bright sun shining high above in the sky" under the pretext of "eulogy," or "being infatuated with pretty girls" and "being sunk in deep thought on their charming smiles" under the pretext of "exposure," his work has departed from the socialist road. There are still other writers who really want to "serve the nation and the people" and have expressed in their works the strong feeling of detesting the dark side of the world. However, as they are not armed with Marxist ideology, they are unable to criticize the unhealthy practices from the higher plane of scientific socialism and the proletarian party spirit. Instead, they criticize them by means of wrong methods, such as, "combating poison with poison" and "combating errors with errors." As a result, while combating unhealthy tendencies such as privilege and bureaucratism, some other unhealthy ideologies and practices, such as individualism, nihilism and anarchism, are propagated intentionally or unintentionally. There obviously exists contradictions between the writers' intentions in creation and the actual results of their literary works. All this shows that a correct stand or world outlook is essential for finding a fundamental solution to the problem of eulogy and exposure.

Second, it is necessary for a socialist writer to uphold dialectical materialism in observing and reflecting our real life and to oppose metaphysics. Of course, when writing about the construction of the new life, emphasis should be put on the depiction of the epic deeds of the hundreds of millions of people in advancing toward socialist modernization and on the eulogizing of the pioneers of the new era. But this depiction or eulogy does not mean evading difficulties, contradictions and struggles in real life. We advocate the depiction of socialist new people in the new period of socialism. This has nothing in common with the theory of "no conflicts" which appeared in the literary and art work several times in the past. Moreover, we must point out that what we are undertaking now, in the realization of the socialist modernizations, is an unprecedentedly great and profound revolution. In order to build a high degree of socialist material and spiritual civilization, we must not only transform and conquer nature in an unprecedented fighting manner, but also penetratingly carry out reforms in the economic, political, ideological and cultural fields as well as in all spheres of the social life. We must not only continue to clear away the remnants of feudal ideology, but must also guard against and resist corruption by bourgeois ideology. On our road of advance, there are contradictions and struggles everywhere and every step of our advance is a great effort. Those "no conflict" works cannot truly and penetratingly reflect our socialist new period and will be proved to be short of artistic vitality. This is just as Comrade Hu Qiaomu said: "We hope our writers will lay more stress on depicting the present struggles of the people in building their new life. However, this does not mean advocating the eulogy of peace and ease of our life, still less does it mean advocating sentimental works. In the past, at present and in the future, the road to building a new life has always been and will continue to be uneven. This is a very complicated, arduous and great struggle which concerns every aspect of the people's life and will go on for a long period of time. Only by conquering various difficulties and obstacles in the human world and in nature can it advance forward. The true, the good and the beautiful exist in opposition to the false, the bad and the ugly and develop in the struggle against them. Therefore, in the narrative works, which are comparatively more complicated, eulogy and exposure usually, and inevitably, appear at the same time. (This refers to the interrelationship between the former and the latter, and does not mean that the role of literature and art is limited to eulogy and exposure.)" Whether in modern or ancient times, in China or elsewhere, the development of literature and art shows that in good literary and artistic works, which depict social life more penetratingly and extensively and have more artistic charm, eulogy and exposure are generally more closely combined. The famous Chinese classics, such as the "Romance of the Three Kingdoms," "Water Margin," "The Dream of the Red Chamber," the "Western Chamber," "The Mudan Pavilion" and so forth, and the foreign classics, such as the works of Balzac, Hugo, Tolstoy, Chekhov and Romain Rolland, are good examples of this. In recent years, some modern novels depicting the construction of industrial modernization, such as "Factory Manager Qiao's Assumption of Office," "Thirty Million" and "Descendent of the Dragon," are also inspiring and have made a deep impression on readers. This is because the characters of the pioneers in the new period, whom the writers have portrayed and eulogized with concentrated effort, were placed in conflict situations of complicated contradictions and in the struggles against various conventional ideas and conservative forces which obstruct the advance of the modernization drive. They have comparatively more truly reflected the profoundness and arduousness of the recent economic reforms. In these works, which reflect the struggles in the building of a new life, eulogy and exposure are better connected. We must affirm the successful experience of these works.

When creating literary and artistic works to reflect the socialist construction in the new period, while laying stress on eulogy, the writers must also pay attention to the depiction of contradictions and struggles as well as shortcomings and disadvantages. They must avoid merely singing the praises of the bright side. On the other hand, when creating works to expose the mistakes in magnifying the scope of the antirightist struggle, and mistakes in the struggle against right deviation and in the 10 years of disorder, it is all the more necessary to avoid writing about the dark side only. Otherwise, the organic unity of eulogy and exposure will be damaged and one-sidedness will occur. As a matter of fact, even during the 10 years of disorder, when the party and the people were suffering from the greatest disaster since liberation, there still widely existed positive and good things in our life. Within the party or among the people, the struggle against the Lin Biao and Jiang Qing counterrevolutionary cliques and the struggle to resist the "leftist" errors never stopped. Just as was pointed out in the "Resolution on Certain Questions in the History of Our Party Since the Founding of the PRC": "The party, the people's political power, the people's army and the nature of our society have remained unchanged." Unfortunately, in a number of literary and artistic works which have stressed exposure and depicted the happenings in the 10 years of disorder, these extremely important and abundant aspects in our social history were not reflected or were not fully reflected. In other words, in these works, exposure is not dialectically related with eulogy. No wonder they are dull and have a low ideological level. Some of them have even produced bad social results due to the mistakes in ideology and art.

In his speech, Comrade Hu Qiaomu particularly pointed out that when taking the dark side of things in history or in our real life as the main theme, "it is necessary to take the overall situation, the mainstream and the future into consideration" and "take a positive attitude toward the future of the party and the people and the future of socialist China." This requires our writers and artists to adopt the principle of revolutionary realism in their creative work and relate the depiction of reality with its revolutionary development, relate the depiction of the dark side of things with the overall situation of the entire society and connections in history, and expose the "illegality" and "temporary nature" of the existence and rampancy of the bad things and the historical inevitability of their being replaced by bright and progressive things. As the dark side of things and the decadent forces are minor aspects in the history of socialist revolution and socialist construction, their existence and development are always restricted by the overall situation of social life and are influenced by the bright side of things and the revolutionary forces, which are in the dominant position. Therefore, when we faithfully and penetratingly depict how the dark side of things and decadent forces are restricted and influenced by the bright side of things and the revolutionary forces and how they are related with other things, we can also bring to light the trend of development in society through the development and changes in the dark side of things. At the same time, the writers and artists can also express their correct social mentality and aesthetic standards through exposing and criticizing these ugly things. Thus, even when a tragedy is written, it can also give people strength; even when the "exposure of darkness" is taken as the theme, it still can point out a correct road for the people, display a bright future and boost people's courage and heighten their confidence on the road of advance.

THE FOUR BASIC PRINCIPLES REPRESENT THE FUNDAMENTAL GUIDING IDEOLOGY IN REVISING THE CONSTITUTION

Beijing RED FLAG in Chinese No 10, 16 May 82 pp 17-19

[Article by Lin Liangqi [2651 5328 8501]]

[Text] Every country always follows fixed principles or a guiding ideology in formulating or revising its constitution. This goes without saying. What is the fundamental guiding ideology for "the draft of the revised constitution of the People's Republic of China" that the 23d Session of the 5th NPC Standing Committee decided to promulgate? In the preamble of the constitution, it was clearly pointed out: "Under the leadership of the Chinese Communist Party and under the guidance of Marxism-Leninism-Mao Zedong Thought, the Chinese people will continue to uphold the people's democratic dictatorship, to uphold the socialist road, to improve various socialist systems, to develop socialist democracy, to round out the socialist legal system, to seek rejuvenation through self-reliance, to fight amid hardship, and to gradually build our country into a highly democratic and highly civilized socialist country with modernized industry, modernized agriculture, modernized national defense and modernized science and technology." The four opening lines here, or the four basic principles represent the fundamental guiding ideology followed in revising the constitution this time, and also the basic principles that our country must follow.

The four basic principles put forth are not the subjective wish of any individual. Instead, they represent the sum of the experiences of our people in a long period of revolutionary struggle under the leadership of the party and are the embodiment of objective laws governing the development of the history of our country. The "draft of the revised constitution" points out: "After 1840 feudal China gradually shaped up into a semicolonial and semifeudal country. The Chinese people kept fighting in a brave struggle for national independence, for national liberation and for democratic freedom." For over 100 years, on the scene of Chinese political struggle, various political forces successively staged their own performances and showed their own powers, to different degrees. Men of insight bent on reform put forth various programs to save the country and the people. Some called for the conduct of education to enlighten the people. Some urged the advocation of science to save the country. Some also called for the use of force to overthrow tyrants. Of all the ideas advanced, there was really no lack of relatively good ones. But before Marxism-Leninism reached China and before the birth of the Chinese Communist Party, there was not an idea that could show us a fundamental road to thorough liberation for the Chinese people. Given the conditions of China, only socialism was capable of arousing the revolutionary enthusiasm of the masses of hardworking people. Only by using the Communist Party, the vanguard of the proletariat armed with Marxism-Leninism, could we organize the proletariat and all the people in waging a thorough anti-imperialist and antifeudal struggle. Only in this way could we, after the victory of the democratic revolution, immediately lead China toward socialism. Such was the fact. Once Marxism-Leninism reached China and the Chinese Communist Party appeared on the Chinese political scene, a turn of the tide came in the Chinese revolution. With its correct revolutionary program, the Chinese Communist Party won the support and trust of people of all walks of life in the country. A new situation appeared in the revolution. Just as the "Resolution on Certain Questions in the History of the Party Since the Founding of the PRC" adopted at the 6th Plenary Session of the 11th CCP Central Committee pointed out: "The then Kuomintang, or other bourgeois and petit bourgeois political factions, did not and could not possibly find a way out for the country and the people. Only the Chinese Communist Party showed the people the way out for China. The way out was to thoroughly overthrow imperialist and feudalist reactionary rule and switch over to socialism." History of over 100 years has proved an imperishable truth: The four basic principles, which accord with the desire of several generations of people in China and reflect the laws of historical development independent of human will, are a fundamental guarantee for the Chinese people's turning our state into a highly democratic and highly civilized powerful and modern socialist country. Therefore, in formulating and revising the constitution, we can in no way deviate from the four basic principles. Whether we uphold or oppose the four basic principles and whether we uphold them properly--this concerns the nature and orientation of development of the state's political, economic and cultural systems, concerns the relations among various classes, among various nationalities and among various political forces of the state, and also concerns the role, effectiveness and dignity of the constitution itself. In this regard, we have both positive and negative experiences for reference.

Since the founding of the PRC, we have promulgated three constitutions. The 1954 constitution was a relatively good one. 1) It summed up and affirmed the experiences of the new democratic revolution led by the Chinese Communist Party and consolidated the results of the revolution of our people and the new victories scored in the political and economic fields since the founding of the PRC. 2) It prescribed the state system of the People's Republic of China as "a people's democratic state led by the working class and based on the worker-peasant alliance." 3) Based on the principle of integrating Marxism-Leninism with the practice of China, it objectively analyzed the main contradictions in Chinese society and put forth the main tasks for the transitional period of the state in light of the fundamental demands during the transitional period of the state and the common wishes of the masses of people in building socialism. The main tasks called for "gradually realizing the socialist industrialization of the state and gradually accomplishing the socialist transformation of agriculture, handicrafts and capitalist industry and commerce." In a word, the 1954 constitution embodied four basic principles, defined a socialist road compatible with the features of China, ensured the smooth socialist transformation of the system of private ownership of the means of production, stimulated the development of industry, agriculture and the whole national economy, and laid a material foundation for our modernization effort today.

The constitution promulgated in 1975 during the "Great Cultural Revolution" abandoned some basic principles of the 1954 constitution and embodied the guiding ideology of so-called "continuous revolution under the dictatorship of the proletariat." The main problems with this constitution were: 1) It affirmed wrong "leftist" viewpoints--which clearly deviated from the orbit of Mao Zedong Thought--as Marxism-Leninism-Mao Zedong Thought, thus creating confusion about the guiding ideology for the whole country. 2) Contradictions of two different types were seriously confused. The dictatorship of the proletariat was interpreted as "overall dictatorship." The article, "The Proletariat Must Exercise Overall Dictatorship Over the Bourgeoisie in the Superstructure Covering All Fields of Culture," was put forth, undermining socialist democracy. 3) The "leftist" economic policy was used to replace the socialist economic policy consistently upheld by our country. 4) Regional revolutionary committees at various levels practicing the party's "centralized leadership" were affirmed, creating a chaotic state in which the party was not separated from the government in the state system and the latter was replaced by the former. The party was thus turned from a leader in the social and political life of the state into something that directly interferes and that directly takes charge. This constitution put in the form of law many erroneous theories and erroneous practices related to the "Great Cultural Revolution," causing damage to the state in the political, economic and cultural fields and providing a handful of careerists and conspirators with a legal basis for usurping party and state leadership. After the 4th NPC, the forces of the "gang of four" counterrevolutionary conspiratorial group were strengthened not only in the party but in the government, not only at central but at regional levels. This was a serious consequence of the 1975 constitution, which negated the 1954 constitution, which deviated from the four basic principles and which followed wrong guiding ideology.

The 1978 constitution was formulated after the downfall of the "gang of four." But due to the limitations of the then prevailing historical factors, it failed to give up the erroneous theories, policies and slogans embodied in the 1975 constitution. Though some ingredients of the four modernizations program were added to it as guiding ideology, the theory of "continuous revolution under the dictatorship of the proletariat" remained as its basis. It is clear that this constitution has in many places become incompatible with the needs of our political and economic life and the needs of the building of a modern state and must be revised.

Different guiding ideas produce different constitutions and different consequences and effects in state political life. The 1954 constitution embodied in a relatively satisfactory way the four basic principles and accorded with the interests and aspirations of the people of the whole country. It won the wholehearted support of the people of the whole country and gave full expression to the dignity of the constitution. The later two constitutions, and the 1975 one in particular, impaired the dignity of the constitution, due to their being divorced from the four basic principles, to different degrees. We must seriously take this as a profound lesson.

The 3d Plenary Session of the 11th CCP Central Committee marked an end to the situation of party work advancing in a period of hesitation and indecision and the beginning of an overall and serious rectification of "leftist" mistakes noticed during the "Great Cultural Revolution" and before. The 6th Plenary Session of the 11th CCP Central Committee adopted the "Resolution on Certain Questions in the History of the Party Since the Founding of the PRC" and reaffirmed the need to continuously uphold the four basic principles. This paved the way for our revising the constitution and putting the business of revising the constitution again on a very reliable and solid foundation.

We know that in upholding the four basic principles, the most important thing is to adhere to the two calling for the socialist road and party leadership. Upholding the socialist road and upholding party leadership are two aspects of one thing. In upholding the socialist road, we must uphold party leadership. Whether we have upheld party leadership, or whether we have done this well depends on whether we have upheld the socialist road. In the articles in the 1975 constitution and the 1978 constitution (especially the former), there appeared many terms about "party leadership" and "socialism." But prompted by erroneous guiding ideology, these articles were permeated with the erroneous theory of "continuous revolution under the dictatorship of the proletariat." This basically violated the rights of the people and undermined the foundation of the people's democratic dictatorship, confronting us with the danger of our country's deviating from the socialist road in political, economic, cultural and other fields. This actually weakened the party's leading position in state life, basically running counter to the four basic principles. Now, though the "draft of the revised constitution" just mentions the four basic principles in its preamble, it has clearly defined our socialist system and people's democratic dictatorship as the state's fundamental system. Based on this system, it has prescribed our economic system and cultural system, set forth criteria for the proper handling of relations among various political bodies, among various mass organizations and among various nationalities and stipulated the composition of people's congresses and people's governments at all levels. This enables the spirit of the fundamental state system to run through all the articles in the "draft of the revised constitution" and forms the basis for the formulation of all other systems, ensuring that the political life, economic life and cultural life of the state always advance along a socialist orbit. Meanwhile, the draft has drawn lessons from the 1975 and 1978 constitutions. In line with the "resolution" of the 6th Plenary Session of the 11th CCP Central Committee and with the spirit of the party Central Committee's instructions on the reform of state organs, it has put forth reform measures for separating the party from the government and defined the premier responsibility system of the State Council, the responsibility system involving ministers and the various forms of socialist responsibility. In the form of general laws, this has affirmed the results of the reform of state organs and the economic system, allowing the improvement and strengthening of the party's leading position in state life.

The "draft of the revised constitution" clearly stipulates that the Chinese people will uphold the four basic principles. This means that every citizen of the People's Republic of China must uphold the four basic principles. These principles cannot be deviated from or abandoned, still less opposed. If anyone opposes the upholding of the four basic principles as the guiding ideology for our country and even brings in guiding ideology of any kind then he has acted against the laws of historical development and against the will of the whole people.

The party has led the people in formulating the constitution. The party will also lead the people in observing the constitution. Once the constitution is approved, all citizens, public organizations, units, and parties and groups, including the Chinese Communist Party, must observe it. Every member of the Chinese Communist Party is not only a member of the party organizations but also a citizen of the People's Republic of China. Like every citizen, he must do his part in observing the constitution. In this regard, no Communist Party member should be allowed to be a privileged citizen. Whether a Communist Party member upholds the four basic principles depends on whether he really observes the constitution and consciously upholds the dignity of the constitution.

Upholding the four basic principles is the fundamental guiding ideology for the current revision of the constitution. They should also become the guiding ideology for the launching of an all-people campaign to discuss the "draft of the revised constitution." Every citizen of the country must take this guiding ideology as a basis, air his own views on the revision of the constitution, and speak freely, enabling the four basic principles to be better embodied in the constitution as guiding ideology.

THE PEOPLE'S CONGRESS SYSTEM IS OUR COUNTRY'S BASIC POLITICAL SYSTEM

Beijing RED FLAG in Chinese No 10, 16 May 82 pp 20-24

[Article by Wang Shuwen [3769 0647 2426]]

[Text] In light of the historical experience in building political power in our country and based on the needs of the construction of the four modernizations, the 6th Plenary Session of the 11th CCP Central Committee laid down a guideline in the "Resolution on Certain Questions in the History of Our Party Since the Founding of the PRC." This guideline made it clear that "it is necessary to strengthen the building of state organs at all levels in accordance with the principle of democratic centralism, make the people's congresses at all levels and their permanent organs authoritative organs of the people's political power, gradually realize direct popular participation in the democratic process at the grassroots of political power and community life and, in particular, stress democratic management by the working masses in urban and rural enterprises over the affairs of their establishments." In accordance with this basic spirit, great importance has been attached to the strengthening and amplification of the system of people's congress, and many new and important stipulations have been made in the revised draft of the constitution of the PRC. In this new revised draft, we can find many considerable amendments to the 1978 constitution, as well as some remarkable improvements of the 1954 constitution.

The Stipulations Concerning the People's Congress System in the Revised Draft Give Free Rein to the Principle of Democratic Centralism

Democratic centralism is the basic principle to be constantly adhered to in the political system of a socialist country, as well as the hallmark distinguishing the latter from the political systems of all exploiting class states. Based on the summarization of the Paris Commune experience, Marx expounded long ago, in "The Civil War in France," the basic principles of the political system of a proletarian state. He said, "The commune was formed of the municipal councillors, chosen by universal suffrage in the various wards of the town, responsible and revocable at short terms. The majority of its members were naturally working men, or acknowledged representatives of the working class. The commune was to be a working body, not a parliamentary body, executive and legislative at the same time."

("Selected Works of Marx and Engels," Vol 2, p 375) In "The State and Revolution," Lenin discussed these principles in detail. He pointed out that only in carrying out these principles can we replace bourgeois democracy with socialist democracy, ensure control over the state by the broad masses of people, and consolidate proletarian state power. Our country's constitution has invariably provided that all state power belongs to the people; the organs through which the people exercise the power are people's congresses at different levels; and all people's congresses and other state organs must carry out democratic centralism. The principle of democratic centralism has been made an individual article (Article 3) in the revised draft of the constitution. It provided that "our state organs adopt the principle of democratic centralism." This is one of the characteristics of the revised draft of the constitution. Furthermore, with regard to the basic content of democratic centralism, the draft has also given an explanation in the following three aspects according to the basic principles of Marxism-Leninism and the actual practice in our country; and tried to embody the principle as fully as possible in every article governing the organization and the activities of the state organs concerned.

First, the NPC and the local people's congresses at different levels are formed by means of democratic elections. All people's congresses are responsible to the people and subject to the supervision of the people. The revised draft of the constitution provides that the people's congresses at all levels throughout the country are formed by means of democratic election. According to statistics compiled during the 1981 nationwide general election, the voters accounted for more than 99.9 percent of the citizens over 18 years of age. The people's congresses at different levels, which are formed by means of election on the basis of extensive democracy, can truly exercise state power on behalf of the people. At the same time, as provided in the revised draft, the NPC and all local people's congresses at different levels are subject to the supervision of the units and voters who elected them; and the latter have the right to replace, at any time, according to the procedure prescribed by law, any deputy whom they have elected. This ensures that all deputies will take the initiative in abiding by the constitution and law and will proceed in all cases from the interests and the will of the broad masses of people. The above stipulation fully shows that the people's congresses at all levels in our country are the people's representative organs and are of a highly democratic nature.

Second, all state administrative organs and all judicial and procuratorial organs are originated by the organs of state power to which they are responsible and to whose supervision they are subject. As provided by the revised draft, the NPC is the highest organ of state power, and its permanent organ is the NPC Standing Committee. It exercises legislative authority in the country, carries out discussions and makes decisions on issues of nationwide importance. The local people's congresses at various levels are local organs of state power. Standing committees are established in the local people's congresses at and above the county level. They carry out discussions and make decisions on important issues concerning their respective administrative areas. All state administrative organs, judicial organs and procuratorial organs at various levels are originated by organs of state power at various levels to which they are responsible and to whose supervision they are subject. This implies that all other state organs which are originated by people's congresses can never go against the will of the latter. All the above stipulations show that the people's congresses at various levels are the organs which truly exercise state power, and have the right to carry out discussions on important issues in the state's political life, to make relevant decisions and to supervise the implementation of these decisions. Therefore, through the people's congress system, the people can exercise state power in a centralized and unified way.

Third, the division of functions and power between the central and local state institutions shall conform to the principle of giving full play to the initiative and enthusiasm of the local authorities under the unified leadership of the central authorities. This stipulation of the revised draft correctly links the centralized and unified leadership of the central authorities with the goal of giving full play to the initiative and enthusiasm of the local authorities; furthermore, it reflects such a spirit in many articles of the constitution.

So, from the above three aspects, the revised draft has clarified the proper relationship between the people and their representative organs, between the representative organs and other state organs, and between the central and the local authorities. It has provided a clearer and more rational division of powers and functions between the state power organs and administrative organs, and between central state organs and local state organs, and has properly integrated a high degree of democracy with a high degree of centralism. It has thus consolidated and developed the people's congress system in our country.

The Revised Draft Has Enlarged the Powers and Functions of the NPC Standing Committee and Has Consolidated the Highest State Power Organs

One of the prominent and important characteristics of the revised draft of the constitution is that it has enlarged the powers and functions of the NPC Standing Committee, especially the legislative power of the latter; and has transferred some of the powers and functions which originally belonged to the NPC to its Standing Committee. The revised draft provides that both the NPC and its Standing Committee can exercise the legislative power of the state and have the right to formulate laws. The NPC has the power "to make and amend basic laws concerning criminal offenses, civil affairs, the structure of the state and other matters." These basic laws include criminal law, the law of criminal procedure, civil law, the law of civil procedure, the law governing the organization of the NPC, the law governing the organization of the State Council, the law governing the organization of the local people's congresses and the people's governments at various levels, the law governing the organization of the people's courts, the law governing the organization of the people's procuratorate, electoral law, the law of regional national autonomy, and so on. Other laws, apart from these, are to be made and amended by the NPC Standing Committee. When the NPC is not in session, the Standing Committee has the power to partially amend and supplement the basic laws enacted by the NPC. Besides, the revised draft also provides that the NPC Standing Committee has the power to supervise the enforcement of the constitution; to examine and approve plans for national economic and social development, and some readjustment plans of the state budget, when the NPC is not in session; and to decide on the appointment and removal of ministers and chairmen of commissions upon the recommendation of the premier of the State Council; and so on. On the other hand, the revised draft also has a series of stipulations to strengthen the organization of the NPC Standing Committee. For example, it is stipulated that members of the NPC Standing Committee shall not concurrently hold posts in state administrative organs or the judicial and procuratorial organs, so that they can devote their full strength and time to carrying out their own duties; the chairman, vice chairmen and secretary general of the NPC Standing Committee will form the chairmanship conference to attend to its important routine work; the responsible people of the standing committee of the people's congress of each province, autonomous region and municipality directly under the central government shall attend the sessions of the NPC Standing Committee, so as to enable the NPC Standing Committee to maintain closer ties with local authorities and masses; and so on. All these new stipulations are of great importance to fully bringing into play the NPC Standing Committee.

Some comrades are afraid that enlarging the powers and functions of the NPC Standing Committee will weaken the role and functions of the NPC as the highest state power organ, and will be harmful to promoting socialist democracy. The principal reason they give for this is that, while the NPC, as the highest organ of state power, is composed of deputies from various electing units and has a relatively extensive representativeness, the NPC Standing Committee, being produced by the NPC through election, has a less complete representativeness than the former, and is merely its permanent organ. This question must be considered both from theory and practice.

According to the Marxist theory of law, law must be based on certain social relations and must conform with the needs of the ruling class to consolidate its rule in the political and economic fields. In talking about the Napoleonic Code of France, Marx said, "Once this code no longer conforms with social relations, it will immediately turn into a pile of valueless waste paper." ("Collected Works of Marx and Engels," Vol 6, p 292) Lenin very sharply divided "constitutions" into "written constitutions" and "practical constitutions." He called constitutional documents prepared by the state "written constitutions," and called economic and political relations, which are objective things, "practical constitutions." Whether the "written constitution" can truly give full play to its legal functions does not depend on what is literally prescribed by it but on whether its content is divorced from the "practical constitution," and on whether it conforms with the objective needs. Being realistic and proceeding in all cases from the actual circumstances is one of the fundamental principles which must always be scrupulously abided by in socialist legislation, and the principal criterion to judge whether the constitution and law are complete. This is also the correct attitude we must take in considering the question of democracy--we must concentrate our attention on real democracy. If the form of democracy is divorced from objective reality, that democracy will not be a genuine one. Therefore, in order to ensure that socialist democracy can be fully carried out, we must consider the actual situation in our country in working out the political system, we must devise a system which can guarantee the fully efficient operation of state power organs and which can effectively ensure the people's rights to control the state.

Let us look at the actual situation. First of all, as far as the superficial situation is concerned, since the NPC is the highest organ of state power, it should enlarge its powers and functions but should not enlarge the powers and functions of its Standing Committee. However, this cannot be easily achieved in actual practice. In view of the past practice, there was a relatively large number of delegates to the NPC (not exceeding 3,500 people as stipulated by the electoral law in accordance with the actual needs). This hindered the progress of work and the exercise of powers and functions. Therefore, the question of reducing the number of delegates has been considered in the course of revising the constitution. But, on the other hand, it is difficult to reduce the number of delegates in order to maintain a wide representation of the NPC because our country is a vast country which is densely populated. Since there is a large number of delegates and in order to keep the meetings from being too lengthy, it is rather difficult to discuss problems. Therefore, the NPC meetings can only concentrate on discussion and solution to questions of fundamental significance in the state's political life. On the other hand, in the wake of the development of the socialist cause, there are some serious national problems awaiting solution. The NPC is designated to make laws which are sometimes unable to meet the demands of reality. In view of this, as early as in 1955, the Second Session of the First NPC adopted a resolution which authorized the NPC Standing Committee to formulate certain laws. The resolution pointed out: "In the wake of the progress of socialist construction and socialist reform, it is necessary for the state to formulate various laws in order to meet the demands of the state's construction and work. At the conclusion of the NPC meetings, it is inevitable for the NPC Standing Committee to adopt and implement certain laws. In light of this, in accordance with Article 19 of Regulation 31 of the PRC Constitution, the NPC Standing Committee is authorized, in accordance with the spirit of the constitution and actual need, to appropriately formulate certain laws--the special regulations." In 1959, the First Session of the Second NPC adopted another resolution which authorized the NPC Standing Committee, at the conclusion of the NPC meeting and in accordance with the demands for development and work, to amend certain inappropriate articles of the law and make new regulations. In the new historical era, in order to strengthen socialist democracy and the socialist legal system and ensure the smooth progress of the four modernizations drive, it is extremely necessary to strengthen socialist legislative work and promptly deal with major problems. In the light of this, we see that enlarging the powers and functions of the NPC Standing Committee is a scientific summation of the long-term practice of the system of the people's congress and is also an objective demand of the new historical era.

Second, the NPC Standing Committee has the ability to exercise the powers and functions entrusted to it by the constitution. At present, the NPC Standing Committee has nearly 200 members. Although the NPC Standing Committee is formed by means of elections of people's congresses throughout the country, it consists of representatives from various aspects. This shows that the NPC Standing Committee is fully capable of exercising the state's legislative power. It was stipulated in the constitution in 1954 that the NPC is the sole organ exercising the state's legislative power and that the NPC Standing Committee cannot formulate laws but only decrees. This stipulation was made with reference to the 1936 constitution of the Soviet Union. However, in accordance with the Soviet 1936 constitution, the number of members of the Supreme Soviet Presidium was only 33. The present number of members of our country's NPC Standing Committee is about 5 times that of the Soviet Supreme Presidium. Since the size of the NPC Standing Committee is rather appropriate, it is rather easy for it to hold regular meetings. With its power extended and its organization strengthened by the draft of the revised constitution, it can give full play to its role as a standing body.

Finally, while enlarging the powers and functions of the NPC Standing Committee, the draft of the revised constitution has also attached great importance to the building of people's congresses throughout the country. Following are major new regulations: 1) Restore the legal procedure of the 1954 constitution in relation to the NPC's right to revise the constitution, pass laws and other proposals, and entrust to the NPC the right to make decrees (including decisions and resolutions beyond the scope of law). These stipulations are of great significance to maintaining the position of the fundamental law of the constitution, enhancing the seriousness of the resolutions adopted by the NPC and strengthening the socialist legal system. 2) Regulations have been made on establishing the special committees such as the committees in charge of economics and finance, education and science, and foreign affairs in order to examine, discuss and draft relevant proposals. Delegates to the NPC have the right to put forth legislative proposals in order to strengthen the NPC's legislative work. 3) As far as the rights of the delegates to the NPC is concerned, the regulation in the 1954 constitution on the exemption right of delegates has been restored. According to this regulation, the statements and votes of the delegates made in various meetings are not subject to legal prosecution. At the same time, regulations on the delegates' obligations have also been made. They must maintain close ties with units to which they originally belonged and with the masses, listen to and reflect the people's opinions and demands, and assist in the implementation of the constitution and the law. Hence, the delegates can better perform their duties. The draft has strengthened the building of the NPC and its Standing Committee, ensuring that they give full play to the role of being the highest organs of state power and really becoming the people's authoritative organs of power.

The Draft Enlarges the Powers and Functions of the Local State Organs, and Consolidates the Local Organs of State Power

Another major characteristic of the draft of the revised constitution is that the powers and functions of the local organs of state power have been enlarged and the building of local people's congresses at all levels has been strengthened. Since the proposal of shifting the country's work focus onto socialist modernization centering on economic construction was put forth at the 3d Plenary Session of the 11th CCP Central Committee, the local organs of state power at all levels, particularly those at and above county level, are shouldering heavier tasks. Therefore, under the centralized and unified leadership of the CCP Central Committee, appropriately enlarging the powers and functions of the local organs of state power and strengthening the building of local organs of state power at all levels are essential to giving play to the initiative and enthusiasm of the localities and speeding up the development of the four modernizations drive. The draft has summed up the experience of building political power in the localities since the founding of the state and particularly over the past few years. It has also made the following new regulations on strengthening the work of the local organs of state power at all levels. These new regulations are major reforms in the local organs of state power.

1. The powers and functions of local state organs have been enlarged.

The draft stipulated that the people's congresses and the standing committees of the people's congresses of provinces, autonomous regions and municipalities directly under the central government can formulate and promulgate local laws and regulations provided that they do not contradict the state constitution, law, decrees and administrative rules, and submit them to the NPC Standing Committee for the record. This is of great significance to giving play to the enthusiasm of the localities. Simultaneously, the draft also expands the autonomous power of the autonomous organs in the minority nationality autonomous regions. For instance, it has been stipulated that minority nationality personnel will take up posts of chairman and governor of the autonomous region, and governor of the autonomous counties; that under the planned guidance of the state, the autonomous organs will be responsible for the management of the local economy, culture and so on; and that in opening up resources and building enterprises in the autonomous regions, the state should take into consideration the interests of the autonomous regions. These stipulations are conducive to safeguarding the minority nationalities' right of autonomy and strengthening the unity of the various nationalities in striving for the realization of the four modernizations drive.

2. Direct election is to be implemented at the county level.

In the structure of the state organs, the organs at county level play a very important role in providing continuity between what has gone before and what comes afterward. The organs of state power at county level constitute an important cardinal link in leading and organizing the broad masses of people. The people's congresses at county level are elected by the people. They help to place the organs of state power at county level under the direct supervision of the masses, maintain closer ties between the state organs and the masses, improve the efficiency of work and lead well the four modernizations drive. The implementation of direct elections at county level lays a solid foundation for the election of organs of state power at all levels above county level. Thus, the implementation of direct elections at county level is very important to perfecting the people's congress system and ensuring that the masses are masters of their own house.

3. Local people's congresses at all levels at and above county level are to set up their standing committees.

In accordance with the stipulations laid down in the 1954 constitution, the local people's committees at all levels are the executive organs of the people's congresses at all levels and, simultaneously, they exercise the powers and functions of the standing organs of the people's congresses. Practice has proved that because the local administrative organs shoulder heavy tasks which hinder their efforts in exercising the powers and functions of the standing organs of the people's congresses and because of the lack of the standing organs of the people's congresses, a situation in which the administrative organs are under their own supervision and are actually divorced from the regular supervision of the local organs of state power appeared. The draft stipulates that local people's congresses at and above county level should set up standing committees and it has also laid down explicit stipulations on the organization and powers and functions of the standing committees of the people's congresses. The general powers and functions of the standing committees of the people's congresses are: discuss and make decisions on major issues of the local administrative district; supervise the work of the local people's government, people's court and people's procuratorate; and make decisions on appointment and dismissal of the personnel of the organs of state power. Thus the establishment of the standing committees of the local people's congresses at and above county level is of great significance to promptly discussing and solving local problems regarding the four modernizations drive in accordance with local conditions, strengthening the building of the people's congresses and strengthening regular supervision over other local state organs.

It is worth pointing out that the draft also entrusts to the standing committees of the people's congresses a large part of the powers and functions of the local people's congresses at and above county level stipulated in the 1954 constitution. This means that local people's congress standing committees now have the power to dismiss inappropriate resolutions and others issued by the people's government at the same level and by the people's government one level below, and the power to dismiss inappropriate resolutions made by the people's congresses one level below. From a superficial look at the situation, the powers and functions of the local people's congresses at and above county level are reduced and the powers and functions of the people's congress standing committees are enlarged. However, such stipulations are in fact more rational and practical because they are more conducive to placing the local administrative organs at all levels under the regular supervision of the local organs of state power at all levels. In view of the stipulation on the powers and functions of the NPC Standing Committee laid down in the 1954 constitution, the NPC Standing Committee was also given the power to dismiss the resolutions and orders issued by the State Council which were contradictory to the constitution, the law and decrees, and the power to alter or dismiss inappropriate resolutions made by the organs of state power of provinces, autonomous regions and municipalities directly under the central government. The local people's congresses were entrusted with the exercise of such powers only because no local people's congress standing committees had been established. This shows once again that, regarding the stipulation of the powers and functions of the people's congresses and their standing committees, we should not superficially look at the amount of powers and functions but should see whether they are rational and accord with practical needs. The draft not only establishes standing committees for the local people's congresses at and above county level but also makes explicit stipulations on their powers and functions. This has further perfected the system of the people's congress, ensuring that full play will be given to the role of the local organs of state power.

In short, the draft consolidates the establishment of the highest organs of state power and the local organs of state power in accordance with the principle of democratic centralism. It realizes the major reforms and new developments in the state system and greatly improves our country's people's congress system. It has great practical significance and far-reaching historical significance in carrying forward socialist democracy, strengthening the socialist legal system and ensuring that our country will be built into a modern and strong socialist country with a high degree of democracy and civilization.

THE DEVELOPMENT OF SOCIALIST DEMOCRATIC POLITICS IS AN IMPORTANT QUESTION

Beijing RED FLAG in Chinese No 10, 16 May 82 pp 25-27

[Article by Gong Yuzhi [7895 5148 0037]]

[Text] The draft of the revised constitution is being discussed by all the people. Our people have placed high hopes on the revision of the constitution this time and they are confident that the discussion, formulation and implementation of the new constitution will surely become a new milestone in building up our country's socialist political democracy.

This revision of the constitution is being carried out after the 3d Plenary Session of the 11th CCP Central Committee definitively formulated the party's correct line during the new historical period and after the 6th plenary session made a basic summary of the party's history since the founding of the PRC. The whole party and the whole people have deeply thought over the experiences and lessons in the 30 years of our great and arduous history and our future tasks and path. Our people wish to record the basic results of their deep pondering, the basic experiences that they have drawn from history and the basic path for future development on the basic law of the state.

Naturally, the construction of the socialist democratic political system has become one of the key issues that the party and the people have conscientiously thought over.

The 3d Plenary Session of the 11th CCP Central Committee already pointed out that we should embody our democracy in our political system and laws and make the system and laws stable, constant and extremely authoritative. In his speech at the 30th National Day, Comrade Ye Jianying pointed out that we should "reform and improve the socialist political system," and include "building up a high degree of socialist democracy" and "a highly developed socialist spiritual civilization" into the "major goals of our socialist modernization."

At the 5th Plenary Session of the 11th CCP Central Committee, the draft of the revised CCP constitution was discussed and the abolition of the de facto lifelong tenure system for cadres in leadership posts was adopted as an important principle. Later, at the enlarged meeting of the CCP Central

Committee Politburo, Comrade Deng Xiaoping gave a speech in which he systematically expounded on the problem of the reform of the leadership system of the party and the state. One of the aims of the reform was to solve the problem of the excessive centralization of power and to abolish the lifelong tenure system for cadres in leadership posts. He also said that the CCP Central Committee would propose a revision in the constitution in order to reflect this reform.

In the historic resolution that was approved by the 6th Plenary Session of the 11th CCP Central Committee it was pointed out that "gradually building up a highly democratic socialist political system is one of the basic tasks of the socialist revolution. Our failure to realize the importance of this task was one of the important factors that gave rise to the 'Great Cultural Revolution.' This is a grievous lesson for us." The resolution highly praised the party's decision to abolish the de facto lifelong tenure system for cadres in leadership posts.

Now this guiding ideology has been embodied in the draft of the revised constitution. The draft of the revised PRC Constitution stipulates 5-year terms of office for the state chairman and vice chairmen, the NPC Standing Committee chairman and vice chairmen, the State Council premier and vice premiers, the state councillors, the chairman of the Central Military Commission, the president of the Supreme People's Court and the president of the Supreme People's Procuratorate. It also stipulates that none of them may serve for more than two consecutive terms. This actually means writing into the constitution the abolition of the lifelong tenure system for cadres in leadership posts. As a result, the constitution specifically embodies the existing regulations on limiting the terms of office in the highest leadership offices of the state.

The construction of the political system of socialist democracy consists of many aspects, and the abolition of the de facto lifelong tenure for the highest leading posts of the state is merely one of the aspects. I am going to give a few of my opinions on this point.

We all know that for feudal emperors there was a lifelong tenure system and hereditary succession. The overthrow of the autocracy of feudal kings and the establishment of the democratic republic political system, in which the top officials of the state are selected by election and their tenure is limited, is one of the great achievements of bourgeois democratic politics. It is also a major step forward in the political life of the human race. Of course, bourgeois democracy is in essence rule by a small number of exploiters. The constant change in the heads of states and heads of governments in the capitalist countries reflects, in essence, contention for power and readjustment in the contradictions between the various economic groups and political sections within the bourgeoisie. This only serves to safeguard their rule over the broad masses of the laboring people. Moreover, restriction of the length of tenure of top officials of the state is often not stipulated in the fundamental laws of all capitalist countries and not always observed even though it has been stipulated in the fundamental laws of a capitalist country.

Socialist political democracy belongs to the whole laboring people and is, in essence, quite superior to the bourgeois political democracy. However, it takes time to build up the socialist political democracy. Due to various specific historical conditions, although the highest leaders in socialist countries are elected to their offices, a de facto lifelong tenure system has emerged. After the death of Stalin, from summing up the historical experiences of the dictatorship of the proletariat, the CCP noted the negative results in political life in socialist countries by the excessive concentration of power and the formation of the personality cult. In light of international experiences and in connection with China's cause, the CCP already started at that time to consider the question of abolishing the lifelong tenure system in party and state leadership posts.

In 1956 Chairman Mao Zedong proposed that he would not serve another term as state chairman, and at the same time also considered not serving a further term as party chairman at an appropriate time in the future. The leading comrades of the Central Committee agreed with this view. The party constitution adopted by the eighth party congress included a provision that "when the Central Committee deems it necessary, it can establish the post of honorary party chairman." This without doubt reflected this consideration.

On 30 April 1957, Comrade Mao Zedong talked with nonparty personalities and mentioned that he did not wish to be nominated as a candidate for the position of chairman of the state. Two nonparty personalities wrote to Comrade Liu Shaoqi and Comrade Zhou Enlai about this. In their letters, they expressed their opinions that this was a matter of great concern and hoped that the party and government prudently think over the problem. On 5 May, Comrade Mao Zedong wrote the following remarks on the letters that had been sent to be read by him:

"This matter has already been discussed by dozens of people at the meeting in Beidaihe and has been considered by them as feasible. They have also discussed my refusal to serve a future term of office as the chairman of the party, but they were of the opinion that although it cannot be accepted at this time, it may be accepted in the future when the situation allows."

"We can also consider that we will revise the constitution and stipulate that the chairman and vice chairmen can be reelected only once, and only after they have served a term of office."

Referring to what was said in the letters about stressing the prestige of an individual in a collective leadership still being an important link for uniting the people of the whole country, Comrade Mao Zedong wrote:

"I am still alive; the prestige of the individual for uniting the people will not diminish because of my refusal to accept reelection."

Regarding the problem of continuing to play his role in the political life of the state, Comrade Mao Zedong thought that when he was freed from his firstline duties, he would be able to concentrate his energy on researching some important issues. He thought that when he no longer held the post of chairman of the state, he could deliver speeches on major issues as the party chairman at proper meetings if necessary, and that even if he no longer held the post of the CCP chairman, he would still be able to deliver speeches as a member of the CCP Politburo.

Comrade Mao Zedong asked that copies of the letter and his remark be circulated to "all members and alternate members of the CCP Central Committee, all the deputies to the eighth CCP national congress, all the provincial, municipal and regional CCP committees, all the NPC deputies and all the members of the CPPCC." He also wrote:

"This matter should be widely discussed in order to be accepted by the people and win their support. We should also consider revising the constitution."

"At present, an increasingly large number of high-ranking leading comrades have accepted this idea, but because of a lack of exchange of opinions, there are still quite a large number of nonparty personalities who will not accept this idea. Therefore, it is necessary to spend a great deal of time in discussing the matter."

Reviewed today, how insightful his words are.

It is a pity that owing to the change in the situation which is known by everybody, restricting the number of terms of office that a state chairman and party chairman can consecutively serve was suspended for a long time. Later, the personality cult was gradually aggravated and the power of the party and the state was excessively concentrated onto one individual. As a result democratic centralism and the principle of collective leadership was weakened or even completely destroyed. During the "Great Cultural Revolution" the practice of including the de facto lifelong tenure system for the leader and the stipulation about the leader being succeeded by a specified person was written into the constitution.

History has undergone twists and turns.

Since the smashing of the "gang of four," both the party and the people have become enlightened again. Searching for a way to reform the leadership system of our party and state through a summing up of our own historical experiences and lessons has become one of the key issues that people have been discussing. With the results of the personality cult in the past and the propaganda of the new personality cult still fresh in their minds, many old-generation proletarian revolutionaries and many careful thinkers among the cadres and masses both inside and outside the party have realized and raised in their discussions the necessity for abolishing the lifelong tenure system for supreme leading officials. This is an inevitable trend as well as a natural and reasonable conclusion. Encouraged by the spirit of the 3d Plenary Session of the 11th CCP Central Committee, some theoretical workers have theoretically raised and discussed this problem with a keen insight. It is precisely on this basis that our

CCP Central Committee collected the opinions of the masses, decided when the time was right and bravely put forth the abolition of the de facto lifelong tenure system for leadership posts as a major policy decision resulting from a wider range of opinions, in a more perfect form and by more accurate reasoning. Thus it reflected the desire of the masses.

How are we to understand the significance of this policy decision? In my opinion, the significance lies in at least the following aspects:

First, this is a reform system, not just a step taken to meet temporary requirements. This reform system was not put forth in isolation. On the contrary, it was put forth as one of the major links of the reform of the overall leadership system of the party and the state and the reform of the overall cadre system. As Vice Chairman Deng Xiaoping profoundly pointed out: The reform and perfection of a system is more fundamental and complete and has greater stability and duration than the thought, work style and responsibility of an individual.

Second, this policy decision helps to establish ideologically, politically and organizationally the Marxist viewpoint and principle that the Communist Party and the state must be under the collective leadership of leaders with ability and political integrity who have emerged amid mass struggle.

Third, this policy decision helps to bring into play the superiority of the socialist system in cultivating and steeling large numbers of talented leaders.

Fourth, this policy decision helps to develop genuinely equal and democratic relations in the highest leadership stratum and puts a stop to the patriarchal system and the phenomenon of the individual placing himself above the collective.

Fifth, this policy decision helps to formulate a democratic order, solve the problem of the handing over of power by the highest leadership stratum, and ensure the continuity and stability of the correct leadership of the party and state.

Sixth, this policy decision helps to bring down the average age of the highest leadership stratum and to regularly rejuvenate it, thus facilitating its constant absorption of new vitality, experience and knowledge.

The old generation of proletarian revolutionaries' prestige, experiences and wisdom that have been gained in their prolonged struggle are the political and spiritual treasure and great strength of the whole party and state. While rejuvenating the leading cadres ranks, the CCP Central Committee has also formulated some methods and measures to enable those comrades who have retired from firstline posts to continue to play their important role--as much as their energy and health allow--in the political life of the party and state, especially in making decisions on important matters. Our old generation of revolutionaries should sincerely help those comrades who lack their prestige, competence and experience, so that they will be worthy of leading posts. They should regard this as their glorious duty for the party and the people. This shows the noble quality of true communists.

In short, the CCP Central Committee's important policy decision on the abolition of the lifelong tenure system for cadres of leadership posts has won the support of the broad masses and the broad ranks of our cadres. This policy decision has been reflected in the draft of the revised constitution and is being implemented in the current work of reforming the leading organs of the party and state.

History usually reflects progress. But on these problems, it seems that we merely have returned to the correct viewpoint that we put forth many years ago. However, as was said by Hegel, the same maxim would sound much more profound if it was said by an old man who had experienced the hardships of life than by a young man who had not experienced much of life. Though it is the same correct viewpoint, when we soundly affirm it today, our affirmations have been supported by the positive and negative experiences of our past; therefore, our understanding of this viewpoint is much deeper and much richer in meaning than that of many years ago. In carrying out this correct viewpoint today, we are much more conscious, much more resolute and much more persistent than we were many years ago. At that time, many people were not mentally prepared for the reform, but now the reform has become the common will and desire of every one of us. We are engaged in establishing and perfecting a complete system to ensure the full realization of socialist political democracy. We are fully confident that we will make steady progress.

A NEW QUESTION FOR STUDY

Beijing RED FLAG in Chinese No 10, 16 May 82 pp 28-30

[Article by Xu Daohe [1776 6670 3109]]

[Text] At present, we have started to combat serious economic crime. The struggle has given rise to a new question for study. We should be armed with Marxism-Leninism and Mao Zedong Thought to preserve the purity of communism.

Notable results have been scored in carrying out the open-door policy and the policy on strengthening our domestic economy in accordance with our socialist modernization and with the international and domestic situations since the smashing of the "gang of four," particularly since the 3d Plenary Session of the 11th CCP Central Committee. That the policy will be carried out in future is beyond doubt. We should, however, note that in the past 2 or 3 years there has been a notable increase in serious crime such as smuggling, selling of smuggled goods, corruption, bribery, speculation, swindling, and stealing property from the state and collectives. Such activities are rampant in a small number of localities and among a small number of people. Such activities, which do great damage to the socialist economy, are often done by a small number of people in the national departments and enterprises who have colluded with undesirable elements in society. Some of these activities are done under the pretense of the state or enterprises, some are even backed up by some leading cadres. Some of our cadres, however, do not have a sufficient understanding of the seriousness and destructiveness of the questions reflected by the class struggle under the present historical conditions. It is, therefore, necessary to raise the ideological level of the members of the Communist Party and the staff of the state, to keep a clear mind and to preserve the purity of communism, so as to achieve a state of not being corrupt while the correct open-door policy and the policy on strengthening our domestic economy are being consistently carried out. This gives rise to a new question for study.

"The decisions made by the PRC State Council on combating serious economic crime" states that "our cadres, particularly our middle-ranking and leading cadres, should study again the works of Lenin and Comrade Mao Zedong, solemnly and persistently preserve the quality of the vanguard of the working class of our party, and preserve the purity of our members' communism.

Our members' ideological level should not be lowered and their political awareness should never be weakened. Our members should never become corrupt and degenerate." The successful study of the new question, the preservation of the purity of communism and the opposition to corruption and deterioration all play an important part in the interest of our people and our state, in the stability of our socialist system, and in the prosperity or decline of our state.

During the cause of our revolution and construction, whenever a new historical era starts, we often pay close attention to the purity of communism. We always raise new questions in time so as to prevent corruption and degeneracy among a small number of members and cadres. For instance, the emphasis of our work shifted from the rural area to the urban area during the early postliberation period. At that time, we had to come into closer contact with the capitalists. Confronted with this situation, some of our members became despondent. "They had not been conquered by the armed enemies." "They could not sustain the people's attack with sugar-coated bullets," so stated Comrade Mao Zedong at the 2d Plenary Session of the 7th CCP Central Committee. They indulged in material enjoyment; they were blinded by lust for gain; and they took part in bribery and corruption and in illegal practices. Nevertheless, our party led all of its members and cadres to study its principles and policies so as to strengthen their political awareness and raise their ideological level. Our party started the movement of "anticorruption, antiextravagance, and antibureaucracy." It severely punished a small number of serious criminals. Our anticorruption and antidegeneracy force in our party has been greatly strengthened. Necessary conditions for socialist reform and socialist economic construction have been created.

Our present situation is different from that in the past. It is different from the situation in Russia's period of implementing the new economic plan declared by Lenin. However, the basic principles and spirit of preserving the purity of communism and the struggle against corruption and degeneracy as advocated by Lenin and Comrade Mao Zedong are still applicable to our present situation. The article "Excerpts of Lenin and Comrade Mao Zedong on Opposing Communist Members' Corruption and Degeneracy," which has been recently carried in the press, is good material for study. We should thoroughly execute the "Decisions by the PRC State Council on Combating Serious Economic Crimes" and should study them seriously.

First, we should study communist ideology, build up a sound communist world outlook and fight persistently against harmful trends.

In many of their works Lenin and Comrade Mao Zedong have stated their insistence on communist ideology. During the war of resistance against Japan, Comrade Mao Zedong pointed out that "it is beyond doubt that our highest guiding principle is to push China toward a socialist and communist society. The name of our party and our Marxist world outlook have obviously demonstrated our brightest, highest and most wonderful ideal." ("Selected Works of Mao Zedong," Vol 3, p 1008) Every member has to dedicate himself to this struggle when he joins the Communist Party. He is required to form a communist world outlook and to uphold the party's principles. As we march along the road to communism, it is inevitable that the development of our revolution will be impeded by all kinds of nonproletariat and harmful trends. How should we tackle these harmful trends? Lenin has pointed out that we "should keep a close eye to such trends and should resist them by means of communism." ("Complete Works of Lenin," Vol 31, p 416) Comrade Mao Zedong also has pointed out that a member of the Communist Party should "uphold the correct principles and wage tireless struggle against erroneous ideas and behavior at any time and place." ("Selected Works of Mao Zedong," Vol 2, p 332) At present, a small number of our party members have become corrupt and degenerate, and they have leaned toward the liberal bourgeoisie. We should follow the teachings of Lenin's and Mao Zedong's to uphold the party's principles and to carry out the struggle. Various harmful trends will run wild and greatly endanger the cause of our revolution if we do not wage a firm struggle against them.

Second, we should learn to preserve the purity of communism under any conditions. We should not lower the members' ideological level or weaken their political awareness.

Lenin has pointed out that "to preserve the ideological and political individuality of the proletariat is the constant and doubtless obligation of the socialists. Those who fail to fulfill this obligation are no longer socialists in practice." ("Complete Works of Lenin," Vol 10, p 60) In the preface and afterword to the "Survey on Agriculture" in 1941, Comrade Mao Zedong pointed out that "to preserve solemnly and firmly the purity of communism among the members of the party, to protect those capitalistic qualities which benefit the economy and to let them develop appropriately are indispensable in our resistance against Japan and at the age of building up a people's republic." ("Selected Works of Mao Zedong," Vol 3, p 751) At present, our socialist economy has become absolutely dominant. Various forms of economy and management will continue to exist. Our social policy can never be a communist social policy. However, members of the Communist Party should preserve the purity of communism under all circumstances. They should also maintain a good relationship between the preservation of the purity of communism and various social policies adopted under different circumstances. We should not use the comments on noncommunism to criticize the social policies and oppose noncommunist policies which are adopted in accordance with the practical situation. Nor should we give up preserving the purity of communism, lower the ideological level or weaken the members' political awareness just because some social policies are not communist.

Third, we should learn to serve the people wholeheartedly and vow to wage a lifelong struggle for communism.

It is our party's aim to serve the people wholeheartedly. It is our members' sacred responsibility to wage a lifelong struggle for communism. Comrade Mao Zedong said, "The Communist Party is to struggle, to serve the people wholeheartedly, not half-heartedly." ("Selected Works of Mao

Zedong," Vol 5, p 420) He also said that "Communist Party members should never put their own interests first. Their personal interests should give way to the interests of the state and people. Therefore, selfishness, sluggishness, corruption, deterioration, 'showing off,' and so forth are most detestable. Selflessness, diligence, wholehearted devotion to public duty, the spirit of quietly immersing oneself in hard work, and so forth are reputable." (ibid., Vol 2, p 488) Through studying Comrade Mao Zedong's teaching and practicing it in daily work, we can realize the public demand, become one with the masses and straighten out our party's spirit. If we possess such ideas and spirit, we will be able to put the interests of the state and people first, handle the relationship among the state, the collectives and the individuals, and abstain from jobbery; we will not give ourselves the airs of a hero and become proud and complacent, slacken off from making any further progress, and will not seek ease and enjoyment or be afraid of leading a hard life when we score good results; we can make criticism and self-criticism, be courageous enough to admit our shortcomings and to overcome them and rectify any ideas and behavior which are adverse to our party's cause when we make some errors in our work. In sum, if we possess such ideas and spirit, we can resist the capitalist attack with sugar-coated bullets, we will not lose in the battle against such sugar-coated bullets, and we can make continuous progress and vow to dedicate ourselves to the lifelong struggle for communism.

In studying the article "Excerpts of Lenin and Comrade Mao Zedong on Opposing the Corruption and Degeneracy of Communist Members" under the new historical conditions, we should closely link it with the present economic crime and the harmful trends in the society. We should take the lesson of the corruption and deterioration of the small number of cadres. We should summarize and study the experience of our good and uncontaminated cadres, members and collectives amid the corrosion of capitalist ideas. We should analyze the practical situation to get a better understanding of the related teachings of Lenin and Comrade Mao Zedong, to raise our ideology level and strengthen our political awareness, and to strengthen resistance to capitalist corrosion.

IS AN INDIVIDUAL UNDERTAKING PRACTICING EXPLOITATION IF IT EMPLOYS ASSISTANTS AND TAKES ON APPRENTICES?

Beijing RED FLAG in Chinese No 10, 16 May 82 pp 30-31

[Article in "Questions and Answers" column by Dong Yancheng [5516 5885 2052]]

[Text] In our economy today, a small number of individual tradesmen own some means of production and, with the permission of the state managerial departments of commerce and industry, have one or two assistants or several apprentices, and these operators make more money than their assistants and apprentices. Is this exploitation through hiring labor? To answer this question, it is necessary to examine the sources and nature of the earnings of these individual tradesmen.

First of all, it should be noted that the income of individual tradesmen is greater than that of their assistants and apprentices and is not solely a result of gratuitous ownership of surplus labor. The amount a tradesman earns includes, first, the value created by his own labor. An individual tradesman owns a little means of production but he is a laborer at the same time. More often than not, he also has higher skills and more managerial competence, playing an important role in the process of production. He does more sophisticated labor than his assistants and apprentices, so it is right that he earn more than they. Second, the earnings of a tradesman include the money made through his earlier investment in the business. These earnings are equal to or modestly higher than the bank interest for the same amount of money. Therefore, although it is earnings on investments, it is justified and permitted by the socialist economy. Third, the earnings include the extra income resulting from pricing factors. The individual economy is a small commodity economy, the economic effects and earnings of which are closely related to the changes of supply and demand on the market. Since some problems still remain in balancing supply and demand in our country at present, and some prices are irrational, a tradesman can often sell at an inflated price and purchase at a discount. This extra income is not created by the labor of the individual tradesman, nor by the labor of his assistants and apprentices, but is created by the labor of laborers in other departments and transferred through price adjustment (it is also transferrable to the state through price adjustments and tax collections). Fourth, the individual tradesmen make profit from the surplus labor of their assistants and apprentices. The amount of this is determined by the number and productivity of the assistants and apprentices. The productivity of individual trades is rather low, and one individual tradesman is permitted to have a few assistants. Therefore, the value of the surplus labor of his assistants and apprentices is very little and cannot provide the bulk of his income.

One cannot indiscriminately regard the individual tradesman who has assistants and apprentices as a capitalist exploiter of hired labor because there are essential qualitative and quantitative differences between the two.

Qualitatively speaking, exploitation means that the workers have no alternative to selling their labor power to the capitalists. The relationship between the capitalists and the workers is characterized by the workers' forced labor and the capitalists' gratuitous ownership of the surplus value created by those workers. But the relationship between the assistants and apprentices and the masters of such individual trades is a coalition based on contract, which sets down the rights, obligations, tenure and income of both parties. Even though the assistants and apprentices are not paid for a part of the value they have created, it can be thought of as payment for the techniques they have learned. Speaking on the nature of apprenticeship Engels pointed out: "Apprentices and assistants are not working to earn sustenance, but rather to make themselves masters too." ("Selected Works of Marx and Engels," Vol 3, p 310) These two essentially different kinds of labor relations and ownership relations should not be confused.

Quantitatively speaking, the portion of income derived from surplus labor by the individual tradesman differs from that of the capitalists. Under the conditions of hired employment, capitalists' income is totally derived from surplus value, which enables them to devote themselves to activities of surplus value, rather than labor-oriented activities, and to continuously increase their wealth. Under individual trade conditions, a tradesman is permitted by the state to hire not more than two assistants, and no more than five apprentices if he has some special skills. This limitation ensures that the value of surplus labor only constitutes a small portion of his income. Moreover, he cannot spend all his time on activities of surplus labor; instead, he has to take part in laboring.

Small commodity production like these individual trades, needless to say, has a spontaneous tendency to expand, to hire more assistants and make more profits. But socialist public ownership and state policies are predominant in our state today. They regulate the scope of business, selling prices and indices of income and expenditure of individual trades. So, with efficient management, proper guidance and support, the negative aspects of the individual economy can be restrained and the business of individual tradesmen can play a positive role.

DO JOINT UNDERTAKINGS AND INDIVIDUAL UNDERTAKINGS MEAN EMPLOYMENT?

Beijing RED FLAG in Chinese No 10, 16 May 82 p 32

[Article in "Questions and Answers" column by Lian Cen [4886 1478]]

[Text] Basically, employment means combining labor and production resources and engaging in social labor in return for a reward or income. The social format of employment, or the channel of employment, is determined by the system of ownership of the means of production. Under the circumstances where the means of production belong to individual laborers, the means of production of an individual laborer are his direct means of employment. In a capitalist society, where individual laborers lose the means of production, a worker can only seek employment by selling his labor. The socialist system has opened up a good future both for the employment of the members of society and for the combination of laborers and the means of production. In our country today, and for a long period of time to come, the economy of the system of public ownership of the means of production is predominant, and at the same time there are diverse economic forms. The state-run economy and collective economy are our country's basic economic forms; the individual economy of laborers of a limited scope is a necessary supplement to the economy of the public ownership system. In order to adapt to the various forms of economy, employment must take various forms. Employment means engaging in any occupation under social division of work and in return getting back a reward or income. Employment, whether working in units in cooperative undertakings, individual undertakings or state-run enterprises, is employment just the same; it is only the form of employment that differs.

Under the influence of "leftist" errors in the past, policies of banning and suppressing the individual economy was implemented. Overemphasis was placed on transforming the collective economy into a state-run economy. This blocked many channels of labor employment. Consequently, people formed a one-sided view of employment. They believed that employment means becoming staff and workers of the state, or staff and workers in big collective units, and that working in cooperative or individual undertakings is not employment. Such misconceptions of employment stem from equating employment to certain definite forms of employment.

Working for state-run enterprises was only one form of employment, but not the whole. For a long period of time, the production structure of our state was unreasonable because unilateral emphasis was placed on developing heavy industry. More than 50 percent of newly recruited workers were in industrial departments. Among the industrial departments, 70 percent of workers were concentrated in heavy industry. At present, many people are working in the industrial departments, and the number of those engaged in the retail business, service trade, catering trade, repair and maintenance trade, and certain consumer production trades is relatively few. In recent years, although there has been an increase in the number of people employed in these trades, the increase still fell largely short of actual demand. The problems of clothing, eating and repairs, which were prevalent in the cities in our country, are far from being solved. Taking the forms of the collective economy and individual economy, these trades will produce results beneficial to production and management, as well as be convenient for the masses. Therefore, from now on, the development of the collective economy and individual economy are important channels for solving the problem of labor employment in the cities.

In order to develop the national economy and to widen employment channels, we must carry out thoroughly the policy of three integrations in employment advocated by the party Central Committee and the State Council, "Under state coordination, planning and guidance, labor departments should make employment recommendations, organize employment on a voluntary basis, and plan employment." The idea of looking down on the collective economy and individual economy should be eliminated. Policies should be made to guide, encourage, promote and support cooperative and individual undertakings willing to organize themselves for employment. Their property, which is also their means of employment, should be given legal protection. Under the conditions of efficient management, higher income, and attention to appropriate accumulation, the collective economy can provide better wages and welfare facilities than national enterprises. The legal income of individual laborers, even if it is fairly high, should also be safeguarded.

Cooperative and individual undertakings pose many problems to many young people. On the subjective side, inexperience, and on the objective side, capital, location, resources, sales, and management all pose problems. In addition to national support, the individual's desire to start an undertaking is needed to overcome these problems. We should fervently help the young people build up a new concept of employment, and make them feel at ease about making contributions to satisfying the needs of the masses and the four modernizations by developing production and strengthening the economy.

CAN OUR COUNTRY USE DEFICIT BUDGETING TO STIMULATE ECONOMIC DEVELOPMENT?

Beijing RED FLAG in Chinese No 10, 16 May 82 p 33

[Article in "Questions and Answers" column by Dai Yuanchen [2071 0955 2525]]

[Text] The socialist economic construction of our state proceeds in a planned way. The scope of construction should be based on the state's capability and should proceed progressively. The balance of a budget serves as an important indicator of whether the scope of construction is in accordance with the state's capability. Although a deficit budget will temporarily increase construction capital and expand the scale of construction, in reality it cannot speed up construction. On the contrary, it will trigger a series of harmful effects.

First, to make a deficit budget expand the scale of construction and to increase the part of the national income used for accumulation implies that the distribution quota of the planned national income exceeds the amount of national income created. In fact, the distribution quota of the national income ultimately cannot exceed the amount created. Though distribution in excess of the quota expands capital construction, it will squeeze out some consumption with the result that some purchasing power cannot be materialized, thereby creating a disproportion between accumulation and consumption.

Second, as capital is a reflection of resources, to carry out construction by a deficit budget not only surpasses the financial capability of the state, but also goes beyond the material resources of the state. This necessarily creates an excessive scope of capital construction, an overextended front, and failure to complete a project on schedule so that it can go into production. As a result, construction is extended over a long period of time, with only investment and no output, no production capacity is formed and the investment result is poor.

Third, deficit budgeting and distribution exceeding the quota will lead to a tight supply of material resources. To safeguard capital construction will squeeze out raw materials, timber and fuel, as well as power required by the current production, will squeeze out the equipment needed for repairs, and will interfere with simple reproduction. This will affect the accumulation of capital and the production of social material wealth. The result will be more haste, less speed.

Fourth, a deficit budget will bring an increasing circulation of currency. When the currency in circulation exceeds the normal demand, the social purchasing power will be far greater than the supply of commodities. This will lead to an unstable currency and rising prices. People often say that capital construction has squeezed out finance, which in turn has squeezed out banks. Banks issue currency, and too much currency leads to inflation of commodity prices, which becomes an unstable factor in economic life. This is harmful to stability, unity and implementation of the four modernizations.

Some people might say that a deficit budget is a common phenomenon in Western countries, and that it has the effect of "prolonging the lifespan" of the capitalist economy. Why is it that the things which are applicable to Western countries fail to work in our state?

It should be pointed out that ours is a socialist state, with national conditions totally different from those of Western countries. In Western countries, crises in sales are common because the purchasing power of the laboring masses is relatively inadequate as a result of the labor exploitation by the capitalists. To them deficit budgeting will expand government expenditure, increase social demand, stimulate production and enhance employment opportunities, leading to a temporary relaxation of the economic crisis. This will bring big opportunities for capitalists to promote sales and therefore make fortunes. However, a deficit budget will increase the circulation of currency and inflate prices. It is in fact a hidden form of taxation at the expense of lowering the living standard by lowering the income of workers. As a socialist state, we are entirely competent to maintain a balance of total demand and total supply in a planned way. A relative shortfall in the ability to pay and demand, or excessive production will not occur. Thus, there is no need for a deficit budget to expand social demand.

In the 30-odd years since the founding of the PRC, deficits were incurred in a few years. But these were owing to some errors in our work. When the problems were spotted, positive measures were taken to balance the deficits. Comparatively large deficits were incurred in our state during 1979 and 1980. After common efforts by the whole party and the people throughout the state, a fundamental balance of revenue and expenditure was realized in 1981, and this was a wonderful achievement. Since the foundation of a balance of revenue and expenditure has still not yet been consolidated, we must soberly recognize this fact, persistently pursue the policies of acting in accordance with our capability and proceed progressively. We must hold fast to streamlining expenditure while increasing revenue, and strive for a balance of revenue and expenditure, so as to ensure a normal flow of production and stable market prices.

A TENTATIVE PLAN OF STRATEGIC MEASURES FOR DEVELOPING OUR COUNTRY'S AGRICULTURE

Beijing RED FLAG in Chinese No 10, 16 May 82 pp 34-38, 43

[Article by Zhan Wu [6124 2976], Shi Jingtang [0670 2417 2768], Wang Guichen [3769 6311 1368], Yu Jianping [0205 1017 1627], Liu Wenpu [0491 2429 3877] and Zhang Baomin [1728 0202 3046]]

[Text] Starting from the concrete conditions of our country, the long-term strategic target for the development of agriculture should be: by means of readjustment, reform and development, to set up a modern socialist agriculture that incorporates intensive, rational, economical and practical features with prosperous commodity production, so as to meet the needs of the life of our people and the demand for grain and other agricultural products in the course of industrial growth, to greatly enhance the income and living standard of the broad masses of peasants, and to build a new countryside of wealth and prosperity with the comprehensive development of agriculture, industry, commerce and communications.

In order to attain the above strategic target, effective strategic measures must be adopted.

1. Strengthen and perfect the socialist economic base.

In the past, one of the important factors that affected the development of our agriculture was the single-product economy. From now on, with the collective economy as the main element, the operation and management of state-run agriculture should be improved, and at the same time household sideline production should be actively developed. Also, individual farming households should be allowed to exist and develop under specified conditions. All this can help to create an active situation with various economic forms promoting and complementing one another, fully mobilizing the initiative of the state, the collective and the individual, and thus expediting the development of agriculture in our country.

Under the concrete conditions of our country, the economy of collective ownership is the main constituent of socialist agriculture. This is so not only because its output value amounts to 80 percent of the total output value of agriculture and the majority of the rural population and labor force belong to the enterprises and organizations of collective ownership, but also because, and more importantly, the economy of collective ownership is more suited to the present production level of our agriculture. Its system of management, such as democratic management, a rather close combination of labor remuneration and production results, and greater autonomy and flexibility in operation and management, are very favorable for mobilizing the initiative of the collective and the individual, in stimulating the production potential and in the rational utilizing of resources. But in the past, under the influence of the erroneous "leftist" ideology, many people often held the view that collective ownership could not promote the development of productive forces in the countryside, and they always wanted to quickly switch to the system of ownership by the whole people. This only led to harmful results. Therefore, we should resolutely establish a long-term, stable policy of making collective ownership the main constituent in agriculture. As to the ways of management, the autonomous rights of the collective economy should be respected, and all the production brigades and production teams should become enterprise units which have independent accounting, which assume sole responsibility for profits or losses, and which have been granted the right of integration vertically and horizontally. The forms of integration or combination can be varied and should not be unified. Within the collective enterprises, various forms of the production responsibility system should be established, particularly forms linked to output. For the cadres, the system of personal responsibility closely associated with personal benefits should be practiced. New problems in the production responsibility system should be continuously investigated and solved, with a view to perfecting the system as production develops.

Various economic forms should be permitted to coexist even within the structure of state farms. The measures of democratic management, forms of the responsibility system linked to output, and other measures should be studied or practiced, while upholding the essential nature of the ownership by the whole people. But these measures should be taken with due consideration paid to the specific conditions of the farms and should not be copied indiscriminately.

Under the condition that public ownership gets the upper hand, household sideline production should be developed vigorously. In actual life, there might exist some contradictions between the household sideline production and the collective or state-run economy, but they can be easily resolved once management and leadership are strengthened. As a matter of fact, the sound development of household sideline production can exert a positive influence on the collective economy. Based on the actual situation in the countryside, the proportion of household sideline production in the total agricultural output value should be appropriately raised. To achieve this aim, some practical and effective measures should be adopted, such as: expanding the quantity and extent of privately owned land and household sideline production of commune members; given the characteristics of our country, where there is a lot of barren land and hills and a broad expanse of water areas, and based on the specific conditions in different localities, some privately owned hilly, sandy and water areas may be assigned to commune members; with regard to the prices of products, credit facilities, taxes, sales of products, the supply of materials and other things, specific policies that facilitate the development of household sideline production should be formulated.

Under the condition that the public-ownership economy enjoys absolute superiority, it is also necessary that a small quantity of the agricultural individual economy be allowed to exist and develop. The reason is that there are many mountainous regions in our country, and some regions have a very low level of production and basically have a kind of natural economy, and the peasants live in widely scattered areas. In these regions, in comparison with the collective economy, the individual and personal economy can more effectively mobilize the initiative of the peasants in production activities and can better utilize the rich natural resources in the mountainous regions. Of course, the individual economy does have the limitations of small-scale production. Therefore, investigations and studies should be conducted to ascertain under what conditions this kind of economy can be allowed to exist and develop, and how it should be supported, guided and managed, so as to formulate a series of practicable and concrete policies.

2. Establish a good agricultural ecological system.

A good ecological environment is the basis and a very important condition for developing agriculture. For a long time, under the erroneous "leftist" ideology, our agriculture violated the natural laws of agricultural production, resulting in serious destruction of the resources in farming, forestry, animal husbandry, sideline production and fishery. We should earnestly draw a lesson from this in our future work.

We should comprehensively carry out the policy of comprehensively developing the five categories of farming, forestry, animal husbandry, sideline production and fishery. Letting neither grain displace forestry, animal husbandry, sideline production and fishery, nor the latter displace the former. In the work of plantation, the structure of the varieties and the system of cultivation must be rationalized. The principle of the combination of land utilization with land preservation must be practiced. Agriculture should be reformed with the techniques of modern agricultural biological science. The traditional experiences in agriculture such as the utilization of manure derived from the excrement of men and animals, green manure, pond-sludge manure, stalks for use as manure in fields, rotational cultivation of grain and manure, and so on, must be popularized. All these measures can combine modern science and technology with traditional experiences, paving the way for low consumption, low cost and high gains.

Attention must also be paid to the problem of ecological equilibrium in the work of water conservancy. In the past, there were considerable achievements in water conservancy, but because engineering administration had not been combined with biological control, some reservoirs were seriously clogged with mud and sand. In recent years, there have been very serious floods in some provinces. One of the important causes was the destruction of forests, vegetation areas and the ecological equilibrium. The current policy in water conservancy, besides the engineering administration itself, should place emphasis on the conveyance system and the improving of results, and should combine engineering administration with biological control, paying particular attention to water and soil conservation and also the expansion of vegetation areas. Capital construction in agriculture should be done in a down-to-earth way and strive for practical results, so as to fully utilize the existing water resources in our country. In the reservoirs and water areas, fishery and cultivation of aquatic industrial products should be developed, and this will help to maintain the water resources with the gains from aquatic products.

Forestry work is a great undertaking that can transform nature, benefit our contemporaries and enhance the well-being of posterity. In order to establish a good ecological environment, active planting of trees and grass must be carried out. We assume that by the year 2000, the forest cover rate will be raised from the present 12.7 percent (the actual figure is still lower) to about 20 percent, and this will require very great efforts. The first thing to do is to gradually slow down the excessive logging of forests and to stop the destruction of forestry resources. The second thing is to effectively plant and protect more trees and to increase vegetation areas. In this respect the key issue is how to solve well the problem of supplying fuel to agricultural households and wood used by the public. For this purpose, aside from developing methane, small-scale hydroelectric power, solar energy and other fuel sources, special attention should be paid to planting fuel forests and fast-growing forests, because they possess the merits of strong adaptability, short growth period, a wide range of uses, and small investment with fast results. In the plains areas, household fuels and wood used by the public are very scarce, and the problem of ecological equilibrium is serious. Therefore, the key issue in the current afforestation of the plains areas is to make the farming fields into a network of trees and to plant trees all around farm houses. Attention should also be paid to the potential and function of woody plants and oils. It is estimated that if all the hilly areas and all the unused space around households or farming fields are fully utilized to grow woody grain, oils, fruits, and also bamboos and medicinal herbs, the farming area would be twice as large as it is now, and the country's total food output would increase by 1/4 to 1/2 under present conditions.

To quicken the pace of afforestation in our country, the fundamental way is to mobilize the initiative of millions of commune members (staff and workers) in planting and conserving trees. This necessitates more efforts in management. For example, specialized groups or households can be assigned the exclusive task of planting trees on the barren land and hills owned by the state or the collective; part of the barren hills can be allotted to the commune members as privately owned hills, thus mobilizing thousands of households in the work of afforestation. In this way, trees can be planted more quickly and their growth rate will be high.

The problem of ecological environment should also be solved well for the development of animal husbandry and fishery. At present, nearly half of the meadows in our country have degenerated, because too many animals are feeding in the fields, exceeding the capacity of the fields, and the construction of meadows has been neglected. From now on, the following measures should be taken: designate the number of animals according to meadow conditions, have a rational assortment of animal species, and set a rigid limit for the number of animals feeding in the fields; develop artificial forage grass based on land conditions, and gradually set up bases for forage; in those pastoral areas where the number of privately owned animals is comparatively large, meadows can be allotted to set up a responsibility system for meadows with regard to grassy hills and slopes that are not suitable for stock raising, the livestock should be confined to certain areas and fed with grass cut from the fields, so as not to spoil the vegetation and to avoid soil erosion; with regard to ill-used grassy plains, hills and slopes, scientific plans should be worked out to rationally use them and to avoid indiscriminate reclamation; methods should be devised to raise the growth rate of livestock, the percentage of meat yield from livestock, and the commodity rate of livestock, and to lower the consumption rate of forage; and so on. In recent years, the fishery resources in the coastal water areas and the fresh water regions have been drastically spoiled. Of the eight main categories of fish of economic value, some have basically lost the ability to regenerate. For a rather long period of time from now, the fishery resources should be well protected, setting up zones where fishing is prohibited and stipulating periods when fishing is prohibited in coastal waters that have suffered from serious misuse. The outlet for developing fishery is mainly dependent on artificial fish breeding, and on the carrying out of the policy of combining fish breeding with fish catching, with proper emphasis on breeding. Special efforts should be exerted to develop fresh water breeding, because it can limit the quantity of fishing in coastal waters to a rational extent, thus facilitating the protection and rehabilitation of fishery resources, and, what is more, restore and maintain a certain portion of water areas that will benefit irrigation work and regulate the local climate. Also, the pond sludge resulting from fish breeding is a good organic manure. Besides, some measures in the southern provinces, such as building mulberry-based fish ponds and sugarcane-based fish ponds, and combining the growing of vegetables, raising of pigs and breeding of fish, should be actively practiced because they closely integrate fishery with plantation and animal husbandry and help to promote mutual progress.

To sum up, our agriculture should be guided by the laws of ecological equilibrium. All the measures concerning engineering, machinery and technology, and also the whole system of cultivation, and the structure and arrangement of crops, should conform to this law without exception.

3. The economic structure in the countryside should be readjusted.

On condition that the general grain output increases steadily, the proportion of industrial crops, forestry, animal husbandry, sideline production, fishery, industry, commerce and communications should be increased in the total output value and the assignment of the labor force. In 1980, the ratio of the output values of grain and industrial crops was 7 to 3. The ratio of the output values of agriculture and forestry-animal husbandry-sideline production-fishery was also 7 to 3. The output value of industry run by the production teams amounted to 14.5 percent of the total agricultural output value. According to abundant sources from our own direct investigation and general statistics, a rough picture can be visualized: for production teams that give an average income of over 150 yuan per person, the income of forestry, animal husbandry, fishery and industrial sideline production amounts to more than 40 percent. For production brigades that give an average income of over 300 yuan per person, the income of forestry, animal husbandry, fishery and industrial sideline production amounts to around 60 to 70 percent. For brigades that give over 400 yuan per person, the income of forestry and others amounted to as high as over 80 percent. Conversely, for teams that give an average income of less than 50 yuan per person, the income of forestry and others amounts to only 20 percent or lower. That is to say, the proportion of diversified economy bears a very close relation to the amount of income of peasants. Besides, if the proportion of diversified economy is high, the capability to fight natural calamities can be increased. Take Shandong Province for example. In 1980, grain production decreased by 3.55 percent because of natural calamities, but because the proportion of the output value of industrial crops increased from 28.7 percent in 1978 to 37.1 percent in 1980, the average per capita income still increased by more than 28 percent. Of course, what constitutes a rational ratio that should be maintained between the diversified economy and grain production has to be decided with reference to the concrete conditions of different periods and different places.

From now on, in the work of readjustment three kinds of relationships should be dealt with properly:

First, the relationship between grain and industrial crops-forestry-animal husbandry-sideline production-fishery should be handled well. In our country, in the years 1979 and 1980, the area sown with grain was readjusted with a total reduction of over 60 million mu. These mu were converted to growing industrial crops or used as forestry and animal husbandry areas. In 1981, the sown area of wheat and early rice continued to be reduced, this time by 23 million mu. But, despite this, total grain output maintained a steady increase. This was mainly because: 1) land unsuitable for growing grain was planted with industrial crops that save labor, water and manure, and thus more labor, water and manure could be concentrated on growing grain crops, resulting in an increase in grain output compared with the method of extensive cultivation; 2) after the practice of alternate or rotational farming of grain with fertilizer, the fertility of the soil was enhanced, and the per unit area yield of grain was raised; 3) with industrial crops and forestry-animal husbandry-sideline production-fishery increasing, more manure and capital could be put into grain production; 4) the peasants and cadres of basic units fully understood that they had to have enough grain to live on and had to develop stockbreeding. Therefore, they adopted various measures to raise the unit output and the total output after the reduction of the farming area sown with grain. But it should be clearly understood that the two tasks stand in contradiction to each other in the problem of land utilization. Thus, when the proportion of industrial crops and forestry-animal husbandry-sideline production-fishery is being raised, the production of grain must be tackled with the greatest effort. Agriculture is an important constituent part of the entire socialist economy, so even after practicing the production responsibility system, we should persist in the policy of letting the planned economy play the key role, supplemented by regulation by market mechanism. Under the present condition in which the unit output of grain cannot be raised, the area for grain cultivation should not be further reduced. Besides, in order to guarantee the needs of people's life in cities, the suburbs should become a base for the supply of vegetables, meat, eggs, poultry and other nonstaple food--this is a problem to be solved well in the future.

Second, the relationship between rational utilization of farmland and the development of mountainous areas, grassland and water areas should be handled properly. In the past, there were many instances of irrational utilization of farmland, such as putting all the added investment in high-yield fields, with the resulting high costs but very small increases in output, and the aftermath was that the output of the medium- and low-yield fields could not be enhanced. From now on, while stabilizing the output of high-yield fields, efforts should be mainly concentrated on raising the output of medium- and low-yield fields, and also on improving dry land production. The potential for an increase in output is great for the low-yield fields and medium-yield fields (over 70 percent of the total farmland), and also for the dry land, because greater economic results can be achieved with comparatively less investment. In other respects, hills, water areas and grass resources have not been fully utilized. Of these resources, 74 percent can be used for agricultural production, but in fact only a little more than 10 percent is being utilized: about 3 billion mu of land suitable for forestry have not been used; of the 250 million mu of inland fresh water, less than 1/5 has been used for raising fish, and output has been low; and 3.3 billion mu of grasslands and 1 billion mu of grassy hills and slopes in the south have been poorly utilized. From now on, hills, water areas and grassland should be rationally exploited so as to supply large quantity of woody grains and oils, fruits, meat, milk, fish and so on, thus satisfying the needs of society and enabling the peasants of our country to prosper faster.

Third, the relationship between the various industrial, marketing and communications trades should be handled properly. Comprehensive management of the production, processing, marketing and transportation of agricultural products is essential for changing the irrational system of management which separates the trades from each other, restoring the inherent association of these branches in the agricultural economy, and rationalizing the economic structure and the system of management in the countryside. At present, because commodity production in the countryside is not very prosperous, and the degree of specialization and socialization of agricultural production is not high, the extent of organizing the comprehensive management of agriculture, industry, commerce and transportation should not be too great. Based on the principle of specialized collaboration and economic rationalization, loose associations can first be organized without changing the system of ownership, and solid economic associations can be gradually established with the development of this process. This process will be a long-term one, and no groundless administrative interposition should be allowed. Besides, things cannot be dealt with in a hurried way.

4. Socialist commodity production should be developed.

Developing commodity production and raising the commodity rate has much to do with rapidly developing our agriculture and helping the peasants to prosper. According to typical statistics, in production teams where there is average income of over 150 yuan per person, the commodity rate reaches 55.2 percent, but in production teams where there is an average income of under 50 yuan per person, the commodity rate is only 18.5 percent. In the whole country, the commodity rate of agricultural products has reached only a little more than 30 percent, which lags far behind that of developed countries. In order to develop commodity production and raise the commodity rate, the following problems should be dealt with properly:

First, as to the arrangement of production, concentration of production must be appropriately based on the concrete conditions of the land. Regionalization, specialization and intensive operation should be gradually achieved. Only in this way can we improve our technology, improve our varieties, increase the output per area unit, and enhance the labor productivity and the commodity rate. For instance, the 157 counties that serve as bases for goat raising have furnished the state with 60 percent of the purchased goat skins; in 1979, the 17 sugarcane bases in Fujian Province produced 99.4 percent of the total quantity of sugar in the province.

Second, great efforts should be made to develop the diversified economy and the work of processing agricultural sideline products. The production of the diversified economy is basically a kind of commodity production. Therefore, the focal point in the development of commodity production should be centered on this aspect.

Third, the form of the responsibility system of specialized contracts linking production results with remuneration will be a strong impetus to developing commodity production. Specialized households need only a small amount of investment and have low costs but can provide greater results, thus enabling the stockbreeding and other undertakings to greatly raise the commodity rate. For example, more than 30,000 specialized pig-raising households and key households in Liaozhong city supply the city with 30 percent of the pigs consumed; in Rushan County, Yantai Prefecture, the specialized chicken-raising households and part-time households of a single production brigade supply 1/7 of the purchased eggs of the county. It can be asserted that specialized households and their combined units are a form of economy that holds great prospects for developing socialist commodity production.

Fourth, circulation channels should be kept open. For many years, under the erroneous influence of "leftist" ideology, the relations between production, circulation, distribution and consumption in the course of reproduction were severed. The planned economy was treated as contradictory to the development of commodity production, and this resulted in confusion and bad results. Since the 3d Plenary Session of the 11th CCP Central Committee, in many places there has emerged the coexistence of diversified channels and diversified forms of marketing, and the rural markets have been more brisk. But, generally speaking, the problem of the system and structure of commodity circulation is far from being fundamentally solved. Under the unified plans and management of the state, various elements of the commercial economy should be allowed to exist, with the state-run commerce as the backbone. The economic results of these sectors should be coordinated, so as to have more channels and fewer links, with a view to enlivening the market and guaranteeing supply.

Fifth, communications and transportation in the countryside should be actively developed. The stagnation of commodity production in some places is owing to the stagnation of communications. Various forces of the state, the collective and the individual should be fully mobilized to run the work of transportation, with special attention being paid to villager-run transportation, which has great potential for development, and to bring the functions of railroad, highway and water transport into full play. Great attention should also be paid to communications construction in mountainous regions and border areas.

Sixth, the construction of small market towns and small towns should be stepped up so that they can be developed into trading centers, centers for industry and sideline production, centers for food and other services, and centers for cultural and technological activities, with the result that agricultural commodity production can develop further.

5. Agricultural science should be actively developed.

Because of the readjustment of various policies concerning the countryside, the initiative of the broad masses of peasants has been enhanced to an unprecedented degree, and a new situation has begun to emerge with the masses learning and applying different branches of science. The task ahead is to make good use of this favorable situation to actively develop agricultural science, so as to raise the level of scientific farming and breeding and the level of scientific management.

An important problem in raising the level of scientific farming and breeding is the low level of technology in the countryside, and the low scientific, cultural and management levels of commune members and cadres of the basic units. According to typical investigations, of the rural labor force, illiterate persons amount to 26.4 percent; those who know a few characters, 18.3 percent; those who have a primary education, 31.5 percent; those who have a secondary education, 23.7 percent; and those who have a college education, 0.1 percent. In the countryside, technical personnel are very scarce, and some communes do not even have any technical personnel.

In view of this situation, we should:

First, grasp well the work of eliminating illiteracy. First, the illiteracy among young and middle-aged people must be eliminated within a given number of years. Then primary school education can be made universal, and in some regions both primary and middle school education can be made universal.

Second, the agricultural educational structure and system should be reformed. At present, the ratio of the students in agricultural institutions of higher learning to those in technical secondary education is 1:2, and the spare-time schooling of peasants is nearly nil. In France, the ratio of students in agricultural colleges, secondary schools and spare-time schools is 1:20:20. According to the concrete conditions of our country, equal attention should be paid to these three levels of agricultural education. When distributing education funds, the proportions for the last two kinds of education should be appropriately increased.

Third, agricultural scientific research and technical popularization systems should be set up and perfected. In our country, agricultural scientific research work is rather backward, and technical popularization is particularly backward. Since liberation, thousands of positive results in agricultural scientific research have been achieved, but few have been really popularized. From now on, special emphasis should be put on the work of popularizing technical know-how. Not only should we pay attention to the research and popularization of modern agricultural science and technology, but also sufficient emphasis should be put on the summing up and enhancement of our traditional agricultural techniques, so that the two can be combined effectively. The recently introduced form of the responsibility system linking technology with output is an effective form for promoting science and technology and should be actively popularized. Emphasis should be placed not only on training technical personnel in various kinds of agricultural schools, but also on training "local experts" and skilled craftsmen.

Fourth, the role of existing scientific and technical personnel on the agricultural front should be brought into full play. The number of scientific and technical personnel on the agricultural front of our country has long been insufficient, and at the same time there exists the serious problem that a large number of these personnel are working in units that have nothing to do with their schooling. According to related statistics, personnel who were graduated from our agricultural colleges or secondary schools since liberation and are still working in agriculture-oriented units amount to a little more than 1/3 of the total number. In other words, nearly 2/3 of these graduates have been transferred to work in other departments. This is a tremendous waste. The main causes of this phenomenon are: 1) the authorities concerned do not pay attention to agricultural science; 2) in the agricultural units, working conditions are poor, and rewards are low politically and materially; and 3) some specialties are not suitable for local application. We have the following suggestions: 1) the work of transferring agricultural technical personnel back to their professional posts should be done properly; 2) the political and material conditions of agricultural technical personnel should be improved, and help should be given to them to solve their practical problems; and 3) while doing good work in the forecasting of production development, agricultural education should be well planned, so as to avoid inapplicable or impractical subjects.

ON SPIRITUAL CIVILIZATION AND MARXISM

Beijing RED FLAG in Chinese No 10, 16 May 82 pp 39-43

[Article by Zhang Qihua [1728 0796 5478]]

[Text] Our country has entered a new historical period. During this period, we will build a socialist material civilization and at the same time spare no efforts to building a socialist spiritual civilization. This work is urgently needed in our present modernization program and is demanded by basic Marxist principles. Therefore, various departments and units must put this work in a very important position.

From a Marxist point of view, civilization is the product of the development of the history of the social progress of mankind as well as the criterion of mankind's social progress. In primitive society, people lived under uncivilized and barbaric conditions because of the extremely low level of productive forces. They led a life of "eating coarse foods, drinking soup made of foliage, wearing animal skins in winter and wearing leaves in summer." They were not concerned with spiritual civilization. Following the constant development of social productive forces, people began to depart from the uncivilized and barbaric era and to enter the civilized era. Historically, civilization includes two aspects--material and spiritual. When Marx and Engels talked about the "production of the whole world" in "German Ideology," they particularly noted that this production "also includes spiritual production." They called the production of the whole world, which includes spiritual production, "global overall production" and pointed out that this is "what is created by people." ("Collected Works of Marx and Engels," Vol 3, p 42) Therefore it can be seen that material civilization and spiritual civilization are like the two wings of a bird and they are indispensable in every period of the development of civilization. Material civilization is the base and source for the building of spiritual civilization, while spiritual civilization has a powerful reaction on the building of material civilization. The development of spiritual civilization can in no way be divorced from the development of material civilization; neither can the development of the latter be divorced from that of the former. These two aspects condition and supplement each other.

Spiritual civilization has a different nature and content in different eras. For example, slave society, feudal society and capitalist society created their own science, culture, health and sports that were or are in line with the economic conditions of their own times and the political ideology and the concept of morality that were or are in a ruling position. In particular, the capitalist society, where productive forces have developed drastically, not only has created a material civilization that has a wealth much greater than the total wealth since the beginning of history, but has also created a spiritual civilization that is much higher than the spiritual civilization of any previous society. But in a class society, there exists exploitation of man by man and oppression of man by man, and consequently people's spiritual life is deformed and far from complete, with both civilized aspects and ugly and uncivilized aspects. This feature is most prominent in a capitalist society. Engels once pointed out profoundly that the basis of bourgeois civilization is "exploitation of one class by another class and therefore all its development is carried out in the contradictions that often happen." These contradictions are shown in the fact that "when one thing is good for some people, it is naturally bad for some other people and that when one class wins a new liberation it naturally means a new oppression for another class." Therefore Engels concluded that "the more the civilized era develops, the more it puts the cloak of love on the bad things it naturally created, so as to whitewash or deny them,--in short, it habitually practices hypocrisy." ("Selected Works of Marx and Engels," Vol 4, pp 173-174) Engels pointed out here that spiritual civilization under the system of slavery, exploitation and oppression naturally has a nature of hypocrisy and contradictions. The socialist society is based on the public ownership of the means of production; it is a brand-new social system in the history of mankind. In a socialist society it is necessary to build both a highly developed material civilization and a spiritual civilization that is more developed than any class society. Without highly developed material civilization there will be no foundation for spiritual civilization, and without highly developed spiritual civilization it is not possible to form a highly developed material civilization. Therefore, it is necessary for a socialist society to create a more advanced and higher stage of spiritual civilization on the basis of critically absorbing the excellent fruits of all spiritual civilizations created by our predecessors.

Basing himself on the viewpoint of Marxism and Leninism and proceeding from the specific conditions of our country, Comrade Zhao Ziyang expounded the main contents of socialist spiritual civilization in his report on government work to the Fourth Plenary Session of the Fifth NPC. These contents include the scale of the development and the level of education, science, culture, art and literature, health and sports, and the orientation of the development and the development level of social political ideology and ethics. The purpose of building socialist spiritual civilization is to transform our people of various nationalities into a people with aspiration, morality, discipline and culture.

Some people hold that the concept of "spiritual civilization" was never used in Marxist and Leninist works and, therefore, they are doubtful about advocating the building of socialist spiritual civilization. The fact is that it makes no difference whether such a concept had been used before; the question is whether there is such an idea. For example, it was mentioned above that in "German Ideology" Marx and Engels mentioned the "production of the whole world" and that "spiritual production is also included," and these words no doubt also include the ideology of "spiritual civilization" that is being mentioned by us today. In addition, it is not difficult for us in reading Marxist and Leninist works to find that Marxist classic works have on many occasions made important and concrete expositions on this question.

Now let us talk about the first aspect of socialist spiritual civilization. Marxism always holds that the development and popularization of education, science and culture is a great motive force for promoting the development of society. In the "Manifesto of the Communist Party," Marx and Engels put forth 12 important socialist measures and they stressed the importance of "combining education with material production." ("Selected Works of Marx and Engels," Vol 1, p 273) Marx said time and again that in order to change social conditions, "the corresponding education system is needed." ("Collected Works of Marx and Engels," Vol 16, p 654) Marx and Engels spoke highly of the role played by natural science in developing society and pointed out: "Modern natural science and modern industry have changed the whole natural world and put an end to people's naive attitude toward nature and their naive activities." (ibid., Vol 7, p 241) Lenin inherited Marx' and Engels' ideology and paid great attention to carrying out scientific and cultural education among the masses. He repeatedly pointed out: "If we say that it is necessary for us to destroy outer obstacles, then we particularly feel that the most arduous work is to reeducate the masses, organize and train them, popularize knowledge and fight against the heritage of ignorance, lack of civilization and barbarism we have accepted." ("Selected Works of Lenin," Vol 3, p 816) He also said: "In order to build communism, it is imperative to master technology and science and enable the broad masses of the people to use them." ("Collected Works of Lenin," Vol 30, p 419) He said: "People will become communists only when they are able to enrich their brains with all the knowledge that has been gained by mankind." He pointed out that "a communist society cannot be built in an illiterate country." ("Selected Works of Lenin," Vol 4, pp 348, 357)

Now we should talk about the wrong aspect of socialist spiritual civilization. Directed against the viewpoints which deny the important roles of politics and ideology in the development of society, Marxist classic works on several occasions clearly pointed out that although the development of politics, law and philosophy is based on economic development, this development has an influence on the economic foundation and cannot be neglected. Marx and Engels pointed out in the "Manifesto of the Communist Party": "The communist revolution means completely breaking away from the relationships of traditional ownership; it is not strange that in the process of its development, it thoroughly breaks away from traditional concepts." ("Selected Works of Marx and Engels," Vol 1, pp 271-272) To "thoroughly break away from traditional concepts" in fact includes denial of the political ideology and ethical morality of the exploiting classes and the establishment of communist political ideology and ethical morality. In this respect, Lenin inherited and developed Marx' and Engels' brilliant ideology.

Lenin paid particular attention to educating the masses of people with communist ideology. He said: "Strictly speaking, so-called communism means working for society without pay, no consideration of the differences between individuals, no old viewpoints, no conservative psychology, no old habits, no difference between various working departments and no difference in labor pay." ("Collected Works of Lenin," Vol 30, pp 160-161) He also pointed out that "communist morality is the morality of uniting the laborers to oppose all exploitation and oppose all small private ownership services." ("Selected Works of Lenin," Vol 4, p 353) He called on the people to "strive to abolish the cursable convention of 'each for himself and God for all' and overcome the practice that regards labor as a burden and holds that any labor must be given a certain pay." ("Collected Works of Lenin," Vol 31, p 104)

The above-mentioned citations show that the education, science, culture, political ideology and ethical morality expounded in Marx' classic works are important contents of the socialist spiritual civilization we are talking about today. Therefore, it can be seen that the question of spiritual civilization occupies a very important position in the Marxist ideological system.

Some people ask: Is it not also necessary for capitalist countries to develop science, culture, sports and health? How can we say that these are the contents of socialist spiritual civilization? Our answer is that this is because our country is developing these aspects with a socialist nature and contents. Science includes natural science and social science. Natural science has no class character, and we cannot say that there is a proletarian science and a bourgeois science. But our natural science must serve the socialist modernization program and must take dialectical materialism and historical materialism as the guide for its world outlook. On the other hand, social science has a very strong class character. Therefore, it must have Marxism as its guide. Its political viewpoint and ideological tendency must be in line with the four basic principles and must serve the consolidation and development of the socialist system. Like social science, education, culture, and art and literature must also serve socialism and take Marxism as their guiding ideology. They must also have different socialist contents and regard it as their own important tasks to form a new ideology, new spirit and new social practices. There is no doubt that health and sports must also serve socialism and must take Marxism as their guide in world outlook. Therefore, our work of developing science, culture, sports and health is of a different nature than that in capitalist countries.

Although these two aspects of socialist spiritual civilization have different nature and contents, they are interrelated and influence each other. Cultural cultivation and scientific knowledge have a great influence on people in forming their communist world outlook and moral outlook. The formation of the communist world outlook and moral outlook will inspire people to further display their talent and wisdom and to further improve the level of their cultural and scientific knowledge. But these two aspects cannot be mentioned in the same breath and be regarded as the same thing. In our view, the core of socialist spiritual civilization is a communist world outlook and moral outlook. It is nothing other than this kind of world outlook and moral outlook and thorough revolutionary spirit that manifest the features of socialist spiritual civilization. They represent a basic difference from capitalist and feudal spiritual civilizations. The key point in building socialist spiritual civilization is to educate the masses with communist ideology so as to enable them to form communist aspirations, beliefs and world outlook and to heroically struggle for the realization of communism in our country. Advanced cultural knowledge and scientific technology will be able to serve our modernization program only when they are mastered by people armed with communist ideology, and it is only they who are able to ardently take part in socialist labor with high consciousness and shoulder heavy responsibilities. Therefore, in building our socialist spiritual civilization, we must put education on communist ideology and morals in the primary position.

Some people might ask why, since the requirements for building socialist spiritual civilization are so high, it is possible to build such a civilization in our country with fairly backward material conditions? Do we not violate the principle of historical dialectics of "social ideology being determined by social existence" if we do so? We believe it is necessary to clarify this question.

First of all, when Marxism affirms that social existence determines social ideology, it also affirms that social ideology is comparatively independent. It is true that material civilization is not philosophical social existence while spiritual civilization is not social ideology. But we can say that the progress in the material living conditions of mankind, the progress in labor tools and technology, and the growth of the material wealth of material civilization constitute an important part of social existence and are part of the productive forces (it is generally known that the basic thing in social existence is the mode of production of goods and materials and that the mode of production includes the two aspects of productive force and production relations). On the one hand, it is true that some contents of spiritual civilization which represents progress in the wisdom and morality of mankind do not belong to social ideology, and this part includes some cultural knowledge, health and sports. But another major part does belong to social ideology (social ideology includes such forms as political ideology, the ideology of rights, morality, science, philosophy, art and literature, and religion). Therefore, in investigating the relationship between material civilization and spiritual civilization, we can completely follow the law of the relationship between social existence and social ideology as expounded by historical materialism. That is to say, we must first of all acknowledge that spiritual civilization is the foundation and the source of material civilization, and we must also acknowledge that spiritual civilization is comparatively independent. The development of spiritual civilization and the development of material civilization do not necessarily and mechanically balance or maintain a definitive relationship.

Second, the development of spiritual civilization has its own particular laws. The various parts of spiritual civilization rely on material production to different degrees. Generally speaking, the scale and level of the development of education, science, culture, hygiene and physical training directly reflects the degree of development of social economic life and of material production. They are directly conditioned by material conditions, and they often and directly play their roles in the development of social productive forces. But none of these are absolute. Under certain conditions, advanced art and literature and philosophical ideology might occur in an economically backward country. Political ideology, moral concepts and prevailing social habits are conditioned by material conditions. What is more important is that they have a relationship with material production through the production relations and the political and legal system based on these relations. The nature of the relations of production and the nature of a social and political system directly determine social political ideology and morals. Therefore, when Marxism affirms that social existence determines social ideology, it also acknowledges that, under certain conditions, a country with a relatively backward material civilization might surpass another country with advanced material civilization in regard to spiritual civilization. At the same time, a country with advanced material civilization might have a lower degree of spiritual civilization than another country with backward material civilization. Even within a country, the development of spiritual civilization has not always accorded with the development of material civilization in different historical periods. This has often occurred in history.

Marx particularly spoke of the balance between material production and artistic production. He said: "With regard to art, we all know that its particular prosperous periods do not develop proportionately with the general development of society and therefore do not develop proportionately with the material base, which serves as the skeleton of social organization." ("Selected Works of Marx and Engels," Vol 2, pp 112-113) For example, under the conditions in which material production was not greatly advanced, some ancient Greek literature and art such as the epics "Iliad" and "Odyssey" are characterized by profound ideological description and superb art, and even the later generations who read these works were amazed at such artistic creation. There are a number of such examples in modern world history. For example, by the end of the 18th century, French philosophy and political ideology had already surpassed those of economically advanced Britain. In the mid-19th century, Germany was economically backward and politically divided, but the philosophical ideology of this country was the world's top at that time and this country became the birthplace of Marxism. Engels termed this situation "an economically backward country being able, philosophically, to play the first violin." (ibid., Vol 4, p 485)

Such situations have also occurred in different historical periods in our country. During the war against Japanese aggression, the material conditions were fairly poor in Yan'an and yet this place was termed by all the progressive people as China's "most pure place" and a "sacred revolutionary place." The food, clothing and living conditions were very poor in Yan'an, but fine sons and daughters of the Chinese people living there cherished great political aspiration and lofty morals. The relationship between men was characterized by equality, mutual help and militant friendship. With high spirits and vigor, they displayed an arduous revolutionary spirit, closely united in their common struggles and were confident of the victory of the communist cause. It is apparent that in these aspects the extent in the development of spiritual civilization in Yan'an far surpassed that of the regions under the control of the Kuomintang which had better material conditions. Our material conditions were also comparatively backward in the 1950's and early 1960's, yet we made great achievements in building socialist spiritual civilization while people's ideological consciousness, spiritual outlook, social practice and moral cultivation reached a considerably high level. This shows that a fairly advanced spiritual civilization might occur in a country with fairly backward material conditions.

Similarly, the development of material civilization does not mean the progress of spiritual civilization. In the world today, the material civilization in the United States of America is the highest, but the spiritual life there is very poor and the relationship between men is nothing but a relationship of money; the words "each for himself and God for all" have become a justified moral principle. American moral standards are amazingly low. America's artistic arena is full of decadent elements. Murder, theft, burglary and drug taking are very common, and the whole society is affected by decadence, degeneration and instability. It is only natural that this country has been described by some people as "a materially rich man and a spiritual beggar."

In short, the extent of the development of spiritual civilization is not absolutely determined by material wealth. It is not against Marxist basic principles to build spiritual civilization in a country fairly backward in economic terms.

Of course, when we pay attention to the building of spiritual civilization, this in no way means that we may neglect the building of material civilization. It is true that material civilization and spiritual civilization are often unbalanced but, basically speaking, the former is the foundation and source of the latter. In the final analysis, building a high degree of spiritual civilization must depend on a highly developed material civilization. Therefore, we can at no time neglect the building of the economy. We must dialectically analyze the relationship between material civilization and spiritual civilization; we must in no way understand them metaphysically; we must not counterpose material civilization with spiritual civilization. On the contrary, we must unitedly build and coordinate these two civilizations. We must understand that the material production in our country is still comparatively backward, but because of the correct leadership of the party, the superiority of the socialist system and the common efforts of the people across the country, we will certainly build our motherland into a great and powerful socialist country with a high degree of material civilization and spiritual civilization.

A NEW PHENOMENON IN POSTWAR MONOPOLY CAPITALISM--DEVELOPMENT OF ECONOMIC INTEGRATION

Beijing RED FLAG in Chinese No 10, 16 May 82 pp 44-48

[Article by Hong Wenda [3163 2429 6671] and Wu Yikang [0124 6318 1660]]

[Text] After World War II, certain countries in Western Europe combined economically to form economically integrated groups of varying types. This fully indicated the tendency toward economic integration in the development of monopoly capitalism. Studying the objective basis for the appearance of this new phenomenon and analyzing its structure and economic influences are extremely important for achieving an understanding of the new postwar world economic and political pattern and the trend of its development.

I

Economic integration means a number of countries effecting a close-knit economic union and carrying out to varying degrees joint regulation in certain sectors of social reproduction. Viewed from the standpoint of the capitalist system, owing to differences in the socioeconomic foundation and in the development level, this kind of economic union includes the economic integration of monopoly capitalism and the economic integration of the developing countries. The economic integration of monopoly capitalism is the result of the daily aggravating contradiction between, on the one hand, the internationalization of the economic life of monopoly capitalist countries and the high degree of development of state monopoly capitalism and, on the other hand, the barriers of the bourgeoisie countries. It is also the product of the intensified contradictions between the imperialist countries.

As early as during the period of laissez-faire capitalism, the growth of giant industries induced various countries and localities to engage in the international division of labor and to take part in the world market. The tendency of economic life becoming internationalized was already apparent. Following capitalism's entering the stage of monopoly, this tendency gathered force and developed steadily. After World War II, propelled by the scientific and technological revolution, international division of labor, international trade and international investments rapidly flourished among the monopoly capitalist countries. The number of transnational corporations doubled, increasing quantities of commodities, capital and labor power were absorbed in international exchange, and the internationalization of economic life reached a new stage of development. But this development has been increasingly hampered by the barriers of the bourgeoisie countries. The development of production forces requires the breaking down of these barriers and the achievement of economic coordination and alliance between the countries. Thus, the tendency of economic life to become internationalized has become the objective basis and motive power for propelling the monopoly capitalist countries in the direction of alliance.

Concurrently, the progress of the scientific and technological revolution and the socialization of production have also promoted the development of state monopoly capitalism. The state has endeavored to intensify its economic functions and has begun to engage in intervention and regulation of the national economy in an all-round way. But, under the circumstances of a high degree of development in the internationalization of economic life, depending on economic regulation within one country alone is far from sufficient. Moreover, vigorous contradictions and conflicts existed between the monopoly capitalist countries in international competition, and without international coordination and regulation, economic development would be hampered. Consequently, there arose the necessity of the countries concerned to jointly engage in regulation on an international scale. During the postwar period, in international economic activities there emerged international economic organizations of a far-reaching nature, such as the international currency sinking fund, World Bank, and organizations for agreements on customs excises and trade. So far as the monopoly capitalist countries are concerned, the activities of these kinds of organizations exercised, in a way, the function of international regulation. But regulation of this kind spelled only the beginning and played a very limited role. In order to further achieve the objective of international regulation, it is necessary to reach a higher level and a higher form of international regulation. This means that the governments themselves must form alliances of countries and achieve economic integration.

The economic integration of monopoly capitalism formed on the basis of the internationalization of economic life and a high degree of development of state monopoly capitalism mean, in essence, the countries concerned joining together on a basis of state monopoly capitalism and carrying out economic regulation on an international scale. But, owing to the actual situation in which contradictions and conflicts between the monopoly capitalist blocs and between the imperialist countries are becoming increasingly intensified, this development results in only a portion of the monopoly capitalist countries forming economic blocs which are limited to certain localities. This is because: First, the nature of monopoly capitalism and the uneven state of the economic and political development of capitalism have brought about multifold contradictions and intense struggles between the monopoly capitalism of the various countries and the countries representing their interests. Just as the developmental trend of centralized monopoly cannot make the various monopoly organizations combine together to form a "world trust," neither can the tendency toward integration make the developed countries form a "world alliance of state monopoly capitalism." Second, the purpose of some of the countries forming a group is to build up the superiority of their own bloc, which must be exclusive and preclusive. The participating countries band together their individual markets to form a common market under the protection of a tariff wall. Its principal purpose is internally to exclude or squeeze out commodities of a third country and externally to augment their competitive power. However, if alliance is expanded without limit, these points of superiority will disappear. Third, an integrated alliance will necessarily reinforce the close economic relations and the mutual assistance between the participating countries as well as promote their political combination. Hence, it requires a relative proximity between the participants in regard to their level of economic development and their political and economic interests. The postwar outward expansion of the superpowers has actually compelled other countries to band together closely as a means of resistance against the control and hegemony of the superpowers. As a result, developed countries which have common interests in the international economic and political struggles and are more or less of the same status have to band together on the basis of their common interests. For this reason, the economic integration of monopoly capitalism can only take place in the form of a regionally integrated group, and in a place which possesses the most solid foundation and best conditions for so doing. Historical development has shown that Western Europe is precisely this region.

Western Europe is an economically developed area where capitalism has achieved a rather high degree of development. The area it covers is not large, but it has a large number of countries. Western European countries rely heavily on the international division of labor and on the international market. In particular, they rely heavily on each other. When the European Economic Community was first established, the reciprocal exports of member countries already constituted 30 percent of their gross export value. Moreover, a firm foundation had also been laid for the reciprocal infiltration of their monopoly capital. For example, the Ruhr and Saar districts of West Germany, Lorraine and the northern part of France and the triangular area formed by Belgium's southern portion and Luxembourg constitute the central coal- and steel-producing areas of Western Europe. In these areas, a close network of monopoly capital of these countries has long been in existence. For this reason, the contradiction between Western Europe's highly developed production and its internationalized capital, on the one hand, and the narrow national markets, on the other hand, have become increasingly severe and the common demand for breaking down the national barriers, strengthening economic alliance, and implementing interregional regulation has become the motive force for bringing about the economic integration of Western Europe. Besides, Western Europe is an area where state monopoly capitalism appeared early and rapidly flourished. After the war, in the Western European countries the union between monopoly capital and the government was further strengthened, the state's regulation of economic life greatly developed, and state monopoly capitalism advanced to an unprecedentedly high plane of development. This provided the necessary basis for the states themselves to organize an economically integrated group.

Changes in the economic and political status of the Western European countries have constituted important conditions for the growth of an economically integrated community in Western Europe. Over a rather prolonged period in history, Western Europe has been the world's major economic and political center. Because of the uneven development of capitalism, and after two world wars, the power and status of the Western European countries fell considerably. After World War II, economically they could hardly compete with the United States while politically and militarily they were gradually menaced by the Soviet Union after the beginning of the 1950's. Only by banding together could they effectively defend their independence and sovereignty and protect their own interests. This shows that the Western European economically integrated bloc was formed to resist the superpowers. At the same time, the Western European region is the world's largest international market, and it is here that traders of the monopoly capitalist countries engage in intense struggles against each other. The formation by the Western European countries of a bloc taking the form of a common market protected by a united tariff wall and highly exclusive in character was in reality tantamount to setting up a regional and collective tariff wall to help in the market struggles. Struggles of this kind reflect not only the contradictions between Western Europe and the United States but also the conflicts between the six Western European countries and Britain, and, in particular, between France and Britain. The development and evolution of these complex contradictions have played an important role in the formation and ultimate expansion of this Western European integrated community. In addition, for the purposes of protecting the Third World, particularly the traditional interests in Africa, and ensuring, safeguarding and expanding the supply of raw materials as well as foreign markets and investments, the Western European countries must also reinforce their alliance to help them in world competition.

II

Over the past 20 years, Western Europe has set up two economically integrated blocs one after another. This illustrates that the economic integration of monopoly capitalism in the Western European region has already obtained a fairly large development. Their respective joint economic practices embody the integrated structure for the international regulation of state monopoly capitalism inside each bloc.

The European Economic Community was formed in 1958 by the six countries of France, West Germany, Italy, Holland, Belgium and Luxembourg. In 1973, Britain, Denmark and Ireland joined the community and in 1981 Greece was admitted. Thus, it became a 10-nation community. In the aspect of economic alliance, the community first of all formed a tariff union to enable the industrial products of the member countries to be free of duties and to freely circulate in unlimited quantities within the group. Externally, a common customs tariff was in force and a common market for industrial products was formed under the protection of a tariff wall. On this basis, the coordination of the bloc's internal economic and social policies and the formulation of common policies were gradually carried out. The direction of development was aimed at the formation of an economic alliance.

The European Free Trade Alliance was formed in 1960 by the seven countries of Britain, Denmark, Norway, Sweden, Switzerland, Austria and Portugal. Afterward, Iceland joined while Finland became a "liaison member-nation." Its organizational form is that of a free trade zone of relatively low-level integration. Between the member countries, their industrial products may freely circulate and are tax exempt. Externally, there are no uniform tariff rates, and no common foreign trade policy has been formulated. Up to now, the alliance has not yet reached the level of a tariff alliance, which was achieved much earlier by the community.

The principal embodiment of economic integration is the carrying out inside the bloc of the international regulation of state monopoly capitalism. As a community unit, this international regulation is first seen in the circulation sector. In this connection, the basic activities are constituted by the setting up of a tariff alliance and a common market for agricultural products. The reason why the community is also known as the Common Market is because it first of all and principally carries out international regulation of the sales market.

To a certain degree, international regulation on the part of the community also touches on the production sector. In this connection, it plays a relatively greater role in the agricultural sector. The major points are the following: It regulates agricultural production through fixing common prices for agricultural products whereby those in short supply are subsidized and those with a production surplus are subjected to intervention in sales and production. It enables the agricultural products to maintain relatively higher prices and thus stimulates production, through levying a disparity tax on agricultural products from outside the bloc and granting a subsidy on the export of agricultural products. It makes use of the common agricultural fund to support the revision of the agricultural structure and to promote the expansion and modernized management of farms. On the industrial side, direct planning and regulation are effected in such links as the distribution of raw materials, investment and production in the coal, steel and atomic energy industries.

The development of the community's international regulation activities also extends to the distribution sector. The community has set up its own community-level budget system. The 1981 budget estimated revenues and expenditures at 20.8 billion Eurodollars (roughly equivalent to $25.6 billion). The member countries undertake to forward 90 percent of the customs duties they collect on industrial products and from the agricultural products price-disparity tax and up to 1 percent of the value-added tax to the community chest to constitute its budgetary revenue. The budgetary expenditures are primarily devoted to the European agricultural sinking fund, the European regional development fund, the European social sinking fund and the European development-aid fund. Its steadily increasing volumes of budgetary revenue and expenditure indicate to a certain degree some sort of international regulation over the redistribution of the member nations' national income.

In order to ensure the free circulation of industrial and agricultural products inside the bloc and to avoid any undue influences on the fluctuations in currency value and exchange rates of the various countries, the community has extended its international regulation and intervention deep into the currency sector. In the early 1970's, it formed an economic and currency alliance and initially coordinated the currency policies of the member countries. In March 1979, the European currency system formally came into being. It stipulated the Eurodollar as the basic unit for settlement of accounts between the member countries and for reserve purposes. The central exchange rate between the currencies of the member countries and the Eurodollar was fixed, and on this basis the reciprocal exchange rates of the various currencies were also determined. A limit was placed on the fluctuations of the exchange rates of the member countries. A European currency sinking fund amounting to 25 billion Eurodollars was set up for the purpose of stabilizing the exchange rates between member countries.

The community also extends its international regulation activities into the field of external economic and trade relations. While the tariff alliance and the common agricultural policies already embody various kinds of regulations governing foreign economic and trade relations applicable to the member countries, the community has additionally acted as a separate entity to establish formal relations and conclude trade agreements with third-party countries. Up to now it has established formal relations with over 120 countries and signed nearly 100 trade agreements of various kinds. The community also pays special attention to coordinating relations with the developing countries. Acting on the basis of the system of liaison countries, which was already in force, the community successively signed, in 1975 and 1979, trade agreements with scores of African, Caribbean and Pacific countries. It conducted separate "talks," or signed trade and economic cooperation agreements, with the League of Arab Nations, the Association of Southeast Asian Nations and the Andes Treaty Organization.

The development of economic alliances naturally leads to and promotes political alliances. In fact, the community countries have already achieved varying degrees of development in coordination and cooperation in such fields as politics, foreign affairs and security protection.

III

The postwar economic integration tendency of monopoly capitalism reflects the developmental demands of the productive forces and the internationalization of economic life. It reflects certain adjustments in international economic relations. Hence, the economic alliance, in varying forms, of the economically integrated groups and the regulation of state monopoly capitalist countries have necessarily affected economic development.

First, international regulation in the circulation sector has promoted the growth of trade inside the bloc. For example, during the transitional period (1958-1969) following the community's formation of the tariff alliance, the gross value of its foreign trade averaged a growth rate of 11.5

percent annually, but the growth rate of trade between the member countries was as high as 16.5 percent. From the end of the 1950's to the early 1970's, the relative proportion of trade within the bloc in the gross value volume of the foreign trade of the member countries rose from 30 percent to over 50 percent.

Second, the development of capital centralization and monopoly in the member countries has been accelerated. Strengthening the economic alliance and the gradual elimination of the limits of national markets have naturally intensified competition among the enterprises of the member countries. This in turn has forced the big enterprises to strengthen their monopoly alliance and to expand the scale of their production. Governments of member countries have also adopted policies and measures to promote the expansion and merging of their enterprises in order to augment the competitive power of the monopoly capital of their own countries. At the same time, in order to strengthen their competitive power with foreign, particularly American, monopoly capital, the community itself has encouraged the merging of corporations of the member countries and jointly forming European-scale corporations to enhance resistance. In addition, the intensification of competition has also tended to bring about the conclusion of monopoly agreements of various sorts.

Third, the development of the international division of labor within the bloc, of production specialization and of technological cooperation has been facilitated while an increase in the investment level has been promoted. The internal markets of the group have been expanded and have developed in depth. This has created advantageous conditions for the internal division of work within the departments and for specialized large-scale production. In the early 1970's, in the internal trade within the community, 3/4 of the trade consisted of industrial finished products and semifinished products while under the European free trade alliance, this proportion was 4/5. At the same time, after economic alliances were formed, progress has been made in coordination and cooperation in the fields of science and technology. The results of development along these lines have naturally increased the labor productivity rate.

Fourth, promotion of agricultural production has been facilitated. The community's implementation of a common agricultural policy has expanded the internal and external markets of agricultural products and increased their production. Reform of the agricultural structure along with production centralization has promoted the modernization of agricultural production and management. During the period from the early 1960's to the early 1970's, the annual growth in the agricultural labor productivity rate of the original six members of the community was as high as 7.5 percent, and from 1958 to 1975 the increase in agricultural production in the six countries was 50 percent. These figures are relatively high even among developed countries.

Fifth, internationally, the economic and political comparative strength has been further changed. The formation and development of the two Western European economic blocs have brought about a comparatively large increase in the economic strength of the Western European countries. Take, for example, the European Economic Community. In 1958, the value of industrial output and the gold and foreign exchange reserves of the six member countries were about 1/2 those of the United States and the volume of their foreign trade about equaled that of the United States. In 1979, the gross value of the internal production of the nine countries of the community exceeded that of the United States while the volume of their export trade and their gold and foreign exchange reserves surpassed those of the United States, respectively by 200 percent and over 500 percent. Including the free trade zone, which has been organized by the community and which comprises 18 European countries and the member countries of the European Free Trade Alliance, an extensive Western European economically integrated group, with the European Economic Community as the nucleus and comprising all the major Western European countries as members, has become a reality not to be ignored in the international economic arena. Economic union has propelled the Western European countries to cooperate with each other in various fields and has raised the status and role of Western Europe in international affairs. In this way, in economic and political relations, Western Europe and the United States have basically acquired the status of equal partners. Concurrently, this has become an important force stemming the progress of Soviet hegemonism.

However, it can readily be seen that this type of alliance and regulation must necessarily meet with, and, in fact, has already met with, many complex contradictions and various kinds of limitations. The reasons are: First, this type of international regulation is based on the state monopoly capitalism of the member countries, and the state monopoly capitalism of the various countries first and foremost serves the interests of the monopoly capital of their own countries. The member countries have differences with regard to the degree of development, the principal form, and the policy and measures of regulation. Besides, following the increase in the number of constituent members of the community, the disparities between them in economic development and economic structure have increasingly widened. This impedes the implementation of common policies and the execution of supernational regulatory activities. Second, the various countries all have in their respective countries certain economic levers which can affect reproduction. These might be said to include the system of ownership by the state, taxation, investments placing orders for goods, loans and so on, all of which are tools to intervene in and regulate the national economy. Unfortunately, basically speaking, these are lacking in an integrated group. Third, an integrated group is an association of autonomous states. Economic alliance and joint regulation cannot proceed without unanimity in negotiations, but the very socioeconomic basis of monopoly capitalism causes an imbalance in development between the member countries and between the social groups and localities within the bloc. Thus, contradictions occur frequently. Take the European Economic Community for example. Here contradictions exist not only between the big countries like France, Britain and West Germany, who are forever bickering among themselves in their struggle for economic interests and for leadership power, but also between the big and small countries, between the countries which have achieved varying degrees of development, and between countries which export industrial products and countries which export, besides industrial products, large quantities of agricultural products. Naturally, contradictions are inherent between different monopoly capital blocs, between industrial areas and agricultural areas, and between developed localities and still backward localities. These contradictions cannot be eliminated just by regulatory activities between countries. On the contrary, under the new conditions, new contradictions and conflicts tend to continuously arise. In recent years, contradictions have been especially apparent in regard to such problems as the common agricultural policy and the community budget. In fact, the existence and development of contradictions within the bloc have delayed the conclusion of certain integration agreements, and have hindered and even disrupted the implementation of certain fixed policies. In particular, during periods when crises of a cyclical nature erupted, the contradictions and conflicts between the member countries intensified and in turn caused losses to the alliance and the regulatory activities. Because of the above-mentioned factors, the development of West European economic integration has been far from smooth. Since the 1974-1975 world economic crisis, with the exception of the formation in 1979 of the European currency system, progress in economic integration has almost come to a standstill, and even progress in the European currency system has been slow. It has developed very slowly and has been confronted with many problems because of the economic recession in recent years, the high interest rates in the United States, and the rise in the value of the U.S. dollar.

In short, the economic integration of monopoly capitalism, as seen in the formation and development of the two economic blocs of Western Europe, constitutes a partial change within the sphere of the capitalist production form in the international production relations of capitalism of the present era. Its properties determine that it must be subjected to the economic laws of capitalism and that it cannot resolve the basic contradictions of capitalism, far less the unbalanced development of capitalism and the contradictions and conflicts existing between the monopoly capitalist countries. Therefore, it may be said that the economic integration of monopoly capitalism has a dual character. On the one hand, it can regulate international production relations to suit the socialization of production and the development of productive force and, on the other hand, it can promote centralization and monopoly and further intensify the contradictions of capitalism. As we all know, state monopoly capitalism constitutes the highest form of socialization of capital relations within the sphere of the capitalist production form. A step further forward will refute this production form itself. Integrated economic alliance and international regulation, as the developed pattern of the internationalization of state monopoly capitalism, have developed on the basis of the internationalization of economic life and, in fact, have promoted the further development of the internationalization of economic life. At the same time, they have in reality provided the material logical premise and preparations for the eventual realization of a united world economic system based on the system of public ownership and highly socialized. This shows the historical position and role of the economic integration of monopoly capitalism.

LET THE MOTHERLAND'S SEEDLINGS GROW EVEN MORE STURDILY

Beijing RED FLAG in Chinese No 11, 1 Jun 82 pp 2-4

[Editorial]

[Text] Our party has always shown loving care for children and has placed high hopes in them. Comrade Mao Zedong long ago encouraged children to "study well and make progress every day" and expressed the hope that "children will close their ranks and study to be new masters of new China." Comrade Deng Xiaoping also "hopes that children throughout the country will resolve to be people with ideals, morality, knowledge and physical strength and will resolve to make contributions to the people, the motherland and humanity." In February last year, the CCP Central Committee Secretariat gave more instructions on work with children; it called for mobilizing forces of the whole party and the whole society to take an active interest in the healthy growth of children and to regard successfully nurturing and educating children as their strategic task, and it adopted many important measures for carrying out this task. Party organizations at all levels have responded to the call of the central authorities and conscientiously strengthened leadership over work with children. As a result, a new phase has emerged in the work of educating children. Nurtured painstakingly by and under the loving care of the party, and with the consideration and protection shown and given by the whole society, our country's children are like seedlings which have broken through the soil and are bathed in the sunlight and bounty of the socialist system. They are growing up strong and healthy. The Chinese children's spirit of vigorously making progress shows that they are full of promise.

It will be a protracted struggle for building our country into a powerful socialist country with a high degree of material civilization, a high degree of spiritual civilization and a high degree of democracy, and for holding high the great banner of communism, to persevere in our striving for a final victory. It will be necessary to carry on this struggle generation after generation over a long period of time. Children who are now between 7 and 14 years old will become a powerful labor army within 20 years. They will become the main strength of the construction and defense forces for realizing the cause of socialist modernization, and will achieve the magnificent goals of the four modernizations. To accomplish this historical mission, we must train our children to become people with the highest level of political consciousness, selfless and perfectly impartial and absolutely devoted to the cause of communism; we must train them to become people who are firm and indomitable, imbued with the spirit of revolutionary optimism; train them to become people with courage to think and speak out, highly creative in a revolutionary way and daring to struggle against any backward elements that hinder the advance of our society; and train them to become masters of the latest scientific and technical knowledge, capable of effectively conquering nature and thus benefiting the people. In short, our country's children should be trained to become new socialist men.

Bringing up such a new generation is certainly no easy job; it requires great effort by the whole party. In particular, during the building of our socialist spiritual civilization, we should be farsighted and think of and view things strategically, judging from the level of the development of our scientific, educational and cultural undertakings and judging from the direction in and the level of the development of people's political and ideological characters such as communist ideals, values and morality, we can see that the education and training of children are a means of laying foundations. Leading comrades of the central authorities have repeatedly noted: The development of communist traits of morality such as lofty ideals, the spirit of sacrificing one's own interests for the sake of others and civilized manners and habits should be started during childhood. Comparatively speaking, firmly grasping the education and training of children and enabling people to foster communist values from childhood have far greater significance. Comrade Deng Yingchao explained this point in her speech at the capital's report meeting in celebration of 1 June, International Children's Day. She said: "Promotion of work with children is the starting point for molding the people, a process which will take 100 years. Promotion of work with children is also the starting point for building material civilization and socialist spiritual civilization and for fostering a generation of people of a new type. This is a most important step we take during the great course of building socialism and fighting for the cause of communism." This is because by molding our children now in accordance with communist ideology and morality, we can change the mental outlook of a new generation of people who will become adults in less than 20 years. Children who are now 5 or 6 years old have no memories of the 10 years of civil strife and even children now 13 to 14 years old are relatively less tainted. Our principal task concerning these children is "maintaining health" and not "curing illness." Moreover, because of their youth their thinking and character are more malleable. They are readily receptive to teachings on the differences between truth and deception, between good and evil, between beautiful and ugly, and between correct deeds and wrong deeds. It is also easy for them to cultivate habits. Moreover, children are very imitative and handle affairs conscientiously. The education a person receives in his childhood will directly affect his lifelong development. Their good thinking and behavior will also have a certain influence in various social situations.

In educating our children in communist ideology and morality, we should attach importance to teaching them the five virtues of love. According to Article 22 of the Draft of the Revised Constitution, "The state promotes the virtues of love for the motherland, the people, labor, science and socialism." Thus the actual contents of and demand for teaching the five virtues of love. Education in the five virtues of love is education in patriotism, collectivism and communism. To foster and develop these socialist virtues throughout the society, we should start with fostering and developing them among children, because children happen to be the future masters, pillars and backbone forces of our country and our whole society.

During the recent "five stresses and four beautifuls" and "all-people civility and courtesy month" campaigns, vast numbers of children responded to the call of the party and enthusiastically participated in activities within their power under the correct guidance and leadership of teachers and of instructors from the Young Pioneers. As a result, the children have been educated and tempered. However, there is a noteworthy problem: While asking children to pay attention to civilization, order and discipline, some comrades have established quite a few restrictions and restraints, thus rigidly keeping children within bounds. We can illustrate this problem with the following case: A child has just visited Chairman Mao's former residence at Zhongnanhai. The child's mother asked what her child saw there. The child grumbled that he only saw the back of the head of his schoolmate standing in front of him. Why? Prior to the visit, the children were told to observe this discipline: "You must follow the one in front of you; you must not whisper to each other; and you must not glance right or left." How could they issue these trivial orders to restrict and restrain the children's innocence and liveliness, which are children's natural characteristics!

It is very important to teach our children to understand manners and observe discipline and social order. To suit the needs of this kind of teaching, there should also be a requirement of a fair and reasonable moral standard. However, we must not neglect to foster the child's indomitable will, his lively, bright and cheerful disposition, and courageous and fearless spirit. This kind of fostering is also an important aspect of spiritual civilization. If we persist in stressing obedience and do not allow our children to express differing views, we will probably turn them into people who unthinkingly become blind followers when problems arise. We should guide our children to have the courage to dissuade others from giving rise to unhealthy tendencies, uttering wrong words and taking erroneous actions, and to struggle against such tendencies, words and actions. We must not turn them into yes-men and cowards who are afraid of getting into trouble. We should teach our children to be ready to take up the cudgels for a just cause and to be enthusiastic in helping companions in dire peril, and also in helping the old, weak, sick and disabled. We must not turn them into selfish people who hang back in the face of danger. We should also make it possible for our children to be imbued with vitality and strong faith in life and to be lively, cheerful, optimistic and highly creative. We must not turn them into reticent young people who dare not speak and laugh in public and lack vigor and drive. Only if we pay attention to all these aspects can our children meet the party's expectations of healthily growing up to be successors in an all-round way.

It is our party's fine tradition to care for the healthy growth of children and it is the Chinese people's communist virtue to have deep love for a new generation. Those who care for the motherland's future and destiny will definitely care about the children's development. It is the whole party's undertaking to nurture and educate children. Our party has always cared for nurturing and educating children. All party organizations must continue to broaden their understanding of the strategic significance of training successors for the cause of communism, and implement the guiding principle of the party central authorities for mobilizing forces of the whole party and the whole society to strengthen the education and training of children. Schools, families and society must truly strive to coordinate their work, make joint efforts and fulfill their respective duties. It is imperative to overcome the views that issues concerning children are not issues that concern the general situation. It is also imperative to overcome the theory of natural growth which has these arguments: "Without grasping agriculture, there will be no grain; without grasping industry, there will be no steel; without discipline, children will still grow up" and "Although the flowers have been cultivated purposefully, they do not bloom; although some willows have been planted unintentionally, they now shade the lanes." We can surely promote educational undertakings for children as long as party organizations at all levels make reasons, gains and losses clear to all party members and take the lead in promoting educational undertakings for children.

Childhood is a period for growing up physically and also for absorbing knowledge. Children must study cultural knowledge but they also want entertainment, games and places to exercise. This means that our party and the whole society must try in every possible way to create conditions for promoting children's education and activities. We must make primary education universal and enable all children of school age to receive primary school education. We must also try in every possible way to strengthen preschool education and do well in running childcare centers and nursery schools. We should also build more clubs for children's after-school activities such as the children's palaces. We should hold small-scale and varied summer camps for children and effectively organize their holiday time. As the central authorities have decided to turn an official garden into a national center for children's activities, big and medium-sized cities throughout the country should also set aside their best houses and buildings for children's activities. Vast numbers of children have not had some children's palaces open to them for a long time. Such a situation must be changed.

With the restructuring of organs and with the reshuffling of leading groups, a large number of veteran cadres will either retire or leave jobs to recuperate. All veteran cadres have gained revolutionary experience. They are an important force for educating the children in the revolutionary tradition. We should organize retired veteran cadres to participate in the social activities of educating children. Old people have a deeper love for children. To them, seeing innocent and guileless children is just like seeing fresh blooming flowers; allowing them to participate in the activities of educating children can also fill their later years with great joy.

At present, cases of infringing upon children's rights and interests and cases of trampling on children have been occurring repeatedly. Some places for children's activities have been willfully invaded and occupied; due to serious pollution of the environment that is in close vicinity to some schools, the physical and mental health of children there are affected; some schools still have corporal punishment; and some children still face discrimination, maltreatment, physical punishment and abuse. In particular, from time to time children have been humiliated and beaten for exposing economic crimes and safeguarding social morality. Children are children after all. Their ability to revolt against and resist attacks is inferior. They need adults' protection and they want adults to speak for them. Both the state and the whole society are responsible for protecting children. This responsibility, above all, is the responsibility of party organizations. The Communist Party serves the people, including children. Our party organizations at all levels must pay close attention to safeguarding children's legitimate rights and interests. They must mobilize forces of the whole party and the whole society to form powerful and lasting public opinion and supervision for successfully safeguarding children's legitimate rights and interests. It is imperative to urge the departments concerned to prosecute those people who have seriously trampled on children.

The motherland's seedlings can surely grow even more sturdily as long as comrades throughout the party become hardworking gardeners.

A BRILLIANT EXAMPLE OF THE PARTY'S LEADERSHIP IN LITERATURE AND ART

Beijing RED FLAG in Chinese No 11, 1 Jun 82 pp 5-6

[Article by Commentator]

[Text] To mark the 40th anniversary of the publication of his "Talks at the Yanan Forum on Literature and Art," Comrade Mao Zedong's 15 private letters to writers and artists were published. The publication of these letters is of great significance in the correct and comprehensive understanding of the fundamental spirit of the "Talks," in the strengthening of the party's leadership over literature and art and in the adherence to the orientation of serving the people and socialism.

Comrade Mao Zedong's letters to writers and artists are not ordinary letters to old friends or individuals. Through these letters, we can deeply feel his loving care for the literary and art circles and his patient and systematic guidance for the literary and art workers. Proceeding from the actual conditions, he always realistically solved various problems in the literature and art fields and guided the literary and art workers to advance in the correct direction. These letters are a brilliant example of the party leadership in literature and art.

The question of whom literature and art should serve has always been a fundamental question. In these letters, Comrade Mao Zedong also considered this question of primary importance. Since "the life at present is also a struggle," he particularly stressed that "we need militant works now," and that "both Yanan and the border regions badly need dramas reflecting the struggles in the enemy's rear flanks." Although the situation is different today from that of the war period, it is still an important task for writers and artists to reflect the people's struggles and life in the revolution and construction. In these letters, he enthusiastically supported the work of popularizing literature and art. He affirmed the role played by the journal POPULAR LITERARY AND ART PRACTICE, which was aimed at helping correspondents and beginners raise their writing ability, and affirmed the article "Forms of Yangko Opera," which summed up the experiences of this opera. On the question of how to comprehend Lenin's talks on art with Clara Zetkin, Comrade Mao Zedong held that revolutionary literature and art should place their bases among the masses and serve the masses, so that "the feelings, thoughts and will of the masses" which were dispersed due to economic, political, geographical and national reasons, could be "united" through the spread of literature and art. That is, as an artistic form spreading ideology, exchanging feelings and arousing consciousness, literature and art must promote the unity of the people so that they will take an active part in the fighting with one heart and one mind. It was proceeding from this principle that Comrade Mao Zedong affirmed the play "Be Driven to the Liangshan Mountain," which "reveals history in its true colors." The orientation Comrade Mao Zedong pointed out here for literary and art work is the same orientation he repeatedly stressed in his "Talks" and is certainly the only correct orientation of serving the people and serving socialism, which we must adhere to in our literature and art work today. Under no circumstances should our literature and art deviate from the general orientation of uniting the people, educating the people and encouraging the people to join in the revolution and construction with one heart and one mind.

A very important question for our party in leading literature and art is how to correctly handle the relations between the party leaders and the literary and art workers. This has a bearing on whether the large number of literary and art workers can be closely united around the party and whether their enthusiasm can be brought into full play to create more and better works for the people. In these letters, Comrade Mao Zedong always fully affirmed the achievements and progress of the writers and artists with immense zeal. Understanding the orientation of serving the workers, peasants and soldiers after the Yanan forum on literature and art, a large number of literary and art workers plunged into the fiery struggles and soon scored new achievements. With his keen strategic insight as a proletarian revolutionary and politician, Comrade Mao Zedong paid close attention to this new development. When Comrade Ding Ling and Ouyang Shan wrote two special features about two exemplary people in cooperative work in the Shaanxi-Gansu-Ningxia border region, Comrade Mao Zedong "finished reading them in one breath after taking a bath and before going to bed" and wrote immediately to the two comrades, extending his "congratulations to the Chinese people and to both of you for your new writing style." Although this letter was written dozens of years ago, it is so ebullient that it still touches the receivers' hearts when they reread it today. Comrade Ding Ling said: "I was greatly encouraged by this letter and thus began my new writing style. What is my new writing style? It is none other than writing about the workers, peasants and soldiers." Comrade Ouyang Shan said: "Whenever I recall this letter, I always feel a strong force that spurs me on." Today, when we read these letters, Comrade Mao Zedong's teachings still warm our hearts. We deeply feel that Comrade Mao Zedong was really an intimate friend and teacher of the literary and art circles.

Comrade Mao Zedong took a serious attitude toward the work in the literature and art fields as well as in other fields and had a strong sense of principle. While enthusiastically and cordially affirming and encouraging the writers and affirming their achievements, he also offered his sincere and comradely criticisms and aid and gave explicit and hearty directions to them. When he was informed by a writer about the situation in Yanan, he first replied in the affirmative that there actually were unhealthy practices in Yanan which needed to be rectified. At the same time, he hoped that the writer would also "pay attention to one's own weak points and not to look at things one-sidedly." "One must pay attention to the correct handling of one's relations with other people and must compel oneself to intentionally examine one's weak points." He also required the writers to "examine their works with the Marxist viewpoint." Whenever we read these sincere words and earnest requirements of Comrade Mao Zedong today, they still touch our hearts. A speech made by Comrade Chen Yun in 1943, which was republished simultaneously with the publication of these letters, embodies the same principle and spirit. In this speech, Comrade Chen Yun criticized two shortcomings in the literary and art circles at that time. "One is privilege and the other is arrogance." He requested our party's literary and art workers to first regard themselves as ordinary party members and not learned scholars. He also asked them not to unrealistically overestimate the roles of literary and art work as well as personal achievements and talents. This is still of important and immediate significance today. Literary and art criticism is an important aspect of the party leadership in literature and art. It includes commending good and excellent works and criticizing bad and erroneous works. Under no circumstances should we give up the weapon of criticism. Some people dare not carry out principled criticism over the works or viewpoints which have obvious erroneous tendencies for fear that the enthusiasm of the writers and artists may be dampened or that they themselves may be blamed as "wielding big sticks." Thus, the party leadership has become lax and weak. This situation must be changed. However, there is also a problem of method and result in carrying out criticisms. The method of criticism displayed in Comrade Mao Zedong's letters, which is highly principled, must be taken as an example for our leaders at various levels and for literary and art workers when carrying out literary and art criticisms.

Comrade Mao Zedong was a great Marxist, and a great poet, too. He was knowledgeable on the law of art. He also paid serious attention to the investigation and study of the situation in the literary and art circles. Before he made the speech at the Yanan forum on literature and art, he listened attentively to various opinions. He discussed with Comrades Ouyang Shan and Cao Ming "problems concerning the literary and art policy," and then wrote to them, asking them to "collect NEGATIVE opinions for me." [capitalized word underlined] From here we can see that Comrade Mao Zedong not only paid attention to listening to positive and similar opinions but also paid attention to listening to negative and different opinions. All correct and realistic policies, principles, schemes and plans should be worked out after sufficient investigation and study and after listening to both positive and negative opinions. Comrade Mao Zedong's "Talks" is a brilliant Marxist work. This is inseparable from his spirit of investigation and study.

Forty years have passed since the publication of the "Talks." These letters were also written more than 30 or 40 years ago. Now, as the situation has changed, Mao Zedong's literary and art thought must also be developed in the light of the new situation and our historical experiences. The past erroneous tendency of studying Comrade Mao Zedong's "Talks" and other works with a dogmatist attitude must be prevented. However, Mao Zedong's literary and art thought is still of important guiding significance today. Total repudiation of Mao Zedong's literary and art thought under the pretext of past mistakes or other reasons is an expression of bourgeois liberalization and must be resolutely opposed. We must adhere to the basic principles of Mao Zedong's literary and art thought and continue to follow the brilliant example of Comrade Mao Zedong in leading the work in the literature and art fields. We must adhere to Mao Zedong's literary and art thought and the guidance of Mao Zedong Thought. This is the only correct road for the development of our revolutionary literature and art.

ARID AREAS IN THE NORTHWEST SHOULD ATTACH IMPORTANCE TO PLANTING TREES AND GRASS AND DEVELOPING A DIVERSIFIED ECONOMY

Beijing RED FLAG in Chinese No 11, 1 Jun 82 pp 7-8

[Article by Commentator]

[Text] Having little rainfall, some arid areas in the northwestern part of our country, such as Gansu Province, suffer more from natural disasters. In these areas, it is relatively difficult to make agriculture prosper at one stroke. However, with large territories and rich resources, these areas have bright prospects and favorable conditions for developing a diversified economy.

Our problem, however, is that quite a few cadres in charge of rural work in these areas have a poor understanding of the importance of a diversified economy, and know little about how to promote it. Unaware of the bright prospects of developing a diversified economy in these areas, they have failed to readjust crop planting distribution in light of the actual situation and according to local conditions. In fact, these areas should grow more industrial crops and should not attach sole importance to the production of grains on existing farmland. There is no doubt that it will be relatively difficult to change the face of these backward areas if they depend solely on grain production.

To effectively promote a diversified economy requires resolution and persistence. The drive to promote a diversified economy must be pushed forward several times a year, and constant and continuous attention must be paid to the work. Furthermore, investment in agricultural construction must be adjusted accordingly, and more funds should be allocated to promote a diversified economy. Old practices must be cast off and new paths opened up in accordance with new circumstances.

However, the most important step is to vigorously plant trees and grass so as to change the arid condition in the area. To launch this drive, we must courageously criticize the thinking that tree and grass planting will not be successful without water conservation projects. More than 100 years ago, Zuo Zhongtang, then governor of Shaanxi and Gansu Provinces, planted poplars and willows along the road stretching from the Shaanxi-Gansu border to Yumen. In noticing Zuo Zhongtang's merit, someone wrote a poem for him, a verse of which reads, "Poplars and willows have been planted along a road 3,000 li long, and thus the spring breeze is brought to Yumen Pass." Although a feudal bureaucrat, Zuo Zhongtang still had such boldness of vision! How can we communists be afraid to embark on similar projects? We must have firm faith that we can do a better job than he did if we are really determined. Last December, when talking to the comrades of Sichuan Province, Comrade Deng Xiaoping strongly urged them to plant trees and grass. Planting trees and grass has many benefits. It can conserve water and soil, purify the air, regulate climate, ease pollution and prevent sand from being blown by the wind. In fact, this is a radical way to expand the area of vegetation, conserve soil and water, maintain an ecological balance and preserve the environment for the cycling of matter, which is indispensable for human existence. Therefore, all arid areas must pay attention to this work and should never lower their guard.

Organs, schools, PLA units, and enterprises must be vigorously mobilized to take the lead in planting trees and grass. For these areas, how many trees a person must plant a year is not an essential question. Instead, we should try our best to plant as many trees and as much grass as possible under existing conditions. We must widely publicize the drive to plant trees and grass and carry it out in a big way.

We should also be determined to develop animal husbandry, such as cattle breeding, sheep breeding and so forth. About 2,000 years ago, Ma Yuan, a well-known figure in the Han dynasty, achieved his great cause of developing animal husbandry in Gansu. It is thus clear that husbandry has been well developed in Gansu in historic times. In order to vigorously develop husbandry, we must pay attention to properly preserving grasslands. Although there are vast grasslands in these areas, the number of livestock they carry is low as scientific methods have not been used to popularize a fine variety of pasture and management of the grasslands is poor. Such a situation must be completely changed.

Furthermore, great attention must be paid to developing the processing industry for agricultural, sideline and special local products. Great importance must also be attached to light industry and manufacture of products by minority nationalities, so that they can be developed as soon as possible.

We must urge our cadres to go to grassroots units to conduct investigations into the problems involved in promoting a diversified economy and planting trees and grass. We encourage more investigation and study, learning from the masses and from practice, because our cadres' knowledge in this field is limited and their ability to solve problems is poor. This is the only way to enhance the knowledge of our cadres.

Undoubtedly, our cadres in these areas such as Gansu have many merits which are worth being developed. They are loyal, hardworking and honest. However, some of them also have several weak points: For example, they are not sufficiently openminded and farsighted, and consequently, they are not readily receptive to new matters. In fact, thev are restricted by objective conditions. In remote border areas like these, culture is underdeveloped and people are poorly informed. Therefore, we must pay close attention to arming our cadres with modern scientific knowledge. We must educate them to broaden their view and open their minds by learning from people who have advanced experiences and are well versed in scientific knowledge. Our slogan is to take advanced people as our teachers and arm ourselves with scientific knowledge.

GRASP THE BUILDING OF MATERIAL CIVILIZATION WITH ONE HAND AND THE BUILDING OF SPIRITUAL CIVILIZATION WITH THE OTHER

Beijing RED FLAG in Chinese No 11, 1 Jun 82 pp 9-13

[Article by Wang Shoudao]

> [Text] Editor's note: We commend this investigation report to the readers. As circumstances permit, the veteran comrades pay visits and carry out investigations in the lower levels each year and meticulously compile written reports afterward. It is a very good sign and should be encouraged in a big way. By so doing, first, they will be able to keep in close touch with the actual conditions, and better propagate and implement the principle, lines and policies of the CCP Central Committee; second, they will be able to discover certain problems and put forth suggestions--this is the most practical advisory work; third, taking the lead in so doing, the veteran comrades pass on their valuable experience to the cadres in power and particularly, the younger cadres.

This spring I carried out an investigation of factories and villages in the municipalities of Guangzhou, Shenzhen, Zhuhai, Zhongshan, Xinhui, Jiangmen, Foshan, Nanhai and Conghua. I held discussions with a number of responsible comrades of the province and the prefectures, municipalities and counties and also with rural cadres. I also visited a number of workers' and peasants' homes. I noticed that, in recent years, in the field of economic construction, Guangdong has achieved a faster rate of growth and higher economic returns. The political situation is also getting better and better. There have also been improvements in the party style, social climate and public order.

Economic Construction Is Steadily Developing

In the past few years, Guangdong Province has seriously implemented the central authorities' guiding principle on further readjusting the national economy and their decision that Guangdong should practice a special policy and flexible measures in its external economic activities. Proceeding from

Guangdong's actual situation, the province has handled relatively well the relationships between centralized control and enlivenment of the economy, between advance and retreat, between readjustment and restructuring, and between expansion of external economic activities and economic readjustment and development. As a result, steady development of the province's economy has been promoted.

1. Agricultural production is steadily developing. In promoting agricultural production, Guangdong Province has linked the functioning of the superiority of the collective economy to the mobilizing of the individual's initiative, by means of continuously perfecting the agricultural production responsibility system, and thus has added strong driving force to the development of the rural economy. Under the guidance of the state plan, the province has readjusted its agricultural economic distribution according to the local conditions, and thus has changed the relatively unitary economic structure of the past. Comparatively remarkable development has been achieved in both the diversified economy and communes' and brigades' industrial and sideline production. For example: Vigorously promoting the diversified economy in the Zhu Jiang Delta under the circumstances that the rice growing area has been stabilized; reducing the grain procurement quota for mountainous areas and the border special zones, so as to push ahead with the development of forestry, forestry sideline production, the production of special local products and agricultural and sideline products for foreign trade such as vegetables, fish, poultry and so on; linking grain production with sugarcane production so as to push ahead with the latter; and establishing a number of bases of commodity grain and bases of oil crops, fishery, forestry, animal husbandry, special local products, and so on, so as to gradually rationalize the internal production structure of agriculture. Last year relatively great development was recorded in industrial crops and diversification despite serious natural disasters such as floods and typhoons which caused a fall in grain output of 3 billion jin. Sugarcane output may have reached 12 million tons, an increase of more than 30 percent over the previous refining season; this was the biggest increase recorded since the founding of the state. Total value of the province's agricultural output rose by 3.3 percent over the previous year. Nanhai County scored outstanding achievements. Its total value of agricultural output in 1981 was 23.8 percent higher than in 1980. Despite a slight reduction in the grain and cocoon harvests due to natural disasters, forestry output value rose by 9.3 percent, animal husbandry by 3.3 percent, sideline production by 44 percent, and fishery production by 4.1 percent. The collective economy has developed rapidly, the political situation in the rural areas is more stable, and one of the best rural situations since the founding of the country has indeed emerged.

2. New progress was recorded in industrial production. As far as industrial production is concerned, we have readjusted the orientation of service, improved the product mix, enlarged the scope of service and realized a relatively fast speed of development in accordance with the characteristics that there are a large number of workshops in the province, the degree of flexibility is high, and that there are sufficient export facilities since our province neighbors Hong Kong and Macao, and in accordance with the market

demand. As a result, development of light industry was accelerated and there was a certain growth in heavy industrial production. Last year total output value rose by 11.4 percent, with increases of 17 percent in light industry and 1.8 percent in heavy industry. Based on the experiences gained in Jiangmen, Qingyuan and other municipalities and counties where experiments on reform of the economic system have been actively and steadily carried out, Guangdong has pushed forward various forms of the economic responsibility, rights and interests, improved business and management and aroused the enthusiasm of the enterprises and the broad masses of workers. The economic returns of state-owned industry and communications enterprises in Foshan municipality previously were never very good. Profit per 100 yuan of output value was only some 5 yuan in 1979, lower than the average for the province, and also lower than the municipality's previous best level. Last year the Foshan Municipal CCP Committee vigorously popularized the experience of the Shiwan chemical industry ceramics plant in implementing the system of "four fixes and four guarantees" ("four fixes" means that the plant fixes the number of workers in the workshops, fixes equipment, fixes raw material supplies and fixes expenditure; "four guarantees" means that the workshops must guarantee quantity, quality, variety and profits). Internal economic activities among the enterprise units were carried out in accordance with estimated costs and the system of "free supply" was abolished. On completion of the task of "four guarantees" the workshops would be given a certain amount of money as a bonus. However, those workshops which were unable to complete the task of "four guarantees" would be fined in accordance with the regulations. Various other forms of the economic responsibility system were also practiced in the administrative offices. Thus the economic responsibility and economic interests of the internal units of the enterprises and the individual workers were made clear. Thus, the staff and workers of the enterprises were encouraged to enthusiastically seek ways to increase production and economize expenses. As a result, distinctive economic results were obtained and large-scale increases of production and revenue were achieved. The municipality's industrial production quota was fulfilled 46 days ahead of schedule. Total value of industrial output showed an increase of 23.11 percent, while profits rose by 55.29 percent and profit turned over to the state increased by 14.4 percent. This was the highest rate throughout the province.

3. The province has actively developed external economic activities and speeded up the development of its domestic economy. The trial operation of special economic zones has not only directly provided favorable conditions for economic construction in the special zones themselves, but has also indirectly supported economic development in the interior, stimulated joint undertakings with the interior, and expressed the complementary relationship between economic development in the special zones and the interior.

In the course of implementing its open-door policy, Guangdong has achieved three integrations. First, economic activities with foreign countries have been integrated with economic readjustment and now serve economic readjustment, thus enabling local industries to enjoy development in the course of the open-door policy and enabling their products to penetrate foreign markets and so bring their own superiority into play. Second, economic activities have been integrated with the technological transformation of enterprises and a number of enterprises have been equipped with advanced and suitable foreign technology. Third, economic activities have been integrated with the development of urban and rural public facilities. Through various channels, they have attracted foreign capital for use in education, culture, bridges, roads, and so forth. They have thus speeded up urban and rural construction. Furthermore, in cities in border regions, they have started up lawful border trade on a small scale. This has also definitely had a hand in increasing peasants' income, improving the lives of commune members and stabilizing public order in the border regions.

4. The markets are prosperous and lively and the standard of living of people in the urban and rural areas has improved. In the wake of the development of production and the increase of the circulation channels, the markets have grown more and more prosperous. Comparing 1981 with 1980, total volume of commodity retail sales rose by 15.9 percent, while purchasing power increased by 13.4 percent. There were ample supplies of clothing and utensils. Savings deposits of the urban and rural people increased by 45.7 percent over 1980, urban workers' wages rose somewhat, jobs were found for 400,000 during the year, and 5.1 million square meters of urban workers' housing were completed. Housing conditions improved to some extent.

The peasants' income from collective and domestic sideline occupation increased to a certain extent over last year. In the rural areas new housing construction by peasants can be seen everywhere; this is a major hallmark of the improving standard of living of peasants. In the rural areas in Nanhai County, there was an upsurge in building houses. In many places both the scale and standard of construction exceeded the previous records, and a situation in which "each household prepares the materials and each brigade is engaged with construction work" existed. According to incomplete statistics for the county, the rural areas of the whole county built over 16,000 houses last year, with a total area of over 1 million square meters. Over 90 percent of them were reinforced concrete structures. Many old villages have taken on a new look. Xiaolan commune in Zhongshan County built 3,502 new houses last year (1,637 houses were reconstructed), showing an increase of 1,966 houses over the preceding year. Peasants living in brick and tile-roofed houses accounted for 93 percent of the commune's total population. Many peasants in Nanhai County have developed from purchasing the "three old things" (bicycles, sewing machines, watches) to the "three new things" (television sets, radio-cassette players, electric fans). The peasants in Xiaolan commune in Zhongshan County owned 24,069 bicycles in 1981, showing an increase of 2,992 over the preceding year; 10,681 sewing machines, showing an increase of 2,415 over the preceding year; 1,810 television sets, an increase of 835 over the preceding year; 7,416 electric fans, an increase of 5,179 over the preceding year and 2,632 radio-cassette players, an increase of 1,193 over the preceding year. Visiting the lower levels and seeing the improvement in the life of the broad masses, we are more confident of the future of our economic development.

The Building of Spiritual Civilization Has Yielded Results

In our socialist state, if socialist ideology fails to occupy a dominant position in the society, it is impossible to ensure a socialist orientation in building material and spiritual civilization. At present, it is necessary, by centering on the task of building spiritual civilization and in the light of practical problems in work and ideology, to strive for a decisive turn for the better in party work style, social mood and social order.

First, the problem of party work style occupies an important place in socialist spiritual civilization. Guangdong implements special policies and adopts flexible measures in its external economic activities, but it should by no means be exceptional in party work style and party discipline. The open-door foreign policy and relaxation of domestic policy also chiefly refers to economic policies. We should never relax party work style and party discipline, but should enforce them more strictly. It should be affirmed that the foundation of the party work style in Guangdong Province is good. The majority of party members and cadres are loyal to the cause of the party and the people, diligent and hardworking. There are plenty of cadres who are willing to serve the people wholeheartedly and who bend their backs to their tasks until their dying day; there are also plenty of cadres who are honest in performing their official duties and remain uncontaminated. However, owing to various complicated causes, both historical and practical, the problem of party work style has now become an outstanding problem that should be solved urgently. Due to the proximity to Guangdong of Hong Kong and Macao, the corrupt bourgeois ideology and lifestyle will definitely take advantage of the open-door policy to work their way in. In the economic sector, unhealthy tendencies and violations of the laws and discipline have been fairly serious. A considerable number of party members have committed economic errors. The proportion of economic cases in relation to the total number of criminal cases has risen. Furthermore, the amounts involved are generally quite big. Viewed from the nature of the problems, illegal activities such as speculation, profiteering, graft, embezzlement, smuggling and selling of contraband, and offering and accepting bribes are on the increase; acts in violation of financial discipline such as indiscriminate issuance of bonuses and loans, arbitrary price increases and illicit distribution of public property as well as unhealthy tendencies such as making use of one's connections and influence have developed to some extent. What is worthy of attention is that the circumstances of some cases are serious and the methods employed are heinous. This reflects that some party members and cadres, and even leading cadres, have a prominent tendency to "think of everything in terms of money." Furthermore, some leading cadres quite obviously use their power for their own gain and seek privileges. Some leading cadres are seriously guilty of bureaucratism, are extremely irresponsible in their work and their revolutionary zeal is waning. In the rural areas, some party members participate in feudal superstitions, gambling, armed conflicts and other activities, and the situation is also quite serious. In view of the situation stated above, the Guangdong Provincial CCP Committee has mustered its strength and grasped the problem from within. With the power of a thunderbolt and the speed of lightning, it has resolutely carried out investigations and meted out punishments to those party members and cadres who have dared to flout the law and who openly take part in the smuggling and selling of contraband, graft, embezzlement, offering and accepting bribes and other violations of the law and discipline. It has spared no one, regardless of seniority. The provincial CCP committee has stipulated that CCP organizations at various levels should vigorously grasp party work style this year. It is necessary to mobilize the whole party to study again the "Guiding Principles for Inner-Party Political Life" and carry forward the party's three important work styles. It is necessary to vigorously praise good party members and cadres, expose typical examples of unhealthy party work style and deal with them seriously. The three special zones of Shenzhen, Zhuhai and Shantou have formulated regulations governing party and government cadres in the special zones so as to educate and check up on them. In Shenzhen, rectification of the party has been started by grasping typical cases of illegal building of houses and smuggling and selling of contraband and by dealing with them with great fanfare. This has hit out at the unhealthy trends and practices, caused far-reaching repercussions and brought about an improvement in the social mood.

Second, a problem that merits our serious attention in Guangdong is preserving a good social mood and preventing cadres and the masses from being contaminated and corrupted ideologically as a result of the open-door policy. The Guangdong Provincial CCP Committee has repeatedly and explicitly announced: We should absorb as well as resist capitalist elements to a certain extent. With respect to funds and technology from Western capitalist countries, we should absorb them, but we should uphold proletarian spiritual civilization, maintain and carry forward the fine traditions of our nation and the proletariat and foster a new socialist mood. Since February last year, the "five stresses and four beauties" activities have been vigorously launched in Guangdong. In the past year, especially since the second half of last year, the building of spiritual civilization in Guangdong has yielded some results and social mood and social order has started to take a turn for the better. To counter the problems of "dirt, disorder and high cost" in municipal environment and sanitation and in prices, Guangzhou municipality launched last year a "three rectifications" drive (rectifying the environment and sanitation, social order and traffic, and market prices) and, by taking this as a breakthrough in building spiritual civilization, organized several big activities. At the same time, Guangzhou municipality launched extensive education in morality and in democratic and harmonious new family relationships along with activities such as promoting new wedding styles and "learning from Lei Feng and adopting new habits." At present, the appearance of the city's 25 main streets has started to change. Some guest houses which were criticized by foreign guests in the past for their poor service have, through the civility and decorum activities, improved their work to a considerable extent. The mood of unity and mutual help and of taking pleasure in helping others has also been initially revived and carried forward. Moving examples reflecting the spirit of "a family in trouble enjoys the support of 100 families" have emerged in many localities. Last year, the activities of "five stresses and four beauties" and "three loves" (love for the motherland, socialism and the collective) were vigorously launched in the three special zones of Shenzhen, Zhuhai and Shantou. At the same time, efforts were made to improve municipal environment and sanitation, traffic and order. The social appearance is now developing in a good direction. School education has an important position in building spiritual civilization. The special zones attach great importance to conducting positive education among youths in order to inspire their patriotic enthusiasm and guide them to study hard, engage in healthy and uplifting activities and develop in an all-round way, that is, to develop morally, intellectually and physically. The atmosphere and appearance of the middle and primary schools in Shenzhen are taking a gradual turn for the better. In Shenzhen's Futian junior middle school, there were only eight CYL members in April last year and the political atmosphere was weak. Since the launching of the "five stresses and four beauties" activities, many pupils have been keen on making progress politically and, by the end of last year, the school had succeeded in recruiting 71 CYL members. With the economic development in the special zones, the spiritual outlook of the people in the special zones is also changing. The youths are very keen on studying and urgently wish to study new knowledge and technology. More young workers have registered to take part in sparetime studies and studying diligently has become the order of the day. The Guangming Overseas Chinese electronic factory in Shenzhen has proposed the "three resistings and three promotings" drive (resisting corrosion and influence by bourgeois ideas and promoting the style of being honest in performing one's official duties and of remaining uncontaminated; resisting the influence of the bourgeois practice of each trying to cheat or outwit the other and of benefiting oneself at the expense of others and promoting the style of being concerned for comrades and taking pleasure in helping others; resisting the influences of out-and-out bourgeois egoist ideas and promoting the style of safeguarding public property and abiding by social morality) and extensively and thoroughly conducted education in upholding the four basic principles and in socialism, patriotism and collectivism.

Third, in strengthening the socialist legal system, improving social order and defending social order, Guangdong has done a lot of work. Since last year, the party and government organs at various levels have extensively launched the "three rectifications" drive. The public security and judicial departments have made a concerted effort in promptly and severely punishing various criminals such as counterrevolutionaries and murderers, arsonists, rapists, looters, traffickers in narcotics and ringleaders of criminal gangs who seriously endangered social order. With respect to various illegal organizations and publications, obscene books, paintings, tapes and videotapes, steps have been taken to resolutely ban them in accordance with the relevant regulations, laws and decrees of the state. The work of suppressing smuggling in the border and coastal areas has also been strengthened by mobilizing the masses to report or expose offenses to the authorities. A number of cases such as smuggling and selling of contraband, tax evasion and speculation have been proved through investigation. This has dealt a severe blow to economic criminal activities. By so doing we have succeeded in consolidating the people's democratic dictatorship and further removing various factors unfavorable to stability and unity. This has contributed to the relatively stable environment in life and work throughout the province and ensured the smooth progress of industrial and agricultural production and other work. There was a turn for the better in social security as a whole last year. The healthy tendency is in the ascendant and the unhealthy tendency is in the descendent. Good people and deeds related to the struggle against bad people and deeds have emerged in large numbers. The disorderly conditions such as "the neighbors closing their doors when a household is being robbed," "all people looking on with folded arms while another is being maltreated," and "good people are bullied while bad people are overweening" have changed. Last year the incidence of crime was 18 percent less than in 1980. This included a 55 percent decline in cases of robbery. However, owing to various reasons, especially to the proximity of Hong Kong and Macao to Guangdong and to its being situated in a border and coastal area, which results in an excessive number of transient people and in a relatively complicated situation, the social order as a whole has not taken a fundamental turn for the better. Various criminal activities such as robbery, theft, gambling and mercenary marriage still continue to occur. We should still make tremendous efforts in order to check the unhealthy tendencies.

Several Questions That Merit Attention

This visit to Guangdong was very fruitful. I and other comrades who traveled with me were glad to see fast economic development in Guangdong and a promising urban and rural political situation. While carrying out inspections and discussions on our way, we gathered the following opinions:

1. When the Central Committee decided to set up experimental special economic zones in Guangdong and Fujian Provinces, it was a brand new undertaking. We are groping our way forward. We need to continuously sum up experiences and lessons in the course of practice. Whether they are experiences of success or lessons of error, as long as we clear-headedly recognize them, they will all be beneficial to our work. The Shenzhen-Shekou industrial zone has taken the initiative by setting up special zones and has reaped distinct results. The Shenzhen-Xili reservoir resort has its own rustic flavor. The Zhuhai-Shijingshan mountain resort has set up a strict, scientific management system and has enlightened us much in our work. Certain of our units and organizations are overstaffed. There are more personnel than matters to be attended to. They are plagued by bureaucratism. Whenever they are confronted with work, they try to pass the buck. Efficiency is extremely low. Some people hold "iron ricebowls" and eat from a "big pot." Should they not learn from these good experiences to overcome the malpractices in their own work? Some comrades have adopted all along a negative, suspicious attitude toward the open-door policy and the experimentation with special zones. They think that the open-door policy has opened a back door for bourgeois ideology and has corrupted the party style and social climate. We are no longer in the period of remote antiquity. No country in the world can now afford to keep itself to itself. During the feudal dynasties of the Ming and Qing in Chinese history, we tried on numerous occasions to implement a "closure of ports." This was to have dire consequences on the development of our own productive forces and caused tremendous political and economic loss. The open-door policy is highly conducive to the enlightenment of people's thinking and the promotion policy

will inevitably cause certain lawless elements to take advantage of the situation and carry out activities designed to sabotage socialist construction and also definitely affect the party style and social climate. However, the present problems associated with the party style and social climate are not entirely due to the open-door policy. We must both acknowledge its side effects and even more recognize the nature of the problem. We must have full confidence in the open-door policy and our experimentation with special economic zones. We must conscientiously sum up and continuously improve. The special economic zones must not be completely Westernized. They must not turn into second Hong Kongs or Macaos.

2. There has been a good start in building spiritual civilization and an improvement in the social and moral atmosphere. However, the development is unbalanced. What merits our attention now is that there are still many party committees and leading cadres who do not have a sufficient understanding of the significance of building spiritual civilization. Some of them think that they are too busy with their work and cannot spare time to promote the building of spiritual civilization; some of them lack confidence in building spiritual civilization, holding that "a bonus of 10 yuan is better than doing 1 year's work in grasping spiritual civilization"; some think that spiritual civilization is unable to solve problems and is like scratching an itch from outside one's boots; some think that grasping civilization is the work of the departments, and wonder why the CCP Central Committee and the provincial CCP committees should make a fuss of it. In order to persistently and profoundly launch the building of spiritual civilization, we must strengthen and improve party leadership and further enhance the whole party's understanding of building spiritual civilization. In the course of building spiritual civilization, we must strongly grasp the question of party work style, social customs and social order. We must create public opinion in a big way so that it can become regular and systematic among the masses. On the basis of extensively mobilizing the masses and improving the level of understanding, we must make the best use of the situation and formulate certain practicable facts, agreements with the masses, management regulations, rules and so forth in relation to the overall situation or certain aspects of building spiritual civilization. We must, by means of building spiritual civilization, make our people become people who have ideals, morality, culture and who abide by discipline.

3. Market prices is a major matter to thousands and thousands of families. Last year in Guangdong, procurement of agricultural and sideline products at negotiated prices and increases in the rural financial credit expenditure, workers' bonuses and transient laborers accounted for the situation in which a large amount of the currency was put in circulation, an excessive amount of food coupons were in the hands of the people and there was short supply of vegetables, nonstaple foods, construction materials for the rural areas, medium-size and small farm tools and other commodities. In addition, slackened market management and increased prices of commodities have affected the livelihood of the masses and, in particular, the livelihood of a certain section of workers and staff members. The question of commodity prices is a matter of overall importance and is a relatively complicated question. We must resolutely implement the 10 regulations on

stabilizing market prices issued by the State Council recently, and adopt the comprehensive measure of integrating economic and administrative methods and ideological education. The state-owned commercial enterprises must take the lead and set good examples in implementing the market price policy and strictly forbid private price increases and price increases made in disguised forms. It is necessary to seriously deal with cases in violation of the price policy and price discipline. We must punish according to law those who break the law. Governments at all levels must perfect the organs in charge of commodity prices, carry out regular inspections of the market prices, form a system and strengthen supervision by the masses. Maintaining fundamentally stable commodity prices is extremely essential to stabilizing the economy, maintaining stability and unity and improving the masses' livelihood. This must not be treated lightly.

CSO: 4004/38

ENHANCE THE ROLE OF BANKS AND DEVELOP DOMESTIC CAPITAL

Beijing RED FLAG in Chinese No 11, 1 Jun 82 pp 14-17, 8

[Article by Liu Hongru [0491 7703 0320]]

[Text] While explaining the Ten Point Economic Construction Policy at the 4th Session of the 5th NPC, Comrade Zhao Ziyang pointed out: "The role of banks in accumulation, transfer and unified control of credit funds should be strengthened." Implementing earnestly this policy, bringing the role of banks into full play and developing domestic capital have great significance in finding a solution to present financial difficulties, in carrying out the mission of economic readjustment and in accelerating the socialist modernization program.

Lack of funds is an outstanding problem in maintaining a certain growth rate in our economic construction. However, it must also be noted that at present there is amazing waste in various fields, ranging from production and circulation to capital construction. Enormous social wealth will result if potential is tapped. Therefore, on the one hand, we must through our policies arouse the enthusiasm of the enterprises, the communes and their subdivisions, the staff and workers as well as the peasants, tap potential, develop the economy and try by every means possible to increase production and revenue and add to the wealth of society. This is a basis for developing domestic capital. On the other hand, we must pool the scattered funds and by means of banking and the use of bank credits use them in the production and construction needed by the state, while putting financial matters under centralized control and making use of capital.

Lenin long ago advocated the use of the bank to regulate the socialist economic life of the country as a whole. However, we have for many years failed to pay attention to fully enhancing the role of banks. Since the 3d Plenary Session of the 11th CCP Central Committee, the CCP Central Committee and the State Council have pointed out that efforts should be made to help banks become a tool for developing the economy and renovating technology and that stress should be laid on encouraging banks to become involved in more activities, undertake more tasks and give full play to their greater role in opening up new prospects of acquiring and accumulating funds and im improving the use of funds. Following this orientation, we have over the last 3 years adopted various methods of collecting funds and have expanded the scope of bank credits. For example, we have changed from the method of free subsidies for some parts of the investment in fixed assets to that of bank loans which have to be repaid with interest; the People's Bank has begun to grant medium- and short-term loans for buying and upgrading equipment with emphasis on the replacement and renovation of equipment and technical transformation of enterprises which produce goods for everyday consumption; the eligible recipients have been expanded from production and circulation fields to service trades, tourism and units in the scientific and technological departments which have business income and the ability to repay. In controlling credit, we have followed the principle of dealing with each case on merit and supporting those which excel in their business and paid attention to implementing the role of such economic levers as credit rate and foreclosure. All of these reforms have played a fairly satisfactory role in improving the economic results of the funds, developing domestic capital and promoting economic readjustment. Practice has proved that emphasizing utilization of the bank to raise social funds and using those funds for production and construction through loan distribution are in complete accord with the new conditions of the development of our economy and reflect the objective requirements of the economic structural reform and a correct way to improve the economic results of investment.

The banks' capital comes mainly from: 1) official listed capital and the accumulation of a certain portion of profits which the bank is entitled to keep as credit funds; and 2) the currency issued in accordance with the needs of the development of production and the expansion of circulation. With the development of production and the increase in the people's income, more and more money has been absorbed by the bank. Particularly since the 3d Plenary Session of the 11th CCP Central Committee, with the greater financial power of the local authorities and enterprises, the growing collective economy, the increasing income of the urban and rural population and more money in the hands of the enterprises, units and individuals, the bank is in a position to accumulate these scattered funds by means of absorbing deposits on which interest is paid. This will, on the one hand, safeguard the economic rights and interests of the depositors and, on the other hand, enable the state to arrange and use these funds in a planned way. During the 3 years from 1979 through 1981, various kinds of bank deposits increased by a big margin at an average annual rate of 2,000 percent over 1978. But we must also understand that bank deposits are reserve currency and the monetary expression of social material wealth; therefore, the growth in deposits is restricted by production increases, national income and the consumption fund. Bank loans are limited by the sources of capital on the one hand and by the volume of material supplies on the other. Provided the volume of bank loans is complementary to that of material supplies, the realization of bank loans in kind can be ensured. Banks should not rely on an oversupply of currency in circulation to expand their credits because the issuance of currency must suit the needs of commodity circulation. Oversupply of currency in circulation will lead to price hikes and inflation. This is an objective demarcation line.

The CCP and the people's government have always adopted a policy of keeping the value of money stable and have persisted in not adopting the method of issuing more money to expand the scope of capital construction. This is a major condition for ensuring the smooth implementation of the economic readjustment, effecting the steady growth of the economy and consolidating the stability and unity of the political situation throughout the nation. The fairly rapid growth of currency in circulation over the last 3 years has resulted from the changes in economic development. This is because the fairly rapid growth of agriculture and light industry and the expansion of the scope of commodity circulation created a need for a corresponding increase in the supply of currency in circulation. At the same time, with the implementation of the various forms of the production responsibility system in rural areas and the restoration and development of the collective economy and the individual economy in cities and towns, there have been many more economic units and management levels for preserving cash in the urban and rural areas, and with more people working, the growth of income for people in both urban and rural areas and the increase in the reserve money of the units and the individuals, there has been a greater capacity for currency in circulation. However, we must also acknowledge that the present supply of currency in circulation is still on the excessive side and the ratio of the currency in circulation to the volume of commodity supplies still has not reached previous normal levels. Latent dangers still exist. If more currency is issued, it will be difficult to keep market prices basically stable or to consolidate the results of the economic readjustment.

Must we therefore adopt the method of tightening money supply and reducing consumption to withdraw huge amounts of currency from circulation as we did when our country encountered economic difficulties in the 1960's? This also will not do. This is because, first, the current economic readjustment is carried out in a situation where there is a sustained increase in both industrial and agricultural production. Furthermore, in order to lay a foundation for future long-term development, we must maintain a certain growth rate. This determines that in financial matters, reducing the amount of bank loans by a big margin and stifling the economy is not permissible. Second, the current economic readjustment is carried out in a situation in which the peasants' income has increased, large numbers of people awaiting employment in cities and towns have been given jobs and there has been an increase in both wages and bonuses. Reabsorbing currency from circulation by relying on reducing the number of staff and workers and consumption is not permissible. Instead it is necessary to suit currency circulation to commodity circulation by significantly boosting production of consumer goods, of agricultural means of production and of building materials for agricultural use and increasing commodity supplies. Third, although large and medium-sized projects under construction, whose scopes are overstretched and building cycles rather long, cannot produce results for the time being, they must not be abandoned all at once as was done in the past when we suspended construction of the "small local construction groupings." The disproportions in the economy and the oversupply of currency in circulation are the result of the "leftist" mistakes which have existed for years. It will take time to return to normal and it cannot be accomplished in a year or two. Precisely because of this, although the supply of currency in circulation is on the excessive side and exceeds the needs of commodity circulation, in order to help readjust heavy industry to service orientation, we must, within the limits of state plans for the national economy and of bank credits, increase loans for production and construction as much as possible, and in particular support the production of goods for everyday consumption, boost the production of brand-name goods which sell well and also the production of building materials for agricultural use and the agricultural means of production which are needed by the peasants. Rather than reabsorbing huge amounts of currency from circulation by adopting the method of tightening money supply and reducing consumption to shrink production in an oversimplified way, we must support agriculture in developing grain production and a diversified economy to provide more raw materials to light and textile industries so that they can develop and supply the market with more commodities. Thus, for a certain time there will be no rapid improvement in the situation in which the supply of currency in circulation is still on the excessive side. However, because bank loans are used mainly to finance operational activities which require less money but promise quicker and bigger results, once they produce economic results, it is possible to increase commodity supplies at a fairly rapid pace, step up the withdrawal of currency from circulation, boost financial revenue and thus provide a material base for returning currency circulation to normal.

At present, the contradiction confronting us is this: On the one hand, there has been an oversupply of currency in circulation and the issuance of currency must be put under strict control, while, on the other hand, it is still necessary to increase some loans to revitalize the economy under a unified state plan. In order to solve this contradiction, accumulate more funds and raise the economic results of the use of funds, banks should devote their energy and time in the following ways:

1. Vigorously develop the savings undertakings in urban and rural areas. In recent years, with the increase in their income, urban and rural residents have had more cash in their hands, part to be used as a working fund for covering the needs of daily life and production and which cannot be absorbed in large quantities as savings deposits, and the other part to be used as reserve funds for buying such goods as durable consumer goods and for savings which will rise for a long time. By absorbing into the bank this part of personal savings which will not be used for the time being, we will be able to turn consumption funds into production funds in a planned way and that part of the latter which is relatively stable over a long period of time can be used to support construction. At the same time, the realization of its potential as purchasing power can be postponed, thus reducing the currency in circulation. Of course, to increase savings deposits, banks must adopt strong measures, such as doing a good job in propaganda work, improving the quality of service, readjusting savings interest rates, increasing varieties in savings which suit the needs of the masses, setting up more savings networks and strengthening the work of rural credit cooperatives.

2. Offer leadership to the various enterprises and units in planned use of funds in production and construction. In accordance with the regulations of the state's system of cash control, apart from a small quantity of cash

to be retained for services and supplies, the monetary income of the enterprises and units must go to the bank. For the enterprises and units, the question of absorbing idle funds in society does not exist. The problem at present is how to guide enterprises and units which have surplus funds at their disposal to try as far as possible to invest these restricted funds in production and construction which are urgently needed by the state and promise good economic results. The guidance may be multifaceted. For example, the bank is allowed to handle fixed deposits of the enterprises and units, pay them higher interest than is paid on current deposits and convert short-term funds into long-term ones; it is allowed to issue bonds under specified conditions so as to concentrate long-term funds and support the small number of construction projects within the jurisdiction of state plans; to handle trust business in places where conditions permit and within the limits of state regulations; and to adopt flexible and various ways to absorb and use funds and do more work under a unified state plan so as to benefit the revitalization of the economy. Further, developing domestic insurance will enable us to establish a system of economic compensation on the one hand and play the role of accumulating funds on the other. In struggle to combat floods and help to tide the people over natural disasters, as in Sichuan, Shaanxi and Liaoning Provinces in 1981, the system of insurance displayed its great compensatory role. The insurance premium handed over by Sichuan Province to the insurance company in the 2 years 1979-80 was no more than 20 million yuan but in 1981 the insurance company paid an indemnity of 77 million yuan for losses suffered by Sichuan Province from natural disasters, thus helping the disaster-stricken enterprises quickly restore production. This shows that establishing this system of economic compensation on a nationwide scale and putting the transfer of funds under unified control will play a positive role in restoring production and stabilizing life in the disaster areas and ensuring the stability of financial revenue and expenditure.

3. Tap the potential of existing funds, try hard to reduce the funds seized and left idle in the circulation field, increase goods and materials and speed up the turnover of funds. At present, large quantities of circulating funds are seized and left idle by industrial and commercial enterprises all over the country; the turnover of these funds is slow. This is an outstanding manifestation of poor economic results. For example, the turnover rate of circulating funds of state-run enterprises in 1981 was 3.12, a decrease of 1.15 compared with the 1965 record of 4.27. The turnover rate of the circulating funds of the commercial enterprises also did not reach the highest record in history. Reducing our circulating funds by 2 or 3 percent will mean a nationwide savings of 7 to 10 billion yuan. In discussing the principle of reproduction, Marx said that commodity reserve is divided into voluntary reserve and nonvoluntary reserve. The former is the necessary condition for commodity circulation and the latter is the result of goods not being sold well. We must strive for a growth rate on the basis of products of good quality and responsive to social demands. This is a true growth rate void of exaggeration. While speed is mentioned, we must no longer blindly seek output value, because this will result in huge overstocking of surplus goods and poor-quality and unmarketable goods and ineffective use of huge funds. Consequently emergence of the phenomena

whereby "in industry, good news is announced while in commerce, bad news; in warehouses, there is overstocking while in finance, nominal increases." Eventually, as a result more banknotes have to be issued. In order to prevent this situation, in regard to the enterprises whose products are in excessive supply banks should practice stricter and tighter control over funds and resolutely carry out the system of raising interest rates and requiring more interest as a forfeit and even stopping the granting of loans. It is necessary to uphold the principle of production, purchase and order according to sale, stimulate the enterprises to economize on the use of funds and cut down the seizure of funds. We must strive to support the enterprises to produce and market more products which meet social demands with the least possible credit funds and provide the state with more accumulation. At the same time, in order to increase goods and materials and revitalize the economy, it is also necessary to use the bank to do a good job in smoothing things out. For example, of the machinery and electrical products kept in stock, some are needed for replacement and renovation of equipment and technical transformation. However, handicapped by a lack of funds, the enterprises are unable to buy them. In regard to these products kept in stock which have a ready market, banks should on the one hand grant loans to units to purchase and upgrade needed equipment and, on the other, call in the circulating fund loans used in stocking materials. Some products kept in stock can be marketed through installment payments. In this way, with little or no increase in the total amount of loans, the goods and materials kept in stock can also come into play and reinvigorate heavy industry, thus bringing to the state additional income in taxes and profits.

4. With regard to helping to improve economic results, transfer funds and choose the orientation and key points for their use and explore and open up new sources of revenue. In accordance with the decisions of the state on the entire national economy and the nature of credit funds that loans contracted from credit funds should be repaid and credit funds kept in continuous circulation, in using limited funds, banks should give priority to production and construction activities which require less money but promise quicker and bigger results by adopting a method of "rolling a snowball" so that they can provide more products and funds in a fairly short period of time. 1) Vigorously support the development of the rural commodity economy rather than using funds purely in relief work. 2) Substantially support development of the production of consumer goods and stimulate heavy industry to readjust its orientation toward services. At the same time, positive support should also be given to such fields which need funds as service trades, tourism, culture, education and hygiene. 3) Support existing enterprises which are carrying out technical transformation in an orderly way and do a good job in the technical transformation of enterprises producing consumer goods. Positive credit support should also be given to energy and transport and communications projects under the jurisdiction of state plans which ensure a quicker turnover of funds, promise bigger results and have business resources and the ability to repay. Practice shows that so long as the above-mentioned orientation and key points are upheld, it is very necessary to explore and open up new sources of revenue for the bank to use in granting certain medium- and short-term loans for buying and upgrading equipment to be used in replacement and renovation and technical

transformation. The total amount of the additional medium- and short-term loans for buying and upgrading equipment which was granted by the People's Bank in the 3 years 1979-81 constituted 10 percent of the total amount of the increase in loans. These credit funds were used mainly to replace and renovate equipment and in the technical transformation of old enterprises; about 70 percent were used to support the technical transformation of enterprises in the light and textile industries. This has played a fairly satisfactory role in boosting the production of consumer goods and promoting economic readjustment. With a big increase in the production of consumer goods--an important condition--market prices can thus be kept basically stable and the supply of currency can be reduced. Thus, it is justified to say that proper use of loans can boost financial revenue, accelerate withdrawal of currency from circulation and benefit the realization of the basic balance between finance and credit.

5. Do a good job in the overall balance between funds and materials. At present, the bank not only grants circulating fund loans but also extends fixed assets loans. In a situation in which the country has financial difficulties and the supply of currency in circulation is still excessive, will credit inflation emerge? This is a question which concerns some comrades and is also a problem existing in our practical work and calls for attention and earnest solution. Besides practicing strict planning and control over the scope, orientation and key points of the use of bank loans as we have stated above, it is also necessary to do a good job in the overall balance between funds and materials. First, the balance between the source and use of credit funds is achieved mainly in terms of the total amount and the makeup of funds. In terms of the total amount of funds, the amount of bank loans extended must correspond to the source of funds. This is a premise. It is still necessary to make an analysis of the conditions of long-term funds (for a year or longer), the officially listed bank capital, the relatively stable part of long- and short-term deposits which are continuously circulating, some being drawn out and some invested to make up the sources of funds. Second is the balance between bank loans and goods. The question whether or not credit inflation will emerge lies in whether or not a balance between bank loans and goods can be maintained and the specific terms of the loans, whether or not the required goods can be ensured, the materials are applicable and the economic results can be guaranteed rather than in the size of bank loans. Every bank loan must go through strict examination to see whether or not the source of goods has been fixed and whether or not fairly good economic results can be practically ensured. In our work, so as to prevent blind and duplicate production, we must act according to the plans stipulated by the state and we must not undertake new projects outside the state plan. Finally, it is still necessary to adhere to a unified balance between finance and credit.

6. Credit funds should be put under a unified plan and policy as well as control. In order to speed up construction, some localities and departments have undertaken more capital construction projects by pooling funds. Some localities have set up various forms of investment companies and run local banks in a disguised form; some have raised funds by asking banks to give them money not set in the previous planning. These actions, in fact, amount

to drawing out funds which have been deposited in banks and which have already been included in the banks' planning and also going in for non-budgetary capital construction or using funds for other purposes. Actually, as far as the enterprises and units are concerned, there are no idle funds. Their funds are all deposited in the bank. The bank takes account of such deposits in making credit plans. Withdrawal of the deposits of enterprises and units results in deficits in the arrangement of funds. Eventually, all parties concerned would reduce their deposits in the People's Bank with the result being either the issuance of more banknotes, which is not permissible, or the reduction in bank loans which are needed in normal production and circulation. This is to no avail. Therefore, money must be collected and funds raised through the bank. The People's Bank must earnestly carry out its responsibilities as the central state bank, be responsible for issuing banknotes, balance credit plans in a unified way and, while balancing, try hard to ensure increases in some places while decreases emerge in other parts and to eliminate deficits.

Our country has always practiced a centralized and unified policy in its financial undertakings. Practice in the 32 years since the founding of the PRC has proved that this policy conforms to the objective requirements of the socialist planned economy and the inherent laws governing the movement of credit funds. In accordance with the regulations stipulated by the State Council, credit matters must be centralized in the hands of banks and no localities are allowed to set up any financial organs without authorization. The financial organs approved by the State Council must also bring their credit activities into line with a unified plan, do a good job in the overall balance so that the issuance of currency can be put under strict control. Under a unified policy and plan as well as unified control, the various banks (including the People's Bank of China and specialized banks) must share the work and cooperate with one another, gradually reform the management system and work regulations and rules which are not suited to the needs of economic development, accumulate more funds, put the funds to effective use, transfer funds in a flexible way and make concerted efforts to raise the economic results of the funds. At the same time, it is also necessary to strengthen the supervisory functions of the bank, resolutely combat criminal activities in the economic field and resolutely struggle against all sorts of activities which violate financial and economic discipline. Strict checkups must be carried out on the various items such as loans, transfer closing accounts, receipts and payments of cash and revenue and expenditure of foreign exchange so as to stop the leaks. If problems crop up, they should be investigated thoroughly and dealt with seriously. It is necessary to sum up experience, further enhance the role of banks and make greater contributions to the socialist modernization program.

EARNESTLY CARRY OUT RESEARCH ON THE ECONOMIES OF DEVELOPING COUNTRIES

Beijing RED FLAG in Chinese No 11, 1 Jun 82 pp 18-22

[Article by Qian Junrui [6929 0193 3843]]

[Text]

I

Under the present international circumstances, it is of great importance to earnestly study the economic issues in developing countries. This can promote China's modernization construction, develop friendly cooperation with Third World countries, particularly in the economic field, and carry forward our common struggle to establish a new international economic order.

Since World War II, along with the upsurge of national liberation movements, many colonial and semicolonial countries have won independence one after another; the colonial system of imperialism has disintegrated and the Third World has mounted the stage of history as a new force. The national economies of developing countries have been growing and getting stronger. However, owing to the long-term rule, plunder and exploitation of colonialism and imperialism and the aggravating scramble of the two superpowers for spheres of influence and world hegemony, developing countries still face a lot of difficulties and problems in developing their economies. They have the solemn task of developing national economies and safeguarding political independence. China is a developing socialist country which belongs to the Third World. We have the same past experiences as other developing countries and shoulder a common fighting task together with them. We consistently give our sympathy and support to developing countries in their struggle to defend national independence, develop national economies and strive for social progress. The Chinese people will always stand side by side with the Third World countries and peoples and fight to break the old international economic order and establish a just and reasonable new international economic order.

The developing countries hold an important position in the world economy. They have three-quarters of the world's population and cover three-fifths of the globe. They are rich in natural resources and there are industrious and wise people in these countries. The people of developing countries have created prosperous economies with their own hands and have had brilliant ancient cultures. It is only since the 15th century that they successively suffered aggression, oppression and plunder by Western colonialism and imperialism and therefore were reduced to the status of poor and backward colonies, semicolonies and dependencies which supplied raw materials for imperialism, were markets for its products and gave it opportunities for investment. Since their independence, however, these countries have increasingly strengthened their capability to develop their economies independently. The economies of developed Western capitalist countries, on the other hand, have become more and more dependent on developing countries. Some 75 percent of crude oil needed in developed capitalist countries is supplied by the Third World. Some 40 percent of the crude oil needed by the United States and 90 percent of that needed by Japan, West Germany and France must be imported. Besides crude oil, 60 percent of their needs for major agricultural and mineral raw materials have to be supplied by developing countries. In particular, nearly all major strategic raw materials used in the nuclear energy, space navigation and electronics industries, such as beryllium, lithium, cobalt and other rare metals, must be imported from developing countries. In addition, developed Western countries must also depend on exporting capital and selling products to the Third World. It can be seen that, at present, in the interdependent world economy, most of the developed capitalist countries would find it difficult to subsist without the developing countries. Developing countries have great potential for developing their economies. Those who deem that Third World countries have no impetus from within to develop their economies but can only achieve development by depending on the "charity" of the developed countries are obviously people with wildly arrogant prejudice (some people in developed countries) or have an inferiority complex (some people in the Third World); their point of view is absolutely groundless.

Since their independence the developing countries have worked out and carried out a series of strategies, policies and measures to develop their national economies. For example, they have handled these matters: How a state should intervene in economic life to mobilize the initiative of various economic elements; how strategies and plans for economic development should be worked out in the light of local specific conditions and how unreasonable economic structures should be reformed; how to utilize, limit and supervise foreign capital on the basis of self-reliance, to import practicable technology and to develop scientific and educational undertakings; how to exploit manpower resources and to promote economic development; how to prevent the environment from being polluted and how to preserve the ecological balance; and so on. In the course of practice, they have had successful experiences and have drawn lessons from failures. Although the social systems of those nationalist developing countries are different from ours, and other socialist developing countries have their respective specific conditions, a lot of things about their past and present conditions are similar to ours. Therefore, we must earnestly study and make use of their experiences, so as to benefit the development of China's socialist economy.

Third World countries are all quite young. With the exception of a small number of newly developed industrial countries and petroleum producing countries, the level of their economies is, in general, still comparatively low; people still live in poverty and there are still many difficulties and obstructions in the course of their economic development. They need to strengthen economic cooperation on the basis of collective self-reliance and take a road that can lead to common prosperity. China is willing to stand together with the people of developing countries in the struggle against the exploitation, oppression, control and economic infiltration of imperialism, colonialism and hegemonism and against the imperialists' monopoly of the world economy. In doing so, we must devote great efforts to intensifying our study of the economies of developing countries so as to make clear our needs and capabilities as well as theirs. In accordance with actual conditions and characteristics, we can thereby expand our economic relations, develop economic cooperation and jointly strive for a common prosperity on a practical, equal and mutually beneficial basis. This is one of the basic principles of our foreign policy. It is our unshirkable sacred duty to do a good job in this field.

II

The rise of the Third World and the increasingly heightened position of developing countries in the world economy are new phenomena arising since World War II. This has posed many new questions in theory and in practice. What are the main questions that we should study at this time? We believe that the following are of importance and worth emphasizing:

1. The economic control, infiltration and exploitation of developing countries by the superpowers and multinational corporations and related theories, policies and measures. Since World War II, along with the disintegration of the colonial system of imperialism, superpowers and international monopoly capital have changed their tactics in their attempt to pursue neocolonialism. In particular, as capital has become more and more internationalized, multinational corporations have rapidly expanded their domain in developing countries. Using various means and methods, imperialists and hegemonists have carried out economic plunder, exploitation and domination in developing countries. They have cultivated their cohorts, plotted subversion against legal governments in developing countries or even committed aggression against them. The Soviet hegemonists, who call themselves "natural friends" of the Third World, under the pretense of "assisting" national liberation movements and carrying out "internationalism" and "the international division of labor" also spare no effort in infiltrating and controlling developing countries politically, economically and militarily, plundering their raw materials, and occupying their strategic areas. They have even sent troops to invade Third World countries. All this is conducted under the cover of a greatly deceptive theory and realized by means of extremely sinister tactics and ruthless measures. We must seriously study and thoroughly expose their acts and wage a blow-for-blow struggle against them.

2. The strategies and different modes of economic development in developing countries and their theoretical basis. In the postwar period, developing countries have worked out and carried out various strategies for development in line with their respective conditions, thus forming

varied modes of development. In terms of strategy, some practice exporting primary products; some practice import substitution, others practice export substitution; some give priority to heavy industry, others lay stress on the development of light industry and agriculture. In recent years quite a few developing countries, by summing up their past experience in development strategies, have embarked on working out and practicing strategies oriented to satisfying the basic needs of the people. These strategies and modes of development vary in content. Each has both advantages and shortcomings. In the course of practice, some have promoted economic development; some have yielded few benefits; others have even met with great setbacks. The crux of the reasons for the above different results is whether development strategies in these countries are derived from a correct guideline and whether they are suited to their own specific conditions. At present, we are making a further study of the specific conditions of our country and are working out and practicing a strategy for developing our socialist economy. Under these circumstances, it is imperative for us to study the conditions, contents, results and theoretical basis of various development strategies and modes practiced in developing countries and use them as our references.

3. The problems of population growth, economic development and pauperization in developing countries. Since World War II, developing countries have achieved certain successes in developing their national economies. The average yearly growth rate of their gross national product was 4.7 percent in the 1950's; 5.6 percent in the 1960's; 5.3 percent in the 1970's; higher than the corresponding rates--4.1 percent, 5 percent and 3.1 percent--of developed Western countries. In spite of this fact, because of their weak economic foundations coupled with a higher population growth rate than in developed Western countries, the majority of developing countries still lag far behind developed Western countries in terms of gross national product per capita. The gap is becoming even wider. Calculated at 1950 constant prices, the per capita GNP of developed countries in 1950 was $3,840, while that of developing countries with low incomes was $164. The former was 23 times more than the latter. In 1980, per capita GNP of developed countries increased to $9,684, nearly 40 times that of developing countries with low incomes which was only $245. The difference thus increased from $3,676 to $9,439. It is particularly noteworthy that because the population of developing countries grows faster than grain output, many of them have changed from grain exporting countries to grain importing countries and the degree of self-sufficiency has markedly dropped. In particular, hundreds of millions of people in Sub-Saharan African areas and in South Asia are still living in starvation or semistarvation. Grain has become a prominent problem in many developing countries. This problem not only severely affects economic development, but also the stability of the political situation. Therefore, the study and solution of the problems of population, grain and pauperization brooks no neglect.

4. The economic cooperation between developing countries. In order to fight against control and exploitation by superpowers and international monopoly capital and jointly overcome difficulties in the course of their economic development, developing countries have displayed the spirit of

collective self-reliance and, with solidarity and militancy, have strengthened their economic cooperation. They have formed many regional cooperation organizations and organizations of raw material producing or exporting countries, such as the Association of Southeast Asian Nations, the Andean Group, the Economic Community of West African States, the Organization of Petroleum Exporting Countries and so on. In the struggle in the international economic realm, they coordinate their stands and policies and fight against exploitation and plunder by imperialism, colonialism and hegemonism. In the course of developing their national economies, they coordinate their development plans and strengthen economic cooperation in all fields with a spirit of solidarity and mutual aid. At present, all kinds of economic cooperation organizations of developing countries are developing vigorously; they have occupied increasingly important positions in the realm of international economy. This shows the strong power of developing countries in their economic cooperation with the spirit of collective self-reliance. However, owing to the problems related to economy, boundaries, nations and religions left over by the rule of imperialism and the imbalance in economic development between them, coupled with the fact that imperialism and hegemonism are sowing dissension, developing countries meet many difficulties and obstructions in the course of developing their economic cooperation. It is extremely important, therefore, to find how developing countries can remove all external interference, frustrate plots to split their ranks and eliminate internal disputes with the spirit of setting store by overall interests, seeking common ground on major issues while reserving differences on minor ones, and mutual understanding and accommodation. Thus the economic interests of different countries can all be taken into account on the basis of equality and mutual benefit and the development of economic cooperation between developing countries can get further impetus. This matter calls for our study from the angles of theory and strategy.

5. North-South dialogue and the issue of establishing the new international economic order. Although the colonialist system of imperialism has basically disintegrated since World War II, the unfair and unequal old international economic order which merely protects the interests of imperialism and international monopoly capital still exists. It has seriously prevented the national economies of developing countries from developing smoothly. In order to change this state of affairs, in the postwar period, especially since the 1970's, with the Group of 77 as the backbone, developing countries have struggled to break the old international economic order. Through intense struggle and repeated negotiations, the position of developing countries in the United Nations and in other international economic organizations and conferences has been raised. They have also strengthened their independent decisionmaking power as regards limiting activities of foreign monopoly capital and multinational corporations. In negotiations and conferences, they have, with developed countries, reached some agreements which are beneficial to developing countries, and have gained some substantial benefits in overcoming their economic difficulties. These facts show that developing countries have become a major force in the international struggle of anti-imperialism, anticolonialism and antihegemonism and the struggle to establish a comparatively fair and reasonable new international

economic order. North-South dialogue, however, has made only slow progress because most of the developed Western countries adopt dilatory tactics and the Soviet Union refuses to recognize its duty. At present, gaining a clear idea of the standpoints, tactics and policies of the superpowers and developed capitalist countries in North-South dialogue, particularly finding methods to strengthen the internal unity of developing countries, working out a correct strategy and tactics in accordance with scientific guidelines which tally with realities, waging struggle in a reasonable, profitable and methodical way and making unremitting efforts to establish a new international economic order have become very important tasks of developing countries. Chinese people are, of course, willing to make the due efforts in this regard.

III

What are the basic principles guiding us in studying the above important questions?

First, after collecting a large quantity of reliable information, we must apply Marxist standpoints, basic viewpoints and methods in conducting intensive and thorough analysis and study from the high plain of theory and strategy in a realistic manner and by means of dividing one into two, so as to correctly realize the historic position and basic conditions of developing countries. We should also sum up their experiences and draw lessons from the course of their national economic development and go deeply to learn the laws governing their national economic development.

Marxist classical authors have made a host of profound expositions on the economies of colonial and semicolonial countries in the light of the historic conditions of their time. For example, Marx has expounded on the plunder and exploitation of colonial and semicolonial countries by colonialism; Lenin put forward the theory on national liberation movements in colonial and semicolonial countries and national economic development after their political independence. Comrade Mao Zedong enumerated the theory on the division into three worlds and, taking China as a typical example, he explained that the bourgeoisie in colonial and semicolonial countries can be divided into the comprador bourgeoisie and the national bourgeoisie and also noted the duality of the national bourgeoisie and the essential importance of the peasant problem in these countries. All these are of great guiding significance in our study of the national democratic revolution and the development of the national economy in the broad developing countries. Many of these viewpoints are still our major theoretical basis in analyzing the economies of developing countries. Of course, since World War II things have changed greatly. We cannot rigidly adhere to a few prepared conclusions. Instead, we should base ourselves on the new conditions, study new problems and draw new conclusions, creatively developing scientific theories to guide our acts. We should, therefore, on the one hand oppose the dogmatist method which does not proceed from realities but merely looks for conclusions from books and, on the other hand, oppose the erroneous attitude that varies from Marxist basic theory and totally and uncritically accepts the bourgeois theory. At present, the most important thing for us is to widely and intensively absorb knowledge of the past and present economies of developing countries, collect detailed material and make an analysis by means of discarding the dross and selecting the essential, eliminating the false and retaining the true, proceeding from the outside to the inside, and proceeding from one to the other, so as to discover the nature of things and draw scientific conclusions in the unity of history and logic.

Second, we must earnestly acquaint ourselves with foreign theories and methodology on the economic development of developing countries. Since former colonies and dependencies won political independence one after another, Western bourgeois economists have intensified their study of the economies of developing countries in order to protect the colonial interests of imperialism in these countries and regions. In accordance with Keynesian theory, they have laid emphasis on the key function of state intervention and expanding demand. They peddle to developing countries the "models" of economic development designed by them, the most famous among these being the "Harrod-Domar model." It should be pointed out that some of their methods in analysis are indeed worth taking as our references. In general, however, these theories do not tally with the realities in developing countries. Some are even designed for the exploitation and plunder of developing countries. For example, the theory of "equilibrium of international demand" put forward by Western scholars deems that trade between developed countries and developing countries is conducted on the basis of exchange of equal value without exploitation. Progressive scholars in developing countries have criticized this theory. This criticism contains many reasonable factors which are worth our serious consideration. But some people in developing countries put forward a theory of "center and margin" in which developed capitalist countries are taken as the "center" of the world, while developing countries are only viewed as the "margin" which has no inner impetus and can only seek development by attaching itself to the "center." This theory is wrong in both system and methodology. If the economies of developing countries have to circle the "center"--developed capitalist countries--then they will never shake off their economically dependent position. Some other people go to another extreme by advocating "severing all relations with Western countries." Both these theories go against the general tendency of contemporary economic development. Thus, both are harmful.

The "theories" mentioned above influenced policymaking of the governments of developing countries to varying degrees. Many developing countries have worked out their respective development strategies and policies under the guidance of this or that theory. Some have achieved a certain success and promoted their economic development; others have met with setbacks and failures and got their national economies into trouble. In some countries where the economy has developed at a fairly high speed comes another problem--aggravating polarization and sharpening social contradictions.

Therefore, it is necessary to concretely analyze foreign theories and methodology on economic development. We should assimilate whatever is reasonable and, with the spirit of seeking truth, point out what is wrong and why it is wrong. We should also seriously criticize what is reactionary. Each school of foreign "development theories," and each part of the development theories in developing countries together with its methodology should be taken seriously. We should gain a clear idea of its origin and development, content and essence. Only thus can we correctly study the strategies and modes of developing countries in developing their economies and absorb valuable scientific elements, so as to speed up the economic construction of our country.

Our research on the economies of developing countries has just begun. We need to mobilize the cadres who are concerned with foreign economies and trade and the comrades who are concerned with researching and teaching of world economy throughout the country to coordinate in collecting and sorting out materials and in carrying out thorough specialized study in a planned and organized way. Comrades who handle actual foreign economic work should strengthen their theoretical study and exploration, while comrades who are engaged in theoretical work should pay more attention to actual economic work. Only thus can one learn from others' strong points to offset one's weaknesses and closely combine theory with practice. At the same time, when possible, we should strengthen academic exchanges with foreign scholars, particularly progressive scholars of the Third World, in a planned way, so as to benefit our research on the economies of developing countries.

AN IMPORTANT REFORM IN THE SUPREME STATE ADMINISTRATIVE ORGANS

Beijing RED FLAG in Chinese No 11, 1 Jun 82 pp 23-26

[Article by Xu Chongde [6079 1504 1795]]

[Text] The State Council of the PRC, or the central people's government, by means of exercising its supreme administrative power, handles our country's major domestic and foreign affairs and realizes the state function of the people's democratic dictatorship. The work of the State Council is directly related to the success or failure of our country's socialist modernization. Thus, the reform and perfection of the administrative system of the State Council is of far-reaching significance.

There are only three articles under the section "The State Council" in the present constitution, which was adopted in 1978. However, they have been increased to nine in the draft of the revised constitution (referred to below as the draft) after being revised, adapted and redrafted. The content is more substantial than the present constitution and represents a new development. Regarding the nature and status of the State Council: It is the executive organ of the highest organ of state power and is the supreme state administrative organ. This basic point was determined when our country's first socialist constitution was promulgated in 1954. The later two constitutions were formulated on the basis of the first one. The objective of this revision is to more perfectly display the above-mentioned nature of the State Council and further strengthen its status and give play to its role. This kind of revision on the one hand reflects the continuity of our country's constitutions and on the other hand shows the vitality of our country's organs of power, which are incessantly developing and perfecting.

Based on the original constitution, the draft has made great changes, mainly regarding: 1) the organization of the State Council; 2) the leadership system of the State Council itself; 3) the tenure of office of the State Council leading personnel; 4) the power and function of the State Council; 5) the establishment of an auditing organ. In addition, since the State Council is the organic constituent of the whole country's structure, the series of reforms of other organs, such as the enlargement of the function and power of the NPC and, in particular, the Standing Committee of the NPC, the restoration of the PRC chairman, the establishment of the Central Military Commission, and so on, will definitely exert certain influence on the structure and activities of the State Council. In short, the draft has reflected the reforms of the State Council in many ways and cannot be discussed in detail in this article. Let me give my view on several questions.

The change of the structure of the State Council proposed in the draft is a summation of experiences over a long time in the past and is also a reflection and affirmation of the results of the reforms in the structure of the State Council which are being carried out at present. The structure of the country's highest administrative organs has undergone three stages of development.

The first stage was the government administration council of 1949-54, which was a committee system. The council consisted of one premier, several vice premiers, a secretary general and several administrative councillors. Administrative councillors could hold concurrent posts as directors of council commissions or ministers, who were not necessarily administrative councillors. That is to say, the directors of council commissions or ministers were not necessarily members of the administration council. Such a regulation was made at that time because the administration council had 30 subordinate ministries, committees, councils, departments and administrative offices. Besides the administrative councillors who did not belong to any ministries, if all the ministers and directors were administrative councillors, there would be too many administrative councillors. Thus, it would be more difficult to conduct administration council meetings. The structure and work methods of the administration council have provided valuable experience for the reform of the leadership system of the present State Council, the appointment of state councillors and the establishment of a standing committee of the State Council which consists of a premier, vice premiers, state councillors and a secretary general.

The second stage was a system stipulated in the 1954 constitution. Under this system, the State Council consisted of a premier, several vice premiers, all ministers, directors of all commissions and a secretary general. This system lasted the longest. There have not been any changes except that the secretary general was deleted from being a member of the State Council in the 1975 and 1978 constitutions. It was different from the structure of the administration council in that there were no committee members holding either concurrent posts as ministers or ministers without portfolio; and all ministers and directors of commissions were without exception members of the State Council. Therefore, we called this an organizational form of ministerial meeting. The advantages of this system were that all ministers of the State Council and directors of all commissions were members of the plenary meetings of the State Council. They could participate in the critical discussions of matters of overall importance under the charge of the State Council. Such a form, in principle, is still kept by the current draft of the revised constitution.

The structure of the State Council stipulated in this draft of the constitution is the third stage of the development of our country's highest administrative organs. Looking at Article 86 of the draft--on members of the State Council--it is different from both the administration council and the original State Council. It is based on the two kinds of structures which have been practiced by the country's highest administrative organs since the founding of the country and has absorbed their strong points. It is also a development of the former structure. In accordance with the stipulation of the draft, the leadership system of the State Council itself after being reformed is called the premier responsibility system. This system is a form of what we usually refer to as a directors responsibility system. Its main characteristics are:

First, the number of vice premiers is reduced to the minimum, appointing state councillors so that the leadership system is more centralized. The draft explicitly points out: "The premier directs the work of the State Council. The vice premiers and state councillors assist the premier in his work." This shows that the premier holds the dominant post in the leadership system of the State Council although the State Council is under collective leadership. The vice premiers and the state councillors are assistants of the premier. The state councillors are entrusted by the premier to be in charge of certain work and certain major tasks. They are also entrusted by the premier to carry out important foreign activities.

Second, the draft stipulates that "the premier calls and presides over the regular meetings and the plenary meetings of the State Council." This kind of meeting is different from that of other organs which practice the collegiate system of work procedure and method of making decisions. The status of each member of the organs which practice the collegiate system is fundamentally equal. While making decisions, each member has the same right to vote. But it is different in the premier responsibility system. The premier not only has the power to call and preside over the regular meetings and plenary meetings of the State Council, but also has the power to gather correct opinions and make the decision of the State Council during the meetings in which major problems are discussed fully by all members.

Third, the draft stipulates that the premier is to be appointed by the chairman of the People's Republic of China. The chairman appoints the premier with the approval of the NPC. In the past, people have not paid much attention to the significance of such procedures. As a matter of fact, the chairman is the symbol and representative of the state. Therefore, the premier actually receives the mandate from the state. He is to represent the interests of the people in organizing the government and in bearing the responsibility of managing state affairs and leading the highest administrative organ. In the future, after the restoration of the post of chairman of the PRC, this solemn legal procedure of appointing the premier will also be restored and the responsibilities of the premier will be made more explicit. On the other hand, the premier has the right to propose to the highest organ of state power the appointment of State Council vice premiers, state councillors, ministers, directors of various commissions, the chief auditor and the secretary general. When he thinks necessary, the premier also has the power to propose to the highest organ of state power the dismissal of the function and power of these people. In light of this, we see that the administrative responsibilities of all people involved are clearly laid down.

It can be readily seen that the draft has changed the former leadership system of committee members and the system of ministerial meetings. It has further strengthened the status and duties of the premier. Undoubtedly, this is a significant change needed to meet the objective demands of the four modernizations drive. It has realized the new development of our country's administrative and management system.

Collective management is feasible under certain conditions. Lenin has figuratively called such a system a "preparatory class" in learning management. ("Collected Works of Lenin," Vol 30, p 420) It is, however, liable to create multiple leadership with no one assuming ultimate responsibility. According to Lenin, the system of collective leadership should be transmitted to the system of individual responsibility. This is a demand of the objective nature of execution and administration. In the light of our country's situation, the State Council is the executive organ of the highest organ of state power and the State Council enforces the laws and decrees formulated as a result of the collective discussions of the NPC and its Standing Committee. When the state decisions which are made on a democratic basis by means of collective discussions are to be enforced, the executive organs must combine forces and rapidly implement them and demand explicit personal responsibilities in the course of enforcement. Otherwise, the enforcement of the laws and decrees will be procrastinated and thus be unable to bring about prompt and correct results. Lenin has acutely pointed out: "At best, corporate management involves a tremendous waste of forces and is not suited to the rapid and accurate work demanded by the conditions of centralized large-scale industry." ("Collected Works of Lenin," Vol 30, p 279) He also pointed out: "The main principle of administration is—a certain person is fully responsible for some specified work." ("Collected Works of Lenin," Vol 36, p 554) Lenin's expositions are perfectly correct. Our country's State Council shoulders the heavy task of organizing and realizing the socialist modernization drive. It leads all ministries, all commissions in local people's governments at all levels in their work, leads in an all-round way and manages the state's economy, finance, monetary affairs, commerce, education, science, culture, public health, sports, civil affairs, public security, diplomatic activities, state defense, urban and rural construction, Overseas Chinese affairs and so forth. Under the circumstances that the objective situation is ever changing, the socialist cause is rapidly developing, both domestic and foreign work are tough and complicated and various problems and all kinds of contradictions are cropping up one after another, if we do not clarify the responsibilities of the individuals, strengthen the authority of the premier or stress a high degree of centralization on the basis of democracy, the State Council will not be able to give play to its high efficiency or to successfully fulfill the tough tasks.

As viewed from our country's current situation of administration and management, there really exist the problems of overstaffing in government organizations. There are more hands than are needed, complicated work procedures, petty disputes, incidences of shifting responsibilities onto others and doing things in a sluggish way, and not being responsible for work. All this is out of tune with the demands for socialist modernization and is totally intolerable. The future of our country will be dreadful to contemplate if we continue to content ourselves with endless collective discussions, produce a tremendous amount of documents, and spend a lot of time reading documents, or if we lack appropriate centralism and make many different policies which contradict each other. Comrade Deng Xiaoping pointed out that, in a certain sense, reform of the government structure is a revolution. If we want to create more prospects for our cause, we must carry out this important reform with revolutionary spirit. The draft explicitly points out that "the State Council implements the premier responsibility system." This is one of the essential and correct measures for launching this revolution.

Some people think that the premier responsibility system contradicts democratic centralism. They think that the premier responsibility system is antagonistic to the system of democratic centralism. This is a purely wrong understanding. There was a similar view when Soviet Russia discussed the question of restructuring in 1918. At that time and in accordance with such a view, Lenin clearly expounded on the theory that collective discussion and the setting up of a strict responsibility system are two categories of democratic functions ("Collected Works of Lenin," Vol 27, p 193), and he solemnly pointed out that it is extremely wrong to hold the view that a strict responsibility system is incompatible with the democratic system and collective management. As viewed from the draft of the revised constitution, the premier responsibility system is actually not contradictory to the system of democratic centralism in principle. It is because under the premier responsibility system, decisions on major problems are to be discussed by all members during the regular meetings of the State Council and the plenary meetings of the State Council. The regular meetings of the State Council play a special role in exercising collective leadership. As Comrade Zhao Ziyang said in the "Report on Problems of Reforming Structure of the State Council": "The regular meeting of the State Council is the routine leading organization of the State Council. Under the direction of the premier, it is responsible for leading various kinds of important work within the scope of power of the State Council and making decisions." In light of this, the premier responsibility system is set up on the basis of giving play to the role of the collective and is a leading cadres' responsibility system which is integrated with the collective. Lenin said: "We need committees to discuss certain basic problems and personal responsibility and personal leadership to avoid procrastination and shirking of responsibility." ("Collected Works of Lenin," Vol 30, p 213) Our country's premier responsibility system in the State Council is exactly like this. It is, certainly, a system of centralism; however, it is a system of centralism on a democratic basis and is a form to manifest the system of democratic centralism. Therefore, it conforms with our country's basic organizational principles.

Similarly, all ministries and commissions which are subordinate to the State Council practice the system of decisionmaking by the leading cadre. Regarding this single point, we have always complied with it although there was no written stipulation in the constitution. However, it is clearly stipulated in the draft that "all ministries and all commissions practice the minister or director responsibility system." Now that the number of deputy positions and vacant positions is reduced, the personal responsibility of the department heads will become greater in actual work.

Among the various subordinate departments of the State Council, there is the establishment of the auditing organ which is to independently exercise the power of auditing and supervision under the leadership of the chief auditor. This is a new characteristic of the draft on reform of the administrative organs. By means of supervising the accounting procedures and the qualifications of the auditors themselves, the auditing organ exercises overall supervision over financial and economic activities. Therefore, the auditing department should be separated from the department of financial accounting in modern economic management. The objective of auditing supervision is to ensure that the state's capital is more rationally and legally gathered and utilized and that it brings better economic benefits. It also helps to strictly enforce financial discipline and prevents possible flaws that may occur in the state's financial and economic activities and is thus conducive to the socialist modernization drive.

Since ours is a vast country with a dense population, there are several hundreds of thousands of enterprises and an enormous number of work units and administrative organs, and it is necessary to practically protect the state's huge capital and property. For many years in the past, because there was neither a perfect legal system nor a complete auditing system or an organ in charge of auditing supervision, unsavory trends appeared in the area of financial and economic management. There was also malpractice which made serious inroads on the state's property. Thus, it is extremely necessary to perfect the auditing system and set up an independent organ in charge of auditing supervision. In the wake of the development of socialist construction, and in the wake of the expansion of the decisionmaking rights in the localities, departments and enterprises and the adoption of open economic policies, new contradictions crop up incessantly, and thus the demand for the establishment of an organ in charge of auditing supervision has become more urgent. The draft stipulated: "The State Council will establish auditing organs to audit and supervise finance and the financial revenue and expenditure of the people's government at all levels and of the financial and monetary organizations, enterprises, institutions and organizations under the people's government." This complies with the demand of China's financial and economic management and the building of the four modernizations.

In order tc continue to make the best possible use of the State Council and bring the role of the highest administrative organ into full play, the draft has, to a certain extent, expanded the authority of the State Council. One relatively important item is that the State Council has the authority to stipulate and approve administrative laws and regulations. The State Council is the executive organ of the highest organ of state power. In the course of carrying out laws and decrees, the State Council must make administrative strategic decisions and promulgate regulatory documents in accordance with the actual complicated situations. This is called administrative laws and regulations. This is the first concept stipulated in the draft on China's administrative laws and regulations. In our actual life, the administrative laws and regulations deal with a wide range of things. According to the stipulation of the draft, the State Council has the authority to use the administrative laws and regulations to define the obligations and duties of all ministries and commissions. This shows that the authority of the State Council has expanded.

As a matter of fact, that the State Council has the authority to stipulate and approve administrative laws and regulations does not mean that the State Council has legislative power, nor does it mean that the State Council is a legislative body. Although determined by the nature and characteristic of the administrative power, in actuality, there are many more administrative laws and regulations than laws and decrees. However, administrative laws and regulations are after all different in principle from laws and decrees. First, laws and decrees are stipulated by the highest organ of state power. In China, only the NPC and its Standing Committee, which are state legislative organs, can exercise state legislative power. Moreover, administrative laws and regulations are but administrative regulations promulgated by the State Council in the course of implementing the law so that the law will be carried out smoothly. Second, from the point of view of what binds and compels, although administrative laws and regulations are almost similar to laws and decrees, administrative laws and regulations must abide by laws and decrees and must not contravene the law. If there is any contradiction, the NPC Standing Committee can change and repeal the administrative laws and regulations. The difference between administrative laws and regulations and laws and decrees is manifested in the subordinate nature of the State Council to the highest organ of state power. In China, democratic centralism and the system of "integrating discussions with action" are the basic principles of the socialist political system. Even though this is the fact, the draft has, for the first time, defined the status of administrative laws and regulations in the constitution. We cannot deny that this is an important feature.

The reform of China's highest administrative organ manifested in the draft of the revised constitution is very important. We can predict that the working system of China's government will continue to improve and its efficiency will be greatly enhanced. This will certainly perfect and strengthen the organization and leadership of the socialist modernization.

CHERISH THE MOTHERLAND'S HONOR, SAFEGUARD NATIONAL DIGNITY

Beijing RED FLAG in Chinese No 11, 1 Jun 82 pp 27-30

[Article by Wang Bingnan [3769 3521 0589]]

[Text] Cherishing the honor of the motherland and safeguarding national dignity is a sacred duty of every Chinese. In "The Draft of the Revised PRC Constitution," it is written: "The citizens of the PRC have the obligation to safeguard the motherland's safety, honor and interests. They must not do anything that harms the safety, honor and interest of the motherland." It is of great significance at present that we strengthen education of the cadres and masses in this aspect.

Over the past few years, by adhering to the principle of maintaining independence and keeping initiative in our own hands, and reconstructing our motherland through self-reliance, we have implemented the open-door policy and scored positive results in promoting the building of the four modernizations and enhancing mutual understanding and friendship with people of other countries. In our ever increasing contacts with foreign countries, many of our cadres and masses have displayed the lofty style of associating their words and actions with safeguarding the honor of the motherland and the dignity of the nation, and there have been many lively and stirring deeds to win the acclaim of foreign friends. On the other hand, some unhealthy phenomena have also appeared--some have done such things as worshipping things foreign and toadying to foreign people, bowing and scraping, forfeiting their self-respect and losing their personality and national character. These people have no sense of decency. By discrediting the honor of the motherland and hurting the dignity of the Chinese people, they have not only aroused the indignation of the broad masses of people within the country, but they have also deeply disturbed many international friends, patriotic Overseas Chinese and Hong Kong and Macao compatriots as well as having aroused their extreme concern. Although these phenomena have only appeared among a small handful of people, they exert a very bad influence. If we let them run rampant and do not strengthen political and ideological education and take effective measures, the body of our party and country will be seriously corroded and the modernization program will be endangered.

There are social and historical reasons for phenomena such as worshipping things foreign and toadying to foreign people. First of all, China experienced a semifeudal and semicolonial society for more than a century and some people have not yet got rid of their capitalist ideology and the colonial slave mentality. Second, the 10 years' internal disorder of the "Great Cultural Revolution" seriously damaged the fine traditional ideology and work style of our party. The patriotic sentiments, moral concepts and sense of discipline of many people become blunted to the extent that some even completely ignore them. Furthermore, since putting the open-door policy into effect, we have underestimated the corrosion caused by corrupt bourgeois ideology and ideological and political work have lagged behind. And the precautionary measures are imperfect. For these reasons, when they confront the dazzling bourgeois human world with its myriad temptations some irresolute youths without experience in life cannot resist being corroded by corrupt bourgeois ideology and, as a result, they are shot by "sugar-coated bullets" and fall captive to bourgeois ideology. Therefore, to overcome the ideology and acts of worshipping things foreign and toadying to foreign people, we must educate the people, particularly the youth, to correctly understand the motherland and our obligations and responsibilities toward our motherland and foster a high degree of national pride and confidence.

Our country is a great country and our nation is a great nation. Ours is a country with a vast territory; our mountains and rivers are magnificent; our products are abundant and we have a long history. Generation after generation, the children of China have been living, working and struggling in this land and we have created a magnificent national culture. For a considerably long period of history, China's science and technology ranked among the first in the world and we made great contributions to the development of human society. According to the statistics of Joseph Needham, the British scholar and author of "History of China's Science and Technology," more than 30 important Chinese inventions were spread to Europe and other regions of the world from the opening of the Silk Road to the end of the 18th century. As Chinese, we should feel greatly honored. The Chinese nation is not only famous for diligence and intelligence, but also for its patriotic spirit and revolutionary tradition. Over thousands of years, many national heroes and patriots who were "impervious to the temptation of wealth and high position, not to be shaken or modified by poverty or destitution, and did not succumb to military force" have emerged to safeguard the nation's honor and dignity. Particularly in modern Chinese history, national heroes and patriots are as bright and abundant as the stars. After Western capitalist countries blasted open China's gate with their cannons in the Opium War, foreign colonialists colluded with the Chinese feudal ruling class and willfully trampled on China. As a result, China was in an abyss of misery for a long time. However, the people of all nationalities in China never surrendered and they resisted foreign invasions many times. There are many heroic and moving deeds. People like Lin Zexu, Hong Xiuquan, Kang Youwei, Tan Sitong and Sun Yat-sen were outstanding representatives of the Chinese people during this period. It is exactly because the Chinese people indomitably advanced wave upon wave to resist invasion that, although large and small imperialist countries of the world united to invade and suppress China, they could not destroy China. Since the birth of the CCP, under the guidance of Marxism-Leninism, the glorious patriotic tradition of the Chinese people has been further inherited and brought forth. The CCP led the Chinese people to wage some extremely arduous struggles and finally overthrew the three big mountains and won national independence and liberation. Since then, the Chinese people have controlled the national power, become the masters of their country and resolutely followed the socialist path. This is the fortune, glory and honor of the Chinese nation. Thousands and millions of Overseas Chinese rejoice that the long period during which they were squeezed out and discriminated against is now over.

Since the founding of the PRC some 30 years ago, although our country has made mistakes and suffered setbacks, we have scored significant results in economic construction. This is obvious to all and is universally acknowledged. When new China was first established, we inherited from old China a country in a complete shambles. The industrial base was very weak, the equipment and installations were obsolete, the technology was backward and the level of productive forces was extremely low. However, after 30 years' arduous struggles, the Chinese people have brought about profound changes in various aspects. Basically, we have an independent and relatively complete socialist industrial system and national economic system. We could not manufacture accurate or large-sized machine tools just after liberation, but now we are able to manufacture 270 varieties of relatively complete machine tools. We are not only capable of manufacturing automobiles and airplanes, but also atomic bombs, guided missiles and manmade satellites. Agriculture in our country has also made relatively great progress and we have basically solved the problem of feeding our 1 billion population. On the basis of the continuous development of industrial and agricultural production, there has been a significant improvement in the people's material and cultural life. Comparing China's standard of economic development with other developed countries, ours is still relatively backward. However, when compared with old China or other foreign countries, the rate of economic development over the past 30 years is relatively fast. The socialist system is not only superior to the semifeudal and semicolonial society, but also to modern capitalist society. This has been proven by evidence. Since the 3d Plenary Session of the 11th CCP Central Committee, we have summed up the positive and negative experiences and proposed a new path for the building of socialism that suits the actual situation of our country. There is no doubt that the superiority of China's socialist system will be effectively brought into full play.

At present, our motherland has obtained its proper place in the world. The age when foreigners treated the Chinese as "the sick man of East Asia" and "an inferior nation" is long gone. In our contact with people of other countries, we hold high the banner of opposing imperialism and hegemonism and safeguarding world peace; we adhere to proletarian internationalism, support the emancipation of the suppressed nations, the building of newly independent countries and the righteous struggles of the people of all countries; and we have won praise and high appraisal from people all over the world. As of now, we have established diplomatic relations with 125 countries and we have friends all over the world. The Chinese People's Association for Friendship with Foreign Countries has nongovernmental contacts with some 120 countries and has established friendly relations and connections with some 100 Chinese friendship associations from some 60 countries. In our nongovernmental friendly contacts with the people of other countries, we deeply feel their sincerity toward the Chinese people. They pin great hopes on China and try their best to cherish and safeguard China's international reputation. They are distressed that some people worship things foreign and toady to foreign people. Many foreign friends treat China as their second homeland. Some friends want to make a final trip to China even though they are very old; some sacrificed their precious lives for the Chinese revolutionary cause and for friendship with the Chinese people; and others had deep love for China during their lifetime and wanted to have their bones or ashes laid to rest in China. Many Chinese friendship associations in foreign countries have overcome difficulties regarding manpower, material and financial resources and launched various activities to introduce China to their own country and to promote mutual understanding and friendship with the Chinese people. How inspiring and exciting this is! Compare it with those people who have lost their national pride and who damage national honor and dignity. Do they not feel ashamed of themselves?

People usually compare their motherland to their mother. This is a sacred and solemn metaphor, and it vividly shows us the lofty status and great significance which is due the motherland in our minds. Through the ages, no one with a conscience would allow others to infringe upon the dignity of his mother, and no one with high aspirations would use words and deeds to bring disgrace on the reputation of his mother. People compare their motherland to their mother, that is to say, all people should ardently love their motherland as they ardently love their mothers. They should take safeguarding the honor and dignity of the motherland as their sacred duty and winning glory for the motherland as their solemn obligation. We are all raised with the milk of the motherland. Without the motherland, we would have nothing. In the poem "Singing for the Motherland," Martyr Chen Hui wrote: "O motherland, you raise me with your milk of love; and I will safeguard you with my flesh and blood," and Martyr Chen carried out his pledge. This is a model that we should always follow.

As a matter of fact, our motherland is still rather poor at present. This is a fact that we will not deny. However, how should we tackle poverty in our motherland? This is a question that tests our ideology and our sense of values. Can we reject the motherland because she is poor? Can we beg from foreign people? This is definitely not the proper attitude for a loyal Chinese. Although the conditions of material life in developed capitalist countries are better than ours, there is an insurmountable dark side of things and there are incurable social evils. Bourgeois society is a society of exploitation of man by man. Unemployment, drugs, robbery, murders...emerge one after another in capitalist countries. Many people have no ideals or convictions and lead lives devoid of meaning. It is exactly like a foreign friend said: Having money does not mean having happiness. The United States is one of the richest countries in the world;

however, many people dare not step out of their doors at night and muggings are not uncommon during the day. Although China is still relatively poor today, because of the establishment of the socialist political system and economic system, the people have a common ideal, common morality and common discipline and there is stability and unity in public order. This is something beyond comparison with any capitalist country. Our forefathers said: "Poverty cannot stifle one's lofty ideals." This is the glorious tradition of the Chinese people. The modern writer and professor Zhu Ziqing was very ill in 1948; however, he preferred to die of starvation than take food handed out in contempt. He refused to take any U.S. "relief grain." This illustrates the integrity of the Chinese people. Comrade Mao Zedong highly praised him and proposed "writing a eulogy for Zhu Ziqing." Thus the poverty of the motherland should not shake our pure hearts but should become a powerful motivating force inspiring us to work hard for the prosperity of the country. A specialist, who has rejected the superior living conditions in a foreign land and returned to China to take part in the socialist construction of the motherland, said: "The magnificent mansions and houses of others are not as good as our own humble houses. We must build our own magnificent mansions for the Chinese people." These words are very well spoken! They reflect the deep love of the Chinese people for their motherland as well as their aspiration to build up China. Every Chinese, especially the young people, should take these words as his motto.

A man should have his moral integrity and a country should have its spirit. The key to whether or not we can gain the respect of foreigners in our contacts with them lies in whether or not we can safeguard our own moral integrity and the spirit of our country. As the saying goes, people will respect you if you conduct yourself with dignity and people will have a low opinion of you if you have a low opinion of yourself. If we have self-respect, we will certainly win the respect of the honest foreigners. On the contrary, if we lose our integrity and the spirit of our country, as some people do, and assume an air of complacency and servility, then foreigners will look down on us. In having contacts with foreign friends, we ought to stress civility and courtesy and be friendly.

On the eve of winning the national revolution, Comrade Mao Zedong exhorted us to heighten our vigilance against the attack of bourgeois "sugar-coated bullets." Since then, he has taught us many times to combat Jia Gui's ideology and work style and enhance our national self-respect and self-confidence. Comrade Zhou Enlai also repeatedly taught us in dealing with foreign friends to abstain from great-nation chauvinism on the one hand, and to be neither overbearing nor servile on the other. We must "build up our integrity and confidence." Many workers, peasants, workers involved with foreign affairs, scientists and technicians, students studying abroad, actors and actresses and sportsmen have adhered to the teaching of Comrades Mao Zedong and Zhou Enlai. Whether in having contacts with foreign friends at home or abroad, or during working, investigating, studying, competing and performing abroad, they have tried very hard to make their words and deeds comply with the demand of safeguarding the motherland's honor and national dignity, and there have been many stirring deeds. This has inspired and encouraged the people of the whole country. When Wei Yu, a lecturer from

Nanjing Technical College who was awarded a doctorate by a technical college in West Germany, was studying in West Germany, she was wholly absorbed in her studies and led a very hard life. When people asked her why, she replied: "Foreigners always appraise the Chinese social system, education system and women's liberation by evaluating every individual Chinese. I must not let them down in my words and deeds." China's woman scientist She Baoguang effected a breakthrough in the study of hepatitis B vaccine during her advanced studies in the United States. However, she declined an offer of a high salary in the United States and resolutely returned to the motherland. "I want to work for the well-being of the people in the motherland." These are indeed lofty patriotic sentiments and awareness! In international competitions, the sportsmen of our country struggle for the honor of the motherland. Therefore, when they score outstanding results and when the five-star red flag is slowly hoisted on the playing field, people burn with righteous feelings and are moved to tears. The motherland's honor and the national dignity affect the sentiments of thousands and millions of Chinese because they have a mutual affinity and are closely linked with each other. History and evidence have proved that being Chinese is an honor of which we should be proud. No matter what the circumstances, we must never forget that we are Chinese, members of the great Chinese nation. Our words and deeds must comply with the spirit of our country and our moral integrity, and we must never do anything to harm the interest and image of the socialist motherland. This is the rudimentary and basic moral character that we should have.

The CCP Central Committee called on us to strengthen the building of socialist spiritual civilization while strengthening the building of socialist material civilization, so that the people of all nationalities in our country will become people with ideals and moral character, disciplined and well educated. Safeguarding the honor and national dignity of the motherland is an essential substance and demand of the building of socialist spiritual civilization. Every one of us must take practical actions to implement this demand. We believe that if we strengthen ideological and political education, if the leading cadres at all levels and the party members set an example for others to follow and if we seriously deal with the small number of people who violate party discipline and laws, the patriotism and internationalism of the people in our country will certainly be brought into full play. We will be able to overcome the unhealthy trends existing in foreign affairs, and thus the open-door policy will be implemented in a healthier way and we will score better results.

TRANSPORT WORKERS SHOULD STRIVE TO BECOME VANGUARDS IN PROPAGATING SOCIALIST SPIRITUAL CIVILIZATION

Beijing RED FLAG in Chinese No 11, 1 Jun 82 pp 31-33

[Article by Pan Qi [3382 3825]]

[Text] In the past few years, I have taken every opportunity to go to many places in Shandong, Liaoning, Zhejiang, Shanghai, Jiangsu, Guangdong and Beijing. Recently I have been to Shaanxi, Sichuan, Hubei and Anhui. I went from place to place to visit bus stations. Occasionally, I took a long-distance bus. Through direct contact with passengers, bus drivers, conductors and bus station personnel, I have come to know much about the situation and have heard various opinions. I have a strong impression: There are many problems in the present bus transport work but the most pressing problem to be solved is how to successfully carry out the building of socialist spiritual civilization.

Not long ago, Comrade Hu Yaobang pointed out: "Bus transport corps and bus drivers work in a decentralized manner. They are so decentralized that they are not easy to supervise. If we can handle them well, they will become a very good force that can propagate socialist spiritual civilization. If we cannot handle them well, they will propagate bourgeois pestilences and evil trends." Therefore we must first straighten out the mood of bus transport corps and bus drivers. He also pointed out: "Keeping to the positions of the party, the state and the people, we must set strict demands on them, explain to them the character and style appropriate to bus transport corps and bus drivers of a socialist country and require them to change their mood." Cadres, party members and YCL members should play their exemplary vanguard role and strive to become vanguards in propagating socialist spiritual civilization. Comrade Hu Yaobang further said: "The problem now is that the higher the ranking of an institution, the more unable it is to do ideological work. Such institutions are unable to do big jobs and then look down on small ones. They do not know how to do political and ideological work among the staff and workers on this front." He requires that we not only call for action, but also go into selected units, work with the workers for a specified period of time, maintain close contacts with the masses, set a good example, play an exemplary vanguard role and carry out criticism and self-criticism. He also requires us to pay attention to the livelihood of the staff and workers.

Comrade Hu Yaobang's opinions are quite correct and very important to bus transport personnel. He has pointed out a general aim for all comrades doing bus transport work: Be vanguards in propagating socialist spiritual civilization. Bus transport has the characteristics of being mobile and decentralized, of operating independently, of going into the depths of the cities and towns and of maintaining close ties with the broad masses. The style of bus transport personnel not only affects the production and livelihood of the people, but also makes a great impact on the mood of society. In recent years, the attitude and quality of service of the majority of bus drivers and bus station personnel have improved, and they are energetically propagating socialist civilization. But a certain number of bus stations and bus transport corps still have many problems, some of which are very serious. They are still far from the general aim of being vanguards in propagating socialist spiritual civilization.

On 1 December last year, I witnessed the situation which was described by a passenger who had written the following in the complaints book of a bus station:

"On my way to your bus station, I saw your bus stations along the way had something in common, which I will summarize in the following four sentences:

"1. Dirty--There is rubbish in and around the bus stations. It is unsightly.

"2. Disordered--Passengers do not buy tickets in an orderly manner. They do not queue up to board a bus, nor do they get off a bus and leave the station in an orderly manner.

"3. Bad--The working personnel are not responsible enough. They do not call the numbers of the buses. Once some passengers asked a station attendant when the next bus would arrive. He did not know that a bus had arrived.

"4. Unhealthy trends--Unhealthy trends are rampant. Acquaintances may go first without taking a number or queueing up. Passengers from other places have to wait longer even if their turn has come."

This passenger's opinion reflects the common characteristics of many bus stations. It also represents the opinions of the majority of passengers. The seriousness of this problem is evidence that many comrades in communications departments turn a blind eye and deaf ear and are apathetic to the above phenomenon. Some comrades "are not itchy even though their bodies are full of lice," and "are not worried even though they are debt-ridden." They do not care what happens. Some run away from trouble, cannot exert themselves, do not have enough faith in themselves and give up their posts. How can they become vanguards in propagating socialist spiritual civilization unless this spiritual phenomenon is changed?!

In 1980 and 1981, I went to Yentai in Shandong Province and Changshu in Jiangsu Province to visit two bus stations which had long been cited as Daqing-type enterprises. I particularly read all the opinions written in the complaint books by their passengers. Really, it was not unique but had its counterpart. Passengers' opinions about these two bus stations were so similar and serious. It was really astonishing! Most of the passengers' opinions about the bus station in Yentai were directed at the station's ticket sellers and working personnel who performed their duties very badly and abominably. There were even three cases of hitting and abusing passengers. Most of the passengers' opinions about the bus station in Changshu were also directed at the station's working personnel who performed their duties very badly and abominably. There were three cases of creating difficulties for passengers and of quarreling with passengers. A passenger wrote: "Let me ask: Where are your leaders' party spirit and mass viewpoint."

It has been 5 or 6 years since the smashing of the "gang of four," but these problems still took place in the two bus stations which had been cited as Daqing-type enterprises. What was the cause of these problems? And what did these problems show? I think we should find the root cause of the problems: What is the purpose of our socialist bus transport? Is it for the people or merely for production and profits? How should we transport enterprises handle the enterprise's relationship with shippers and passengers? Who are the masters after all? Who should transport enterprises serve? What are the standards for measuring the quality of our bus transport work? Who are the judges of our work? Should we look only at how the eight great indices are fulfilled, or should we also look at whether passengers and shippers are satisfied with our work? What is of particular importance is whether we should also build spiritual civilization and do ideological and political work well while in terms of attention we are paying attention to material civilization in tons and man in kilometers. These are fundamental questions in our communications and transport work. But some units and comrades often overlook these questions. They even confuse the relationship of these questions. Take these two Daqing-type enterprises for example. It was true that their achievements in fulfilling the eight great indices were substantial and that they enjoyed a resounding reputation after being cited as Daqing-type enterprises. But their attitude toward and quality of attending passengers were very, very bad. To make things worse, they beat up and abused some passengers. This was the fundamental reason why they were severely criticized by their passengers. Through the activities of the "five stresses and four beauties," and especially through this year's "all-people civility and courtesy month" activities, the two bus stations have made great progress in their work. This lesson is profound enough to learn from.

In the final analysis, socialist transport personnel must become vanguards in propagating socialist spiritual civilization, and the bus transport trade should take this as its own goal. But we must adopt a series of measures to achieve this goal. At present, we must particularly set forth specific requirements, because spiritual civilization is not at all empty or abstract. On the contrary, it is concrete and real. In particular, it must be manifested through the concrete actions of man. Do not our passengers say that our bus stations are dirty, in disorder, bad and full of unhealthy trends? To build spiritual civilization, we must first solve these four points. We must do a good job in public health, maintain good order, raise the quality of service and improve the attitude in attending to passengers. But the most fundamental thing is to solve the problem of unhealthy trends. If a bus station or a bus is full of unhealthy trends, it must be dirty, in disorder and bad. Once we have got rid of unhealthy trends, the problems of being dirty, in disorder and bad will also be solved.

Not long ago I went to the Zhuhai special economic zone in Guangdong Province. I saw the rules and regulations of the staff and workers of a car corps of the Shijingshan touring center. I believe their rules and regulations are very good and quite specific. For instance, working personnel are required to greet visitors with a smile. The driver must open the door and say "please" when allowing passengers to board the bus or car. Only after this may he board his bus or car and begin to drive. They have a set of rules for rewards and punishment. Absence from work without leave and taking care of personal matters during work hours are all recorded. The working personnel do not have to argue about the amount of money to be deducted from bonuses. Those who observe all of the rules and regulations are entitled to their rewards. Therefore everyone is very serious and energetic during work hours. I stayed there for 1 or 2 hours. No one was grinning impudently or loafing. If you go there, they will greet you with a smile. They are refined and courteous and are ready to answer any question. They have very few supervisors, but their work is in perfect order, and the staff and workers are full of vigor. The Zhuhai special economic zone in Guangdong Province is open to foreigners. It is close to the capitalist world. It is our outpost in the true sense of the word, and the working personnel there are our vanguards worthy of the name. They can perform their duties very well under such circumstances. Why cannot working personnel in other places do the same? So long as bus transport units all over the country can learn from this method, and so long as everyone is willing to work hard, rely on the party and the masses (including transport workers and passengers) to enable bus drivers, bus station personnel and ticket sellers to become vanguards in propagating socialist spiritual civilization, it is completely possible for our bus transport corps and bus stations to become outposts in building socialist spiritual civilization. Since the unfolding of the activities of the first nationwide "all-people civility and courtesy month," many bus stations and bus transport corps have been advancing in this orientation. So long as we can persevere, make the foregoing a regular and systematic practice and constantly consolidate and develop it, I believe Comrade Hu Yaobang's requirements on transport workers will certainly be realized.

> Editor's note: Pan Qi is an old comrade. He was vice minister in the Ministry of Communications. He has taken every opportunity to investigate bus stations and buses, and has made direct contact with passengers, bus drivers, ticket sellers and bus station personnel. He is

well acquainted with the opinions of the masses and constantly studies and improves his work. Leading cadres at all levels, especially middle-aged and young cadres who have just been promoted to leadership posts, are required to pay attention to and learn from his work style of going deep into the grassroots level and maintaining close ties with the masses. If leading cadres at all levels can perform their duties in this way, we will greatly reduce our bureaucratic work style and subjectivism, and there will certainly be a great improvement in our work.

GRASP FIRMLY THE CENTRAL LINK--IDEOLOGICAL EDUCATION

Beijing RED FLAG in Chinese No 11, 1 Jun 82 pp 34-36

[Article by Xin Cheng [2450 4453]]

[Text] Comrade Mao Zedong pointed out: "Ideological education is the key link to be grasped in uniting the whole party for great political struggles. Unless this is done, the party cannot accomplish any of its political tasks." ("Selected Works of Mao Zedong," Vol 3, p 1043) We should firmly grasp the central link of ideological education regardless of the time or what kind of work we are doing. Our party has a fine tradition in this respect. Our party itself is the product of the integration of Marxism-Leninism and the workers' movement. In this sense, it is appropriate to say that our party has built itself up by relying on ideological and political work. Ideological and political work has given impetus to our cause of revolution and construction so that it develops, grows and advances.

Millions upon millions of the masses have as their cause revolution and construction. Without the direct support and unswerving struggles on the part of the broad masses of people, it is impossible to achieve our goal. To encourage the broad masses of people to take part in the cause of revolution and construction in an active and orderly way, we should strengthen ideological and political work so that the masses will become people with ideals, morals and culture and who observe discipline. We should know that people's actions are governed by their ideology and that ideals and belief are their spiritual support. Their ideology and state of mind are connected with the orientation of their actions and effects. The fundamental task of our ideological and political work is to persist in using Marxism-Leninism-Mao Zedong Thought to arm the cadres and the masses, raise their consciousness and enhance their ability to understand the objective world. In so doing, we will arouse their enthusiasm to reform the objective and subjective world and to carry on the revolutionary spirit. They will enhance their revolutionary vigor to ensure the accomplishment of the task of revolution and construction.

In the past, Lin Biao and the "gang of four" had an ulterior motive in preaching the theory of the "omnipotence of spirit," saying that spirit and ideology might reverse the course of events and decide everything. This was truly ridiculous. After repudiating this idealist fallacy, the truth of materialism shines again. However, some comrades wrongly think that ideological and political work is no longer important. Such an idea is obviously wrong. The reasons why some of the theories of Lin Biao and the "gang of four" were ridiculous were that they reversed the relations between matter and ideology on the one hand and economics and politics on the other. This ran counter to the objective law of the development of matter. We uphold dialectical materialism and admit that matter decides ideology. Furthermore, we affirm the active role of ideology. We should not neglect ideological and political work because we have abandoned the idealistic theory of the "omnipotence of spirit."

Under the present socialist conditions in our country, there are various kinds of contradictions--the contradictions between the advanced and backward units, between right and wrong and between leaders and the masses. There are contradictions between the masses, state, collectives and individuals. In particular, there are the contradictions between the proletarian ideologies and various nonproletarian ideologies such as capitalist ideology, feudal ideology and so forth. Although the exploiting class has been eliminated as a class, its ideological influence will not disappear overnight. Furthermore, there are remnants of the exploiting class in our country, the dregs of Lin Biao and the "gang of four," and counterrevolutionaries. There is also the influence of and infiltration by Taiwan, Penghu, Jinmen, Mazu, Hong Kong, Macao and international capitalism. Therefore, class struggle within certain limits will exist for a long time. Our party members and cadres are still facing the danger of degeneration. At present, serious trends of bourgeois liberalization have occurred in various fields of the social life in our country; this is particularly so of the unlawful and criminal activities in the economic field. All these are the manifestation of the class struggle under new historical conditions. In order to promote the great cause of building our country into a socialist and modernized power, we should correctly understand and solve these contradictions and problems. To do this, we should never for a single moment cut ourselves off from ideological and political work. In particular, under the present conditions where the ideological influence of the exploiting class at home has not disappeared and where international capitalism still exists, the ideological field is not calm and tranquil. If we fail to strengthen ideological and political work, decadent bourgeois ideology will inevitably take advantage of this opportunity to intrude and corrupt our ranks. Over the past 2 years or so, unlawful and criminal activities in the economic field developed to a very severe extent and even some party members and cadres were involved in criminal activities. This situation was, apart from other reasons, attributed to the defects of our work. In other words, while implementing an open-door policy toward foreign countries and enlivening our domestic economy, we neglected the improvement of our management system and measures and did not do our ideological and political work well. Therefore, we should on no account neglect ideological and political work. We should conscientiously grasp it and persist in doing so for a long time.

Some think that so long as we do a good job in the economy and improve the people's material living standard, they will automatically excel in ideological work, and that there is therefore no need for us to grasp ideological work. This is really an oversimplified way of treating the relationship between economic development and ideological change. Will people's ideological consciousness be automatically raised when we have effectively improved our economy and enhanced material living standards? Admittedly, the development of production and the improvement of our material and cultural life will have a great bearing on the people's ideology; spiritual civilization cannot be separated from certain material conditions. However, spiritual civilization is not a direct derivation or appendage of material civilization. Instead it is a great ideological construction project. In order to build socialist spiritual civilization, we must carry out careful and painstaking work over a long time. We should use ideological education to promote spiritual civilization and should make use of the legal system, discipline and public opinion to maintain and consolidate it. While using positive measures and the role of advanced examples as guidance, we should criticize and struggle against passive, backward and reactionary things. While advocating the new socialist ideas, morals and habits, we should carry on and absorb fine historical traditions. It is not to be supposed that if we engage only in the building of material civilization, the tall buildings of spiritual civilization will automatically tower in front of us. Marxism has told us that what directly determines people's ideology is not productive forces but production relations, that is, people's economic status (or class status in a class society). People's ownership of the means of production, their positions and role in the process of social production and what they get from the distribution of social products determine their ideological viewpoints and feelings. Once a kind of social ideology has been established, it is relatively independent of its economic base. Although the old economic base has disappeared, the old ideology will not vanish immediately. To eliminate its influence, we should carry out a fierce struggle in the ideological field so that the new ideology will take the place of the old one. Furthermore, no kind of systematic doctrine or theory will spontaneously take root in the people's minds; the people can only acquire them through propaganda. This is particularly the case with Marxist-Leninist theories and communist ideology. To enable the broad masses of people to master communist theories and ideology, we should, under the leadership of the party, carry out extensive and profound ideological education and a sustained struggle against the ideological concepts of the exploiting class and private ownership mentality. This objective cannot be attained through effective economic work alone. For example, in the 1950's and early 1960's, people's mentality and the general mood of the society were better than at present. However, the level of economic development at that time was not as high as at present. It is incorrect to say that with the development of material production, people's socialist ideological consciousness will also rise. Any spontaneous theory viewpoint is utterly groundless because it goes against the law of ideological changes. Furthermore, without strengthening ideological and political work and raising people's ideological consciousness, it is impossible to fully arouse their enthusiasm for socialism, promote the national economy and enhance their living standard.

There is another viewpoint related to the aforementioned one. It is that some attribute certain unhealthy phenomenon and bad tendencies in the society to the low level of the development of production and the poor conditions of people's material life. Such a view is completely wrong. Do a low level of production development and poor conditions of material life inevitably usher in unhealthy trends or even unlawful and criminal acts? If we accept this view as correct, it means that we hide the evil consequences of the protracted sabotage of Lin Biao and the Jiang Qing counterrevolutionary cliques and deny the struggle between corrosion by the capitalist ideology and corrosion-resistant socialist ideology, a struggle which really exists. In other words, we admit that unhealthy trends and unlawful and criminal acts are pardonable. Moreover, our production is constantly developing and the people's living standard is continuously rising. It is improper to say that the level of development of our production is low and our material living conditions are poor without making any analysis. Actually, the reason that some people were influenced by unhealthy trends or even committed crimes was not because they lacked food or clothing, but because they were corroded by the capitalist decadent ideology and the bourgeois way of life. It is impossible to clarify the problem or seek a correct way of solving the problem by simply seeking the economic cause.

Some comrades maintain that as long as we do things according to economic law, we will promote economic construction well. To them, it is unnecessary to stress the importance of ideological education. This is also a kind of muddled idea. To carry out economic construction, we should, of course, do things according to economic law and make use of necessary economic means. There is no doubt about that. However, it is wrong to merely regard economic work as a process of economic development. This is because economic work is done by the people. It is the people who understand and make use of economic law. Are people's ideological conditions and mental attitudes not connected with their understanding and utilization of the economic law? It is appropriate to say that if we deviate from ideological education and fail to enhance people's level of understanding of Marxism-Leninism-Mao Zedong Thought and raise their communist consciousness, it is impossible for us to truly understand economic law and consciously utilize it. We will inevitably be manipulated by the spontaneous role of economic law. For instance, we should rely mainly on the guidance of the state plan to develop our economy in the rural areas. At the same time, we should make use of the role of law of value. However, if we give up ideological and political work and fail to provide peasants with the education of "paying equal attention" to the interests of the state, the collectives and individuals, some of them might disregard the interests of the state and the collectives. Thus the economy of the rural areas will go astray. In our economic work, we should stick to the principles of relying mainly on the planned economy, making the law of the marketplace subsidiary to these principles and coordinating all the activities of the nation as in a chess game. To do this, we should oppose erroneous ideas such as selfishness, seeking private gain at public expense, decentralism, departmental selfishness and so forth. Otherwise we will follow an erroneous tendency. To effectively implement the principle of distribution according to work and overcome egalitarianism, it is necessary to give staff members and workers who have overfulfilled production quotas and scored marked achievements a certain amount of pay and bonuses. This will help arouse their enthusiasm. However, if we give up ideological and political work and regard the issuance of bonuses as the sole motive force for arousing the masses' enthusiasm in production, things will go contrary to our wishes. We will not only fail to arouse people's socialist enthusiasm, but also encourage them to "take money as the end-all." As a result, they will go astray. Some enterprises have learned profound lessons in this respect. We should bear it firmly in mind. Of course, ideological and economic work should be combined with economic work and people's material interests. We are not allowed to indulge in empty talk. In other words, we should closely integrate ideological and political work with reality and carry it out in a thoroughgoing and painstaking way. We should convince people by reasoning, not coercion. Otherwise, it will be difficult for us to achieve good results.

Those who educate the people should be educated first. To strengthen ideological and political work, leading cadres should, first of all, fully understand the importance of the work. When we raise the subject of strengthening ideological and political work, some people think that we intend to provide only the masses with ideological education. Actually, we should, first of all, solve the ideological problems of the leading cadres. If leading cadres fail to straighten out their ideas, do not fully understand the importance of ideological and political work or are even influenced by a number of erroneous and muddled views, they will not be able to carry out ideological and political work effectively. Therefore, leading comrades at all levels should strengthen their study of Marxism-Leninism-Mao Zedong Thought and fully understand the interrelationships between material civilization and spiritual civilization on the one hand and politics and economics on the other. They should also clarify the interrelationships between politics and technology as well as economic work and ideological work. They should truly and firmly grasp the central link of ideological education and never for a moment relax their efforts in this respect.

TEACHERS SHOULD SET EXAMPLES IN BUILDING SOCIALIST SPIRITUAL CIVILIZATION

Beijing RED FLAG in Chinese No 11, 1 Jun 82 pp 37-39

[Article by Yu He [6735 4421]]

[Text] Millions of people are concerned about the development of youths and it is a matter of strategic significance to educate well the hundreds of millions of youths across the country. It is the responsibility of the whole society to educate young people, but the responsibility of primary and secondary school teachers is even more direct and concrete. The state and parents of youths have entrusted the children to schools, hoping that teachers will educate them well. The reason why we should pay attention to the work of teachers and stress the importance of such work is that we have placed our hopes in the future and in the next generation. There will be hope for our cause only if we are able to educate the next generation well.

Lenin pointed out: "The most important course in any school is political orientation. Who decides this orientation? It can only be decided by the entire teaching staff." ("Collected Works of Lenin," Vol 15, p 438) Comrade Mao Zedong also said that for a school "the most important things are selecting the principal and teachers and defining reaching principle." ("Selected Works of Mao Zedong," Vol 1, p 161) Following definition of teaching principle, an important problem is the question of teachers, for both ideological education and teaching work in schools are mainly carried out through teachers. Whether teachers are able to carry out their work well will directly influence the growth of the broad masses of primary and secondary school pupils. There are more than 10 million primary and secondary school teachers in our country. They make up a big revolutionary army. These teachers have heavy responsibilities and are busily occupied with their work. With arduous tasks, they work very hard and have a particularly important responsibility of bringing up a new generation and of building socialist spiritual civilization. Whether they are teaching culture and scientific knowledge or nurturing the broad masses of primary and secondary school pupils in ideology and morality, all such works are an important aspect of the building of socialist spiritual civilization. The youths that are being educated by primary and secondary school teachers will become builders of socialist materialistic civilization and spiritual civilization. Therefore, it is true when we say that teachers are engineers of the souls of mankind and active and direct builders of socialist spiritual civilization.

The "five stresses and four beauties" campaign that is being launched across the country is an important part of the building of socialist spiritual civilization. It is very important to launch such a campaign in primary and secondary schools. As for the pupils, through the requirement of concrete images and the implementation of students' regulations, pupils will be able to differentiate between what is beautiful and what is ugly, between good and evil, and between what are good, beneficial and civilized deeds that should be actively undertaken and what are uncivilized, ugly and unhealthy things that should be resolutely discarded. Consequently, they will be able to constantly raise their ideological consciousness and morality, strengthen their sense of organization and discipline and grow along a correct and healthy road. This campaign has provided the teachers with an opportunity to combine the building of socialist spiritual civilization with their daily routines so that their educational work will have a stronger ideological nature and more definite goal. In addition, teachers will be able to do a good job in the campaign, lead pupils to follow their examples and make all schools have a good style of study and work only when they set examples. If the tens of hundreds of our schools are able to do well in this regard, they will constitute a tremendous motive force in improving social practice and in establishing new habits.

The delegates to the national conference of the trade unions of the primary and secondary schools across the country to exchange experiences in ideological and political work called on teachers to set examples during the campaign. This is a significant proposal and it has pointed out a direction for teachers' activities. The "four beauties" first of all means beautiful souls. The beautiful souls of teachers are mainly demonstrated in their loyalty to the party's education cause and their love for their work, their schools and their pupils. Pupils represent our future and are the successors of our revolutionary cause. Therefore, the conditions of these pupils' growth and ideology are important and directly related to the future of our country, the fate of the nation and the success or failure of our revolutionary cause. Therefore, the teachers must demonstrate their love for the party and the socialist motherland first of all by doing a good job in their own work and in nurturing their pupils.

Love for pupils is an invaluable feeling as well as a foundation for doing a good job in education. Our purpose is to educate pupils according to the requirement of the party and the country so that the pupils may develop their morality, knowledge and physical fitness and become laborers with socialist consciousness and culture and talents, having political consciousness and professional knowledge. This is the glorious and yet heavy historical task of teachers. The educators of new China must not only pass on knowledge but also be responsible for educating students in ideology and morality so that they will not only possess rich knowledge but also have higher ideological consciousness and beautiful morality and understand that the purpose of gaining knowledge is to use it to serve the people and contribute to their motherland and to mankind. If we pay attention only to injecting knowledge and examination subjects into the minds of pupils but pay no attention to making them wise, and if we do not guide them to form high ideals and do not pay attention to helping them form an aesthetic outlook and to carrying out physical conditioning, we will run counter to the goal of socialist education as well as to educational principles. Good people's teachers must educate and instruct people, implement the party's educational principle in an all-round way and be concerned with the growth of all the pupils.

In order to educate pupils it is imperative to understand them and to be acquainted with each of them so that with a definite objective in view we will be able to teach them with skill and patience and help them grow. If you do not understand them and do not know what they are thinking, then you only speak your own words and they think their own problems. Thus you will not be able to do a good job in education. Some outstanding teachers maintain close contact with the pupils and make friends with them. The pupils regard such teachers as their intimate friends. They like to tell the teachers what they have on their minds in order to seek guidance from them. Teachers must work hard to make themselves respected and loved by the pupils, not respected but distant. Teachers cannot disregard those pupils who are doing poorly in their studies, nor can they despise them. On the contrary, teachers must love them, must even show particular concern for them and give them more help. In fact, pupils with more shortcomings need more concern from their teachers.

Teachers must not only ardently love their pupils but must also be accomplished and skilled in carrying out their work or they will not be able to accomplish their tasks. Therefore, they must study hard and be professionally competent and spare no efforts to improve teaching methods so as to improve their teaching standard. Their study and profession must include specialized knowledge on subjects taught and each teacher must understand related knowledge about pedagogy, psychology and teaching methods, and have some knowledge of Marxist-Leninist basic theories and the party's important policies and principles. Only when teachers have grasped this knowledge will they be able to teach with good results and according to the requirements of the party and the people and to the young people's psychology and physiology.

Primary and secondary school pupils are in the stage of rapid growth, highly impressionable and incapable of distinguishing right from wrong. They have little ability to control themselves and are vulnerable to outside influence. They often understand things and differentiate right from wrong proceeding from concrete images; therefore, the deeds and the attitudes of their teachers have a particular influence on them. That is why we have particularly stressed the importance of the role of teachers' examples and demanded that the teachers always pay attention to their own moral cultivation, place strict demands on themselves, train themselves to become politically conscious and professionally competent and set examples for pupils with regard to cultural development, ideological standards and morality. Since teachers demand that pupils form a high spiritual civilization, it is first of all imperative for teachers to do so. Since teachers demand that pupils speak beautiful words, the teachers themselves must not speak ugly and uncivilized words. They must say beautiful things during or after class, in front of pupils, in school, when not around pupils, outside school and at home.

Setting an example for others means playing an exemplary role, being as good as one's word, thinking and behaving in a certain way, and teaching by personal example as well as by verbal instruction. That is to say, teachers must educate and influence the feelings and souls of the pupils through their own deeds and with vivid and sound reasoning.

It is imperative for the party organizations and educational administrative departments and teachers' organizations of education trade unions at various levels to make concerted efforts to enable the broad masses of teachers to meet the above-mentioned requirements and set examples. It is necessary now to further implement the party's policy on intellectuals, unite the broad masses of teachers around the party, fully mobilize their initiative and creativity, further improve their political and professional level and working capability and further improve their conditions for work, study and life as well as their position. Primary and secondary school teachers have been an important army in the ranks of intellectuals; it is the biggest such army. We cannot say that there are no problems in the question of how to use and treat teachers. Even today, the leadership in some regions and units still do not really understand the importance of education and the position of the roles of intellectuals in this new period. They do not conscientiously carry out the pertinent policies of the CCP Central Committee issued since the 3d Plenary Session of the CCP Central Committee. Particularly, they do not show enough concern for young intellectuals. As a result, the capabilities of many young people have not yet been fully displayed and their difficulties in work, study and life have yet to be properly resolved. In addition, since the implementation of the open-door policy, some people have been influenced by bourgeois ideology while our ideological and political work is very weak. Consequently, some problems have appeared in our work. Therefore, it is imperative for party organizations at various levels to conscientiously implement the party's policies concerning intellectuals and eradicate the biased views about intellectuals that still exist within the party and in society. It is necessary to treat intellectuals equally in politics, use them daringly in their work and be concerned with their livelihood. It is imperative to make the broad masses of teachers realize that they are rasters of their country and schools so that they will be able to fully display their initiative and pool their wisdom to run schools well. Some schools have experimented in setting up the system of teachers' congresses under the leadership of party committees with encouraging results. We must also create broad public opinion in schools and society so as to form a new social practice of pupils respecting teachers and the latter loving the former.

The party committees at various levels must carry out vivid, practical and effective ideological and political work and do a good job among the teachers through education trade unions. Education trade unions recently pointed out that it was necessary "to proceed from the features of education trade unions and to give priority to doing a good job in ideological and political work among teachers." This statement is in accord with reality and represents a glorious tradition of the education trade union. The broad masses of intellectuals are part of the working class. But the working class is not a golden symbol. It must set examples through its own deeds and constantly transform its subjective world outlook in the process of transforming the objective world. In order to carry out ideological and political work well, it is imperative first of all to arm teachers with Marxism-Leninism-Mao Zedong Thought and the party's principles and policies, and to educate them in the revolutionary tradition of the working class and historical tasks. It is also necessary for teachers, through study and practice, through criticism and self-criticism and by overcoming shortcomings, to get rid of various influences of bourgeois ideology, constantly raise their communist ideological consciousness, persist in the four basic principles, constantly improve their sense of responsibility toward the revolutionary cause, step up their consciousness in implementing the party's education principles, persist in and develop the morality and tradition of the working class and make demands of themselves, influence pupils and carry out their work with the ideology and morality of the working class.

Leading cadres at various levels must visit schools, contact the broad masses of teachers to understand their situations with concern, patiently and honestly help them to solve problems and make friends and talk with them. When conditions permit, the teachers' actual problems in their work, life and study must be resolved immediately. When they have problems in their ideology and understanding, leading cadres should in no way take the stand as educators and criticize them; on the contrary, they must proceed with good intentions, patiently help them to solve problems, become friends of the masses and combine the work of solving ideological problems with actual problems. Primary and secondary school teachers have a certain cultural level with various talents; politically, they protect the party and socialism, they work conscientiously with sense of responsibility. They have a healthy, modest and reasonable ideological style. Their social economic position is not high. Therefore, it is imperative for the leadership to understand, trust, respect and have concern for them. They are busily engaged in their work. Their lives are monotonous and therefore they must be given an opportunity for contacts with society and nature. Teachers not only have to improve themselves, but they also must educate pupils. Therefore, they must be given some "capital" so that they can play still greater roles.

Trade unions are communist universities and full use must be made of the features of trade unions in carrying out ideological and political work. It is necessary for self-education of the masses to be carried out from the top down to grassroots levels so as to promote the basic positive education method of displaying the advanced to lead the general, to carry out educational activities with definite purpose, and to carry out various lively and imaginative educational activities and inspire and exert influence on people's character and thinking. With definite guiding ideology and fully representative of mass organizations, the work of trade unions will be very helpful.

In short, with policies implemented and a good job done in ideological work, people will be convinced to improve their understanding and step up their efforts. In this way, it will be possible to form a deep ideological foundation for teachers to set examples while the work in educating our new generation will be guaranteed.

IT IS HELPFUL TO STUDY THE THEORY OF REPRODUCTION

Beijing RED FLAG in Chinese No 11, 1 Jun 82 pp 40-42

[Article by Huang Zhigang [7806 1807 0474], second secretary of Tianjin Municipal CCP Committee]

[Text] Not long ago, some cadres in Tianjin municipality studied the Marxist theory of reproduction and the reaction was quite good. Taken as a whole, the study has helped us deepen our understanding of the principle of readjustment, restructuring, reorganizing and upgrading that has been implemented by the CCP Central Committee since the 3d Plenary Session of the 11th CCP Central Committee. The following derives from my understanding gained in the study of the Marxist theory of reproduction, and I use my understanding in concretely explaining the guiding role of this theory in our economic construction.

It must be said that the principle of the proportionate development of production of the two big categories is the core of the Marxist theory of reproduction. Marx classified the complicated and intermingled economic activities into two big categories--production of the means of production and production of the means of consumption. He also pointed out the relationship of mutual adaptability and mutual balance between the two categories and within each of these categories. This is an objective need in social mass production that is independent of people's will. Because of the influence of "leftist" ideology for quite a long period in the past, our planning to a certain degree departed from our country's objective need for proportionate development of the national economy and departed from practice. As a result, our national economy was out of balance which caused serious waste of social productive forces. The purpose of the readjustment put forth by the CCP Central Committee is aimed at enabling our national economy to take the road that accords with proportionate development in production of the two big categories and to achieve better economic effects. Therefore the questions of what is to be readjusted, how to readjust it and how to realize a good circulation in the national economy can in no way be defined subjectively; they must be guided by the Marxist theory of reproduction.

In expounding the conditions for the realization of social reproduction, Marx pointed out that whether in simple reproduction or in expanded reproduction, the production of the first category must not only make up for its own consumption of the means of production but must also meet the needs of the second category in terms of means of production; the production of the second category must not only make up for its own consumption of the means of subsistence but must also meet the needs of the first category in terms of means of subsistence. Social reproduction can be carried out smoothly only when we are able to follow the proportionate relationship between these two categories as pointed out by Marx and realize the conditions for this relationship. Many of the problems that cropped up in our economic life over the past many years, such as consumer goods being in short supply for a long period and unbalanced phenomena such as enormous stockpiling of heavy industrial products, particularly mechanical and electrical products, were caused by the fact that we upset this balance. The CCP Central Committee pointed out that in carrying out readjustment work it is imperative to combine the work of developing light industry and the textile industry with readjustment in the service orientation of heavy industry so that the production of the two big categories will gradually become balanced. This is completely correct. Under the leadership and with the support of the CCP Central Committee, Tianjin municipality has, since 1979, emphasized the development of light industry and the textile industry. On the one hand, the city has concentrated its efforts in developing 18 trades, promoting the production of 136 varieties of famous brand products and "fist" products and in carrying out 902 technical reform projects. On the other hand, it has organized heavy industry to serve the technical reform and equipment renewal of the light and textile industries and to provide urgently needed advanced technical equipment and good quality raw materials with applicable specifications. Thanks to these efforts, the value of the city's gross industrial output increased on an average by 8.8 percent annually over the past 3 years. Of this, the output value of light industry increased by an average of 14.8 percent annually while heavy industry increased by 2.2 percent. In the gross industrial output value, the proportion of heavy industry has decreased and, as a result, the industrial structure has tended to be more rational. This shows that the national economy will be able to develop smoothly only when our planning accords with the law of mutual agreement in the production of the two big categories.

According to the Marxist theory of reproduction, the various departments within the production of the two big categories must also develop proportionately. Take the first category for example. In addition to producing the means of production for the production of the second category, the first category must also meet its own needs and carry out exchanges among its own various departments. Marx referred to this situation as "producing a constantly repeated movement" between the constant capital within the first category and constant capital. This situation is in fact what today we often call self-service by heavy industry. Therefore it can be seen that self-service by heavy industry is imperative and, under the prerequisite that it accords with the law of reproduction movement, can in no way be neglected. We made mistakes in our work in the past because we exaggerated self-service and neglected serving the second category and to a certain degree our work was characterized by blindness in carrying out production just for the sake of production. In the process of readjustment, it is necessary to stress the importance of heavy industry serving agriculture and light industry but at the same time we cannot neglect the importance of heavy industry serving itself. We must pay attention to this question. In the final analysis, the rational self-service within heavy industry itself is in the interest of serving agriculture and light industry still better. Take the machine building industry for example: Unless the structure of the products of the machine building industry is readjusted, no new varieties of products are added and no improvement is made in the quality of the products. It will thus not be possible for the various departments of our national economy to have an advanced technical foundation and consequently the constant and stable development of our national economy will be affected. Therefore it is imperative for us to understand the Marxist principle of the interrelationship between the production of the two big categories in an all-round and correct way.

In referring to the expansion of reproduction, Marx pointed out the existence of the two forms of reproduction. One is extensive expansion of reproduction, that is "building new factories outside the old factories." Today we refer to this situation as adding new items and projects. Another is intensive expansion of reproduction. This means relying on the existing enterprises by tapping their potential and improving their "efficiency of the means of production" so as to expand the productive force. It is of great significance to have a clear understanding of the forms of these two different forms of expansion of reproduction. In readjusting the national economy, the party Central Committee stressed the importance of the strategic measures of intensively expanding reproduction as the main factor so as to mend the longstanding lopsided point of view and method of expanding the scale of production by mainly relying on adding new items and projects.

Marx expounded the concrete contents of intensive expansion of reproduction from many aspects such as progress in production, technology, rational organization of productive forces, improvement in the skills of laborers and making full use of the means of production. Such intensive development in the expansion of reproduction is in fact developing production in depth and breadth. Our investigations showed that over the past few years, some trades and enterprises have paid attention to intensively expanding reproduction. They have improved their management, carried out coordination among specialized departments, undertaken technical reform and equipment renewal, improved scientific technology and quality of products and added more new varieties. They have made considerable achievements as they have carried out only one or two of these items, but in a good way. The Tianjin No 3 Steel Rolling Plant has carried out a major technical reform every year since 1978 and basically it has been able to put the results of the reform into production in the same year. This plant has been able to add an annual 10 million yuan of profits for 3 years running. The Tianjin Dyeing and Textile Industry Company and its subsidiaries carried out coordination in production among specialized departments and as a result, production output value in 1981 was 99 percent higher than 1978 and profits increased by 1.2 times. The Tianjin Seamless Tubes Factory implemented an accounting system in economic contacts between departments, workshops and teams and as a result, the profit rate of capital grew to 30 percent in 1981, or 1.2 times higher than 1978, while profits increased by 4.7 times. If all our enterprises are able to proceed from their own specific conditions and carry out feasible and comprehensive measures, they will no doubt achieve better economic effects. When we stress the importance of carrying out intensive expansion of reproduction as the main, we do not mean putting aside extensive expansion of reproduction when it is possible, and particularly not in energy and communications construction. It is imperative to overcome this weak link in order to create conditions for the better development of our national economy.

The principle of capital circulation and turnover constitutes an important part of the Marxist theory of reproduction and therefore it is also of realistic significance to study this principle.

It can be seen from the whole process of socialist social reproduction that whether the movement of capital can be carried out smoothly mainly depends on whether or not we can correctly handle the proportional relationship between the two big categories and the relations between intensive expansion of reproduction and extensive expansion of reproduction. But we must understand that the movement of capital itself is relatively independent. Therefore when there are problems in some links of the movement of capital, such as a lack of coordination in supply, production and sale and the relations between industry and commerce and between industry and trading not being in harmony, these problems will spoil the balance between the two big categories. Consequently it is necessary for us to fully understand the importance of capital circulation and turnover. Marx' explanation about rational utilization of fixed capital and working capital is helpful to us in solving such problems as the low utility rate of fixed assets and excessive use of working capital; his views about how to sell commodities in a timely way is useful in solving such problems as having limited channels for commodity circulation, too many intermediary links and bad circulation; his views on "voluntary" and "involuntary" commodity reserves will help us solve such problems as irrational commodity reserves and irrational use of capital, while his views about banking are helpful to us in improving the roles of our banks in raising, collecting and using finance and in speeding up capital turnover. Therefore, industrial, agricultural, commercial, banking and tax revenue departments must proceed from the point of speeding up the movement of social gross capital, closely coordinate with each other and spare no efforts in carrying out their own duties. They must in no way proceed from departmentalism and disregard the whole situation; otherwise they will cause waste in the use of capital.

As mentioned above, I believe it makes a big difference for the broad masses of cadres, particularly those working in the economic sector, whether or not they study the Marxist theory of reproduction. In studying "Das Kapital" in the past, we mostly concentrated our attention on exposing the exploitation and decadence of capitalism and in understanding the objective necessity of the dying out of capitalism. This method of study is of course right. But from this book we must absorb more spiritual nourishment that is needed in our modernization program. Last year and in spring this year, Tianjin city organized leading cadres above the regional, prefectural and bureau level to study the Marxist theory of reproduction and the results were quite good. Practice in this study proved that the Marxist theory of reproduction is not beyond our reach, nor does it depart from practice. On the contrary, this theory has an important guiding role in our economic construction. We must sum up our experiences in this study so that our cadres will be able to make further progress in their study.

DIALECTICALLY PONDER OVER ECONOMIC PROBLEMS

Beijing RED FLAG in Chinese No 11, 1 Jun 82 pp 43-45, 42

[Article by Zhang Jing [4545 4544]]

[Text] In the study of economic theory, we should ponder problems and sum up experiences using the scientific ideological methodology of materialist dialectics. In other words, we should grasp the dialectical relations of the development of objective affairs in the sphere of economics and link the general laws of materialist dialectics with actual practice in economic work.

People can readily see that the economic sector really is a "boundless universe." It comprises numerous divisions and trades. The network of production and circulation is widely scattered while the division of work and coordination are profoundly related to each other and form a criss-cross network of immense dimensions. Each and every economic "factor" not only is mutually dependent, subjected to reciprocal control and part of the organic whole but also is influenced by internal and external factors and remains in a state of constant motion and change. Furthermore, all matters in the economic sector have their inherent contradictions and are governed by the relations of the unity of opposites. For example, the productive force and production relations of the entire socioeconomic system, the accumulation and consumption of the national income, the "bones" (production construction) and "meat" (nonproduction construction) of capital construction, expanded reproduction by intension and expanded reproduction by extension, the central authorities and the local authorities of the management system, big planning and small freedom, and so on, are all examples of the unity of opposites. As for an individual economic division, it also has many concrete instances of the unity of opposites such as, for example, grain production and diversified operations in agriculture, heavy industry and light industry in industry, centralized leadership and diversified management in commerce, and so on. The parties of the contradiction in the unity of opposites repulse each other but depend on each other, jointly form the composite body of the national economy and foster and promote economic development. Lenin said: "Dialectics may simply be verified as the theory of the unity of opposites." "In order to understand the 'self-movement,' self-generated development and vitality in all the goings-on in the world, we must understand these proceedings as the unity of opposites." ("Collected Works of Lenin," Vol 38, pp 240, 408) In economic work, our guiding thought should be to correctly understand and handle the various contradictions in the economic sector. The results of our work will have to depend to a certain extent on whether or not we can consciously employ materialist dialectics and correctly grasp and regulate the dialectical relations of the contradictions between the two parties of the unity of opposites.

Looking at past historical experience, we are deeply impressed by the importance of dialectically pondering economic problems by pursuing the law of the unity of opposites.

Early in the democratic revolutionary period, Comrade Mao Zedong had already noted the importance of the use of materialist dialectics in guiding economic work. He formulated such principles as promoting production, protecting supplies, centralizing leadership, diversifying operations, having regard for both the military and the civilian, considering both public and private interests, placing equal emphasis on production and economy, and so on. These were all measures to promote the development of production and economic prosperity in the base areas. At that time, the matters of primary concern were the military and political struggles and economic construction had yet to place on the daily agenda for deliberation. Consequently, there was not yet a possibility of fully developing economic dialectics. After the founding of the PRC and following the large-scale development of economic construction, the use of material dialectics to guide economic work became an important lesson in guiding thought. During the first 5-year plan period, we were comparatively more cautious and more realistic. We handled relations between productive force and production, industry and agriculture, accumulation and consumption, "bones" and "meat" and the like fairly well. We succeeded fairly well in bringing about an overall balance. As a result, economic development progressed at a rapid pace and the 5-year plan was triumphantly fulfilled in less than 4 years. In Comrade Mao Zedong's 1956 report "On the 10 Big Relationships," he made use of materialist dialectics to give a systematic summary of the experiences in practice in socialist construction. Especially concerning the relations between industry and agriculture, heavy industry and light industry, coastal industries and inland industries, state production units and individuals, and central and local authorities, the discussions were full of economic dialectics and were extremely significant in guiding our economic work. When Comrade Chen Yun was in charge of economic and industrial affairs, he strongly insisted on the principle of being practical and realistic and was keen to make use of materialist dialectics to analyze and solve problems. For example, many of his viewpoints were full of economic dialectics, such as his views that in a socialist economy state-operated enterprises and those operated by the collectives should form the principal part and a restricted number of individually operated enterprises should be supplementary; that in industrial and agricultural production, planned production should be primary and free production within the sphere of the national plan should be supplementary; that in a socialist unified market, the state market should be primary while the free market under the state's leadership and within a prescribed area should be supplementary; that economic construction and the people's standard of living should both be given due attention and be balanced; that great attention should be given to the study of the proportionate relations within the national economy and to achieving an overall balance; that in capital construction both the general and the particular or pivotal points should be ensured and attended to; that in arranging construction projects note should be taken of the existence of light items among the heavy ones and of the existence of heavy items among the light ones, and so forth. These correct viewpoints of Chen Yun further amplified and developed the economic thought brought forth by Comrade Mao Zedong in his treatise "On the 10 Big Relationships" and played an important part in guiding China's economic construction at that period. Although at the time certain of his views were not given great attention or adopted, yet because they reflected the dialectical relations of objective things and constituted materialist dialectics that could be put to concrete use in economic work, they were able to stand the trials of actual practice and examination. Even today, after more than 20 years, they still possess great vitality. It can thus be seen that in the final analysis a correct economic guideline and a correct economic theory reflect and summarize the dialectical relations of objective things in the realm of economics and in fact are the results of dialectically pondering economic problems.

If it is established that the triumph in our country's socialist economic construction is indivisible from the due regard given to the use of materialist dialectics in our guiding thought, then it may be concluded that the errors or setbacks suffered in our country's economic construction are to the same extent closely related to our overlooking or even violating materialist dialectics.

Our violation of materialist dialectics is mainly due to one-sidedness in understanding. Just as Comrade Chen Yun pointed out: "Our errors are due to the failure to do things according to objective facts. But those of us who have committed errors were not without some support. Rather, they mistook the part for the whole." ("How To Make Our Understanding More Complete") Our errors in economic work were mostly of this nature. For example, our socialist transformation may be said to have been as a whole successful, but in the course of its progress some comrades were over-impressed by the merits of centralized production and centralized operation and overlooked the fact that centralized production and diversified production and centralized operation and diversified operation were in reality the unity of opposites and, although opposed to each other, could readily assist each other. As a result, the phenomena of blindly chasing after the merging of small plants into big plants and of converting diversified operations to centralized operations developed. This brought about such maladies as certain products deteriorating in quality, a decrease in the variety of products, poor services rendered, inability to respond to the consumption needs of the populace, and so on. Again, for example, since the latter part of the 1950's and over a fairly prolonged period, the one-sided over-emphasis on the development of heavy industry (particularly the iron and steel industry) and on achieving large accumulation and a high speed of development has resulted in the entire national economy losing its balance and there is no way for it to develop smoothly. Hence, although generally speaking one-sidedness cannot be said to be idealism, yet if one-sidedness has a start and if one side of the contradiction develops to the point of absolute predominance, this may possibly lead to idealism and to the opposite side of materialist dialectics.

Engels long ago pointed out: "Contempt for dialectics will invariably bring punishment." ("Selected Works of Marx and Engels," Vol 3, p 482) For many years, we have suffered much in this regard and have had many painful experiences and lessons. These experiences and lessons may be summarized from different angles and different sides but there are two points of a regular and basic nature. These should be especially noted and thoroughly studied in the course of theoretical study.

One point is that in economic work we must hold firm to this materialist dialectic basic concept of the unity of opposites. At no time and under no conditions should we strongly emphasize one side, overlook or even refute the other side or, in short, sacrifice one side in order to play up the other side. To put it in Lenin's words, we should not hold one side "in esteem to the point of the absolute." ("Collected Works of Lenin," Vol 38, p 222)

When touching on economic relations and economic contradictions, Engels said: "Since this is one type of relations, it means that the reciprocal connections of the two sides are involved." ("Selected Works of Marx and Engels," Vol 2, p 123) Since objectively the two sides are mutually related and mutually dependent, losing one side renders the other side untenable. Hence, we cannot artificially separate the two sides or one-sidedly care for one end but forsake the other. Take for example this problem of economic interests with which we customarily meet. They habitually comprise the relations between two sides, namely, current interests and long-term interests, and interests of a sector and interests of the whole. Only in simultaneously studying the two sides and proceeding further to examine the form of their mutual relations and their reciprocal role, that is to say, studying their dialectical relations of the unity of opposites, can we find the correct method of solving the problem. To isolatedly and one-sidedly at any time play up one side and overlook the other side can bring about losses. Certain contradictions may clearly be seen to be principal or secondary and leading or subsidiary, as, for example, the frequently mentioned big collective and small freedom, big centralization and small diversification, and planned economy as the principal and regulation by market mechanism as supplementary. Because of the great disparity in the status of the two parties of the contradiction and objectively because of the actual conditions of one party commanding great attention and the other being lightly regarded and one party being primary and the other supplementary, it is very easy to lay great stress on the one and to neglect the other. Under such conditions, it is all the more important to grasp the unity of opposites between the two parties and to grasp the dialectical relations of their opposing each other yet also complementing each other, and guard against holding one party in "absolute esteem."

One important reason for our frustrations in past economic construction work was the failure to grasp the dialectical relations of the unity of opposites between the two parties of the contradiction. Particularly concerning the two parties of the unity of opposites which were clearly primary or secondary and leading or subordinate, we frequently overemphasized the former and lightly regarded the latter and even attended to one but neglected the other. Moreover, a fixed viewpoint was formed more or less to the following effect: that to stress the side that was primary and dominant was revolutionary and to attend to the side that was secondary and subordinate was conservative. This readily gave rise to one-sidedness and absolutism. It possibly explains why our economic work has been for a long time unable to shake off the "leftist" errors. Naturally, as we are today rectifying this trend, we must also guard against going to the other extreme. We must not reverse the position of being the primary or the secondary or even go so far as to push or promote the secondary and the subordinate side to becoming "absolute." For example, on the question of planned economy being primary and regulation by market mechanism being secondary, formerly there was the trend to one-sidedly stress the former and neglect the latter. However, in recent years, following the rectification of this trend, some localities and enterprise units proceeded to the other extreme: they disobeyed the state plan and permitted regulation by market mechanism to lash out at the planned economy. Acting in this way can similarly cause losses to the socialist economy.

The second point is that in economic work we must concretely study the unity of opposites in contradictions of various sorts, so that each of the two parties of a contradiction can occupy its objectively proper position. Also, we must make quantitative stipulations so that each occupies a position that is in proper proportion and with the appropriate relations.

In the past, we used to clearly specify the relations of the unity of opposites of certain contradictions in the economic sector. For example, take such sayings as "agriculture as the foundation and industry as the leading factor," "large collective and small freedom," "the state market is the principal body and the free market is supplementary," and so on. They themselves already denote the position occupied by each of the opposed parties. However, facts have shown that regulation in principle is not sufficient. The actual context must be concretely demonstrated through the adoption of concrete policies and measures of control and, furthermore, by definite quantitative measures, since only in this way can the proportions become really fitting and the relations proper and appropriate. For example, Comrade Chen Yun pointed out that in the gross volume of the retail sales of commodities in the country, even though the free circulation portion makes up slightly more than a quarter of the whole, price stability can still be maintained and ensured provided the planned circulation portion makes up nearly three-quarters of the whole. This, in point, has reference to a quantitative limit. At present, in our cities and towns, individual operations are allowed to employ one or two assistants, and those units with special skills are entitled to take on not more than five apprentices. This is another illustration of laying down a definite quantitative limit. Bound by quantitative limitations, individual operations can only exist as a supplement to the socialist economy. Turning now to the relations between accumulation and consumption, in what ways can these relations be exactly appropriate? This will require a careful study of the quantitative limitations. According to experiences gained through the years, an accumulation rate of around 25 percent is fairly appropriate. If it exceeds 30 percent, then there will be an imbalance in the proportionate relations. Since socioeconomic life is in a continuous process of movement, the position of the two parties of a contradiction and the quantitative limitations do not remain static. In order to make subjectivism fit in with objectivism, it is necessary to continuously carry on investigation and research and follow up with the development of a realistic economic life.

In general, to do our economic work well we must be adept in the use of this scientific ideological method of materialist dialectics to ponder economic problems. Thus we must first of all earnestly engage in research work. Marx' "Das Kapital" is a masterpiece full of materialist dialectics. After reading Marx' "Critique of Political Economy" and "Das Kapital," a writer wrote to Marx thus: "From the lines and words of your writings, I am fully aware that the logical premise of your superb economics is likewise a superb type of philosophy." ("The Worker-Philosopher Joseph Dichken," p 97) Comrade Mao Zedong's treatist "On the 10 Big Relationships" and Comrade Chen Yun's economic writings are all packed with materialist dialectics and are well worth studying repeatedly. Next, we must link together realities and sum up experiences. We have abundant positive and successful experiences but, on the reverse side, we have many painful experiences of setbacks and defeats. Both of these are lively materials for the study and use of materialist dialectics. In addition, the experiences in economic management in foreign countries also embody many factors of dialectics and from them we can learn many useful lessons.

ARE CAPITAL CONSTRUCTION AND EXPANDED REPRODUCTION ONE AND THE SAME THING?

Beijing RED FLAG in Chinese No 11, 1 Jun 82 pp 46-47

[Article by Li Mengbai [2621 1125 4101]]

[Text] The concept of capital construction was first mentioned in Stalin's report "On the Economic Condition of the Soviet Union and the Party's Policies." Generally, it is used to describe the process of the formation of fixed assets. Newly established production departments must carry out capital construction for the formation of new fixed assets. For example, old China did not have an aviation industry, but since the founding of the PRC we have established a new aviation industry. The production equipment and facilities it possesses have been formed via the capital construction process. As for production departments that have already been established, if they wish to continuously enlarge the scale of their fixed assets so as to increase their production capacity, they will have to go through capital construction to realize this objective. In order to make a rational distribution of productive force on a nationwide scale and also to carry out construction of the cities and towns and communications, it is also necessary to rationally assign various kinds of fixed assets to the various localities and the relevant departments. All this is brought about by means of capital construction. Capital construction is a type of comprehensive economic activity which is spread through the various material production departments and the nonmaterial production departments.

Although capital construction plays an important role in social expanded reproduction, it is not one and the same thing as social expanded reproduction.

First, capital construction constitutes an important means for the realization of expanded reproduction but is not the only and sole means. While capital construction is for the purpose of serving social expanded reproduction, the expansion of the scope of social production does not depend entirely on capital construction for realization. In his analysis of the road of expanded reproduction, Marx said: "The yearly expansion of production comes from two sources: First, a continuous increase in the input of capital into production; and second, a continuous improvement in the utilization efficiency of capital." ("Selected Works of Marx and Engels," Vol 26, p 598) He further pointed out that expanded reproduction was in two forms: "In the event of an expansion of the production premises, then it is expanded reproduction by extension; in the event of improvement in the efficiency of the means of production, then it is expanded reproduction by intension." ("Selected Works of Marx and Engels," Vol 24, p 192) Expanded reproduction by extension has the special feature of the expansion of the production premises and is shown in the building of a new plant outside the original plant or expansion of the original plant. Hence, expanded reproduction by extension is realized by means of capital construction, while expanded reproduction by intension is not necessarily accompanied by capital construction. This is because of two possible conditions: In the event of improving the quality of the machines, speeding up the operations, improving the labor organization, effecting economy in raw materials, and so on, then capital construction is not needed; in the event of improving the handicraft or production technique, raising the degree of automation, expanding the production line, and so on, then this will need an appropriate scale of construction and the installation of new equipment. As for capital construction, we should let it display its role in full both in expanded reproduction by extension and in expanded reproduction by intension. Over the past years it was customary that whenever production development was contemplated, fervent efforts would be made to undertake capital construction of the extension type and the measures of the technical restructuring of the enterprise units and improving the operation and management were neglected. This could hardly achieve the best returns on investment. We should firmly remember lessons of this kind.

Second, capital construction serves not only expanded reproduction but also simple reproduction. For a long period of time, under the influence of the one-sided belief that capital construction and expanded reproduction are one and the same thing, arrangements for the simple reproduction items have been frequently overlooked in capital construction. This is not in conformity with Marx' theory on reproduction. In discussing the relations between simple reproduction and expanded reproduction, Marx pointed out: "Simple reproduction is part of the yearly reproduction on an expanded scale and in fact constitutes its most important part." "The material basis for expanded reproduction is derived from the internal production of simple reproduction." (Ibid., pp 457, 560) All along simple reproduction has been an important constituent part and the basis of expanded reproduction. Moreover, viewed from the actual conditions of social production development, following the continuous increase in the base figure of production, the proportion occupied by simple reproduction in the expanded reproduction each year has grown continuously. Hence, despite the fact that capital construction is intended mainly to serve expanded reproduction, it must also serve simple reproduction. Take, for example, the case of coal production. In a given period, certain old pits are bound to be abandoned. Prior to these old pits being reported abandoned, new pits must be built in time to replenish the gradually diminishing production capacity. Since the building of new pits necessarily calls for a sizable amount of construction and installation work and may indeed involve a rather lengthy construction period, undoubtedly such new building work comes under the category of capital construction. Yet it serves simple reproduction. A similar state of affairs is found in production construction of the petroleum industry.

Similarly, when natural disasters like earthquakes and floods ransack fixed assets including plants, mines, bridges, houses and the relevant machinery and equipment, all of which must be repaired, rebuilt or repurchased, the necessary recovery and construction work also constitute capital construction and they first of all serve simple reproduction. Hence, in capital construction, we should never overlook the construction projects necessary for the maintenance of simple reproduction.

Third, capital construction serves not only the development of production but also the improvement of the people's standard of living. Concurrently with handling such production measures as the building of plants, mines, oilfields and electric power generating units, capital construction likewise engages in the building of houses and the public utilities that go with them as well as such nonproduction items as parks, theaters, hospitals and libraries. All of the above serve the purposes of improving the material and cultural life of the people. Marx' theory of reproduction tells us that the social reproduction process encompasses not only production but also consumption. It includes not only consumption for production but also for the individual's daily needs. Social reproduction cannot progress smoothly if it is concerned with production only and not with consumption. Capital construction is a category of economic activity which provides all production departments and nonproduction departments with fixed assets and serves both the development of production and improvement of the people's standard of living. In the past, under the influence of "leftist" thought, frequently production was heavily stressed while living was lightly regarded and capital construction was taken as a means to serve the development of production only. This was the cause of the imbalance between "bones" and "meat" and the fact that for a prolonged period of time, particularly with regard to the housing problem, the people's standard of living could not be improved. Since the 3d Plenary Session of the 11th CCP Central Committee, this situation has undergone a great change. With regard to capital construction, we should sum up our past experiences, follow Marx' theory on reproduction as the basis and in conjunction with the actual national conditions of our country, comprehensively arrange for production construction and for the people's life and in this way promote the all-round development of the four modernizations.

CAN ROBOTS PRODUCE SURPLUS VALUE?

Beijing RED FLAG in Chinese No 11, 1 Jun 82 pp 47-48

[Article by Tan Huazhe [6223 5478 6568]]

[Text] The robot is developed on the technical basis of the manipulator and the operating machine after having absorbed certain of the latest scientific and technological achievements. It is a new form of automatic device fitted with various types of machines, precision instruments and automatic computers and can do various jobs independently and automatically like a human being. The robots now in use in industry can do only simple and repetitive tasks. Certain countries are currently experimenting with the making of a new generation of robots which not only possess the power of mankind to see, feel, hear, write, compute and distinguish between tools and charts, but also can walk around at the plant site. Although robots are more complicated than ordinary machines, and are of a much higher grade, yet after all they are not human beings but mere machines. Hence, in the hands of the capitalists, they belong to the category of fixed capital like other means of production. In the production process all they can do is to transfer the original value to new products. They cannot create new value or increase value. The extensive use of various kinds of advanced technology and robots will greatly raise social labor productivity, achieve savings in man's labor input and reduce the required social labor time in the production of commodities. In turn, this will lower the cost of the commodities.

People may ask: With the capitalists using robots and the rise in labor productivity, there is a great reduction in employment. Under such conditions, where does the large amount of surplus value reaped by the capitalists come from? We say that this still comes from the labor of the hireling workers.

First, under the capitalist system the phenomenon of machines squeezing out workers has long been in existence. The appearance of the robot further intensifies this contradiction. In certain departments and enterprise units, the increasing use of robots has caused a relative diminution in the number of workers, sometimes very extensive. However, robots cannot completely replace the work of human beings. On the one hand, robots are created and invented by human beings. The study and making of robots, and continuously improving them to the stage, or near the stage, of perfection require in themselves the input of a large amount of human labor. For example, in the study and research work on the making of robots, the Hitachi Electronics Company of Japan alone employed over 500 scientists and engineers, not counting a large number of trained workers and management personnel. On the other hand, no matter how advanced the robots have become, in the production process they require human labor for their control, management and maintenance. Even though some day it will be possible to concentrate workers, technicians and management personnel into a main force to form a technological service center, this will represent a change in organization and structure and will not alter the substance of things. Some people connive at the idea of setting up a "factory without workers," but in reality human beings cannot be dispensed with. Separated from human beings and separated from the technical service center, the factory will be paralyzed and the robots will become a pile of useless materials. Thus, capitalists must continue to hire people and the surplus value reaped by the capitalists can only have its source in the labor of the hired laborers.

Second, under the conditions of socialized mass production, the definition of production personnel comprises a large number of engineering and technical personnel, scientific and research workers directly related to production, and workers of the production command and of the control and management system. Their labor is all production labor. Marx put it very clearly: "Following the development of the nature of coordination in the labor process, the concept of production labor and of production workers will necessarily be expanded. Taking part in production labor now does not necessitate doing the work itself. Rather, being a part of the composite picture of workers and performing one relevant function only will be amply sufficient." ("Collected Works of Marx and Engels," Vol 23, p 556) The various categories of personnel mentioned above all constitute what Marx described as the expanded "production workers." Their labor input similarly creates value and surplus value. Following a steady advance of science and technology, the proportion of manual laborers in the ranks of laborers has been steadily falling, while the proportion occupied by mental laborers has been steadily increasing. Foreign statistical data show that under the condition of a low degree of mechanization, the ratio between manual laborers and mental laborers is 9 to 1, while under the condition of a medium degree of mechanization the ratio is 6 to 4 and under the condition of full automation the ratio becomes 1 to 9. Therefore, despite the progress of automation and the use of robots and the decrease in the number of ordinary workers in certain departments or enterprise units, the number of their personnel engaged in complex labor work such as the scientists, engineers and technicians is increased. As we all know, within the same given period of time, complex labor creates much more value than simple labor. In this way, in spite of a sizable decrease in the personnel employed by the capitalists, they still manage to reap a large amount of surplus value.

Lastly, under the conditions of the use of robots still not being commonplace, those enterprises making use of robots can reap much larger profits than the ordinary enterprises. This is because of the higher labor productivity, lower labor input, shorter time taken in production than time required by society, and lastly the sale of their commodities at the prevailing market prices. A portion or a great portion of the surplus profits of the enterprises is transferred from the surplus value created by workers of other enterprises. Robots do not constitute the source of income but the material conditions enabling these enterprises to gain larger income. Thus, that the use of robots can reap large surplus value does not mean that robots can create value and surplus value. Rather, both value and surplus value are created by the labor of hired workers. The progress in science and technology and the use of robots have by no means changed the basic reasoning of Marx' theory on the value of labor and his theory on surplus value.

SEVERAL PRACTICES IN INTENSIVE FARMING

Beijing RED FLAG in Chinese No 11, 1 Jun 82 inside back cover

[Article by Wen Jianhu [2429 0256 5706]]

[Text] Intensive farming means putting a fairly large quantity of means of production and labor force into a certain area of land with the application of science and technology so as to achieve high and stable yields per unit area.

China has a huge population but little arable land. With its present relatively weak economic strength, it is rather difficult for our country to put immense funds and huge amounts of energy into the total mechanization of agriculture and into efforts to promote the extensive use of chemical fertilizers and other farm chemicals in agriculture. However, we can take advantage of our strong point of having available an abundance of labor and carry forward the tradition of intensive and meticulous farming, use more labor and apply more fertilizer to the fairly limited cultivable land, and try hard to increase the yield per unit area so as to boost total output and make production costs lower and lower.

Some communes and brigades and specialized households in Hunan Province started developing intensive farming in the main according to the following procedures:

1. Practicing intensive cultivation and multicropping with both early and late maturing crops and raising the utilization rate of land. Apart from continuous cropping and cultivation, in light of the principle of crop-plant symbiosis, they adopted intercropping, interplanting and mixed sowing, ingeniously mated long-stalked crops with short-stalked ones, vine crops with root-tuber ones, grain crops with leguminous ones, crops which demand light with those that grow in the shade and early-maturing crops with late-maturing ones and turned plane planting to three-dimensional planting. In addition, they paid attention to rotation of paddy and nonirrigated-farmland crops and of crops and green manure so that the more the land was farmed, the richer its soil would become. In recent years, the Pitai production team of You County, the Xiadafang production team of Liling County and the Shengli production team of Liuyang County adopted these methods with the result that the per mu yield of paddy topped 2,000 jin and the per mu yield of paddy in specific years reached 2,300 to 2,400 jin.

2. Adopting intensive rearing and fully utilizing pens and barns and water surfaces. In recent years, some localities have built double-deck pig houses and multideck batteries and rabbit cages and put space to full use. For instance, Huang Jianbai, a commune member of Shahe production brigade of Jinhuahu commune in Yiyang municipality, raised 56 pigs in 5.2 square meters of pigsties in 1981. With close breeding, there was little room for pigs to move about, thus reducing their consumption of calories. A pig would eat only 1 jin of concentrated feed and 3 jin of coarse fodder per day but would produce 1 to 1.2 jin of pork. In the whole year, the whole family only spent 0.8 of a labor force [as published] to raise pigs and sold a total of 4,327 jin of pork to the state. Zhuzhou fish farm is another example. In the last few years, it has imported advanced technology and bred fish in net cages on a trial basis. The total output of fish came to 40,000 or 50,000 jin per mu, which was equal to about 100 mu of water surface for conventional fish breeding. There are still some localities which breed fish and soft-shelled turtles or fish and pearls in a mixed way. This method has brought them high per unit area yield, high output value and big results. The average income per mu has been from 5,000 to 6,000 yuan.

3. Developing a diversified economy, ensuring overall development and tapping the potential of natural and labor resources. Xihu commune of Hengyang municipality practiced a three-in-one operation combining vegetable growing, pig raising and fish breeding. Pigs were fed with vegetable roots and leaves; ponds were fertilized with pig dung; and vegetables were grown with pond silt. As a result, a benign cycle of more vegetables, more pigs and more fish has gradually taken shape. Over the past few years, some communes and their subdivisions and specialized households have first used green manure as fodder to feed pigs, gone on to make methane with pig dung and weed, and then applied methane fertilizer to the farmland rather than directly applying green manure, thus obtaining fairly satisfactory economic results. Xie Wankun of the Zhongzhou production team of Jiashui production brigade of Guankou commune in Liuyang County fed chickens with concentrated feed, fed pigs with the fermented feed made of chicken dung and grit, further used pig dung to raise earthworms and then fed chickens with earthworms. In 1981, he and his wife used 5 rooms in their house to raise 180 setters and 2,200 broilers and sold 12,531 fresh eggs and 1,500 broilers to the state. They earned an annual income of 8,663 yuan or a net income of 2,250 yuan after deducting expenses.

4. Building small-sized agricultural engineering facilities to gradually convert some agricultural production links into factories [gongchanghua 1562 1681 0553]. In recent years, a few communes and brigades, farms and centers and specialized households which have conditions have begun to build small hothouses, plastic sheds, chicken-raising factories and fish-breeding factories and so on, and simulated the natural conditions to create suitable conditions so that agricultural production can be free from the restrictions of seasons and regions. In its small hothouses and plastic sheds, the Dongtundu commune in Changsha adopted the method of multicrop interplanting and high-density cultivation to grow vegetables, thus prolonging the growth period on the one hand and putting space to full use on the other. At least

20 jin of mushrooms were gathered every quarter on every square meter. The per mu income from vegetables, of which most were high-yield varieties, was more than 2,000 yuan.

5. Integrating traditional skills with modern science and manual labor with mechanized operations. For instance, in paddy production, some localities crossed long-stalked varieties with short-stalked ones, practiced rational close planting, coupled scientific application of fertilizer with meticulous management and timely prevention and control of plant diseases and elimination of pests, thus achieving stable and high yields. In fish farming, some localities bred large species of fingerlings, rationally applied fertilizer and threw in bait, did a good job in the prevention and cure of fish diseases, captured and seeded the fries in rotation in good time and installed pressurized-oxygen machines to increase the supply of oxygen and boost the fish yield per unit of water surface area by a big margin, and so on.

FBIS FOREIGN BROADCAST INFORMATION SERVICE

NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service, Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semi-monthly by the National Technical Information Service, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Correspondence pertaining to matters other than procurement may be addressed to Joint Publications Research Service, 1000 North Glebe Road, Arlington, Virginia 22201.

OUR PARTY'S BASIC POLICY ON RELIGIOUS QUESTIONS DURING THE PERIOD OF SOCIALISM

Beijing RED FLAG in Chinese No 12, 16 Jun 82 pp 2-8, 19

[Article by RED FLAG Editorial Department]

[Text] Summary: Freedom of religious belief is our party's basic policy on religious questions during the period of socialism. This article analyzes the history and the present situation of religion in our country according to the Marxist basic viewpoints on religious questions, points out the reasons why under socialist conditions religion inevitably will exist for a long time, reviews the positive and negative experience of the party's religious work since the founding of the PRC and stresses the great significance of thoroughly and correctly implementing the party's policy on religion. In carrying out our work related to religion at present, we should primarily combat the "leftist" erroneous tendencies and at the same time, we should also pay attention to preventing and overcoming the erroneous laissez-faire tendency. The article also expounds on the party's principles and policies concerning all aspects of the party's work related to religion, including winning over, uniting and educating the people of religious circles, training and educating the younger generation of patriotic professional religious workers, giving full play to the role of the patriotic religious organizations, cracking down on illegal and criminal activities and counter-revolutionary sabotage activities under the cover of religion, developing friendly international exchanges related to religion and resisting the penetration of hostile religious influence from abroad. The article concludes by pointing out that strengthening the party's leadership is the basic guarantee for doing a good job in religious work. Party organizations at all levels must unite their thinking, understanding and policy on religious questions and conscientiously carry out this work satisfactorily.

Article 35 of the "Draft of the Revised Constitution of the PRC" provides: "Citizens of the People's Republic of China enjoy freedom of religious belief. No organs of state, public organizations or individuals shall compel citizens to believe in religion or disbelieve in religion, nor shall they discriminate against citizens who believe, or do not believe, in religions. The state protects legitimate religious activities. No one may use religion to carry out counterrevolutionary activities or activities that disrupt public order, harm the health of citizens or obstruct the educational system of the state. No religious affairs may be dominated by any foreign country." The whole content of this provision is our party's basic policy on religious questions during the socialist period. We communists are atheists and Marxism always holds that religion is the opiate of the people. Why, then, should our party implement a policy of allowing freedom of religious belief?

Social and Historical Factors That Have Given Rise to Religion and Enable It To Exist

Ours is a country with many kinds of religions. In our country, Buddhism has a history of about 2,000 years, Taoism has a history of more than 1,700 years, Islamism has a history of more than 1,300 years and Catholicism and Christianity have to a relatively great extent developed since the Opium War.

Among our people, especially the Han people, who constitute the majority of the country's population, the number of those who believe in religion is not great, but there are more than a dozen minority nationalities in which all the people believe in religion. Compared with the initial period after liberation, due to the increase in the minority nationality components of our population, the number of the masses of people who believe in religion has increased. However, their proportion to the whole population of the country has decreased.

During the prolonged period of the feudal society and the over a century-long period of the semifeudal and semicolonial society in our country, generally speaking, all the religions in our country were controlled and exploited by the ruling class and made to play a major negative role. The feudal landlord class, the class of feudal lords, the warlords and the bureaucratic bourgeoisie at home mainly controlled Buddhism, Taoism and Islamism, while the foreign colonialist and imperialist forces that came later primarily controlled Catholic and Christian churches.

Since the founding of our country, religions in our country have undergone a radical change because of the profound social reform and the reform of the religious systems that we have carried out. Generally speaking, the contradictions on religious questions have already been turned into the contradictions among the working people. However, we should realize that religious questions will exist for a long time to come in a certain respect, will involve a certain section of the masses and will involve nationality problems in many aspects. Furthermore, certain aspects of the class struggle and certain complex international factors will also have a bearing on these questions. Therefore, whether we handle religious questions properly is still of such great significance that it cannot be neglected for our state's stability and national unity, for the development of international exchanges and the resistance of the penetration of hostile foreign influences and for the construction of socialist material and spiritual civilizations. It is precisely for this reason that during the socialist period, we should adopt a "very prudent," "very serious" and "carefully thoughtful" attitude--as was pointed out by Lenin--toward religious questions.

We are Marxists and we understand the social and historical factors in human life that have given rise to religion. Religion is an inevitable phenomenon at a certain stage of human history. This phenomenon has to undergo the stages of emergence, development and withering away. Religious belief and religious feeling along with religious ceremonies and organizations are all a historical outcome of society. In a society of class antagonism, the most profound social factor that gives rise to religion and enables it to develop lies in people's apprehension of the tremendous pressure of the system of exploitation, in the poverty and ignorance which people cannot free themselves from because of the control of an alien force and in the needs of the exploiting class to use religion as a narcotic and an important spiritual means to control the masses of the people.

Under socialist conditions, along with the elimination of the system of exploitation and the elimination of the exploiting class, the class factor that has given rise to the existence of religion has already been basically eliminated. However, because the development of people's ideology always falls behind social existence, the old ideology and habits left by the old society cannot be thoroughly eliminated in a short period of time. Moreover, because a prolonged struggle is necessary to greatly raise the social productive force and highly develop culture, science and technology, it is impossible to completely eliminate in a short time the various sufferings resulting from the shortage of material wealth and the uncontrollable natural disasters and manmade calamities. At the same time, there still exists to a certain extent the class struggle and a complicated international environment. All these factors determine that it is inevitable that religion will exist and have an impact on some people for a long time in a socialist society.

All the comrades in our party should adequately and soberly understand that under socialist conditions religious questions are prolonged in nature. It is unrealistic to think that religion will soon wither away after the socialist system has been established and the economy and culture has developed to a certain extent. The idea and practice that treats religion as something we can eliminate once and for all by administrative orders or even by means of force, runs counter to the Marxist basic viewpoints on religious questions and is completely wrong and very harmful.

Correctly Sum Up Historical Experiences, Prevent the Erroneous Laissez-faire Tendency and Oppose the Erroneous "Leftist" Tendency

Since the founding of the PRC, there have been twists and turns in our party's religious work.

During the 17 years from the founding of new China to the beginning of the "Great Cultural Revolution," despite a few major mistakes, generally speaking, we did much work related to religion and achieved great results under the guidance of the correct principles and policies of the CCP Central Committee. We eliminated the imperialist influence in our churches, implemented the correct policy of running the churches independently and the policy of "three selves" (preaching by ourselves, running the church by ourselves and supporting the church by ourselves), thus we succeeded in changing Catholicism and Christianity from being tools for aggression by the imperialists into an independent religious undertaking of Chinese believers. We abolished the feudal privileges of religion and the oppressive and exploitative system of religion and exposed and cracked down on the counterrevolutionaries and evildoers working under the cover of religion, thus freeing Buddhism, Taoism and Islamism from the control and exploitation of the reactionary classes. We carried out the policy of freedom of religious belief and enabled the broad masses of religious believers to begin to enjoy the right of freedom of religious belief as well as political and economical emancipation along with people all over the country. We carried out the policy of winning over, uniting and educating the personalities in religious circles and succeeded in uniting many patriotic persons. Furthermore, we supported and assisted the religious circles in developing friendly activities throughout the world, which played a positive role. All these tremendous achievements have been universally acknowledged.

However, after 1957, the "leftist" mistakes in our religious work began to aggravate and by the middle of the 1960's became more serious. They became especially serious during the "Great Cultural Revolution" because the Lin Biao and Jiang Qing counterrevolutionary cliques willfully exploited these "leftist" mistakes and took them to the extreme. They recklessly trampled on the scientific theory of Mao Zedong Thought on religious questions, completely negated the party's correct policies on religious work that had been formulated since the founding of the PRC and entirely abolished the party's religious work. They wrecked the religious organizations and the ranks of activists of the religious circles that loved the country and supported socialism and even forcefully banned the normal religious life of the masses of religious believers and destroyed and closed down all places of religious activities. They regarded patriots in religious circles and even ordinary religious believers as "objects of dictatorship," and framed up many wrong, false and misjudged cases. Moreover, they treated the customs and habits of some minority nationalities as religious and superstitious and forcefully banned these customs and habits, thus impairing national unity. They used violence in solving religious problems. They provided extremely favorable conditions for a few counterrevolutionaries and evildoers to carry out illegal and criminal activities and counterrevolutionary sabotage activities in a big way under the cover of carrying out religious activities.

Since the smashing of the Jiang Qing counterrevolutionary clique and especially since the 3d Plenary Session of the 11th CCP Central Committee, the party's correct principles and policies related to religious work have gradually been restored. We have done much work and achieved remarkable results in implementing our religious policies, opening up temples, churches and other places of religious activities, restoring the activities of patriotic religious organizations, winning over, uniting and educating the masses of religious believers and the personalities of religious circles, developing the friendly international activities of religious circles and resisting the penetration of hostile foreign religious influence. During the new historical period, our party's basic task toward religious work is to resolutely implement the policy of freedom of religious belief, consolidate and expand the patriotic political union of religious circles of all nationalities, strengthen their education in patriotism and socialism, give play to their positive factors and mobilize them to strive along with us to build a powerful socialist motherland, realize the great goal of the reunification of the motherland with Taiwan, oppose hegemonism and safeguard peace.

Of course, in comprehensively and correctly implementing the party's policies on religion, we will encounter much resistance and many difficulties, including the interference and sabotage of "leftism" and "rightism." At present, we should primarily oppose the erroneous "leftist" tendency and at the same time, pay attention to preventing and overcoming the erroneous laissez-faire tendency. However, it is beyond any doubt that so long as all the comrades in our party, especially the party's leading organs and leading cadres at all levels, are adept at summing up and conscientiously learn the positive and negative historical experiences in the party's religious work since the founding of the PRC, so long as we further understand and master the objective law governing the emergence, development and withering away of religion, and so long as we steadfastly follow the scientific line of Marxism-Leninism-Mao Zedong Thought in carrying out the party's religious work, we will certainly be able to overcome all difficulties and resistance and fulfill this major task satisfactorily.

Respecting and Protecting Freedom of Religious Belief Is Our Party's Basic Policy on Religious Questions During the Period of Socialism

By freedom of religious belief, we mean that every citizen enjoys the freedom to believe, or not believe, in religion, the freedom to choose any religion, the freedom to believe any faction in a religion, the freedom to convert oneself from a nonbeliever to a believer or from a believer to a nonbeliever in religion. Respecting and protecting freedom of religious belief is a long-term policy of our party and is a basic policy that we should always adhere to until the natural withering away of religion.

True, we communists are atheists and we advocate and will propagate atheism among the masses of the people. However, we, at the same time, understand that it is not only ineffective but also very harmful to use simple and forceful methods to handle the ideological problems of the people and problems concerning the spiritual world of the people, especially the problems of religious belief. We also understand that in the present stage, if we one-sidedly stress the disparity of ideological awareness between religious believers and nonbelievers among the masses of the people, regard this relatively secondary disparity as being of primary importance, discriminate against and attack the religious believers among the masses of the people, neglect and even deny the identity in the basic political and economic interests of the religious believers and the nonbelievers and forget that the party's basic task is to unite all the people (including the broad masses of believers and nonbelievers of religion) to jointly strive for the construction of a modern powerful socialist country, we will only widen the gap between the believers and nonbelievers among the masses of the people, stir up and aggravate religious fanaticism and seriously harm the socialist cause. Therefore, the policy of freedom of religious belief is the only correct religious policy that our party has formulated according to the theory of Marxism-Leninism and is a policy that really conforms to the interests of the people.

Naturally, we should also stress that we protect the people's freedom of refusing to believe in religion, while implementing this policy and stressing that we protect people's freedom of religious belief. These are two indispensable aspects of the same problem. Forcing people to believe in religion in any manner, like forcing people to refuse to believe in religion, is an infringement on the freedom of religious belief of other people and is, therefore, extremely wrong and can never be allowed. We must also stress that the essence of the policy of freedom of religious belief is to make the question of religious belief one of personal choice for a citizen and his private affair. It is precisely for this reason that we must adhere to the principle of separating religion from politics, judicature and education, and we must never allow religion to interfere in the administration of the state and the law or in school or social public education. It is precisely for this reason that we must never allow the practice of forcing youngsters below the age of 18 to be converted to some religion or to be sent to temples to be monks or to learn religious scriptures. It is also for this reason that we must never allow the abolished systems of feudal privilege of religion and religious exploitation and oppression to be restored. Furthermore, we must in no way allow anybody to use religion to oppose the party's leadership and the socialist system or to use religion to carry out propaganda against Marxism-Leninism-Mao Zedong Thought.

In short, uniting both the believers and the nonbelievers of religion among the masses to jointly strive for the construction of a modern powerful socialist country is the basic starting point and basic ground for us in carrying out the policy of freedom of religious belief and in carrying out all religious work. Any words or actions that are divorced from this basic starting point and basic ground are wrong and should be resolutely resisted and opposed by the whole party and all the people in our country.

Winning Over, Uniting and Educating the Personalities in the Religious Circles Is an Important Part of the Party's Religious Work

Although the personalities of the religious circles in our country, primarily the professional religious personalities, differ in their family backgrounds, life experiences, beliefs, political ideas and thoughts, generally speaking, most of them love our country, observe the law and support socialism. The number of counterrevolutionaries and evildoers who oppose the constitution and socialism or who even collude with foreigners is very small. Many of the personalities of the religious circles and primarily many of the professional religious personalities have not only close spiritual contacts with the masses of believers but also an important influence on their spiritual life which cannot be neglected. Moreover, in the form of carrying out their religious duties, they have been carrying out a large amount of work of social service and benefits. These include for example: Looking after temples, churches and religious cultural relics, farming, cultivating and protecting forests and carrying out religious academic research. Therefore, we must attach due importance to all the personalities of the religious circles and especially to various kinds of professional religious personalities. We must unite them, show concern for them and help them to make progress. We must steadfastly and patiently teach them to love our country, observe the law and support socialism, the cause of the reunification of the motherland and national unity. Among Catholic and Christian personalities, we should intensify the education in maintaining independence and running the church on their own. We must satisfactorily arrange the lives of the professional religious personalities and conscientiously implement relevant policies. This is especially so for the well-known personalities and intellectuals among them and we should even more vigorously speed up the implementation of the policies related to them and grant them proper remuneration. In regard to the wrong, false and misjudged cases that have involved personalities in the religious circles and the masses of religious believers and that have not yet been remedied, we should speed up the reexamination and reinvestigation of these cases and rehabilitate them in the manner of seeking truth from facts. We should fix a deadline for remedying these cases. We must pay attention to training, supporting and giving play to the positive role of the newly emerged representative personalities who love the motherland, obey the leadership of the party and the government, adhere to the socialist path, safeguard the reunification of the motherland and national unity, are accomplished in religious learning and can maintain contacts with the masses of religious believers. We must organize all personalities in the religious circles according to their different conditions and abilities to take part in the productive labor that they can do and in social service work, religious academic research, patriotic social and political activities and international friendly exchanges so as to give play to their positive factors and make them serve the cause of socialist modernization. We should not only continue to win over, unite and educate all the existing personalities of the religious circles, but should also help the various religious organizations to do a good job of establishing and managing religious colleges and training new professional religious personalities. Religious colleges should recruit students from those young people who are honest, patriotic, willing to go in for a religious profession and are educated to a certain degree. The task of the religious colleges is to vigorously train and form a rank of young professional religious workers who politically love the motherland and support the party's leadership and the socialist system and who are to a certain extent accomplished in religious learning and can maintain close contacts with the masses of believers. Combined with the existing patriotic and progressive elements in the religious circles, this rank of young patriotic professional religious workers will become the backbone force to ensure that the various religions in our country will develop their activities in a correct direction.

Our comrades must understand that though in terms of world outlook Marxism runs counter to any theism, in terms of political actions, Marxists definitely can and must form a united front with religious believers to jointly strive for socialist modernization. This united front should become a very important part of the broad patriotic united front that is led by the party during the period of socialism.

Give Full Play to the Role of the Patriotic Religious Organizations and Organize and Guide the Broad Masses of Religious Believers in Carrying Out Normal Religious Activities

Now there are eight national patriotic religious organizations, namely: the Chinese Buddhist Association, the Chinese Taoist Association, the Chinese Islamic Association, the Chinese Patriotic Catholic Association, the National Administrative Commission of the Chinese Catholic Church, the Chinese Catholic Bishops College, the Three Self Patriotic Movement Committee of Protestant Churches of China and the Christian Council of China. Besides, there are some social bodies of a religious nature and some local religious organizations. The basic task of the patriotic religious organizations at all levels is to assist the party and government in carrying out the policy of freedom of religious belief, to help the broad masses of religious believers and the personalities of the religious circles to continuously raise their patriotic and socialist awareness, to represent the legitimate rights and interests of religious believers, to organize and lead the masses of religious believers to carry out normal religious activities and to satisfactorily do all the work related to religion. All the patriotic religious organizations should obey the leadership of the party and the government. The cadres of the party and the government should be good at consulting and cooperating with the religious organizations and the religious personalities and support and help them to solve their own problems. They should not take on what ought to be done by these organizations and personalities. Only by so doing can we give full play to the initiative and proper role of the patriotic religious organizations. Only by so doing can we enable them to develop useful work on their own initiative within the scope of the constitution and the law, to become the religious organizations that exert a positive influence and to become the bridge for winning over, uniting and educating religious personalities and the masses of religious believers.

The problem facing us at present is that we must rationally arrange places for carrying out religious activities and provide for the material needs in order to ensure that religious activities can be carried out normally. All the normal religious activities that are carried out in the places for religious activities, such as worshipping Buddhas, chanting scriptures, burning incense, holding religious services, praying, explaining scriptures, preaching, holding masses, baptizing, granting full status to nuns and monks, giving last sacraments and celebrating religious festivals and all the customary religious activities that are usually carried out at home, such as practicing abstinence from meat and chanting requiems, should be managed by religious organizations and religious believers on their own. They are protected by law and thus no one is allowed to interfere in these activities. All the places of religious activities should be managed by religious organizations and professional religious personnel under the administrative leadership of the religious affairs department of the government. In principle, in carrying out all religious activities, we should avoid hampering social, production or work order. No one is allowed to propagate atheism at religious places or stir up debates about the existence of the gods among the masses of religious believers. However, in places other than religious places, no religious organizations or believers should preach, propagate theism or distribute religious pamphlets or religious books, permission for publication of which has not been granted by the responsible department of the government. We should take prudent care of the important temples and churches at well-known mountainous and scenic spots because they are not only places of religious activities, but also cultural facilities of significant historical and cultural value. We should take good care of the cultural relics in these temples and churches and maintain these temples and churches in good repair in order to turn them into clean, quiet and beautiful places for sight-seeing.

We should make a clear distinction between normal religious activities and the illegal and criminal activities under the cover of religion. The resolute protection of all normal religious activities itself, calls for the resolute cracking down on all illegal, criminal and counterrevolutionary sabotage activities under the cover of religion. We should severely punish according to the law the counterrevolutionaries and criminals who act under the cover of religion. Those professional religious workers who have been released from the prison and who continue to carry out sabotage activities should be punished as severely as possible according to the law. At the same time, we should make a clear distinction between normal religious activities and feudal superstitious activities. We should not allow those reactionary superstitious sects and secret societies and those sorcerers and sorceresses that we have banned to resume their activities. We should ban and severely punish all those who carry out superstitious activities to lure the people and defraud them of their money and property. We should even more severely punish the party members and party cadres who exploit these superstitious activities to make profits. We should realize that in cracking down on all illegal and criminal activities under the cover of religion and in banning all feudal superstitious activities we are precisely aiming at protecting normal religious activities. This is because only by so doing can we more satisfactorily win over, unite and educate the broad masses of religious believers and ensure that their religious activities can be carried out in a normal manner.

At present, along with the daily increase in our international exchanges, the external contacts of the religious circles will also develop in a daily increasing manner and play an important role in raising our country's political influence. However, at the same time, the reactionary religious forces in the world, especially the imperialist religious forces will also attempt to exploit religious exchanges to carry out penetration activities in order to "stage a return to China." Our policy should be resolutely resisting the penetration of any hostile foreign religious forces as well as vigorously developing the international friendly exchanges in the religious field. In carrying out international exchanges, our religious circles must adhere to the principle of maintaining our independence and running the churches by ourselves. They should resolutely combat the attempt by reactionary international religious forces to resume the control of our country's religion. They must resolutely reject the interference of any foreign churches or foreign religious personalities in the religious affairs of our country. They must never allow any foreign religious organizations (including the organs controlled by these organizations) to preach in any form in our country, or to smuggle religious propaganda materials into our country and distribute them in our country. We should maintain a high vigilance and a close lookout on the underground churches and other illegal organizations that the reactionary foreign religious forces have set up and will try to set up in our country in order to carry out espionage and sabotage activities in our country under the cover of religion. Whenever we find any, we should resolutely crack down on them.

Developing friendly external relations in the religious field on an independent basis is a new problem facing us. The key to doing this work well is to conscientiously do a good job of the religious work at home in accordance with the CCP Central Committee's correct principles and policies. Facts have proved that when we have done the religious work at home satisfactorily, there will be no or very few loopholes for hostile foreign religious forces to take advantage of and the international exchanges in the religious field will be able to healthily and smoothly develop and play their due role.

Strengthening the Party's Leadership Is the Basic Guarantee for Doing the Religious Work Satisfactorily

Religious work is an important part of the party's mass work and involves many fields. Therefore, our party organizations at all levels must unify their thinking, understanding and policies and must resolutely take this important task in their hands and steadfastly and conscientiously fulfill this task in a satisfactory manner.

We should emphatically point out that using a Marxist stand, viewpoints and methods to carry out scientific research on religious problems is an important part of the party's theoretical work. Criticizing idealism (including theism) by Marxist philosophy and educating the masses of the people, especially the broad masses of youngsters in the scientific world outlook (including atheism) is an important task of the party on the theoretical and propaganda front. Building up a contingent of religious theory research workers who are armed with the weapon of Marxism is an indispensable part of the construction of the party's theoretical ranks. While we encourage the academic circles to respect the ideology and beliefs of the religious circles, our religious circles should also respect the activities of research on and propaganda of Marxist religious theory by our academic circles.

By declaring and carrying out the policy of freedom of religious belief, our party does not mean that the party members are allowed to believe in religion as they please. The party's policy of freedom of religious belief is only for ordinary citizens and not for party members. A party member differs from an ordinary citizen and is the member of a Marxist political party. Therefore, he undoubtedly should be an atheist and should not be a theist. Our party has time and again clearly stipulated that CCP members are not allowed to believe in religion or to take part in religious activities and that if a CCP member clings to believing in religion and to taking part in religious activities and refuses to mend his ways, he should be persuaded to quit the party. This stipulation is entirely correct and taking the party as a whole, we should continue to resolutely carry out this stipulation in the future.

The problem now is that, among the people of the minority nationalities who nearly all believe in religion, we should adopt measures to implement this policy step by step in the light of the actual conditions and should not do this in a hurried way. We must see that there is still quite a large part of the CCP members among these minority nationalities who have been loyally carrying out the party's line, conscientiously working for the party and observing party discipline, but cannot completely be free from religious feelings. Regarding these comrades, the party organizations should not simply turn them out, but should, while giving full play to their political initiative, carry out patient and careful ideological work in order to gradually help them fix in their minds a Marxist world outlook and break away from the fetters of religious feelings. A small number of party members have acted in an extremely harmful manner by not only believing in religion, but also taking part in stirring up religious fanaticism, or even using religious fanaticism to oppose the four basic principles and the party's line, principles and policies. These people have already completely lost the basic stand of party members and, if after criticism and education they still refuse to correct their mistakes or feign willingness to but covertly refuse to correct their mistakes, they should be resolutely expelled from the party.

Among the minority nationalities, all the people of which believe in religion, the party members who live at that grassroots should not refuse to take part in the traditional wedding and funeral ceremonies and mass festive activities that are to some extent religious in nature, even if they have already abandoned their previous religious beliefs. For if they refuse, they will be divorced from the masses and become isolated. Although there is something of a religious nature and tradition in many traditional wedding and funeral ceremonies and mass festival activities, in essence, this religious nature and tradition has already become a component of the nationality's conventions and customs. Our comrades, especially the party members living at the grassroots, should not only thoroughly abandon religious beliefs in their minds, but should also respect and observe the conventions and customs of their nationality in their lives. It is inappropriate to confuse the conventions and customs of a nationality with religious activities without making an analysis. This will be unfavorable to correctly handling religious problems and to strengthening national unity.

All the comrades in our party should deeply understand that ours is a great socialist country with many nationalities. As nationalities and religions differ, so do the relationships between religions and the people of the nationalities. In regard to some minority nationalities, nearly all the people of a nationality believe in one religion, for example, Islam or Lamaism. For these nationalities, the religious problems often intertwine with nationality problems. However, this is not the case for the Han nationality, the people of which believe in Buddhism, Taoism, Catholicism or Christianity and the religious problems of the Han people are not related to nationality problems. Therefore, we must be good at making concrete analysis of the different conditions of various nationalities and different religions and at understanding the distinction and relationships between nationality and religious problems. Moreover, we must know how to handle these problems correctly. If our party cannot soberly and resolutely master these problems in leading China, a country with so many nationalities, in carrying out the magnificent struggle for socialist modernization, we will not be able to satisfactorily unite the people of all nationalities to jointly forge ahead.

All the comrades in our party must soberly understand that the party's current religious policy is by no means a make-shift policy. On the contrary, this policy is formulated on the scientific theoretical basis of Marxism-Leninism-Mao Zedong Thought and is a strategic stipulation that is aimed at uniting the people of all nationalities throughout the nation to jointly build up a powerful modern socialist country. Under the socialist conditions, the only correct way to solve the religious problem is that, under the premise of protecting the freedom of religious belief, we greatly develop the socialist economy, culture, science and technology and achieve great progress in developing socialist material and spiritual civilizations so as to gradually eliminate the social and cognitive sources that have given rise to religion and enables it to exist. Of course, it is impossible to achieve success in such a great cause in a short period of time nor in the time of one, two or three generations. This means that only after a very long historical period and only after the joint struggle of many generations of the masses of people including both believers and nonbelievers can we achieve this. Then, the Chinese people and the land of China will be thoroughly free from any poverty, ignorance and spiritual barrenness and the Chinese people will have created a bright world with highly developed material and spiritual civilizations and rank the foremost among human beings. At that time, most of the citizens in our country will be able to consciously adopt a scientific attitude toward the world and life will no longer need to look for spiritual sustenance in the illusory world of gods. That will be the times that Marx and Engels described as when all the social life is put under people's conscious and planned control and that Comrade Mao Zedong described as the times when people consciously reform themselves as well as the world. Only when we have entered these times will the various religious expressions of the actual world finally disappear. Our whole party should strive hard generation after generation in order to achieve this magnificent goal.

CONSOLIDATE AND STRENGTHEN THE PEOPLE'S DEMOCRATIC DICTATORSHIP

Beijing RED FLAG in Chinese No 12, 16 Jun 82 pp 9-12

[Article by Yang Yifan [2799 0001 0416]]

[Text] Article 1 of the "Draft of the Revised PRC Constitution" stipulates: "The PRC is a socialist state of the people's democratic dictatorship led by the working class and based on the alliance of workers and peasants." This explains the nature, that is, the state system, of our country. State system refers to the class nature of the state, that is, the positions of all classes in the society. An instrument of class domination, a state is the dictatorship of a certain class. As an instrument with which the exploiters oppress the broad masses of laboring people, a state of the exploiting class is the dictatorship of the minority over the majority. Our state power is completely different in nature from all the states of the exploiting classes. It is the people's democratic dictatorship which practices democracy toward the broad masses of the laboring people and exercises dictatorship over a small number of enemies.

The "Resolution on Certain Questions in the History of Our Party Since the Founding of the PRC" approved at the 6th Plenary Session of the 11th CCP Central Committee specifically pointed out: "A fundamental task of the socialist revolution is to gradually establish a highly democratic socialist political system." The preamble of the draft of the revised constitution also regards the establishment of a high degree of democracy as an important component of the future tasks of the people of the whole country. A high degree of socialist democracy has two implications: one is the ruling position of the whole people in the state, or their position of being the masters of the country, and the other is a high degree of development of the democratic system. The first, which is also the most fundamental implication, is a state system of the people's democratic dictatorship as stipulated in the draft of the revised constitution.

Our people's democratic dictatorship is a form of the dictatorship of the proletariat. It has been explicitly pointed out in the preamble of the draft of the revised constitution that "the people's democratic dictatorship is the dictatorship of the proletariat." This is because: First, this dictatorship is led by the working class as well as its political party, the CCP, which is precisely the basic indication of the dictatorship of the proletariat. Second, this dictatorship undertakes the historical mission of the dictatorship of the proletariat. It will not only abolish all exploitive systems, the bourgeoisie and all other exploitive classes, but will also greatly develop social productive forces, improve and develop the socialist relations of production and the superstructure and, on this basis, gradually eliminate all class differences and all major social differences and social inequality brought about mainly by inadequate social productive forces, until the realization of communism. Third, this dictatorship is based on the alliance of workers and peasants, which is the basic principle of the dictatorship of the proletariat. Fourth, this dictatorship should not only suppress the sabotage activities of the extremely few internal enemies; it also has the function of guarding against subversion and possible aggression by external enemies. All of these, particularly the leadership of the proletariat and its political party and the historical mission undertaken by this dictatorship, determine that the people's democratic dictatorship of our country is in essence the dictatorship of the proletariat.

With respect to the class nature of our political power, there were two formulations in the constitutions previously promulgated. The 1954 constitution made it clear in the preamble that we "have founded the People's Republic of China of the people's democratic dictatorship." It was also stipulated in the general principle that our country is a people's democratic state led by the working class and based on the alliance of workers and peasants. The two constitutions promulgated later stipulated that our country is a state of the dictatorship of the proletariat. The present draft of the revised constitution for discussion among the people of the whole country has restored the formulation in the 1954 constitution. Since the two formulations are essentially the same, why is it necessary for the draft of the revised constitution to adopt the formulation of the people's democratic dictatorship?

This revision has not been made at will. It has been affirmed in the form of a fundamental law under the guidance of the basic principle of Marxist theory on the dictatorship of the proletariat in the light of the specific historical and national conditions in our country and with the aim of expressing more clearly and explicitly the nature, content and functions of our political power. After leading the revolutionary people in smashing the old state apparatus and seizing the state power, the proletariat became the ruling class and established the dictatorship of the proletariat. This is undoubtedly the fundamental and primary indication of the victory of the proletarian revolution. "The continued advancement of the revolutionary cause of the proletariat, i.e., development toward communism, proceeds through the dictatorship of the proletariat, and cannot do otherwise." ("Collected Works of Lenin," Vol 25, p 448) This is also a truth that has been repeatedly proved in history. However, due to different national conditions in various countries and the different revolutionary paths the proletariat and laboring people in various countries have taken in winning liberation, there are bound to be various different political forms by which to achieve the dictatorship of the proletariat. The form of the dictatorship of the proletariat a country adopts can only be determined in the light of the specific national conditions in each country and not according to a fixed, unchangeable pattern. The specific social and historical conditions in our country are greatly different from those in the relatively developed capitalist countries of Europe and America; they are also different from the conditions evident when Lenin and Stalin led the Soviet socialist revolution. The proletariat in our country launched proletarian revolution in a semicolonial and semifeudal country where the economy and culture were very backward; it has launched socialist revolution and the cause of socialist construction in a great country where the peasants make up the great majority of the people. It is precisely in the light of the specific social and historical conditions and the actual situation in our country and because of the following reasons that we have adopted the form of the people's democratic dictatorship as the dictatorship of the proletariat in our country.

First, the people's democratic dictatorship of our country is an objective historical fact which has been formed in the protracted revolutionary struggle and which has been accepted by the people of the whole country. The people's democratic dictatorship of our country has gone through the new democratic and the socialist periods. On the question of the Chinese revolution, our party and Comrade Mao Zedong, by integrating the universal principle of Marxism-Leninism with the concrete practice of the Chinese revolution, determined the strategic tasks of the new democratic revolution and socialist revolution in the course of the Chinese revolution, clearly pointed out the correct path for achieving the victory of the Chinese revolution and gradually formed the concept of the people's democratic dictatorship. During the war period Comrade Mao Zedong proposed that the new China should be a new type of political power of the people's democratic dictatorship led by the working class and based on the alliance of workers and peasants. On the eve of national liberation he again pointed out in his article "On the People's Democratic Dictatorship": "To sum up our experience and concentrate it into one point, it is: the people's democratic dictatorship under the leadership of the working class (through the Communist Party) and based upon the alliance of workers and peasants. This dictatorship must unite as one with the international revolutionary forces. This is our formula, our principal experience, our main program." ("Selected Works of Mao Zedong," Vol 4, p 1417) When new China was founded, our state power was organized precisely according to the principle of the people's democratic dictatorship. It was led by the working class, was based on the alliance of workers and peasants and recruited the petit bourgeoisie and national bourgeoisie as well as the representatives of other patriotic and democratic elements. We put the principle of the people's democratic dictatorship into the 1949 "Common Program" which served as a provisional constitution, and into the 1954 constitution. After the founding of new China, we entered the period of transformation from the new democratic revolution to the socialist revolution and we accomplished the transformation in 1956. By that time, the people's democratic dictatorship also became a state power of socialist character on the national scale. In the struggle to achieve this great transformation, the party and Comrade Mao Zedong further enriched and developed the concept of the people's democratic dictatorship. The national bourgeoisie in our country was different from the bureaucrat-capitalist class and the landlord class in that on the one hand it exploited the working class to gain profit and on the other hand it supported the constitution and was willing to accept socialist transformation. Therefore, the class struggle between the national bourgeoisie and the working class generally came within class struggle among the people. For this reason, during the transition period, we closely relied on the broad masses of workers and peasants, correctly handled the contradictions between the working class and the national bourgeoisie, victoriously accomplished socialist transformation of the private ownership of the means of production by peaceful means and abolished the system of exploitation of man by man. Either before or after socialist transformation, our state power was organized according to the principle of the people's democratic dictatorship. As a matter of fact, this situation has been prevailing in the normal conditions of our state life since our country entered the period of full-scale socialist construction. All this has convincingly proved that the form of the people's democratic dictatorship is suitable to our country not only during the new democratic period but also during the socialist period.

Second, the adoption of the form of the people's democratic dictatorship for our state power is suited to the class and national conditions of our country in the present period and is necessary for exercising the leadership of the working class over state life. Ours is a country where the peasants make up the great majority of the people. Since the founding of the PRC, the ranks of the working class have grown rapidly, but they still account for a very small percentage of the whole population. Without the peasants and other laboring people, it is impossible for the working class to exercise a strong rule of the majority over the minority and it is impossible to firmly maintain the leadership of the working class over state life. Lenin said: "The dictatorship of the proletariat is the direction of policy by the proletariat." ("Collected Works of Lenin," Vol 32, p 332) In order to exercise this leadership, it is imperative for the working class to form a close alliance with the vast numbers of peasants and other laboring people. Now, after the exploiting class has been eliminated as a class, most of the people among the exploiting class have been transformed into laborers who support themselves through their own labor. The targets of dictatorship have been greatly reduced while the ranks of the people who enjoy democratic rights have correspondingly expanded. With the exception of the extremely few reactionaries who are hostile to and sabotage the socialist revolution and socialist construction, all the people in our country are masters of our country. Naturally, there are still certain contradictions between the two laboring classes of the workers and peasants, between the various strata of the masses of people and between one group of people and another group of people. These contradictions include the contradictions between the interests of the state and the interests of the collective on the one hand and the interests of the individual on the other, and the contradictions arising from the bureaucratic style of work of some state personnel in their relations with the masses. These are contradictions among the people. Generally speaking, the fundamental identity of the people's interests underlies the contradictions among the people. Therefore, under the socialist conditions, the leadership of the working class over the peasants and other masses of the people cannot be achieved through the method of dictatorship, but through the guidance of Marxism-Leninism-Mao Zedong Thought, through its correct principle and policies, through the methods of conducting ideological education among the masses and coming into close contact with the masses and through the method of correctly handling the contradictions among the people. The formulation of the people's democratic dictatorship in the draft of the revised constitution will not weaken the leading role of the working class over state life, but will better conform to our national conditions and more explicitly reflect the position of the whole people as the masters of the country in state life.

Third, the adoption of the people's democratic dictatorship for our state power of the dictatorship of the proletariat can reflect more clearly and more explicitly its nature, content and functions. In classical Marxist works, the content and functions of the dictatorship of the proletariat originally included the two aspects of democracy and dictatorship, that is, the practice of democracy among the people and the exercise of dictatorship over the enemies of the people. Lenin explicitly pointed out that the dictatorship of the proletariat "must inevitably be a state that is democratic in a new way (for the proletariat and the propertyless in general) and dictatorial in a new way (against the bourgeoisie)." ("Selected Works of Lenin," Vol 3, p 200) In light of the practical situation in our country, the formulation of the people's democratic dictatorship can directly indicate the two aspects of democracy and dictatorship it contains. This has the advantage of being explicit and clear in expression and can prevent some people from abusing the dictatorship of the proletariat. People still clearly remember that during the decade of civil disturbance, the Lin Biao and Jiang Qing counterrevolutionary cliques, put into motion by the need to usurp the leadership of the party and power, deliberately distorted the content and nature of the dictatorship of the proletariat. They isolated democracy from dictatorship, abolished socialist democracy and exercised "all-round dictatorship" of the feudal-fascist type over the numerous cadres and the broad masses with the result that the state and the people suffered from an unheard-of calamity. Naturally, the ugly performances of the Lin Biao and Jiang Qing counterrevolutionary cliques were not in the least related to the formulation of the dictatorship of the proletariat. However, in view of the historical lessons and experiences and in order to prevent conspirators from engaging in counterrevolutionary activities with the trick of stripping the revolutionary theory of its essence, it is quite necessary for the draft of the revised constitution to adopt the formulation of the people's democratic dictatorship which directly indicates the implications of the dictatorship of the proletariat.

It should be emphatically pointed out here that the adoption of the people's democratic dictatorship in the draft of the revised constitution published on this occasion also reflects the increased function of the people's democratic dictatorship in maintaining socialist democracy during the new historical period. The chief contradiction in the present stage of our country is no longer the contradiction between the working class and the bourgeoisie but the contradiction between the people's need for speedily developing economy and culture and the inability of the present economy and culture to meet the needs of the people. The fundamental task of our country is to concentrate our forces in the socialist modernization drive and gradually build our country into a socialist state with modern industry, modern agriculture, modern science and technology and modern national defense, and with a highly developed democracy and civilization. This determines that the fundamental task of the people's democratic dictatorship is to protect social productive forces under the new relations of production and to ensure that the people enjoy a high degree of democratic rights in the state's political life and economic construction. In order to develop social productive forces at a high speed, it is imperative for us to develop socialist democracy and ensure that the broad masses of people take an active part in socialist construction with the attitude of being masters of the country. In order to establish a socialist political system with a highly developed democracy, we should, with the development of socialist economic construction, constantly expand the people's democratic rights, particularly the people's rights to manage state affairs. The principal character of the people's democratic dictatorship of our country is extensive democracy. Therefore, the adoption of the formulation of the people's democratic dictatorship in the draft of the revised constitution has correctly reflected the functions of our state power and the socialist nature of our country.

Our party and Comrade Mao Zedong have enriched the Marxist-Leninist theory of the state with the theory and practice of establishing the people's democratic dictatorship. This constitutes a major contribution to the international communist movement. In this respect, the "Resolution on Certain Questions in the History of Our Party Since the Founding of the PRC" has made a positive confirmation. Taking the people's democratic dictatorship as a form of the dictatorship of the proletariat is an outstanding indication that the party and Comrade Mao Zedong have creatively applied the universal principle of Marxism-Leninism in the practice of Chinese revolution. When setting forth and expounding the theory on the forms of the dictatorship of the proletariat, Marx and Engels set forth, in the light of the different social and historical conditions in capitalist countries such as Britain, France and Germany at that time, the concept that these countries may "directly or indirectly establish the political domination of the proletariat" after the victory of the proletarian revolution. Engels pointed out: "In Britain this domination can be directly established because the proletariat there is now made up by the majority of the people; in France and Germany this domination can be indirectly established because the majority of the people in these two countries include not only the proletarians but also small farmers and small urban capitalists." ("Selected Works of Marx and Engels," Vol 1, p 219) This shows that, in judging the question of whether a state power is the dictatorship of the proletariat, we should chiefly see whether the country has established the political domination of the proletariat, that is, whether the proletariat has taken the leadership of the state into its hands. As to the forms of the dictatorship of the proletariat, whether it is a direct domination of the proletariat or an indirect role, that is, the exercise of political domination by means of establishing an alliance with the peasants and other laboring masses, they are all permissible. Therefore, the formulation of the people's democratic dictatorship adopted in the draft of the revised constitution does not deviate from the Marxist-Leninist theory on the dictatorship of the proletariat, nor has it changed the nature of the dictatorship of the proletariat in our country. It is precisely an expression of upholding in a better way the dictatorship of the proletariat in light of our national conditions.

Upholding the people's democratic dictatorship is a fundamental guarantee for the victory of the cause of our socialist revolution and construction. The reason why it is necessary for us to continuously consolidate and strengthen the people's democratic dictatorship is that the historical mission undertaken by this dictatorship is still far from being accomplished. We have abolished the system of exploitation and the exploiting classes in our country, but owing to the internal factors and international influence, class struggle will still exist in a certain scope for a long time. It may even intensify under some circumstances. In order to defend the socialist system, ensure the smooth progress of the four modernizations drive and ensure that the people of our country will enjoy a high degree of democratic rights in a stable social environment, it is imperative for us to employ the force of the state power to strengthen the suppression on the extremely few enemies who resist and disrupt socialism, guard against subversive activities and possible aggression by antagonistic external forces, eliminate all class differences and accomplish the historical mission of transition to communism. This is a more difficult, arduous and protracted fighting task. Therefore, so long as class struggle and class differences exist, the function of the people's democratic dictatorship will not wither away. The historical experience in the 30-odd years since the founding of the PRC has told us that without the people's democratic dictatorship socialism is empty talk. Only if the people of the whole country closely rally around the working class and its vanguard, the CCP, and persistently strive to uphold the people's democratic dictatorship will it be possible for the cause of our revolution and construction to smoothly advance.

STRENGTHEN THE BUILDING OF POLITICAL POWER IN GRASSROOTS UNITS

Beijing RED FLAG in Chinese No 12, 16 Jun 82 pp 13-15

[Article by Zhang Qingfu [1728 1987 4395]]

[Text] Compared with the existing constitution, the "Draft of the Revised Constitution of the People's Republic of China" promulgated by the NPC Standing Committee has made important reforms in some of the stipulations in the political power sector in urban and rural grassroots units. This draft of the revised constitution has changed the present integrated management system of people's communes, has stipulated the setting up of rural political power as an organization of rural grassroots political power and has retained the people's commune as a simple organization of collective economy no longer possessing political power and functions. This has made the functions of organs of state power and administration in urban and rural grassroots units more rational and clearly divided. Apart from this, it has also written the neighborhood committees and villagers' committees into the constitution. These stipulations provide constitutional safeguards for improving and strengthening the work of our urban and rural grassroots political power and are important measures enabling the people to exercise the rights of being their own master and building a highly democratic socialist political system.

In China, the content of the people's socialist democratic rights is very extensive and involves every sphere of the political life of the state and social life. However, its most vital and essential aspect is the active participation of the masses in managing the various affairs of the state and society and becoming genuine masters of the state. Lenin said: "It is important for us to draw literally all working people into the government of the state. It is a task of tremendous difficulty." ("Collected Works of Lenin," Vol 27, p 123) Lenin also said: "The people need a republic in order to educate the masses in the methods of democracy. We need not only representation along democratic lines, but also the building of the entire state administration from the bottom up by the masses themselves, their effective participation in all of life's steps, and their active role in the administration." ("Collected Works of Lenin," Vol 24, pp 153-154) Strengthening the building of political power in urban and rural grassroots units is precisely for the sake of drawing the working people by the millions from the bottom up to participate in administering the affairs of the state. Only if the political power in urban and rural grassroots units is really produced as a result of direct election by the people and directly supervised and removed by them in accordance with the stipulations of the constitution can it become an authoritative organ of political power in the hands of the people and perform various functions stipulated by the constitution, and can the people bring their role into play in administering the affairs of the state and society and exercise the rights of being their own master.

The organ of political power at the urban and rural grassroots level is a basic organization of state power of the people's democratic dictatorship and an organic component of the whole state power system. It is directly responsible for the difficult task of mobilizing and organizing the masses to carry out the various construction assignments of the state and its own locality, and is an important base for various work of the state. At the same time, it is an organ of political power in direct contact with the masses and is the link between the party, the state and the people. The voices and demands of the people must also be reflected through it to state organs at various higher levels and directly to the central authorities. Strengthening the building of organs of political power at the grassroots level will bring the party and the state closer to the people and they will subject themselves to supervision by the people. Improving the work style of state organs will enable the state power of the people's democratic dictatorship to be established on a solid foundation and develop along the path of socialist democracy.

In this country of ours which has 800 million peasants, making a success of the building of political power in grassroots units is of especially important significance. Based on the past experiences of China in building rural political power, the draft of the revised constitution, in accordance with the principle of separating government administration from commune management, stipulates establishing rural political power while retaining the people's communes as collective economic organizations. This stipulation is helpful to improving and strengthening the work of organs of political power in rural grassroots units. Separating government administration from commune management will define the responsibilities of the party, the government and the enterprise so that each can attend to its own duties. This will prevent the concentration in the commune of party, government, financial and cultural powers in the hands of a few people. This will also help the organs of political power in grassroots units to cast off concrete production tasks and concentrate their energy in making a success of building political power, independently exercising their functions and power, and conscientiously performing their duties. At the same time, because the organs of political power in rural grassroots units are directly elected, supervised and removed by rural voters, this will contribute to their maintaining close ties with the masses of peasants and people and extensively listening to their views and demands. As a result of the effectiveness of their work, they will be able to: guarantee the observance and implementation of the constitution, laws and decrees as well as administrative laws and regulations in their own administrative district; decide on such major issues as economic construction, cultural construction and public works of their own locality in accordance with the authority prescribed by law; supervise in their own administrative district such administrative work as economy, education, science, culture, public health and physical culture as well as finance, public security, civil administration and family planning so that various work of the state will be concretely carried out in the vast countryside and so that they can really become people's organs of political power representing the interests of the people, safeguarding the people's democratic rights and working for the masses.

Will the separation of political power in rural grassroots units from commune management weaken the leadership of the party? No, it will not. China is a socialist country of the people's democratic dictatorship led by the working class and based on the worker-peasant alliance. The Communist Party is the core of leadership of the whole state power system. All state organs must carry out activities and develop work under the leadership of the party. This is a general principle of the activities carried out by socialist state organs. If we deviate from this principle, political work would lose its bearings and forfeit the quality of proletarian political power. However, the leadership of the party over state power definitely cannot be described as the amalgamation of party and state power, or that the party can take the place of the government. The leadership of the party over state power is mainly to exercise political leadership and not to monopolize concrete administrative and management work. The separation of government administration from commune management will enable party organizations in rural grassroots units to free themselves from tedious, trifling, routine matters so that they can go deep into reality for investigation and study, more effectively strengthen leadership in ideology and theory as well as in line, policies and principles over the organs of political power, intensify inspection and supervision over their work to enable them to advance along the correct orientation charted by the party and ensure the correct and concrete enforcement of the line, policies and principles of the party in every rural grassroots unit. At the same time, the separation of government administration from commune management will also help the party organizations in rural grassroots units make room for properly carrying out their own construction, strengthen education and supervision over the party members and enable the party organizations to really become the core and stronghold for rallying the masses in their advance so that the party members will truly play the exemplary role of vanguards at their respective stations.

The separation of government administration from commune management will also help perfect the rural collective economic organizations and promote the development of the national economy. As economic organizations, the people's communes are of a collective ownership nature. Their means of production and products are collectively owned, and the state as well as all other units cannot make gratuitous transfers but can only carry out exchange based on the principles of voluntary participation and mutual benefit. The separation of government administration from commune management will prevent state organs at higher levels from making gratuitous transfer of the manpower and material and financial resources of production teams. It will also help prevent the organs of political power from excessively controlling production and livelihood by means of administrative orders and fostering such bureaucratic phenomena as resorting to coercion and commandeering and giving arbitrary and impracticable directions. It will help to safeguard the ownership as well as the administration and management decisionmaking power of commune collective economic organizations and also mobilize the socialist enthusiasm of the broad masses of peasants and people. At the same time, the separation of government administration from commune management can break the framework of administrative district restrictions. Based on the organic connections in socialist economy, division of labor and cooperation can be carried out beyond the districts and trades and among different ownership systems. In communes, production teams and various economic organizations can also establish genuine relations of cooperation on the basis of voluntary participation and mutual benefit. This will help agriculture to develop in a direction favorable to specialization and socialization and will cater to the needs of agricultural modernization.

The separation of government administration from commune management is the general trend and popular feeling. It reflects the needs of our rural and economic development. However, this reform is an important change involving the political and economic life of 800 million peasants. This is a very complicated and meticulous work and there is absolutely no room for carelessness or hasty changes. Work must be carried out in an orderly manner in accordance with the dispositions of the CCP Central Committee and the State Council, and there must be leadership, preparations, plans and procedures and there must not be "across-the-board measures." At present and in the next few years after the formal adoption of the constitution, all localities should maintain the present system and continue to perfect various responsibility systems and readjust various grassroots organizations in accordance with the stipulations of the "Minutes of the National Conference on Rural Work" approved and transmitted by the Central Committee. However, we can first conduct tests at selected points based on unified planning and sum up experiences. Then on the basis of summing up experiences and after ample preparations and overall arrangements, we can gradually make changes by stages and in groups under guidance in accordance with specific conditions in various localities. At present, enterprises run by communes and production brigades are still led and managed by them. Even after the separation of government administration from commune management in the future, the enterprises run by the communes, production brigades or production teams and their property still belong to them and will not change as a result of the separation of government administration from commune management. This point must be made clear to all the commune members and commune cadres in order to avoid unnecessary ideological confusion which might result in economic and production losses. At present, the administration, management and organization of the agrotechnique popularization stations and agricultural machinery stations belonging to the communes are still under their responsibility and leadership. Such enterprises and units as supply and marketing cooperatives and credit cooperatives set up at the commune level are still managed and led under the existing system. Unless a decision is made specifying so by a department in charge at a higher level, this cannot be changed at will. Before the formal establishment and operation of rural organs of state power in the future, the work of various organs of political power in the rural areas at present is still managed respectively by the communes and the production brigades, and the responsibilities of the production team will continue to be in force. We must also continue to strengthen the work of party and league organizations. We must understand the important significance of the future separation of government administration from commune management to strengthening the building of political power in rural grassroots units and to developing rural collective economy. We must strengthen discipline, stand fast at our posts, conscientiously implement the various policies of the party and the state, and make a success of various work tasks.

In order to strengthen the work of organs of political power in our urban and rural grassroots units, the draft of the revised constitution makes the stipulations more explicit and rational than before in defining the functions of organs of state power and administrative organs in grassroots units. The differentiation made in the present constitution is not very explicit in this respect, and the functions of some administrative organs such as the planning of economic, cultural construction and public undertakings, the safeguarding of public property and the upholding of public order have been stipulated as the functions of organs of state power. The relevant stipulations in the draft of the revised constitution have remedied this defect. Not only this, but the draft of the revised constitution also makes more explicit and concrete than the present constitution the extent of the authority of local state administrative organs (including state administrative organs at grassroots level), and points out the limits of the authority of people's governments at various local levels, the management of the economy, education, science, culture, public health, physical culture and urban and rural construction in their own administrative district, as well as such administrative work as finance, public health, civil administration and family planning, the promulgation of decisions and orders and the appointment, dismissal, training and examination as well as the reward and punishment of administrative personnel. These stipulations in the draft of the revised constitution play an important role in enforcing the work responsibility system, raising work efficiency in state organs and getting rid of bureaucracy.

In order to strengthen the work of organs of political power in our urban and rural grassroots units and the masses, the draft of the revised constitution has also added the neighborhood committees and the villagers' committees into its content. Neighborhood committees and villagers' committees are important forms of organizations that have long proved effective in China. Although they are not a form of state power organs, they are important channels for organs of political power in grassroots units to maintain ties with the masses. According to the stipulations of the draft of the revised constitution, neighborhood committees and villagers' committees are mass organizations of self-government set up in cities and rural areas where people live in a community. The neighborhood committees and villagers' committees set up subcommittees for mediating disputes among the people and to help maintain public order. They also reflect the views and demands of the masses to the people's government, offer suggestions and carry out supervision. This not only will enable the urban and rural residents, based on the principle "everybody's business should be handled by everybody," to solve problems in their own livelihood, production and study by means of the neighborhood committees and villagers' committees, and to strengthen unity among the people, but the organs of political power in urban and rural grassroots units can also, by means of such residents' self-government organizations, acquaint themselves with the views and demands of the masses, maintain close ties with the masses and guarantee the implementation of the line, policies and principles of the party as well as the laws and decrees of the state.

The stipulations in the draft of the revised constitution concerning the strengthening of organs of political power in grassroots units are a summation of the experiences in the building of political power carried out for a long time in our country. It can be affirmed that these stipulations will play an important role in persuading the masses to take part in the management of the state, guaranteeing the democratic rights of the people and promoting the four modernizations. Now the 23d Session of the 5th NPC Standing Committee will submit the draft of the revised constitution to the whole people for discussion, an important event in the political life of our country. All our citizens must actively take part in the discussion and conscientiously submit amendment suggestions so that our constitution will become more perfect and complete and the stipulations of the constitution concerning organs of political power in grassroots units will be more suited to our national conditions.

SELECT AND APPOINT PERSONS OF ABILITY

Beijing RED FLAG in Chinese No 12, 16 Jun 82 pp 16-19

[Article by Yang Fengchun [2799 6646 2504]]

[Text] "Selecting and appointing persons of ability" is a strategic task in carrying forward the proletarian revolutionary cause. It is also one of the major tasks in the present restructuring of government organizations and reform of the cadre system. It is aimed at vigorously developing the great socialist and communist cause pioneered by the proletarian revolutionaries of the older generation and ensuring the successful realization of the construction of the socialist modernizations.

The restructuring of government organizations is being carried out smoothly. The organs directly under the CCP Central Committee and the State Council have been doing a good job in carrying out the party's line of "appointing people on their merits," paying serious attention to selecting outstanding young and middle-aged cadres for the leading bodies and enabling them to take part in or to take charge of the leadership work. What they have done enjoys warm support from the broad masses of cadres and people and has set a good example for the reform of party and government organizations at various levels.

The comrades who have been newly promoted to the leading bodies can certainly open up a new prospect in their work if they resolutely carry out the party's line, policies and principles, abide by party discipline, maintain close ties with the masses, are capable of independent work, active and resolute in doing their work, never seek private interests and dare to overcome difficulties. The old comrades who have left the leading posts will then feel relieved when they see with their own eyes that a large number of talented people have come forth from the contingent of the proletarian successors and that there is no lack of successors to carry on the proletarian revolutionary cause. It is necessary to help and support the younger comrades to take charge of the leadership work and do a good job in handling and taking over the work when the old comrades are still in good health. It is necessary to foster the revolutionary atmosphere in which every younger cadre at a leading post is working hard for the party and the people with a high sense of responsibility and every older comrade who has left his post is continuing to concern himself with the party's cause with high revolutionary enthusiasm and is keeping up the good qualities of a party member. Thus, our purpose of abolishing the lifelong tenure of leading posts, which has really been existing, and preventing the aging of the leading bodies will be achieved. Besides, this is also an essential condition for ensuring the continuity of our party's line, policies and principles and for ensuring that our revolutionary cause is developed continuously toward prosperity. Therefore, "selecting and appointing persons of ability" is of far-reaching significance.

We have fulfilled the task of setting to rights things which have been thrown into disorder in the guiding ideology and have a correct political line. However, in order to implement the party's correct ideology and realize the party's political line, there must also be a correct organizational line. Therefore, the cadres' quality, their steadfastness and loyalty toward the revolutionary cause, and whether they are capable, energetic and vigorous are of decisive importance. Without tens of thousands of leading cadres and backbone forces who have both ability and political integrity and are in their prime, it is impossible to complete the great historical task of leading the socialist modernization drive in a country with a population of 1 billion.

The old cadres must take on the responsibility of selecting and training their successors. This is the crux of "selecting and appointing people of ability," and is also the most glorious and sacred duty of the old cadres in the new historical period. In this respect, the proletarian revolutionaries of the older generation have set the whole party a brilliant example. Standing on a high plane and being farsighted, they have taken the interests of the party and the state as the supreme guiding principle for their ideology and action. They have conscientiously fostered and supported the younger comrades, who are not so capable, so experienced and qualified as themselves, to take charge of the important leading posts so that a new generation of leadership core can be shaped and our cause can be carried on and be uninterruptedly pushed forward. What they have done, which is good for the people and is enjoying the ardent support of the people, will always be spoken of highly by the masses of people and will thus go down in history to educate our descendants.

Many old comrades have voluntarily withdrawn from the front-line leading posts and "made way" for the younger and middle-aged cadres. They are naturally spoken of highly by the party and the people. Under the education of the party, our veteran comrades have always lived and fought together with the party and the people, whether in the war-ridden years or in the sun-scorched and rain-drenched days of construction. They have acquired good habits of diligently working and making revolution. Now, since they have become old and their energy and vigor have failed them in doing such intense and onerous work as they did when they were young, they have to leave their familiar environment. Some of them will retire and some will leave their posts for convalescence. It is natural that they feel reluctant to leave. We must understand their feelings and show every consideration for them. There are also a large number of old cadres who regained their posts after the smashing of the "gang of four" or after the party's cadre policy was implemented. Although their prime of life for working for the party and the people was lost due to the persecution by Lin Biao and the "gang of four," they have never become despondent. They are capable, enthusiastic and are in good health. They are eager to work for more years for the party and the people so as to make up for the lost time. But proceeding from the long-term interests of the party and the state, they have voluntarily withdrawn from their posts so that the younger and middle-aged cadres can have more opportunity to take up the leading posts and give better play to their prime of life. We must learn from and develop this noble quality. At this juncture, the veteran comrades cannot but have mixed feelings. They are recalling the past, thinking of the future and caring for the present. They are concerning themselves with affairs of the party and the people, just like "an old steed in the stable aspiring to gallop a thousand li, and an old warrior cherishing high aspirations." Every one of us, working at our posts, must have a full understanding of all this, show every consideration for the ardent revolutionary feelings of the old comrades and never hurt their feelings. As to those who spread rumors and slander and say things that hurt the feelings of the old comrades and are harmful to the unity between old and young cadres, it is necessary to stop them from doing so and educate them. We must fully respect our veterans politically and take good care of them in their daily life. It is especially important for us to do a good job in the work our veterans have handed over to us. We must respect our veterans, earnestly learn from them, ask them for help and listen to their opinions and criticisms with an open mind.

There have always been obstructions to the selection and promotion of young cadres. This is not a question of whether one is enlightened or not but an expression of backward social habits and an erroneous conventional concept. According to these outworn concepts and habits, the maintenance of administrative power is a symbol of honor, position and material gains. These erroneous concepts and habits have now penetrated into the routine work of our party and government and have given shape to the lifelong tenure system, which was regarded and propagated as "carrying out revolution all one's life." Under this system, the comrades who had power in their hands were taken very good care of in a hundred ways while the retired old comrades were seldom thought of. Thus, various absurd remarks emerged, such as "power means truth" and "power means gains," and some vulgar and erroneous ideas such as leaving the leading post means being nonrevolutionary or committing mistakes, even such harmful and corrosive ideas as "using the power as much as possible before it is forfeited" have emerged. They have run completely counter to the Marxist revolutionary viewpoint of "public servants." If these erroneous conventional concepts and habits are not exposed, our reform will be seriously obstructed.

In this connection there is also a question of recognition. In the eyes of some comrades, young and middle-aged cadres are always immature, so they cannot be trusted to carry the heavy loads. This is certainly reasonable in some aspects, for young comrades are generally not so experienced as the old comrades and their understanding of party spirit and ability to take their bearings are not as good as the latter. But, on the other hand, since they are younger, and are in the prime of life, just like the old comrades were when they were young, they are more eager to learn, more sensitive to fresh happenings and more diligent and indomitable in doing solid work. They also have closer ties with the masses. So, with the help of the old comrades, they will be able to grow rapidly and become successors to the proletarian revolutionary cause. "Real knowledge comes from direct experience." Leaders can only acquire their knowledge, ability and methods by actually taking part in leadership work. At the actual leadership posts, the young cadres will be able to enhance their abilities, acquire experiences and become mature more rapidly and give better play to their role. Did our veterans not grow up in this way?

Some other comrades are apprehensive that the young and middle-aged cadres are not prestigious enough to lead the work. Analysis must be made on this question of qualifications and record of service. The qualifications and record of service reflect, to a certain extent, one's work experience. Having little experience and without a period of practical training, it is certainly difficult for one to do leadership work. However, by stressing one's revolutionary qualifications, we do not mean "judging one's ability merely according to one's qualifications and records of service." This is a wrong principle in cadre work. Some people always believe that they are better than the others and have thus adopted an uncooperative attitude toward the young and middle-aged cadres who have been promoted to the leading posts. Such an individualist attitude is certainly incorrect. Some people have advocated "being even with one another." Do they mean that a leadership post should be taken by everybody? There is nothing absolutely "even" in the world. The earth itself is uneven, too. To "judge people merely according to their qualifications and record of service" has never been the proletarian boldness of vision. What we must do is "select and appoint persons of ability." Anyone who has common political knowledge can understand this. However, this shows how the young and middle-aged cadres need the help and support of the veterans. In short, we must, proceeding from the whole situation and with a proletarian breadth of vision, take a broad and long-term view and select and train the successors. Otherwise, we shall commit an unforgivable historical error due to overcaution, indecision and hesitation.

In selecting and appointing young and middle-aged cadres, we must adhere to the criterion of having both ability and political integrity. There are different political criterions for different classes. For the proletariat, it means a firm proletarian class stand, high socialist consciousness and good political quality. As to ability, it means professional knowledge, work experience, being capable of solving problems and capable of implementing the party's line, policies and principles mapped out since the 3d Plenary Session of the 11th CCP Central Committee in the light of the actual conditions. To judge whether one is of good political integrity, we must not merely judge it from one's temporary behavior, but mainly from one's political attitude since the 3d Plenary Session of the 11th CCP Central Committee. It is necessary to see whether one supports the party's political line, reaches political identity with the CCP Central Committee, adheres to the four basic principles, works hard and is ready to devote one's self in the construction of the four modernizations. Those proven smash-and-grabbers, those who made their fortune through rebellion and those who have been seriously influenced by factionalism should never be allowed to enter the leading bodies at various levels. These people, as well as those who have seriously violated the law and discipline in the political and economic fields and those who have stubbornly rejected the implementation of the party's line, policies and principles mapped out since the 3d Plenary Session of the 11th CCP Central Committee must resolutely be transferred from the leadership posts if they are still in power. Those who are lazy, dispirited and selfish and who indulge in idle talk without doing concrete work should not be permitted into the leading bodies either. More attention should be paid to preventing those who are always inactive, unprincipled, deceitful, double-faced, fond of talking big, flattering, framing others and forming factional cliques and who enjoy no support from the masses from entering the leading bodies. Such political double-dealers are not only unreliable but also very dangerous. They have corrupted the party's work style, injured its relations with the masses and damaged its unity. They are careerists hidden in the revolutionary ranks. Those people who have only ability but are without good political integrity should not be admitted to the leading bodies. But to those comrades who have really corrected their past mistakes, we must not seize on their mistakes. If they must be transferred to important positions, we must not hesitate to do so.

It is necessary to give first priority to the political criterion in the training and selection of successors. This principle is not only adopted by the proletariat but was also adopted by all people of insight in the feudal society. Sima Guang, a feudal politician, said: "A man of moral character is respected, and a man of ability is loved. People usually keep a distance from the respected and are on intimate terms with the loved. For this reason, one can discover the ability of other people more easily than to know their moral characters. Since ancient times, prodigals of a family or treacherous court officials and arch careerists of a country were usually those who had ability but lacked moral integrity. Many countries and families were then subverted by such people. Therefore, if the leaders of a country or a family can draw a distinction between ability and moral character and know pretty well which is more important, then there will be no need to worry." ("Zi Zhi Tong Jian": "The Records of Zhou, the Twenty-Third Year of King Wei Lie") So, "when we select and promote cadres, it is necessary to find out whether they adhere to the socialist path. If a cadre does not adhere to the socialist path, he must be educated and transferred to another post." (Deng Xiaoping: "The Present Situation and Our Tasks") Secondly, an important condition for the selection and promotion of cadres is whether they possess scientific and professional knowledge. Under the present circumstances, anyone who does not possess scientific, technological and cultural knowledge will be unable to lead the construction of the four modernizations and shoulder the heavy loads of building the socialist material and spiritual civilizations. Therefore, "no matter at what post one is working, one should acquire professional knowledge and be vocationally proficient. Those who have not acquired professional knowledge should start learning, and those who already have professional knowledge should continue learning. Anyone who is unable or reluctant to learn should be transferred to another post. We must organize our leading bodies according to the demands of various professions, give full play to the role of professional cadres and help the broad masses of people in their study and work according to the demands of various professions." (Deng Xiaoping: "The Present Situation and Our Tasks") On the premise of combining both political integrity with ability, whether one is in the prime of one's life must also be taken into serious consideration today. In selecting cadres, it is necessary to be selfless, to take the whole situation into account, and proceed in all cases from the interests of the party and the state. Such practices as "judging cadres merely according to one's own judgment," and "arousing factionalism" are very harmful. In order to do a good job in this respect, it is necessary to follow the mass line and combine personal recommendation with organizational investigation as well as combine organizational investigation with soliciting opinions from the general public. In other words, it is necessary to select the comrades who meet the three requirements as cadres for the leading bodies so that the leadership power at various levels can be grasped by the active elements of the proletariat.

This restructuring of government organizations and the reform of our cadre system, including "selecting and appointing persons of ability," are a deep-going revolution. It is a great self-revolution of the proletariat after summing up historical experiences and lessons to overcome its own shortcomings. It is also an organizational preparation made through consolidating organizations for the great socialist construction. This is why when it was waged, it soon became a central task in the political life of the whole country. Having the destiny of the party and the state in mind, the broad masses of people, party members and cadres sincerely hope that this reform will be carried out successfully and that it will be carried out resolutely and through to the end. Some comrades are apprehensive that this great action cannot be finished since there are various obstructions and deep-rooted habits which are difficult to get rid of. Some other comrades, who are selfish and have proceeded from their private interests, are preoccupied with their personal gains and losses or are even full of grievances. Those who oppose us, including the remnants of the "gang of four," are looking on unconcerned with cold eyes. Some of them have even seized the opportunity to stir things up and tried to shake the will of the people, desiring to see the world plunged into chaos. In short, the restructuring of government organizations and the reform of our cadre system have found an echo in various social strata and there are various views and comments on them. However, the Chinese Communist Party, which takes the people's will and interests as its own, must do as the masses of people require. We have no reason to stop doing what the masses of people require us to do. There do exist difficulties, but we are full of confidence that we will win. We have already made the first step toward victory. We must continue to advance and never turn back or stop on the road of ictory. We are sure to win successes if we are determined, firm and resolute and overcome all obstructions.

INVESTIGATION ON LIUZHUANG

Beijing RED FLAG in Chinese No 12, 16 Jun 82 pp 20-25

[Investigation report by joint investigation team comprising members of the Henan Provincial CCP Committee, Xinxiang Prefectural CCP Committee and Xinxiang County CCP Committee]

[Text] Qiliying commune's Liuzhuang brigade in Xinxiang County, Henan Province is located on the north Henan plains' old course of the Huanghe River. There are 207 households in the village [as published] with a population of 1,230. The village has a total cultivated area of 1,904 mu. As an advanced unit, it was well-known throughout the country as early as the 1950's. Over the past more than 20 years, members of the brigade have overcome all kinds of obstructions and have consistently persisted in steadily advancing along the socialist road. Following the 3d Plenary Session of the 11th CCP Central Committee, this brigade has achieved a big increase in production every year. In 1981, the brigade's per-mu grain yield reached 1,700 jin, its per-mu yield of ginned cotton reached 175 jin after encountering a natural disaster, its total collective income reached 2.52 million yuan, its per-capita income reached 2,050 yuan, and on the average, each person received 600 yuan through collective distribution. In 1981, the brigade sold 142,000 jin of grain, 170,000 jin of cotton and over 10,000 jin of oil to the state. In 1981, its public accumulation increased by 510,000 yuan, thus having an accumulative total of 5.3 million yuan. The accumulative total of 5.3 million yuan represents an average of 25,600 yuan per household. Every household in the brigade has surplus grain and bank savings. In 1981, the total amount of bank savings of all members of the brigade exceeded 800,000 yuan. This total amount means that on the average, each household has deposited over 3,800 yuan in the bank. The collective [as published] has built 41 two-story buildings and all members of the brigade have moved into new houses. The brigade's average housing space per person is 23 square meters. The village has 197 television sets, 315 radios, 265 electric fans, 609 wristwatches, 310 bicycles and 217 sewing machines. Some households in the brigade have also bought washing machines, cameras and motorcycles. The brigade also provides for its members free housing, free water and electricity supply, free medical care, free schooling, free nursery service, free hairdressing, free bathing facilities and free movies.

How did the party branch of Liuzhuang brigade lead the masses to build a new socialist village?

1. Proceed From Reality, Correctly Implement the Party's Policies, and Lead the Masses To Work Steadily and Make Solid Progress in Promoting Production and Construction

Comrades of the Liuzhuang brigade party branch always said: "What is our party's purpose in leading the masses to make revolution? The party simply wants to develop production and let the masses become well-off. We should proceed from this realistic point and try in every possible way to quicken the pace of developing production and construction, to increase the income of the masses of commune members and to make greater contributions to the state." Members of the party branch call this strong faith the pillar. With this pillar, they have persisted in proceeding from reality and correctly implemented the party's policies over the previous years. With this pillar, when they were kept waiting a long time for assignments, they were not downhearted or nervous; when they were given important assignments, they did not overdo their roles nor did they take a haughty attitude. In particular, the realistic spirit they showed when work involving the overall situation went wrong is really commendable.

In establishing advanced agricultural producers' cooperatives in 1956, some comrades thought that advanced cooperatives should be established on the largest possible scale and that some 20 elementary cooperatives in 7 natural villages should be integrated into one advanced cooperative. However, after consulting members throughout the village, the Liuzhuang party branch unanimously held that integrating over 1,000 households into an advanced cooperative would create production headaches due to the lack of management experience. Members of the party branch decided to integrate the village's three elementary cooperatives into one advanced cooperative. Higher authorities then did not recognize the Liuzhuang advanced cooperative. As a result, the Liuzhuang advanced cooperative was kept waiting for 6 months for assignments. After being put into practice for a year, the large-scale cooperative system got nowhere. Consequently, cooperatives established on a small scale in natural villages were restored while Liuzhuang promoted production.

In 1958, the rural areas engaged in grand large-scale battle tactics. The Liuzhuang party branch could only helplessly watch these tactics producing adverse effects on production. The strength of a single brigade was unable to stand up against this current. Consequently, the Liuzhuang party branch organized weak and female workers into a labor force for "supporting work in other localities" and reserved 100 strong workers to promote the brigade's production, thus reducing the brigade's production losses.

During the 10 years of upheaval, Lin Biao and the "gang of four" energetically criticized the "theory of productive forces," and preached fallacies such as "rather have socialist weeds than capitalist seedlings" and "poverty leads to revolution and prosperity leads to revisionism." None of these things shook the Liuzhuang party branch's will to grasp production.

No matter how chaotic the outside situation was, all trades and professions in Liuzhuang carried on as usual.

The Liuzhuang party branch upheld the Marxist-Leninist principle of seeking truth from facts. Not only did it not waver or vacillate during political storms, but it strictly carried out production and construction tasks in accordance with objective laws. At every stage, the party branch formulated feasible and realistic production plans and led the masses to work steadily and to make solid progress in developing the range and quality of production.

What history had left for the Liuzhuang people was a piece of barren saline-alkali land crisscrossed by ravines. Before liberation, it was said that, "In this area which has a circumference of 10 li, the poorest village is Liuzhuang village." In 1949, Liuzhuang's per-mu yield of grain barely exceeded 100 jin, its per-mu yield of ginned cotton was around 20 jin, the whole village's total income was between 30,000 and 40,000 yuan and its per-capita income was around 20 yuan. In face of this reality, the Liuzhuang party branch raised a loud and clear point: "To enable everyone to eat one's fill, it is imperative to change conditions." The party branch led members throughout the village to fight for 4 whole years. During the 4 years, they leveled land, dug irrigation ditches, sank wells, diverted water from the Huanghe River to their land, improved their saline-alkali soil, and turned the village's 750 low-yielding plots into a large piece of open and flat land. In 1957, the village's per-mu yield of grain reached 430 jin and its total grain output reached 280,000 jin. This meant its grain output increased more than five times. In the same year, the village exceeded 100 jin in per-mu yield of ginned cotton and its total ginned cotton output increased more than 10 times. The village's 1957 per-capita income from distribution reached 79 yuan. The village's problem in finding enough to eat and wear was then solved. Comrades in Liuzhuang described this stage as a stage for turning low yield into high yield. They also described it as a stage to lay foundations for eliminating poverty and achieving prosperity.

What did they do after turning low yield into high yield? On the basis of summing up experiences, the Liuzhuang party branch led the masses to further level their land. To provide "double insurance" against drought, they carried out both well irrigation and canal irrigation. They developed fine varieties by selection, improved cultivation techniques, gradually carried out mechanization of farm work, and established farmland with high, stable yields. In 1968, the village's per-mu yield of grain exceeded 1,000 jin and its per-mu yield of ginned cotton reached 176 jin.

Looking back on the 10-year course of the production development, the Liuzhuang party branch discovered that the growth rate of agricultural income was far lower than that of agricultural investment. During the 10 years, the village's per-capita income from distribution was always between 130 and 150 yuan. At the same time, with the further and continuous improvement in production conditions and management standards, and with the development of scientific farming and the increase in the number of farm machines, it was discovered that there were too many people and very few farm tasks in the village. Through summing up experiences, the Liuzhuang party branch achieved a new leap in ideological understanding. Members of the party branch said: "If we do not develop a diversified economy, we will not be well-off in 100 years' time." From 1969-1975, while further grasping the promotion of grain and cotton production, they organized surplus labor forces to actively develop animal husbandry and forestry. The development of forestry and animal husbandry not only increased income and accumulated funds for promoting expanded reproduction but also supplied agriculture with a large amount of organic fertilizer, improved soil and promoted grain and cotton production. With a continued increase in funds, the village bought more farm machines, thus saving agricultural labor. As the labor and funds were available, the village successively set up a flour mill, a machinery plant, an ice cream factory and a cottonseed oil processing factory. Liuzhuang's total income in 1975 reached 540,000 yuan, compared with only 320,000 yuan in 1969. Its income from industrial and sideline production in 1975 accounted for 42 percent of its total income, compared with only 7.7 percent in 1969. The Liuzhuang party branch described this stage as a stage of all-round development. They also described it as a stage for achieving prosperity.

Following the 3d Plenary Session of the 11th CCP Central Committee, the Liuzhuang party branch further emancipated its mind and led the masses of cadres and people to enter a new stage for promoting the integrated management of agriculture, industry and commerce and all-round development. The party branch proceeded from Liuzhuang's reality and formulated two measures: 1) Setting up on a trial basis an integrated agriculture, industry and commerce undertaking and striving to increase economic returns. Under the guidance of higher authorities, they set up a shop, a business canteen and a food processing factory, expanded their paper mill, developed their breeding trade, and initially made production, supply and marketing a coordinated process. 2) Further perfecting the production responsibility system. The whole brigade was divided into six specialized departments, namely, agriculture, industrial and sideline production, animal husbandry, forestry and vegetable production, building construction, and machinery. The brigade's 12 production units carried out specialization in production, promoted business management, and established the production responsibility system which is characterized by "unified management, specialized production, division of labor and cooperation, and linking rewards and penalties to output." This gave better expression to the principle of distribution according to work, gave full play to the superiority of the collective economy, and mobilized village members' enthusiasm for promoting production. With the implementation of the two measures, Liuzhuang made three big steps in 3 years' time: the total income of the brigade's collective economy increased from 1.26 million yuan in 1978 to 2.52 million yuan in 1981, thus achieving an average increase of 26.1 percent; the brigade's per-capita income from collective distribution increased at an average rate of 26.3 percent; the brigade's grain, cotton and oil contributed to the state showed a yearly average increase of 4.8 percent; and the collective's public accumulation showed a yearly average increase of 11.2 percent. The development pace achieved since the third plenary session was unprecedented since the founding of the PRC.

Members of the Liuzhuang party branch who fight in the agricultural forefront the year round understand that going in for agriculture requires much study. To work in agriculture, one must not only have the courage to do so, but also have a good grasp of agriculture. Without raising scientific and technological standards, production cannot be developed in an all-round way.

Over the past 20 years and more, members of the Liuzhuang party branch consistently have taken the lead in studying science and technology and strived to turn themselves into experts in various production trades. As early as 1956, they had organized a scientific research group, carried out various experiments in grain and cotton production, insisted that "experiments should first be carried out in small plots prior to spreading successful experimental experiences over a large piece of land for growing field crops," solved knotty problems, set good examples, promoted production and served production units. Shi Laihe and Li Anren, respectively secretary and deputy secretary of the party branch, lived near the experimental plots with members of the brigade, observed the growth of their cotton day and night, the situation of plant diseases and insect pests and the results of various experiments; tried to learn the secret of cotton cultivation techniques, and summed up their experience in mastering high-yield cotton cultivation techniques: "Cotton seedlings should be managed in a timely manner; strong sprouts grow quickly; seedlings should be managed in accordance with the way they are growing; the growth of budded cotton can be stabilized by building racks; water and fertilizer should be applied ingeniously to promote the stable growth of cotton; and a high yield can be achieved by making unremitting efforts to promote cottonfield management." During the late 1960's, withering disease spread and cotton production was seriously threatened. They introduced disease-resistant varieties of cotton, promoted cotton variety development by systematic selection and through hybridization, developed over 10,000 single plants and several hundred hybrid combinations, and successively bred three types of disease-resistant and high-yield cotton varieties, namely, "Liuzhuang No 1," "Liuzhuang No 2" and "Liuzhuang No 3." These varieties of cotton have been demonstrated and popularized in this province and also in fraternal provinces. Through long-term practice, cadres of this brigade have turned themselves into experts in cotton production. Of the 17 members of the brigade party branch, 15 have been assessed as qualified technicians and some of them have become noted local experts in cotton production. The Liuzhuang Scientific Research Center has now become a scientific research organization engaged in the synthetic study of agriculture, forestry, animal husbandry, sideline production and industry. The brigade now has a total of 107 qualified peasant technicians. The brigade has technical personnel engaged in various specialized trades and professions such as grain and cotton production, plant and crop protection, meteorology, pedology, animal husbandry, veterinary medicine, agricultural machinery, machinery, papermaking and food industry. The brigade party branch has also carried out technical training for members of the brigade through various forms and made great efforts to train and foster a generation of a new type of peasants with political consciousness, culture and technical capability.

To raise the scientific and technical standards for promoting production, there must be scientific management corresponding to the raising of the standards. With the development of production, the Liuzhuang brigade party branch has paid great attention to improving management work and tried in every possible way to increase economic returns. The party branch has divided members of the party branch and cadres of the brigade into three groups: the first group is in charge of grasping party building and the party's ideological and political work; the second group is in charge of the management of production and construction; and the third group is in charge of day-to-day administrative affairs. Every specialized department of the brigade has a leading group which is in charge of organizing production and management work. The brigade has a set of methods to manage production, marketing and distribution. With regard to labor management, the party branch has sent the brigade's 580 workers to various production units in accordance with their specialties and production needs. The party branch has carried out a careful calculation, clearly defined every worker's responsibility, adopted a quota management system and implemented the system of linking rewards and punishments with production output so as to give full play to every worker's special skill, to tap labor potentials and to make the best use of every worker. With regard to the management of industrial and sideline production, the party branch has stressed that brigade-run enterprises will not vie with state-run factories in purchasing raw materials; that brigade-run enterprises will just use local materials; that brigade-run enterprises will start with producing those products that only require a small investment but produce quick desired results and have a good market; and that brigade-run enterprises should adopt the "snowball" method of progressively developing their enterprises. The party branch has also stressed that brigade-run enterprises must pay attention to economic returns, avoid participating in losing ventures and avoid adopting dishonest practices. With regard to property management, the party branch stressed that it is imperative to uphold careful calculation and strict budgeting and to be industrious and thrifty in managing property. This system and these management methods organically integrate responsibility with power and profit, organically integrate political work with economic work and organically integrate centralized leadership with democratic management. They are advantageous to the building of our socialist material civilization and spiritual civilization.

2. Linking the Hearts of the Cadres and the Masses Together With Socialist Ideology Is an Important Social, Political and Ideological Condition for Liuzhuang's Incessant Progress

The Liuzhuang party branch persists in educating the commune members with socialist ideology so that, even though they are in Liuzhuang, the cadres and the masses have the whole country in mind, are united as one and are doing their utmost in building socialism.

In the practice of continuously educating the masses with socialism, it has acquired a set of methods and styles welcomed by the masses for carrying out lively and concrete ideological and political work and it has gradually regularized and systematized work in this respect. One thing it does is to integrate political work with economic work and to carry out ideological work in every link of production. In each stage, it often helps the masses to understand what, how and why they should do something. It links each item of work with the interests of the state, the collective and the individual and asks the masses to participate in making plans and to put forth suggestions so that the masses can really become masters of the collective. Before doing anything, it first mobilizes the masses. Then, it checks the work while it is being done. Finally, it sums up the work when it is completed. It persists in selecting and commending the advanced, setting up typical exemplary examples and relying on the role played by the advanced to push forward work that affects the overall situation. Last year, the brigade set up 8 red banners, selected 12 advanced collectives, 120 model cadres, 71 model CYL members, 228 model commune members and 45 model families. Secondly, it adheres to the principle of giving guidance. Timely help is given instead of belated advice. Investigation is conducted before any problem crops up and the thoughts of the masses are well-understood. The Liuzhuang party branch watches out for symptoms of unhealthy tendencies and carries out timely education so that problems will not pile up before they are tackled. It carries out specific ideological work in accordance with the specific conditions of different individuals. If a problem cannot be solved right away, it waits patiently and in the meantime, creates conditions for solving it instead of making rash criticism. Thirdly, it helps the masses solve concrete problems while carrying out ideological work. It becomes a bosom friend of the commune members. When a commune member is ill or when he attends to a wedding or funeral ceremony, the cadres will visit them and help them solve concrete problems. Before each Spring Festival, the brigade has various kinds of goods provided for the occasion. Shortly before the busy farming season, the brigade arranges holidays for the commune members to visit their relatives, gather pig feed and attend to their private affairs. In the winter, the cadres send coal to the commune members and so on. Through the work mentioned above, the hearts of the commune members are closely linked with the collective economy. Fourthly, an exemplary role is played by party and CYL members and cadres and all party, CYL, women and militia organizations grasp ideological and political work. In Liuzhuang, the masses dare to criticize and check anything which is harmful to the collective and any words or deeds which are harmful to socialism. A new social practice of cadres supervising commune members, commune members supervising cadres and commune members supervising commune members has been formed. Fifth, it has formulated a set of feasible popular rules, welcomed by the masses, which are gradually changing into a new socialist moral code.

With the ever-deepening socialist education, profound changes have taken place in habits, customs and ideology which have lasted for several thousand years. New socialist relationships among men have appeared. People are united, help each other and love each other. Selflessness, putting other people's interests ahead of one's own, loving the collective and loving the country have become virtues treasured by Liuzhuang's commune members, while corruption, theft, speculation, profiteering, extravagance, waste and feudal superstition find no support. All the people of the village pay attention to civility and politeness, respect the old and take care of the young and help and accommodate each other. In the past few years, no civil lawsuits have been filed. No one has applied for an audience with the higher authorities to appeal for help and no fighting has been reported. A new mood of socialist civilization is prevailing everywhere.

The people of Liuzhuang are united as one in building socialism. The lofty ideal of taking the socialist road is remarkably expressed in their correctly handling the relationship between the interests of the state, the collectives and individuals. Liuzhuang is located in an area where grain and cotton are the main crops. According to the state's planting plan, it is to plant 1,000 mu of cotton and 800 mu of grain crops each year. In order to ensure fulfillment of the state purchasing plan, it did not reduce even 1 mu of land to plant cotton when the people there had difficulties in their livelihood; and after the price of cotton was raised, it did not reduce even 1 mu of land to plant grain crops either. The comrades of the party branch said: The tasks of selling grain and cotton assigned by the higher authorities are based on the needs of the overall situation. We cannot care only about our own interests at present and disregard the needs of the state. Our small family--Liuzhuang--cannot be separated from the big family--the state. In selling agricultural and sideline products to the state over the past 20 years or more, the Liuzhuang brigade has sold a large amount of surplus grain, cotton, oil, meat, eggs and other agricultural and sideline products in addition to fulfilling the state purchasing tasks. It has never sold its cotton or grain to brokers.

The noble socialist virtues of the people of Liuzhuang are also concentratedly expressed in their upholding and developing the revolutionary spirit of self-reliance and hard struggle. In the course of developing production, their foothold has always been their own strength. The comrades of Liuzhuang said: "We can only depend on our own hands to get rich. If we depend on outside help to become rich, our wealth will not last long. The more we depend on outside help, the lazier we will become and the more we depend on outside help, the less aspirations we will have. A lazy person cannot be a pioneer!" As early as in 1956 when the advanced agricultural producers' cooperatives were formed, Liuzhuang suffered from a serious flood. The wheat decayed and the output of autumn grain dropped. While summing up experiences and lessons, the Liuzhuang party branch organized the commune members to provide for and help themselves by engaging in production, to plant vegetables, to develop sideline production and to gather grass in order to provide food for the people and the horses. This set the people's minds at rest and helped the commune members see the strength of the collective and the superiority of socialism. After production was developed and their livelihood became well-off, they still depended on the spirit of self-reliance and hard struggle in doing pioneering work and blazing new trails. When they developed animal husbandry in 1964, they endeavored to get more done with less money. They spent 90 yuan to buy 3 milk cows and increased the number mainly by breeding their own animals. At present, the number has increased to 110 and the value of their cows amounts to 130,000 yuan. Later, they bought 27 mares from Xinjiang and also increased their number by breeding their own animals. At present, the number of livestock is 320, and the annual income from animal husbandry alone may reach over 200,000 yuan. The cadres and the masses of Liuzhuang also display a valuable spirit of assiduity in developing industry and sideline production. In 1975, the horn of Liuzhuang's tractor broke and they were not able to buy a new one. The brigade repair plant set out to make a horn themselves. They removed the old horn, dismantled it and put it together again and again in order to study it. They continued to improve their process and after half a year's efforts, they finally succeeded in producing a horn on a trial basis. Later, they not only were able to satisfy their own needs but also were able to produce horns in large quantities and to supply markets in 20 provinces. This kind of product alone brings in an annual income of 400,000 to 500,000 yuan. The production of horns has greatly enhanced the development of industry and sideline production in Liuzhuang. In developing production, Liuzhuang does not depend on outside help. In improving the living conditions and in building a new countryside, it depends even more on the people's own hands to do difficult pioneering work. To build residential houses, Liuzhuang needed over 10 million bricks, 2,400 cubic meters of wood, an investment of 1.5 million yuan and over 300,000 work days. It resolutely refused to ask the state for help. It did not depend on the help of others. Nor did it ask the commune members to bear the expenses. The people of Liuzhuang made bricks, gathered materials and constructed doors and windows themselves. They did not have enough people skilled in house building; so, people improved their skills and trained others while they worked. In 50 days' time, they completed the first house. In the beginning, only 1.5 men were skilled at brick laying, tiling and plastering. Later, 150 persons were able to do so, of which 90 were women. The number of carpenters was increased from 6 to 30. In this way, a new residential area was built within 6 years. This has not only created material wealth for Liuzhuang's future generations but also left behind for them the valuable spirit of struggling hard in doing pioneering work.

3. Strengthening the Party's Own Building and Giving Full Play to the Role of a Fighting Bastion of the Party Branch Is a Fundamental Guarantee to Liuzhuang's Incessant Progress

The comrades of the Liuzhuang party branch said: "If one is not really up to the mark, nobody will listen to him." In the course of continuously strengthening the party branch, they have set up and amplified seven systems step by step: One is the system of democratic life meetings. Each month, the party groups hold one democratic life meeting to carry out criticism and self-criticism, and members of the branch committee lead dual organizational lines. Within the party, they set high and strict political and ideological demands for party members. They frequently check the situation of the party members and give them as much help as possible. Second is the system for study and party lecture education. Each month, the party branch holds one meeting of all its members at which it gives party lectures, helps its members to study current affairs and policies and educate them with the party's basic knowledge and the party's fine traditions. Third is the system of having heart-to-heart talks. The secretary, committee members and party members often have heart-to-heart talks to exchange views and to reflect the demands of the masses. Fourth is the system of party members forming ties with households. Besides doing a good job in the ideological and political work of their own families, each of the 68 party members have formed ties with 2 to 3 households of commune members in order to publicize to them the party's principles and policies and to help the commune members manage their families democratically and carry out family ideological work properly. The party groups and branch committee regularly listen to party members' reports on their mass work. Fifth is the system of assessing party members and the party branch twice a year. Sixth is the system of examining party members. This is linked with activities of striving to become advanced and fine party members. A preliminary examination is made in the middle of the year and a final one at yearend. This is for summing up advanced experiences and for commending the advanced. Seventh is the system of reelecting the party branch regularly. The party branch is reelected once a year. Among the 17 party branch committee members at present are former cadres from the land reform period who have rich experience, middle-aged cadres who were already cadres when the agricultural cooperatives or the people's communes were set up and young cadres who have been trained in the past few years. The oldest is over 50 years old. Most of them are 30-40. The youngest is 27.

The members of the party branch consciously accept supervision by party members and the masses, set strict demands on themselves in line with criterion of party members and set an example in all respects. They have made a few simple rules to be observed by all concerned, namely, not seeking privileges, taking the lead in work, linking their hearts with those of the masses and uniting with them in one mind. Old secretary Shi Laihe of this party branch set an example for the rank and file. After being secretary of the county and even the prefectural CCP committee, he still continues to work and always has the well-being of the masses at heart. There are six big elm trees in his courtyard. One woodworking team of another brigade offered him 2,700 yuan for them, but he refused. Instead, he sold them to his own brigade for 1,500 yuan to be used for house building. Deputy secretary Li Anren, known as a willing ox among the masses, takes the initiative in all work and thinks of the masses at every crucial moment. For years, no cadres have borrowed public grain or asked for allowances. On rainy days or holidays, when commune members do not work, cadres do not record workpoints. At the end of the year, the average distribution of income for cadres is usually lower than that of corresponding workers by 5-10 percent. Cadres often take the lead in building new houses, but they are always the last to move into these houses. To this, the masses said: Cadres are racking their brains for us; we cannot help but work hard with one heart and one mind. While all members of the party branch are setting examples in all aspects, all ordinary members strive to be models. In building the new village, at first there were no bricklayers. Female party members Liu Quiying and Shi Shilan took the lead in climbing up the scaffolding to learn how to do it themselves. As a result, the first group of female bricklayers appeared in the village. In order to learn how to operate lathes well to improve the quality of products, young party member Shi Shiling asked for advice with an open mind and made time for self-study. He finished all his university courses within 3 years and has become an expert in both mechanical and electrical designing and operation. At the end of last year, the party branch of the brigade called on the masses to assess all party members. In the appraisal, 16 of 17 members of the party branch were selected model cadres and 64 of 68 party members were assessed as outstanding party members--the remaining 4 were old and weak or had been temporarily transferred to work elsewhere. Eight party members were also chosen as pacesetters on various fronts.

Over the past 30 years or more, the party branch of the Liuzhuang brigade has stood relatively fast and firm because of its solid construction and close unity with the masses. It has stood tests of political storms and waves in society, but it also has time and again repelled attacks by evil tendencies. Last summer, one purchaser bought 5 tons of rubber from the south, which at that time was in short supply in Henan Province. If the 5 tons of rubber were sold to Henan, the collective immediately could make a profit of 4,000 yuan. When the purchaser explained the situation to the party branch, all members uniformly pointed out: Rubber is a state monopoly purchase item. If we transport it for sale for personal reasons, this will be tantamount to undermining socialism. Liuzhuang will never take this ill-gotten money. Consequently, they made a decision to return all the goods.

In spite of achievements, all members of the party branch of Liuzhuang brigade still set high demands on themselves in line with party's requirements and the level of advanced units in the country. They do not think that they have done enough, but think they still have far to go. In spite of repeated commendations and encouragement from the superior levels, they always believe that they have done what they should and all achievements must be attributed to the party and the people. On the eve of the last Spring Festival RENMIN RIBAO published the report on Liuzhuang brigade. The masses of Liuzhuang were greatly inspired. Beginning on 3 January of the lunar calendar the party branch held a series of consecutive meetings among its members, ordinary party members, cadres and the masses in order to determine where they have fallen short, even though they have achieved success, and to try to tap their potentials. The cadres and the masses held identical views: The economic results in production are not so satisfactory; improvement is still needed in some spheres of management. More potentials can be tapped in utilizing land and facilities. In particular, the party organizational building as well as political and ideological work cannot properly meet the needs of the general tasks in the new situation. There is a big gap between the cultural life and technical level of commune members as well as the demands of building modernization of agriculture. With this in mind, they immediately mapped out plans and adopted measures with a resolution in response to the call of the party Central Committee in order to achieve new victory in the building of material and spiritual civilizations and to make greater contributions to the country.

The example of Liuzhuang shows that if our policies are correct and there is a good leading group in the rural grassroots units, and if we really insist on carrying out the production responsibility system according to local conditions and do a solid job of grasping production planning, our agriculture will indeed be full of vigor and have a bright future!

EMANCIPATION OF PHILOSOPHY AND STUDY OF PHILOSOPHY

Beijing RED FLAG in Chinese No 12, 16 Jun 82 pp 26-29

[Article by Liang Zhao [2733 6856] and Tan Sizhe [6223 1895 0772]]

[Text] Emancipation of philosophy is a correct thinking formulated by Comrade Mao Zedong in the protracted revolutionary struggle. Since the founding of the PRC, emancipation of philosophy has played an important role in promoting the broad ranks of cadres and the masses to study Marxist philosophy. However, there were deviations in practice. Under the new historical conditions, there are different views on the study and propaganda of philosophy and on whether or not we should uphold emancipation of philosophy. Regarding this question, we held that it is necessary to carry out discussions in the manner of seeking truth from facts and correctly sum up experiences so as to arrive at a unified understanding.

Generally speaking, there are two interpretations for emancipation of philosophy. First, the emancipation from the yoke of the old system of philosophical thought and the creation of a new philosophical thought. Second, the emancipation from classrooms and textbooks, so that philosophy will become a great tool for the broad masses of the people to understand and transform the world. The emancipation of philosophy mentioned by Comrade Mao Zedong was of the latter type. Early in 1942, Comrade Mao Zedong pointed out: "To oppose subjectivism, we must advocate materialism and dialectics." ("Selected Works of Mao Zedong," Vol 3, p 785) In 1957, at the meeting of Communist Party and Workers' Party representatives in Moscow, Comrade Mao Zedong said: "Dialectics must proceed from the circles of philosophers to the broad masses of the people." Later, he further pointed out: "Let philosophy be emancipated from the classrooms and textbooks of philosophers and become the sharp weapon of the masses." This is an important contribution of Comrade Mao Zedong to Marxist philosophy.

Originally, the emancipation of philosophy was in itself a requirement of Marxist philosophy. Before the birth of Marxism, philosophy was separated from the working people. However, since the proletariat became an independent force on the historical scene, in order to oppose the capitalist system and fulfill the historical mission of emancipating the whole of mankind, it needed its own philosophy to serve as a weapon for understanding and transforming the world. As Marx said: "Philosophy treats the proletariat as its material weapon, likewise, the proletariat treats philosophy as its spiritual weapon." ("Selected Works of Marx and Engels," Vol 1, p 15) The birth of Marxist philosophy suits the proletariat's needs of understanding and transforming the world. Its birth has realized the great transformation of philosophy and put an end to the situation of philosophy being opposed to the laboring masses.

Emancipation of philosophy is also demanded by the people of our country for carrying out revolution and construction. After the victory of the October Revolution, Marxism-Leninism spread to China. The progressives used dialectical materialism and historical materialism as tools to study the fate of our country and our nation. They understood that we must follow the path of the Russians. However, since the situation in our country was special, shortly after the founding of our party, the party led the people to plunge into a protracted arduous armed struggle and in this situation, many comrades could not carry out in-depth and systematic studies of Marxist theory. Therefore, they did not have sufficient understanding of theories and because of this, our party made several mistakes in guiding ideology. There was the rightist capitulationism during the period of the great revolution. During the second revolutionary civil war, we were bogged down in "leftist" adventurism, in particular the errors of Wang Ming. We nearly ruined the Chinese revolutionary cause. From the point of view of understanding the root cause, these errors occurred mainly because subjective views deviated from the objective situation and our thinking did not conform with the actual situation. At that time, many comrades of the party did not realize these errors. On the contrary, they themselves also committed the same mistake. The negative experiences of history have taught us that if we do not study Marxist theory and understand Marxist philosophy, we will not be able to guarantee that the revolutionary cause will advance heroically along the correct path.

In view of the above situations, after the Red Army arrived in northern Shaanxi on the Long March, Comrade Mao Zedong started to promote the study of philosophy and mobilized the whole party to seriously sum up the historical experiences. Comrade Mao Zedong himself organized philosophical study groups and under his guidance, a new society of philosophy was established. He also gave philosophical lessons in the Anti-Japanese Military and Political University in Yanan and aroused the students to use philosophy as a weapon to analyze the problems of the Chinese revolution. Under the advocation of Comrade Mao Zedong, the study of philosophy became common practice among the cadres, in particular, senior cadres in Yanan. In 1942, Comrade Mao Zedong led the Yanan rectification movement. He used Marxism-Leninism to teach the broad ranks of cadres to oppose subjectivism, factionalism and stereotyped party writing then prevailing inside the party, and to expose and criticize the "leftist" or rightist errors in the history of the party, in particular, the "leftist" adventurism of Wang Ming. As a result, the thinking of the party was unprecedentedly unified and this laid a firm ideological foundation for the final victory of the war of resistance against Japan and for the establishment of new China. This rectification movement was, in a sense, a profound emancipation of philosophy.

Since the founding of the PRC, our country has made the transition from new democratism to socialism. In an economically backward country like ours, how to carry out socialist reform and construction in accordance with the actual situation of our country is a new issue for the broad ranks of cadres in terms of theory and practice. Although the theoretical level of the cadres had improved, in general, they could not meet the demands of the situation. In order to improve the theoretical standard of the cadres, the CCP Central Committee and Comrade Mao Zedong stressed the study of Marxist philosophy and demanded them to use the stand, viewpoints and methods of dialectical materialism to analyze and sum up the new experiences of socialist revolution and construction. Comrade Mao Zedong said: "The basic thing is Marxist philosophy. If we do not have a thorough understanding of Marxist philosophy, we will not have any common language and methods. Then, we will not be able to understand each other. If we have the thinking of dialectical materialism, we can save much effort and avoid many mistakes." ("Selected Works of Mao Zedong," Vol 5, p 145) At that time, the broad ranks of cadres actively responded to the call of the CCP Central Committee and Comrade Mao Zedong. They diligently studied Marxist philosophy and the philosophical works of Comrade Mao Zedong. The study was also launched among some workers, peasants and PLA fighters. In the course of the study, the philosophical workers did a lot of work.

In retrospect, the achievement of the broad ranks of cadres and the masses was primary and outstanding. Many cadres had studied the principal Marxist philosophical works in a relatively systematic manner and had a preliminary understanding of the basic principles of dialectical materialism and historical materialism. In particular, many comrades had studied "On Practice" and "On Contradiction" and used the basic viewpoints to analyze the practical problems of socialist construction in their local districts and units. They used the viewpoint of the unity of opposites to observe and handle various contradictions in their work. In practice, they continued to improve their understanding of objective matters and scored very good results in solving many difficult problems. In the course of the study, integrating with their actual situations, some comrades wrote many vivid and impressive articles to describe their personal experiences. All this played a positive role in the socialist construction in our country.

We must point out that Comrade Mao Zedong took dialectical materialism as the thinking and working method for practical work which should be comprehended by the broad ranks of cadres and the masses as a very important aspect of the emancipation of philosophy. In accordance with the viewpoints of dialectical materialism, he devised a system of scientific methods to ensure the successful realization of all tasks, such as upholding the theory of two points; looking at questions from an overall point of view; from the masses, to the masses; distinguishing the principal aspects from secondary aspects; walking on two legs; grasping the two ends to bring along the middle; dissecting a sparrow; learning how to play the piano; having a good idea of how things stand; allowing for unforeseen circumstances and paying attention to the fact that one tendency conceals another. Thus, the skills and standard of leadership of our party's cadres were further promoted. This is what Comrade Mao Zedong did to enrich and develop Marxist philosophy.

It cannot be denied that there are deviations in the course of implementing emancipation of philosophy and organizing study of philosophy. There are many complications. In our view, there are two major questions:

First, the tendency of formalism. At that time, people in some places disregarded the existing conditions and the will of the masses, and compelled everybody to study philosophy by hard and fast rules. The masses in some places were gathered to study several philosophical quotations and philosophical terms, and this was regarded as mass study of philosophy. People in some places regarded the number of participants in philosophical classes as the criteria to appraise the political understanding of the masses. Such formalistic practice was in fact fraudulent practice which seriously undermined the reputation of the emancipation of philosophy.

Second, the tendency of simplification and vulgarization. At that time, instead of carrying out scientific analysis and practically solving practical problems, some people treated philosophical concepts as labels and stuck them everywhere without discrimination. Some of them rigidly associated study of philosophy with some scientific and technological creations, inventions and discoveries, and said that they were achievements of Mao Zedong philosophical thought in disregard of the actual situation. Others mechanically applied strategic and tactical thinking to medical science without specific analysis. Obviously, this is not genuine integration of theory with practice, instead this is a manifestation of simplification and vulgarization.

Why should there be the above-mentioned deviations? We must analyze them in association with the historical background at the time. After socialist reform has been basically completed, our party led the people of all nationalities in our country to launch a large-scale socialist construction. Since we did not understand the law of economic development and the basic situation of the Chinese economy, and since we were conceited and arrogant in face of victory, we were overanxious for success in economic aspects and promoted the "Great Leap Forward" in disregard of the actual situation in an attempt to change the impoverished and backward situation in our country within a short period of time. Such thinking was also reflected in the emancipation of philosophy. As we all know, Marxist philosophy is a science. To grasp its essence, we must work very hard. In particular, we must work arduously and carry out serious thinking by adopting a philosophical viewpoint to analyze the actual situation and solve practical problems. However, to some people, the study of philosophy is an easy task, and achievements can be scored without much effort. Under the influence of such thinking, some unhealthy phenomena emerged in the course of studying philosophy. At that time, the relevant departments of the CCP Central Committee recognized the above-mentioned deviations and issued documents to demand the cadres and the masses to correct their incorrect methods of studying philosophy. However, during the "Great Cultural Revolution," Lin Biao, Jiang Qing, Kang Sheng and their cronies turned things upside down and declared the criticism as a crime of "anti-Mao Zedong Thought." In this way, not only were deviations in the study of philosophy not corrected, but they were taken to extremes by Lin Biao, Jiang Qing, Kang Sheng and their cronies, to the extent of being absurd.

Do these deviations indicate that the orientation of emancipation of philosophy is incorrect? Certainly, they do not. This can only indicate that we have not done a good job of integrating philosophy with practice. Such situations are very common in actual life: Although the policies and principles of a certain project are correct, since we do not have a thorough understanding of them, or because we do not have a thorough understanding of the objective reality, or because of subjective, one-sided and superficial thinking and working methods, we may achieve opposite results. Therefore, we must make serious and specific analysis of the deviations in our work. We must make clear whether they are problems of policies and principles or problems arising from errors during the execution of the policies and principles. It is obvious that we must not simply put all the blame on the orientation of the emancipation of philosophy when dealing with the deviations of the cadres and the masses in the course of studying philosophy. The orientation of the emancipation of philosophy must not be negated. Otherwise, this will result in negating the historical mission of Marxist philosophy and the use of Marxist philosophy as the sharp weapon for the proletariat and the revolutionary people to understand and transform the world.

At present, we are faced with the great task of building a modern, highly democratic and civilized powerful socialist country. Due to the 10 years of internal disorder, the theoretical studies of the broad ranks of the masses were stopped and many theories were confused. The young generation does not have any understanding of Marxist theories. The dialectical materialist work methods and work style of our party were sabotaged by Lin Biao and the "gang of four." In order to shoulder the historical responsibility, we must correctly sum up the past experiences, further study Marxist philosophy, Mao Zedong Thought and have a genuine understanding of the sharp weapon of dialectical materialism and historical materialism. We must uphold and exemplify the past practice of integrating theory with practice, and do a good job of preventing formalism, simplification and vulgarization, so that everybody will seriously study theories from textbooks, comprehend the stand, viewpoints and methods of dialectical materialism and historical materialism, and integrate the actual situations of the local districts and units to solve the new situations and problems in the course of the four modernizations.

Some comrades say, "Since the current policies and principles of the party are correct, it will be all right if we adhere to them. Why bother to study philosophy?" This is obviously a confused idea. Since the 3d Plenary Session of the 11th CCP Central Committee, that the party's line, principles and policies are correct, that they conform to the actual situation of our country and the will of the people and that they display great power, lie on the fact that they are founded on the basis of dialectical materialism and historical materialism. If we do not study philosophy, it is obvious that we can neither have a profound understanding of it nor be able to correctly implement it. If we can master philosophy and ponder problems from the world outlook and methodology of dialectical materialism, we will be able to get rid of some narrow views and grasp the essence of the party's policies and principles from a unified subjective and objective point of view and integrate them with the actual situation of the local districts and departments, so as to score better achievements.

Some comrades held: Study of philosophy is too vague and general and abstract. They would rather do some practical work than studying philosophy. As a matter of fact, we must do more practical work in the course of building the four modernizations. However, to do a good job of practical work, we must have a correct guiding ideology and a scientific working method. Philosophy is precisely a learning that teaches us how to do a good job of the practical work in the world outlook and methodological aspects. Seeking truth from facts, proceeding from the actual situation, and integrating theory with practice are the gist of Marxist philosophy and a prerequisite for doing well in all tasks. To succeed in any task, we must not deviate from this basic thinking. If we do not proceed from the actual situation of the local districts and units and randomly make suggestions in disregard of the objective conditions, we are sure to run into a stone wall. Therefore, if we do not study Marxist philosophy and do not understand its stand, viewpoints and methods, we will not be able to achieve our aim although we want to do some practical work. Frankly speaking, philosophical theories are comparatively abstract and generalized. However, past experiences have proven that if we work hard to understand the basic viewpoints of philosophy, and use them to analyze the practical problems arising in the course of socialist construction, philosophical theories are very concrete and practical. In other words, mastering philosophy is not something unattainable.

Some comrades are worried that upholding emancipation of philosophy will hinder us from deepening our understanding and that the standard of academic studies will be lowered. Such worries are unnecessary. The main tasks for the study of philosophy are to integrate the current actual situation with the study of new problems and new situations in the course of the socialist movement and socialist modernization. In accordance with the basic theories of Marxist philosophy, to give some scientific and simple explanations for the actual current situations is an unshirkable duty of every professional worker of philosophy. Real life poses many new problems for us; theoretical workers are compelled to carry out in-depth analysis and give scientific answers. However, we have not done enough in this respect. Up till now, there are not too many articles and works that profoundly analyze and explain the new situation and problems that emerge in the course of building the four modernizations from the high plane of philosophy. This shows that the study of philosophy does not conform with the requirement of the four modernizations. Thus, we must work harder. This is the requirement of the emancipation of philosophy and that of the study of philosophy.

We do not have any experience in carrying out socialist modernization in our country. It is necessary for us to understand the world outlook and methodology of dialectical materialism and historical materialism so that our understanding will conform with the objective reality and our cause will effectively and steadily develop. Only if we do a practical hard job, will we be able to score good results in the study of philosophy. Hence, we will be able to make greater contributions to the socialist modernization.

SHOUT ALOUD FOR THE WORK OF GATHERING MATERIALS--FOREWORD TO THE BOOK 'DISPUTED PROBLEMS IN SOCIALIST ECONOMIC THEORY'

Beijing RED FLAG in Chinese No 12, 16 Jun 82 pp 30-31

[Article by Mao Zhongyang [7456 0112 2254]]

[Text] While publishing "Disputed Problems in Socialist Economic Theory" as a reference book, apart from extending my respects to the comrades who have put in a lot of work into gathering materials, editing and publishing this reference book, I would like to say something which I have wanted to say for a long time concerning the work of gathering materials. Since I want to stress the work of gathering materials, I call it shouting aloud.

One very important but also very weak link on our ideological and theoretical fronts is the work of gathering materials. Once we start with our study, in whatever field or problem, the problem of material will confront us in a glaring way. Marx said: "To study, we must fully possess materials, make an analysis of its various forms of development and probe the internal relations of these forms. Only when this work has been completed, can the actual movement be appropriately described." ("Collected Works of Marx and Engels," Vol 23, p 23) Without materials or without possessing large quantities of materials, how can we conduct our study and research? How can we avoid indulging in empty talk? Materials are the basis for scientific research and also the basis for propaganda work. They are the indispensable raw and semifinished information for all intellectual products. Intellectual products without raw or semifinished materials are like water without a source; like a tree without roots. Although they bear every conceivable name, they are nothing but castles in the air. In order to really ensure that our ideological and theoretical fronts meet the demands of the four modernizations program, it is necessary, first of all, to do a solid and practical job in the work of gathering materials. This work is not only the basis for research work and propaganda work but also the frontline and logistics of all struggles led by our party and also the source and guide in carrying out the various aspects of our work. This appropriately reflects the position and role of the work of gathering materials, and is not just an exaggeration.

However, quite a few comrades in some of our scientific research and teaching units and other units lack a proper understanding of the position and role of the work of gathering materials and as a result, they have adopted inappropriate work styles. Some units put the work of gathering materials in an unessential place. The setup of organizations and the assignment of personnel are less than perfect and inappropriate. Some units only manage to do some work of receiving and disseminating as well as preserving materials and they even fail to do a good job in this work. Some units also regard those organs which gather materials as the collecting points for housing idle personnel and let those who are not occupied "undergo a transition" there! Still other units use the money intended for subscribing to newspapers and books and periodicals for other purposes in order to "practice thrift." This phenomena warrants serious attention. In order to practically and effectively carry out the modernization program of our motherland and build a highly developed material civilization and spiritual civilization, it is vital to have reliable and sufficient materials as the foundation. We have paid too high a price for this and have profound lessons to draw from it. We must not commit such idealist follies any more and must no longer tell lies, brag or indulge in empty talk. If no serious changes are effected and no strong measures are adopted on this matter, how then can we say that we are implementing the principle of seeking truth from facts?

The work of gathering materials is a difficult job requiring arduous efforts. It requires not only diligent and conscientious efforts but also firm and indomitable willpower and the spirit of not minding the effort and gradually accumulating materials for a long time and also the spirit of serving other people enthusiastically and conscientiously on one's own initiative. Those who drift along aimlessly, seek an idle life, are afraid of trivial matters and impatient as well as crude and careless will be unable to gather materials well, and those who crave for fame and are pretentious and unwilling to serve others will also be unable to do the work of gathering materials well. The value in material lies in its ability to be accumulated, complete and systematic. We must not go fishing for 3 days and dry the net for 2 and not be prompted by sudden impulses and do things as the heart desires. Materials should be abundant and complete. Furthermore, they should be gathered and explored selectively with a definite purpose and stress different key points. At the same time, materials should be constantly processed, sorted out and improved so as to make it convenient to use. In regard to the use of materials, one must not imagine that every piece of material can be put to instant use on finished products. The so-called shooting with unfailing accuracy is not the goal and demand of the work of gathering materials. So long as some of the vast material we have gathered for a long time is useful, and even if specific pieces are useful, or useful for a short while, our work can be regarded as successful. The work of gathering materials is a kind of capital construction. Materials are the storage of spiritual wealth. The work of gathering materials itself cannot determine when or how much of the materials will be used. We must not approach this matter in a shortsighted way.

The work of gathering materials requires being practical and realistic. Gathering materials in a subjective and one-sided way will have extremely harmful consequences. This problem remains fresh in our memory from experience. We must not repeat those mistakes. Of course, materials and particularly social materials are always processed by people. Any processing and sorting out of materials will bear the mark of the ideology of the processors and the mark of our times. Thus, the original natural appearance is lost and the materials cease to be an objective accumulation. However, upholding the principle of seeking truth from facts and subjective prejudice are two entirely different things. It is wrong to confuse them.

Some people do not understand the true relationship between the work of gathering materials and research work and frequently underrate the former and stress the latter. This is wrong. It is well known that in writing his "Das Kapital," Marx read more than 1,500 books and extracts and the notes he made on them equalled more than 100 books; in order to write his "Imperialism Is the Highest Stage of Capitalism," Lenin gathered huge amounts of materials and made a lot of notes. All this data was included in the "Collected Works of Lenin," Vol 39. These facts prove that Marx and Lenin were both models for research workers and also models for workers engaged in the work of gathering materials.

Although some people have various misunderstandings about the work of gathering materials, no one denies the extreme importance of materials to the building of our material civilization and spiritual civilization. The comrades engaged in the work of gathering materials are indeed arduous workers, unknown to the public. This is not an undertaking which amazes the world with a single feat. People very often will admire how certain engineers display their talents before a magnificent building, but few people care who actually built it with their craftmanship and wisdom. On what buildings on earth have the names of the builders ever been engraved? I have no intention of belittling the role and position of the engineers and of asking that the workers and engineers be listed together as "starts" who are treated equally by the people. What I hope is that while giving publicity to the well-known heroes, we never forget those unknown heroes!

At present, our work of gathering materials is still very weak. This is the common feeling of every person who uses materials. Therefore, strengthening the work of gathering materials has become a common demand of many comrades. It is startling how few reference books and periodicals we have published. This state of affairs must not be allowed to continue. Time means life. One effective method for putting an end to the backwardness in our culture and work is to start with the work of gathering materials. Being aware of the importance of this matter to our ideological front, I have aired my views. If they are wrong or inaccurate, I look forward to your--fellow comrades--criticism and corrections.

DIMITROV AND THE CHINESE REVOLUTION

Beijing RED FLAG in Chinese No 12, 16 Jun 82 pp 32-35

[Article by Ma Xipu]

[Text] This year will witness the 100th anniversary of the birth of Georgi Dimitrov, outstanding activist of the international communist movement and leader of the Bulgarian people. Dimitrov devoted his entire life to the struggle for peace and the socialist cause, and thus won the love and respect of the laboring people all over the world.

The Chinese people are familiar with and respect Dimitrov not only because he exposed Nazi Germany's conspiracy of masterminding the Reichstag fire and shifting the responsibility to communists in the world-renowned Leipzig trial, but also because he showed deep sympathy and extended enthusiastic support for the Chinese people's revolutionary struggle.

Dimitrov was born into an ordinary laboring family on 18 June 1882. He became active in revolutionary activities when he was 15 years old. After the defeat of the September armed uprising launched by the Bulgarian people under his leadership, he was exiled from his country. He was active in the international arena after that. Leading the life of a professional revolutionary, he was engaged in labor movements under the Federation of the Communists of Balkan Nations and the West European section of the Comintern.

The 1930's was a decade which people all over the world will never forget. In 1933, Hitler established fascist dictatorial rule in Germany. During the period from 1936-1937, Germany, Italy and Japan formed the fascist alliance. They carried out even more wanton acts of aggression and expansion, and eventually launched World War II, which brought about tremendous disasters to the peoples throughout the world.

In 1931, the Japanese imperialists caused the "September 18th incident" and forcibly occupied the four northeastern provinces of China. They stepped up preparation for an overall aggressive war against China, and tried in vain to turn all of China into a colony of Japan. In the face of imperialist aggression, the Kuomintang government adopted the policy of nonresistance and carried on the counterrevolutionary principle of expanding civil war and slaughtering the Chinese communists and the Chinese people.

Meanwhile, under the leadership of the CCP, the masses of people from all levels of society in China called for stopping the civil war and uniting to resist the Japanese invaders. In January 1933, the Soviet Provisional Central Government of China and the Revolutionary Military Committee of the Chinese Workers' and Peasants' Red Army jointly published a manifesto, offering to make an agreement with the Kuomintang troops of various factions on the resistance against Japan based on the following conditions: stopping the attack on revolutionary bases; safeguarding the people's democratic rights; and arming the people. In 1934, the CCP again put forward the "Six Major Programs to Resist Japan and Save the Nation." On 1 August 1935, the CCP Central Committee issued a manifesto, appealing to the compatriots of all strata and all parties throughout the country to pull together all resources to carry out the movement of resisting Japan and saving the nation. All these actions show that the CCP was beginning to adopt the new policy of establishing an extensive anti-Japanese national united front.

The anti-Japanese struggle of the Chinese people and the experiences obtained by the CCP drew Dimitrov's close attention. After his victory over Nazi Germany in Leipzig, Dimitrov was elected to the Presidium of the Executive Committee of the Comintern in May 1934, and held the post of secretary general of the Comintern during the period 1935-1943. While engaged in international revolutionary activities, he always kept abreast of the progress of the Chinese revolution through various channels, and paid close attention to and enthusiastically supported the revolutionary struggle of the Chinese people. Under his direction, the Presidium of the Executive Committee of the Comintern often held meetings to study and discuss the problems concerning the Chinese revolution, and in particular the Chinese people's struggle against the Japanese invaders. Dimitrov introduced the experience of the Chinese revolution at the Comintern meetings, cheered every success of the Chinese people, and appealed to the proletariat and peoples of all countries to strongly support the Chinese revolution.

During the preparation for and in the course of the Seventh Congress of the Comintern in 1935, Dimitrov summed up the experiences learned from the activities of the French people's front, the Spanish revolution and the labor movement in Western Europe, as well as the experience of the Chinese people in their struggle against the Japanese invaders. Based on this summation, he put forth the slogan of establishing a proletarian united front and the people's antifascist front in imperialist and capitalist countries, and an anti-imperialist united front in colonial and semi-colonial countries.

When discussing the questions concerning the "anti-imperialist united front" and "united front government" in his report made at the Seventh Congress of the Comintern, Dimitrov repeatedly referred to the experience of the Chinese revolution. He pointed out that the solution to the problem of establishing a united front in Brazil was different from that in India, China and other countries because the conditions for carrying out revolutionary struggles, the degree of maturity of the national liberation movement, and the role of communist parties in the revolutions were different in various colonial and semicolonial countries. The local characteristic in China was that the national liberation movement was flourishing there, as soviet bases had arisen in some parts of the territory, the powerful Workers' and Peasants' Red Army had been organized, and the CCP had undertaken the establishment of the anti-Japanese national united front. ("Collected Works of Dimitrov," Sofia, 1954 edition, Vol 10, pp 99-100) Dimitrov commended the Chinese revolution as having brought hope to the national liberation movement of colonial and semicolonial countries. In his speech delivered at the close of the congress, he said: "Today the peoples of all colonial and semicolonial countries no longer regard their struggle for liberation as a hopeless cause. On the contrary, they are more and more resolutely engaged in the struggle against the imperialist enslavers. The best proof of this is the Chinese people's struggle and the Chinese Red Army's heroic deeds." ("Collected Works of Dimitrov," Sofia, 1954 edition, Vol 10, p 182)

Just for this reason, at this grand gathering of the Comintern, Dimitrov declared on behalf of the revolutionary proletariats of all countries that he wholeheartedly subscribed to the proposal of the CCP on establishing an anti-Japanese national united front; he denounced the Japanese bandits' savage invasion and the Kuomintang government's traitorous activities, and appealed to the revolutionary peoples of all countries to provide the Chinese people with moral and political support. He solemnly announced: "We subscribe to the proposal by our courageous fraternal CCP on uniting with all organized forces within the territory who are willing to join and are actually engaged in the struggle of saving the country and the people so as to form a most extensive anti-imperialist united front opposing Japanese imperialism and its Chinese agents." He also said: "We extend our warm and fraternal greetings to all soviets in China and to the revolutionary Chinese people. We extend our warm and fraternal greetings to the courageous and battle-tested Chinese Workers' and Peasants' Red Army. At the same time, we assure the Chinese people that we resolutely support them in their struggle to completely liberate themselves from the rule of all imperialist bandits and their Chinese running dogs." ("Collected Works of Dimitrov," Sofia, 1954 edution, Vol 10, pp 100-101) As soon as he paused, the audience stood up and broke out into thunderous applause. Dimitrov's speech profoundly embodied his own as well as all revolutionary peoples' militant bonds of friendship with the Chinese people, which strongly encouraged the CCP, the Chinese Workers' and Peasants' Red Army under its leadership, and the Chinese people, who were carrying out an extremely arduous and difficult struggle.

On 9 December 1935, under the guidance of the party, students in Beijing held a massive demonstration to resist the Japanese aggressors and save the country. On 25 December, our party convened a meeting of the Political Bureau of the Central Committee in Wayaobao of Shaanxi Province and adopted the "Resolution on the Present Political Situation and Our Party's Tasks," in which the strategic guideline for the anti-Japanese national united front was laid down. After the meeting, in elaborating this guideline, Comrade Mao Zedong pointed out that under certain conditions, the left wing of the national bourgeoisie and some people in the Kuomintang camp might unite with the workers and peasants in the struggle against the Japanese aggressors; therefore, "the task of the party is to form a revolutionary national united front by combining the activities of the Red Army with all the activities of the workers, the peasants, the students, the petit bourgeoisie and the national bourgeoisie throughout the country." ("Selected Works of Mao Zedong," Vol 1, p 137)

In June 1936, in an article which he wrote for the Comintern to commemorate the 15th anniversary of the CCP, Dimitrov enthusiastically commented that "the CCP is a real Bolshevik party." He pointed out that "the reason why the CCP could have developed into a mighty political force" was because it had maintained "deep-rooted ties" with the people. The party was devoting all its efforts to making itself "the vanguard in establishing the anti-Japanese national united front"; it was trying to unite with the people throughout China, and to cooperate with various political groups and military forces in the resistance against the Japanese aggressors. Dimitrov anticipated that the CCP, in establishing the united front, would encounter inside the party opposition from those "closed-doorists" and those "opportunist capitulators" who "were ready to give up the political and organizational independence of the party and the Red Army." He believed that the Chinese party would surely be able to overcome these difficulties inside the party. In conclusion, he appealed to the proletariats of all countries to actively support "the Chinese people who were carrying out the struggle for liberation," and to oppose the Japanese and German fascists who were the common enemies of the Chinese people and the people throughout the world. ("Selected Works of Dimitrov," Liberation Publishing House, 1949 edition, pp 241-244)

Those articles by Dimitrov on the Chinese revolution were compiled into a book entitled "The Struggle for Establishing the Chinese Anti-Japanese National United Front" which was published in 1937.

On 7 July 1937, the Japanese invaders launched an overall aggressive war in China. The Chinese people rose against the enemy and thus started the anti-Japanese war which lasted for the next 8 years. At home, while the masses of people who were united within the anti-Japanese national united front were undertaking the main tasks of resistance against the Japanese, the Kuomintang intended to surrender to the enemy by carrying out the policy of passively resisting the Japanese and actively opposing the CCP. Abroad, Britain, the United States, France and some other countries were encouraging Germany, Japan and Italy to do evil by continuing their appeasement policy toward the latter's invasion and expansion. Even inside the Comintern, some people were pessimistic about the future of the Chinese revolution. Facing such circumstances, Dimitrov resolutely stood on the side of the Chinese people. In July 1938, on behalf of the Executive Committee of the Comintern, he made the "Declaration To Give All-Out Support to the Chinese People in Their Struggle Against the Japanese Aggressors," devoting his efforts to urging world opinion to support the Chinese people's anti-Japanese war. ("The Comintern," Moscow edition, July 1938)

Dimitrov emphatically pointed out in his speeches and articles that both Europe and the Far East were equally important sources of war. He warned in good time that the Japanese occupation of the four northeastern provinces of China and the invasion of Abyssinia and Spain were steps taken by the fascists toward new and massive plundering wars. He questioned those Western countries which turned a blind eye to the Japanese bandits' invasion of China, asking: "Does the appeasement attitude toward bandits who are attacking the northern part of China not encourage the Japanese warlords, who are arbitrarily trying to enslave the great Chinese people? Does such encouragement not arouse our indignation?" ("Collected Works of Dimitrov," Sofia, 1954 edition, Vol 10, p 375)

As the fascists' offensive and the world war became more and more threatening, Dimitrov held that, in order to defend the world peace, "we first of all have to defeat the fascists' invasion plans in Spain and China," and defeat their conspiracy of launching a world war. And the task of top priority was to mobilize all forces to "drive the fascist aggressors from Spain and China as soon as possible." ("Collected Works of Dimitrov," Sofia, 1954 edition, Vol 10, pp 377-378)

Dimitrov set a high value on the Chinese people's anti-Japanese war. He said: "The great Chinese people who are united within the national united front are steadfast, brave and militant examples in the struggle against the savage Japanese invaders." ("Collected Works of Dimitrov," Sofia, 1954 edition, Vol 10, p 415) "The national liberation war against the Japanese imperialists carried out by the great Chinese people," he pointed out, "is not only a struggle to defend China's independence and integrity, but is also of tremendous help to the European people in their struggle against imperialism." ("Collected Works of Dimitrov," Sofia, 1954 edition, Vol 11, p 80)

Dimitrov had full confidence in the victory of the Chinese revolution. In the latter half of 1939, when recuperating in Moscow, Comrade Zhou Enlai elaborated to Dimitrov and the Executive Committee of the Comintern the situation of the anti-Japanese war and the CCP's strategy and policies of the anti-Japanese national united front. In February of the next year, on the eve of the day when Zhou Enlai, Ren Bishi, Deng Yingchao and other comrades left for home, Dimitrov gave a farewell banquet in their honor, and requested Comrade Zhou Enlai to send his regards to the anti-Japanese fighters on the battlefront and in the rear. He firmly declared: "I believe the victory of the Chinese revolution is in sight!" ("Ren Bishi," Hunan Peoples Publishing House, 1979 edition, p 210)

Following the victory of the worldwide antifascist war, the Bulgarian people overthrew the autocratic monarchy and established the people's political power on 9 September 1944. The Chinese people's anti-Japanese war also ended triumphantly in August 1945. However, with the backing of the U.S. imperialists, the Kuomintang reactionaries turned down the just demand for peace and democracy made by the whole Chinese people and the CCP, and subsequently launched the civil war against the people. In November 1945, Dimitrov returned to his motherland, Bulgaria, which he had left 22 years ago. He was appointed general secretary of the Bulgarian Communist Party and chairman of the Council of Ministers. At that time, Dimitrov was occupied with a myriad of state affairs and was working hard for the reconstruction of postwar Bulgaria. But he still showed great concern for the Chinese revolution.

On 19 July 1947, Dimitrov received a Chinese trade union leader who was visiting Bulgaria, and had a cordial and friendly conversation with him. Being deeply concerned for the Chinese people's struggle, he asked about the situation of the Chinese people's liberation war and the circumstances in the liberation zones. When he learned that the PLA had shifted from a strategic defensive to a strategic offensive and the party was trying hard to consolidate the extensive national democratic united front, he said: "The opinions of Comrade Mao Zedong are very correct. The peoples of all countries must learn from him! Uniting with all forces of the people to oppose the minority reactionaries has proved to be very correct!" ("Dimitrov, a Great Communist," Joint Publishing Company, 1950 edition, p 152) He had firm faith that the Chinese people, relying on the great patriotic unification, were bound to overthrow the reactionary rule of the Kuomintang. At last, Dimitrov emphatically affirmed that China had bright prospects; and that the victory of the Chinese revolution would add strength to the people's democracy and socialism, contribute to the struggles against imperialism and any new aggression, and have a great impact on international politics in the future. ("In Memory of Dimitrov," (No. Ganchovski) [0355 3927 0829 1133 2448 1015], Sofia, 1975 edition, Vol 1, p 487)

At the end of 1948, Dimitrov once again affirmed the worldwide significance of the Chinese revolution at the Fifth Congress of the Bulgarian Communist Party. He pointed out in his speech that the brave struggle which the Chinese people had carried out for years to attain independence and oppose imperialism and its agents in China was "of extreme importance" to the change in the balance of world power. "Under the strong and brilliant leadership of the CCP, the more than 1 million-strong Chinese PLA has already won a series of marvelous victories and defeated the Chinese reactionary military forces armed and subsidized by the U.S. imperialists. At present, this 1 million-strong army has already liberated the entire northeastern and northern sections of China and Inner Mongolia. It is now marching toward Chiang Kai-shek's capital Najing and will soon lay siege to the city." China's democratic force has crushed the reactionary force, "their final victory is a foregone conclusion, and it is only a question of time before final victory is achieved." ("Collected Works of Dimitrov," Sofia, 1955 edition, Vol 14, pp 305-306)

Dimitrov's anticipation of the Chinese revolution was realized very soon. Under the correct leadership of the CCP, new China eventually arose on the east horizon of the world on 1 October 1949. However, it is really regrettable that Dimitrov could never see or hear the victory of the Chinese revolution since he had passed away on 2 July that year.

The Chinese people have always highly respected Dimitrov. In the period of the anti-Japanese war, some works of Dimitrov had already been translated into Chinese and published as documents to be studied by cadres. Both

Comrade Mao Zedong and Comrade Liu Shaoqi appealed to the vast number of party members, especially the party's high-ranking cadres, to set the four standards for cadres put forth by Dimitrov (absolute loyalty, close ties with the masses, ability to work independently and observance of discipline) as strict demands on themselves. After the founding of new China, we translated and published some of his major works and some books on his revolutionary deeds.

Dimitrov's loyalty to the revolutionary cause of the international proletariat, and his sympathy and support for the Chinese revolution, have profoundly impressed the Chinese people. He was a faithful friend of the Chinese people.

CARRY OUT SYSTEMATIC THEORETICAL EDUCATION TO RAISE CADRES' POLITICAL QUALITY

Beijing RED FLAG in Chinese No 12, 16 Jun 82 pp 36-39

[Article by Commentator]

[Text] Marxism is a powerful ideological weapon for us to understand the world and change it. It is a guide for our party in formulating principles and policies and a science that every cadre should study. In the new historical period, we are confronted with the arduous task of building socialist modernization. This requires that cadres be proficient in vocational knowledge, otherwise they will not be able to work well. However, while having a good command of professional work, cadres must be systematically educated with Marxist theory. Only by so doing, will it be possible to raise the political quality of the cadre ranks so that all cadres will be able to adhere to the orientation of socialism and maintain the purity of communism in a complicated situation and will they be able to consciously carry out the line, principles and policies formulated since the third plenary session and to enhance their ability of analyzing the new situation and tackling new problems. This is a task of strategic significance.

At present, the theoretical level of cadres is rather inconsistent with the missions they are undertaking in building modernization. According to statistics, in some provinces and municipalities, only 18 percent of cadres have relatively systematically studied the basic knowledge of Marxism, 56 percent of them have arrived at a general understanding of it, and there are 26 percent of cadres who can be said to be lacking in understanding of Marxism for the main. This means that there are more than 80 percent of cadres who have no systematic and basic knowledge of Marxism. Owing to lack of fundamental theories of Marxism to arm their minds, some cadres cannot understand well the essence of the party's principles and policies so that they usually vacillate in implementing these principles and policies. In the face of the new situation and new problems, some cadres cannot analyze and deal with them with the Marxist stand, viewpoint and method so that they not only work at a low efficiency, but also often make deviations in handling their work. Furthermore, not being equipped with the Marxist world outlook on the whole, some cadres have no ability of resistance at all when confronted with attacks by the ideological trend of bourgeois liberalization and even step on the road of breaching discipline and committing crimes.

Here is a well-known saying of Stalin: "In any state or party department, the higher the political level and the Marxist-Leninist consciousness of its staff are, the more efficient and effective their work will be. Conversely, the lower the political level and the Marxist-Leninist consciousness of its staff are, the more setbacks and failures there will be in their work, the more likely the staff are to become vulgar and turn into shortsighted persons bogged down in routine matters, and the more likely they are to degenerate morally. This can be said to be a definition." Stalin also said that if cadres in all departments could be turned into quite mature Marxist-Leninists, then 90 percent of the problems could be solved. ("Selected Works of Stalin," Vol 2, pp 461-462) Our party's history also proves that the Marxist-Leninist level of cadres, especially of leading cadres determines the progress and the retrogression of our cause as well as its advance or retreat. Comrade Mao Zedong, therefore, pointed out: "No political party can possibly lead a revolutionary movement to victory unless it possesses revolutionary theory and a knowledge of history and has a profound grasp of the practical movement." ("Selected Works of Mao Zedong," Vol 2, p 498)

Of the veteran cadres who joined the revolution during the anti-Japanese war or before, many of them are now advanced in years. It is anticipated that those who will still be working at their posts by 1990 will mostly be cadres who took part in work after the founding of the PRC. The theoretical level of this part of cadres is quite uneven. Generally speaking, those who joined work before 1957 are much better in political level and those who started working after 1966 are fairly poor in this field, most of them have not been systematically educated with Marxist theory. This is a question of prime importance. Here, we must get a move on and take measures to systematically educate the middle-aged and young cadres with Marxist theory in as short a period of time as possible so that we will be able to ensure that our party continues to march forward along the line of Marxism-Leninism-Mao Zedong Thought in 10 or 20 years' time.

Why should the theoretical education of Marxism for cadres be necessarily carried out systematically? This has been put forward in line with the requirements of the Marxist theoretical system itself and according to the positive and negative experiences we summed up from the past work of educating cadres theoretically.

Marxism is a scientific theoretical system. It consists of three component parts--philosophy, political economics and scientific socialism. We must have a systematic study of them. Only when we attain a systematic understanding of the three component parts of Marxism and the practice of the CCP in applying the fundamental tenets of Marxism-Leninism to tackle the problems of the Chinese revolution, will it be possible for us to integrally and accurately master the fundamental tenets, stand, viewpoint and method of Marxism and foster a communist world outlook. The requirements of mastering Marxism must differ for different kinds of cadres. Cadres who engage in party, government and mass work, especially leading cadres should know much more Marxism than other comrades.

On the problem of educating cadres theoretically, our party has long promoted the systematic study of Marxist theory. Comrade Mao Zedong pointed out that it was necessary to imbue cadres with Marxism systematically, not piecemeal, and to do with practice, not devoid of content. Comrade Liu Shaoqi seriously criticized an erroneous statement of neglecting systematic study of theory in arguing that those who bury themselves in books are "academics." Both in the Yanan period and in the 1950's, our party accumulated much experience in organizing cadres to systematically study theory. But for a long period of time after that, this study was disturbed by Lin Biao, Kang Sheng and the "gang of four." Being obsessed with the ambition of usurping the party and seizing power, they categorically opposed systematic study of Marxist theory with the excuse of combating dogmatism. They advocated the so-called methods of "taking a shortcut," "studying what is urgently needed" and "getting instant results." This led to fragmentizing Marxist theory into pieces and making arbitrary use of some quotations with no interconnection at all. Such pragmatic practice completely changed the systematic theoretical education for cadres and mentally disarmed them. To counter the influences of the pragmatic practice and the "leftist" errors advocated by Lin Biao, Kang Sheng and the "gang of four" in the study of Marxism, Comrade Deng Xiaoping specially emphasized the problem of integrally and accurately studying Marxism, providing us with an ideological weapon for criticizing pragmatism and dogmatism. We must continue to sweep away the baneful influence left over by Lin Biao, Kang Sheng and the "gang of four" and insist on systematically educating cadres with Marxist theory.

Promoting the systematic study of Marxism is by no means to isolatedly and statically study books without connecting the struggle with reality. Our consistent policy just as recommended by Comrade Mao Zedong is "to focus such education on the study of the practical problems of the Chinese revolution using the basic principles of Marxism-Leninism as the guide, and the method of studying Marxism-Leninism statically and in isolation should be discarded." ("Selected Works of Mao Zedong," Vol 3, p 760) Today, our principle of theoretical education must still be applying theory to reality. In building socialist modernization, we are confronted with a great deal of problems. But owing to scant knowledge of basic Marxist theory, many cadres are not able to judge and solve problems with the Marxist stand, viewpoint and method. The aim of organizing cadres to systematically study theory is, in the final analysis, to solve various practical problems awaiting us by centering on the task of building socialist modernization. The ultimate end of making our cadres systematically study theories is to use the "arrow" of Marxism to shoot at the "target" of the socialist construction in China.

In order to help all cadres study Marxist theory well and systematically, it is necessary to have the study system reformed so as to make it a regular practice taken step by step. To this end, we must seriously study the good tradition and good experience in the theoretical education that our party carried out for cadres both in the Yanan period and in the 1950's. In line with the practical situation in our country, we must work out a feasible system and plan for carrying out theoretical education among cadres. Different requirements must meet with different types of cadres. Attention must be focused on grasping theoretical education among leading cadres between the ages of 30 and 50, leading cadres in reserve and cadres who engage in party, government and mass work. We must fulfill the plan of rotationally training cadres in a planned way through different channels such as the party school, cadre school, or "calling together" a small number of cadres at work or self-study. We must strengthen the system of checking on cadres' theoretical study, establish records and assess their study while assigning, selecting and promoting cadres. With a view to systematizing the theoretical education for cadres and making it a regular and standard practice, we must vigorously create conditions to solve the problems such as teaching materials, teachers, expenses and places. While gaining a good grasp of the present theoretical study of cadres, we must start in studying how to reform the system of theoretical education for cadres, actively creating conditions and striving to regularize theoretical education for cadres at an early date so as to meet the needs of building socialist modernization.

AT PRESENT, WE SHOULD EXPAND REPRODUCTION WITH EMPHASIS ON INTENSION

Beijing RED FLAG in Chinese No 12, 16 Jun 82 pp 38-40

[Article by Lu Congming [7627 1783 2494]]

[Text] Enlarged reproduction is divided into two types: enlarged reproduction by extension and enlarged reproduction by intension. This is an important principle of Marxist theory on reproduction. According to the explanation of Marx in "Das Kapital," enlarged reproduction by extension generally means "adding new factories to the old ones." In other words, it means expanding reproduction by enlarging production sites and increasing manpower and material resources. Enlarged reproduction by intension generally means expanding reproduction by carrying out technical innovations in the original enterprises and raising the quality of essential factors of production and the use rate of funds. In the whole course of socialist enlarged reproduction, enlarged reproduction by extension and enlarged reproduction by intension are indispensable. They are interdependent and promote each other. However, one of the two aspects may possibly become more prominent than the other in a certain period of time. In a certain period of time after the founding of the People's Republic of China, in order to lay a necessary foundation for industry, it was absolutely necessary to carry out enlarged reproduction by extension by devoting our major efforts to building a large number of factories. But when the material technological foundation of the national economy reaches a certain scale, we should gradually carry out enlarged reproduction with stress on intension. In his government work report at the 4th Session of the 5th National People's Congress, Premier Zhao Ziyang pointed out: "From now on we must rely on technical innovations in the expansion of reproduction, and bring into full play the role of our present enterprises." This means that from now on there will be a strategic change in our socialist enlarged reproduction, a change from enlarged reproduction with stress on "extension" into enlarged reproduction with stress on "intension."

Why must we carry out this change?

First, this is the objective demand of the development of social production at a certain stage.

Whether extension or intension is to be stressed in socialist enlarged reproduction is mainly determined by the status of the material and technological foundation of the national economy. When we started our industrialization on a poor and blank foundation left over from the old China, it was obviously wrong not to carry out enlarged reproduction with stress on extension. After 30-odd years of construction, our economic and technological levels have fundamentally changed. Now we have heavy and light industries with comparatively consummate departments, and have built an independent and integrated industrial system and national economic system. In 1980, there were more than 370,000 industrial enterprises and 400 billion yuan of industrial fixed assets, which was a 2,600 percent increase over 1952. The proportion of industrial output value in the total output value of industry and agriculture rose from 30 percent in 1949 to 75 percent in 1980. All this shows that China's present industry has reached a certain scale, provided the material and technological foundation for the realization of enlarged reproduction and built a reliable basis for our modernization.

Let us view this from the angle of funds. The proportion of funds of the original enterprises in the total funds that have increased over the years is becoming larger and larger following the development of social production. For a long time to come, due to the shortage of funds and energy, we will not be able to open up large numbers of new enterprises the way we did in the past. Therefore, raising the use rate of funds of the original enterprises through technical innovations will play an increasingly important role in the development of the national economy. This is an evitability that will emerge after social production develops to a certain stage. After World War II, some economically developed countries did not use their major investments for increasing the absoluteness of the means of labor or for building new enterprises, but for renewing and innovating their technology and raising the level and productivity of their equipment and production technology. Take for example the machine building industry. Eighty-four percent of the increase in machine tools from 1963 to 1973 in Japan and 76 percent of the increase in machine tools from 1952 to 1972 in the United States were used for renewing their original machine tools. At present, 80 percent of investments of Western developed countries is applied to technical innovations, while the Soviet Union allots 70 percent of all investments for technical innovations.

Second, the status of technology and equipment of our present enterprises urgently requires us to place enlarged reproduction by intension in a major position.

China's industry has reached a certain scale, but because we have been longing for new projects and new enterprises for a long time to the neglect of the renewal and innovation of the original equipment, the equipment of many enterprises is obsolete, technology is outdated, products are backward, consumption is too high and economic effect is low. At present, the "enlistment age" of the equipment of the fixed assets of industrial and communications enterprises throughout the country is as follows: enterprises with equipment more than 10 years old account for 52 percent, enterprises with equipment more than 15 years old account for 42 percent, enterprises with equipment more than 20 years old account for 33 percent, enterprises with equipment more than 25 years old account for 14 percent and enterprises with equipment left over from the preliberation days account for 7 percent. The technological level of the equipment is as follows: about 20 percent of equipment is advanced or comparatively advanced; about 20-25 percent is obsolete and can barely cope with present production levels; and about 35 percent is quite old, outdated and requires immediate renewal and innovation.

The equipment of enterprises is old, technology is outdated and the consumption of raw materials and energy in production is high, therefore the quality of products is low and the economic effect is bad. In 1980, 40 percent of the indices of the quality of major products of key enterprises throughout the country and 65 percent of the indices of the consumption of fuel, power and raw materials did not reach the best level in history. According to statistics, the profits realized from each 100 yuan output value by industrial enterprises under the ownership of the whole people in 1980 dropped by 10 percent as compared with 1957. Of course, there are many reasons for such a phenomenon, but overlooking the renewals and innovations of the equipment of enterprises over a long period of time must be regarded as an important reason. Marx said: "The greater part of the means of labor constantly undergoes innovations due to the progress of the state. Therefore, they carry out replacement in the form of innovation instead of in the original form." ("Collected Works of Marx and Engels," Vol 24, pp 190-191) Machinery and equipment are the skeletal system of modern production. Whether they are advanced determines, to a very great extent, the economic effect. Therefore, in order to change the backwardness of China's present enterprises and raise the economic effect, it is necessary to renew the equipment of our present enterprises and to carry out technical innovations so as to realize enlarged reproduction with emphasis on intension.

Third, carrying out enlarged reproduction with emphasis on intension is an important strategic measure for China's national economy to change from readjustment to overall development.

In the present period of readjustment of the national economy, on the one hand, some heavy industrial projects and many machine building factories "do not have enough to eat," and capital construction contingents are seriously short of production tasks; on the other hand, the equipment of many industrial enterprises is old and their technology is backward. Many products which are needed at home and abroad cannot be produced due to limitations in technology and energy. Or even if they can be produced, they cannot meet the demands. How should we overcome such a contradiction so as to enliven the national economy in an overall manner? One important strategic measure is to pay close attention to the technical innovations of our present enterprises and to carry out enlarged reproduction with emphasis on intension.

In the past, much was devoted to capital construction in the production of the machine building industry, while little was devoted to technical innovation; much was devoted to heavy industry, while little was devoted to agriculture and light industry. Now due to the need for technical innovation, various trades and undertakings have begun to place orders with the machine building industry. In this way, the production capability of the machine building industry can be brought into full play, its technical innovations can be carried forward and its orientation of service readjusted. The machine building industry occupies an important position in industry. Before the readjustment principle was implemented, its output value accounted for about 25 percent of the total industrial output value. The enlivening of the machine building industry will give an impetus to the increase in heavy industrial production such as metallurgical production and to its technical innovations. And when the entire heavy industry is enlivened, it can provide advanced equipment and superior quality materials for light industrial and agricultural production and for their technical innovations. In this way, the whole national economy will be enlivened in an all-round way.

For a long time, energy has been in short supply in China, and it has been unable to meet the demands of the national economic development. One of the methods to solve this problem is to grasp firmly the technical innovations with regard to the use of coal, petroleum and electric power in our present enterprises. According to estimates, if we can reform high consumption coal furnaces within 10 years, we will be able to save 50 million tons of coal each year, and replace 40 million tons of superior quality coal with low quality coal. This will create favorable conditions for further growth of the national economy.

China is in a period of economic readjustment. Its financial situation is comparatively difficult and its funds are not sufficient. Carrying out technical innovation in our present enterprises will enable us to get better economic effect with less investments. According to the estimates of the departments concerned, in increasing the same production capability, if we reform our old enterprises instead of building new ones, we can cut our investments by two-thirds, equipment and materials by 60 percent and shorten the production period by 50 percent. Following the gradual expansion of technical innovations, the quality of products will increase, consumption will decrease, the effect on the national economy will be greatly raised and the conditions of the state's financial status and people's livelihood will greatly improve.

The carrying out of enlarged reproduction with emphasis on intension is designed for the national economy as a whole. It does not mean that we cannot carry out enlarged reproduction with emphasis on extension in certain fields. In addition, in carrying out enlarged reproduction with emphasis on intension, we must start from our national condition and consider that our large population will provide great employment tasks, and according to the characteristics of different departments, different regions and different enterprises, introduce a multistrata technological structure and correctly combine the role of advanced science and technology with that of rich labor resources to get the best economic effect.

WHY DOES THE PRICE OF A COMMODITY RISE EVEN WHEN ITS VALUE DECREASES?

Beijing RED FLAG in Chinese No 12, 16 Jun 82 pp 41-42

[Article by Wei Xinghua [5898 5281 5478]]

[Text] In accordance with Marx' theory of the value of labor, the value of commodities and the amount of labor which find expression in commodities constitute a direct ratio while the value of commodities and labor productivity producing commodities constitute an inverse ratio; commodities are exchanged according to or on the basis of their value, and prices are the monetary expressions of values. In line with this principle, people will easily think that with the gradual increase in social labor productivity, there is a relevant decrease in the value of a commodity and there should also be a relevant decrease in the price which is the monetary expression of the value of a commodity. However, the phenomena existing in the real economic life are very often not so. For 30-odd years in our country, although there has been a decrease in the prices of a small section of commodities, seen from the general level of commodity prices, there has been a slight increase in the general level of commodity prices with the improvement in labor productivity. Why is it so?

It must be pointed out that when labor productivity improves, the value of a commodity decreases. This is one situation. Whether or not the price of a commodity will drop in the same degree with the devaluation of the commodity is another situation. The movement of commodity value and that of commodity prices are two processes which are both interrelated and different. True, prices are the monetary expression of value, but the orientation and scope of the variations of value do not necessarily accurately find expression in price variations. This is because what determines the value of a commodity is not only the socially necessary work time consumed in producing the commodity but also many other factors; besides the value of a commodity, there are still the value of the money itself, the volume of paper money in circulation, the relation between supply and demand, the factor of distribution and so on.

Under circumstances where coins are used as a means of circulation, because coins have their own value also, if the value of a commodity and money decreases in the same degree, prices will not change; if the scope of the decrease in the value of a commodity is narrower than that in the value of money, prices will rise. This phenomenon in which the movement of value and that of prices are not identical does not mean that the price of a commodity and its value deviate from each other. While paper money is used as a means of circulation, and particularly since paper money no longer has a legal gold content, it is a common occurrence that the decrease in the value of a commodity and the increase in its price run parallel. This is because paper money itself does not have any value. When it represents coins, paper money only symbolizes value. In accordance with the laws governing the circulation of paper money, when paper money is over-issued and exceeds the volume of currency needed in circulation, paper money will "devalue" and the price of a commodity will rise, regardless of whether or not the value of the commodity has decreased. This occurs in both capitalist and socialist countries.

Besides the factor of money, other factors such as distribution also have an important bearing on the price of a commodity. Changes in a price are often the result of the comprehensive action of the various factors. Judged from the actual conditions of our country, over the last 30-odd years there has been a slight increase in the general level of commodity prices, which mainly accounts for the following things:

First, the influence of the increased prices for agricultural products. In old China there existed very great "price cutters" between the prices for industrial and agricultural products (that is, the prices for agricultural products were lower than their value and those for industrial products were higher than their value). After liberation, in order to boost the income of the peasants and promote the development of agricultural production, the CCP and the government raised the purchasing prices for agricultural products many times and thus helped to gradually exchange agricultural products for industrial products with the prices which approached their value and reduced the "price cutters." This is precisely the demand of the law of value. Of course, the fairly rapid increase in agricultural labor productivity and the relevant decrease in the value of agricultural products will become a factor which offsets the rise in the prices for agricultural products. However, the increase in labor productivity in our agriculture is, in fact, very slow. Judged from the materials from a sample survey of some localities, there was even a certain decrease rather than an increase in our agricultural labor productivity (this is related to the errors made in the economic work in the past and the disproportions between agriculture and light industry on the one hand and heavy industry on the other hand). In addition, the supply of farm produce and sideline products of our country has for many years failed to keep pace with the increase in the demand for them. Therefore, price hikes in agricultural products have become an objective inevitable trend.

Increased prices for agricultural products have exerted a great influence on the increase in the general level of commodity prices. This is not only because the total volume of the prices for farm produce and sideline products constitutes a fairly great proportion in the total price volume for consumer goods, but also because most raw and semifinished materials of our light industry directly or indirectly come from agriculture. The raising of prices for agricultural products will cause a chain reaction and a relevant increase (or will hamper the decrease) in the costs and prices of many light industrial products.

Second, previous prices for such fuels as coal and for such industrial raw materials as pig iron were on the low side. This was also a problem left over from history. In order to advance production, it is necessary to raise the prices for these products in a planned and appropriate way. But as a result it will also have an impact on the relevant increase in the costs and prices of a series of industrial products. This is also one of the causes for the increase in the general level of commodity prices.

Third, the influence of the accumulation rate. The price of every commodity and the value of all social products can be distributed into two parts, namely, the transfer of original value and the newly created value. The former is used for making up the consumption of machines, raw and semi-finished materials, fuels and so on, while the latter can be viewed as accumulation funds and a means to increase consumption funds after deducting labor costs, such as wages. The excessively rapid increase in accumulation and excessively high accumulation rate will not only squeeze out the part used to increase consumption funds but also cause an increase rather than a decrease in the price of a commodity despite a drop in its value. The balance between them will change over to accumulation through the price of a commodity being higher than its value. In normal circumstances, increasing some accumulation through the distribution of prices will be conducive to promoting the development of the socialist construction cause. The problem is that because of the influence of the "leftist" errors in economic work, the accumulation rate was excessively high in the past. This surpassed the rational demarcation line in increasing accumulation through the distribution of prices. This is also one of the reasons why industrial labor productivity increased but the prices for industrial products failed to correspondingly decrease.

Fourth, the influence of wage increases. With the decrease in value, prices fall. One of the reasons for this is that the scope of wage hikes must not exceed the growth rate of labor productivity. If it is surpassed, the ratio of accumulation in the newly created value has to be reduced; if the ratio of accumulation remains unchanged, it will be possible to effect a fall in prices with the decrease in value only when prices are kept unchanged or even raised.

Over the last 30-odd years, China's average income has increased step by step, and because more people are working, there has been a fairly big increase in the total amount of wages for the staff and workers. Particularly in the last few years, the party and the government have increased the wage income of the staff and workers by a fairly large margin and, with the solution to the employment problem for a total of 26 million people, the total amount of wages in 1981 for the staff and workers throughout the nation registered an increase of 43.3 percent over 1978. The average income of the staff and workers employed in the units under the system of ownership by the whole people in 1981 was 26 percent more than that in 1978.

Furthermore, a fairly large number of bonuses were distributed. This caused the scope of wage hikes to outstrip the growth rate of labor productivity, thus producing an impact on the increase in the general level of commodity prices.

To sum up, although the variation of prices always takes value as the foundation, it is still affected by other factors and the two must not be directly equated. The principle of basically stabilizing commodity prices which we adopted is the use of the law of value. Owing to the errors in our work, price hikes in a certain period outstripped the normal scope. However, this was only a transient phenomenon. With the further readjustment of the national economy last year, the scope of price hikes has already dropped markedly. With a further change for the better in economic and financial affairs, the commodity prices of our country will surely become stable with each passing day.

IS THE SOCIALIST ECONOMY A PLANNED ECONOMY OR A COMMODITY ECONOMY?

Beijing RED FLAG in Chinese No 12, 16 Jun 82 p 43

[Article by Mao Gang [3029 6921]]

[Text] A planned economy and a commodity economy are not absolutely antagonistic and neither are they two different stages of development of the socialist economy. A commodity economy is the opposite of a natural economy while a planned economy is the opposite of an unplanned economy. In a socialist society where commodity production and commodity exchange have still to be retained, practicing a planned economy means, in fact, practicing planned commodity production and planned commodity exchange. This is the objective reality of our socialist economic life. Since the current economic life is so, therefore it is only natural for people to try to theoretically summarize it in terms which they consider relatively clear and unambiguous. As a result, formulations of all kinds have emerged. For instance, some people say that the socialist economy is a planned commodity economy; some say that it is both a planned economy and a commodity economy and there are still other people saying that it is a commodity economy with the planned economy as the dominant factor. In my opinion, none of these formulations can accurately mirror the essential feature of the socialist economy.

The essential feature of the socialist economy is the planned economy. Based on the system of public ownership of the means of production, the planned economy forms a unitary whole and thereby enables the society to ensure the proportionate development of the socialist reproduction process and the various departments of the national economy through regulation by planning mechanism. With a planned economy, the state can rationally distribute manpower and financial and material resources among the various localities and departments in light of the national condition, help balance the movement between funds and material, regulate the distribution of consumption funds on a national scale in a unified way so as to basically stabilize the market and prices, achieve fairly great economic results in social production and improve the well-being of the masses of the people step by step. This was not inherent in previous social and economic formations, is a major difference between the socialist system and previous social systems and also an important aspect of the superiority of the socialist system.

The socialist planned economy does not exclude the market and does not dispense with the regulatory role of the market. The socialist planned economy develops the economy mainly in accordance with the objective requirements of the law that the national economy is developed in a planned way and, at the same time, applies the law of value to regulating commodity production and commodity circulation. In his "New Problems Arising After the Basic Completion of the Socialist Transformation," Comrade Chen Yun said: "Planned production is the major part of industrial and agricultural production while free production according to fluctuating market conditions and within the limits allowed by state planning is a supplement to planned production." "In the socialist unified market, the state market is dominant, but a free market is attached to it, carried out within certain limits and led by the state. This kind of free market is carried out under the leadership of the state as a complement to the state market. Therefore, it is a component part of the socialist unified market." This is China's current concrete economic form. It is in this concrete economic form that our planned economy is carried out. As Comrade Chen Yun said, the main part of our industrial and agricultural products are produced in a planned way and although the remaining part of the products are produced freely according to fluctuating market conditions, that is free production conducted within the limits allowed by the state plan. The state plan still plays a leading role in free production and has a certain binding force on it.

Socialist society is not a self-sufficient natural economy. The social products of a socialist society are basically commodities. In this sense, it can be called a commodity economy. But this cannot show the nature and properties of socialism, because there similarly exists commodity production in the previous social formations and particularly in capitalist society. In stressing that the socialist economy is a commodity economy, people may give rise to the consideration that it is to correct such "leftist" views as that in the past, the socialist planned economy was regarded as being opposed to the commodity economy and as excluding commodity production. If it gives rise to lack of such aspirations, it will only be all right if the concrete contents of the planned economy at the present stage are clearly explained. It is best not to substitute the concept of the commodity economy in place of the planned economy, because the latter displays the properties of the socialist economy system.

RECOMMENDING 'POPULAR PHILOSOPHY'

Beijing RED FLAG in Chinese No 12, 16 Jun 82 inside back cover

[Book review by Sha Ying [3097 5391]]

[Text] The book "Popular Philosophy" [Tongsu Zhexue 6639 0198 0772 1331] (edited by Han Shuying) recently published by the China Youth Publishing House is a comparatively outstanding book about popular philosophy.

The writers of this book said that it was "only a trial" to compile books about popular philosophy. I think it is a significant as well as comparatively successful trial.

What are the features and advantages of this book?

First, it expounds Marxist philosophical principles quite accurately. All philosophical principles are explained from the point of the whole system of Marxist dialectical materialism so that each can be explained as accurately as possible. For example, the explanation of the theory that matter is primary, objectiveness of law, practice as the only criterion for testing truth and the two basically opposite historical outlooks, is all made on the basis of world matter and on the fact that the world is an entity of the world of matter. The writers explicitly point out that if this basis is taken out, no principle of dialectical materialism or historical materialism can be formed. In expounding the basic philosophical question of the relationship between matter and ideology, the book criticizes the "theory of all-powerful spirit" and the "theory of useless spirit." In the past, in expounding the law of dialectics, some philosophical books and articles only dealt with the law of the unity of opposites and stressed the struggle of contradictions; they did not deal, or dealt very little, with the unity of contradictions. But this book follows the three basic laws of dialectics that were expounded by Engels and explains in an overall way the contents of dialectics. At the same time, this book puts the three basic laws in the same position and mainly explains the law of the unity of opposites and points out the nature and core of dialectics.

Second, the book deals quite well with combining theory with practice. The writers followed the principle of seeking truth from facts, proceeded from reality and explained the line, principles and policies of the 3d Plenary

Session of the 11th CCP Central Committee on the background of the experiences and lessons in the practice of socialist construction in our country since the founding of new China. They also explained the spirit and nature of the resolution of the 6th Plenary Session of the 11th CCP Central Committee in their efforts to lead readers to profoundly understand the new road for socialist construction put forth by the Central Committee and is in line with national conditions. They talked about the problems that exist in work by cadres and pointed out the importance of cadres correcting their ideological line and improving their methods and style of work. In particular, with regard to ideological conditions of youths, the writers enlightened them on how to get out of individualist small circles and how to distinguish socialism from capitalism and genuine beauty from falsification and ugliness so that they can form the correct ideology of loving their motherland, the party and socialism. The development of modern production and natural sciences has exposed many new natural phenomena and raised many new questions. The writers have also made an effort to explain all this on the basis of Marxist philosophical principles. For example, the book has properly reflected such things as the theory of information, cybernetics, the theory of systems and their relations with philosophy.

Third, "Popular Philosophy" is worthy of the name. This book is really very popular and easy to understand, with vivid wording and food for thought. It pays considerable attention to knowledge. In expounding philosophical principles, the writers introduce some knowledge about history, geography, culture, art and natural sciences so as to help readers improve their knowledge in these respects and develop their scientific and cultural level. The book is also delightful as the writers refer to interesting things, domestic and foreign and ancient and modern, scientific and historical stories, anecdotes of celebrities, poems and maxims. The book also uses simple language that makes it accessible to and well received by readers. What is particularly interesting is that the book also carries 20 philosophical cartoons by Comrade Fang Cheng.

Of course, this book has some shortcomings. I hope that the writers will solicit the opinions of readers and make amendments and improvements before the second edition of this book comes off the press. I also hope that philosophy circles will be able to publish more popular philosophical books so that our philosophy will become more rich and varied, and daily more prosperous.

FBIS FOREIGN BROADCAST INFORMATION SERVICE

NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service, Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semi-monthly by the National Technical Information Service, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Correspondence pertaining to matters other than procurement may be addressed to Joint Publications Research Service, 1000 North Glebe Road, Arlington, Virginia 22201.

COMRADE MAO ZEDONG'S FIVE LETTERS TO RELATIVES AND FRIENDS (MAY 1950-JUNE 1957)

Beijing RED FLAG in Chinese No 16, 16 Aug 82 pp 2-4

[Text] Comrade Mao Zedong's five letters to his relatives and friends (written between May 1950 and June 1957).

Letter to Mao Yimin[1] (dated 8 May 1950):

Comrade Yimin: Your 3 January letter has been received. Thank you for your kindness and for telling me in detail about the situation in our home village. The poor people in the village live a hard life and the families of revolutionary martyrs live an even harder life. They must bear it at this time. After the land reform, things will improve somewhat. Then, the people's government will be able to give some aid to the people, such as providing loans for them. By that time the people will be able to gradually improve their livelihood.

Care for the families of revolutionary martyrs is a nationwide concern. There are millions of families of revolutionary martyrs throughout the country. Of course, it is inconvenient for the government to give special care to the families of revolutionary martyrs in only a few localities. However, the local government should give consideration to the people with the greatest difficulties when reducing rent on land and carrying out land reform and when the new crop is still in the blade and the old one has been consumed.

It is very good that you work in the home village. Thus, you can write to me often and tell me about the situation there.

Please give my best regards to the comrades in the village. I hope they will work hard and progress.

This is my reply to your letter. I wish you good health.

Mao Zedong, 8 May 1950

Letter to Wen Nansong (dated 12 May 1950):

Cousin Nansong: Your letter has been received. Thank you for your kindness. Brother Yunchang[2] wrote me several letters and I sent him a reply which was mailed to the address in Baibangkou, Nanxian County. I do not know if he has received the letter. It is improper for me to recommend brother Yunchang for a job. He should acquit himself well among the people to win their trust. Then, he will have an opportunity to participate in work. Are our 10th and 17th elder brothers still alive? I am greatly relieved to learn that our 11th elder brother is still alive and healthy. He has written to me and I have sent him a letter in reply. I do not know if he has received the letter. In your letter you said that there was a food shortage in the village, but the government refused to provide food grain. How are things now? Is there still a food shortage? Has the government done anything about it? Please write to me and tell me in detail about the situation.

This is my reply to your letter. I wish you well.

Mao Zedong, 12 May 1950

Letter to Li Shuqing[3] (dated 16 October 1952):

Mr Shuqing: Your letter has been received. I am delighted that you told me about the situation in the home village. I am willing to collect information on local matters for reference only; I am unwilling to directly handle general local matters and should not do so. Otherwise, it would be inconvenient for local party and government organizations to handle matters. I hope you will excuse me. I avail myself of this opportunity to extend my respects to you.

Mao Zedong, 16 October 1952

Letter to the Shicheng village party branch and government (dated 29 April 1954):

Comrades of the Shicheng village party branch and government: Comrade Mao Yueqiu[4] brought me your report when he came to Beijing. Many thanks.

The Wen family of Tangjiatuo are my relatives. In the past several years, they visited me often in Beijing. Since their return to Tangjiatuo, some of them have become arrogant and not very cooperative with the government. This is wrong. Any member of the Wen family, like others in the village, should obey the leadership of the party and the government, farm diligently, and abide by the law and should not be treated differently. Please do not hesitate to subject them to discipline just because they are my relations. My attitude is:

1. I love them because they are working people and my relatives.

2. Because I love them, I hope they progress, farm diligently, abide by the law and participate in the mutual aid cooperative organization like everyone else. They should not enjoy any special privileges. They should be criticized if they show backward behavior. Do not hesitate to criticize their shortcomings and mistakes just because they are my relatives

Enclosed is a letter from Comrade Wen Bingzhang[5] for your perusal. I agree with Comrade Wen Bingzhang. Please handle what he mentioned. Also, please let those in Tangjiatuo read my letter and Wen Bingzhang's letter, and help them correct their shortcomings and mistakes. I believe that as long as you and I assume a correct attitude and as long as they do not stubbornly adhere to their opinions, they can correct their shortcomings and mistakes and progress.

With comradely regards,

Mao Zedong, 29 April 1954

Letter to Sun Peijun[6] (dated 8 June 1957):

Comrade Peijun: Your 16 May letter was received. I am glad that you have graduated from junior middle school. It is inappropriate for me to write to the school regarding your admission. The school should decide whether you passed the examination and have been selected. If you are not admitted to the school of higher grade, you may review your lessons at home. Enclosed is 300 yuan for your mother. I will send you more money later. Do not worry.

Mao Zedong, 8 June 1957

FOOTNOTES

1. Mao Yimin, a native of Shaoshan in Xiangtan, Hunan, joined the CPC in 1938, worked for the Shaoshan District CPC Committee before liberation and worked for the Huanglong District CPC Committee of Xiangtan County in the early years after liberation. He died in 1968.

2. Yunchang was Mao Zedong's cousin Wen Yunchang, a native of Xiangxiang, Hunan. He died in 1961.

3. Li Shuqing, a native of Shaoshan in Xiangtan, Hunan, was a teacher. When Mao Zedong was young, he often asked Li for advice. Li died in 1957.

4. Mao Yueqiu, a native of Shaoshan in Xiangtan, Hunan, joined the CPC in 1925 and once served as secretary of the Shaoshan party branch. After liberation, he worked as a receptionist at Mao Zedong's old residence and died in 1957.

5. Wen Bingzhang, a native of Xiangxiang, Hunan, and Mao Zedong's second cousin, was dead.

6. Sun Peijun, a native of Changsha, Hunan, is Chen Yuying's daughter. From early 1927 to 1930, Cheng Yuying accompanied and took care of Yang Kaihui.

LEARN FROM COMRADE LIU BOCHENG

Beijing RED FLAG in Chinese No 16, 16 Aug 82 pp 5-9, 31

[Article by Xiao Ke [5135 0344]]

[Text] Comrade Liu Bocheng is a devoted proletarian revolutionary, a tested marshal, a Marxist military theorist and a noble-minded communist fighter. His magnificent contributions and his inspiring words and deeds are models for the whole party and the whole army. I knew Comrade Bocheng's name at a very young age. The second day after the start of the Nanchang uprising, I saw in the street a bulletin by the advisory group of the revolutionary committee. Liu Bocheng's signature heading others caught my attention. This was the first time I saw his name. Only later did I realize that he was a brave and remarkable general of Sichuan well versed in the military arts. During the period connected with the central revolutionary base, I could not tear myself away from any translation or work by him that I picked up. To me, he was a cherished mentor. In the summer of 1936, the 2d and 4th Front Armies of the Chinese Workers' and Peasants' Red Army converged on Ganzi. I at last saw Comrade Bocheng. I regretted not having had such an opportunity earlier.

A Dedicated Communist

Comrade Bocheng said with emotion: "I am very proud to be a member of the Communist Party of China and to have found the right leader..., I wish that after my death, I could have a monument over my tomb bearing the inscription: the tomb of Bolshevik Liu Bocheng. That would be a source of great satisfaction to me." These words from the bottom of his heart spelled out Comrade Bocheng's sense of dedication to communism. All who made his acquaintance had nothing but admiration for his conversion from a democrat of long standing into a faithful communist!

In his youth, Bocheng cherished the idea of making the country rich and the army strong. He was from a poor family. Some people advised him to go into business. He said: "A gentleman has nothing but the well-being of the poor in mind. How can he think of his own prosperity?" He resolutely went into the army and participated in the revolution of 1911. In 1912, Yuan Shikai usurped the fruits of the revolution of 1911. Joining the army of Xiong Kewu, a member of the Sichuan League, Comrade Bocheng participated in the first battle against Yuan. After its failure, Dr Sun Yat-sen reorganized the scattered members of the KMT and established the Chinese Revolutionary Party. Comrade Bocheng in Shanghai joined it. At the end of 1915, Yuan Shikai laid claim to the title of emperor. From Yunnan, Cai E led an army to Sichuan to fight Yuan Shikai in defense of the country. Yuan Shikai made Cao Kun lead an army upstream for Sichuan. The two forces were thrown into a decisive battle in the neighborhood of Luzhou and Naqi. At this time, Comrade Bocheng was leading the 4th Detachment of the Sichuan Safeguard-the-Country Army. His troops occupied the important town of Fengdu, intercepting enemy troop transportation on the Changjiang River and attacking the flank of troops sent to help Cao Kun. This gave an effective boost to the northward advance of Cai E's Safeguard-the-Country Army. Comrade Bocheng spent 10 years in the Sichuan army rising from platoon leader to a ranking commander. He witnessed the replacement of the old militarists by the new ones and the sorry plight and miserable fate of the people. He deeply felt that there was no hope for the realization of his original idea of saving the country and the people. His despair was bitter.

After the Russian October Revolution, Marxism-Leninism was brought to China. In the autumn of 1923, Comrade Bocheng was seriously wounded in his left leg in a battle against bandits (represented by Wu Peifu). He recuperated in Chengdu. He got acquainted with Communist Party members Wu Yuzhang and Yang Angong. They became good friends talking about the situation and discussing Marxism-Leninism. Thereafter, he broadened his horizon and his thinking changed greatly. Just as Bocheng was in a confused state of mind looking back over the past and pondering the future, militarist Lai Xinhui asked Chengbo's former subordinate Wang Erchang to persuade Bocheng to fill an important military post in Lai's army. Comrade Bocheng replied: "I have been with you for so many years. But you still don't know what I want. Yue Wumu said: 'Just as a civil official is not greedy for gain so a military official is unafraid of death.' I am from a poor family. I have nothing to fear in fighting the enemy. My only fear is that there may be trouble from within and without. The country may be reduced to such a state that officials carry out persecution and soldiers throw their weight around, leaving the people in a sad plight. The last thing I have in mind is fame and fortune. If these militarists think that they can lure me with high office and lucrative pay, they are dead wrong. I have made up my mind. I will follow Yuzhang and leave Sichuan with him. So long as I am alive, I will not stop participating in the revolution." In May 1924, Bocheng and Wu Yuzhang left Sichuan together. They went to Beijing, Shanghai, Hong Kong and Guangzhou studying the revolutionary movement. In July 1925, they returned together to Chongqing. As members of the Sichuan Provincial KMT Committee, they participated in the work of the leftist provincial headquarters of the KMT. In May 1926, through Yang Angong and Wu Yuzhang's introduction, Bocheng joined the Communist Party of China, realizing his conversion from a democrat into a communist.

In the summer and autumn of 1926, the Northern Expedition jointly organized by the KMT and the CPC reached the Changjiang River valley. As assigned by the party, Bocheng joined Yang Angong, Zhu De and Wu Yuzhang in organizing and leading the uprisings in Luzhou and Shunqing (Nanchong). Five brigades totaling 12,000 people participated in the uprisings. Bocheng was recommended by all as the general commander in charge of the various route armies of the National Revolutionary Army in Sichuan. The uprisings this time lasted from early December 1926 to the middle of May 1927. They played a helpful role in the Northern Expedition, realizing the strategic aim of preventing the main force of the Sichuan army from moving eastward to threaten Wuhan--a strategic aim called for by the CPC Central Committee. The uprisings "shattered the pipedream of the militarists and aroused the consciousness of the masses, producing a great impact on the Sichuan situation. Success or failure should not be the measure of a big or small achievement." (The "National Bulletin," 29 January 1927) The uprisings of Luzhou and Shunqing were a big contribution by the communists toward the Northern Expedition. They also represented our party's first attempt in leading armed struggle.

Due to Chiang Kai-shek and Wang Jingwei's rebellion against the revolution, coupled with rightist capitulationism erroneously promoted by the leadership organ of the Communist Party represented by Chen Duxiu, the spectacular great revolution failed. Serious White terror was subjecting every revolutionary to a test. Some of the revolutionaries retired from the scene, assuming a passive attitude. Some gave up their cause and joined the reactionary camp. A number of most devoted communists and proletarian revolutionaries represented by Mao Zedong, Zhou Enlai, Zhang Tailei and other comrades formed the backbone in keeping the cause alive. "Wiping off the bloodstains from their own bodies and burying the corpses of their good companions, they kept on fighting." ("Selected Works of Mao Zedong," Vol 3, p 985) At this historical turning point, Bocheng displayed the firm faith and high principles of a Communist Party member. Knowing what should be done, he first found his way to Wuhan and then reached Nanchang. He joined Zhou Enlai, Zhu De, He Long, Ye Ting and other comrades in leading the Nanchang uprising, firing the first shot in resisting the KMT reactionary group and turning a new page in the history of the Chinese revolution.

A Marxist Strategist and Military Theorist

Comrade Bocheng was one of the founders of the Chinese People's Liberation Army. In the long period of revolutionary war, he directed many battles and fought and won many major battles. He was an invincible general striking awe into the enemy. He left a glorious page in the history of the Chinese revolution and the revolutionary war. His art of directing military operations and his combat strategies formed an important part of Mao Zedong's military thinking. Comrade Bocheng was worth being called a tested marshal, Marxist strategist and military theorist.

After the failure of the Nanchang uprising, the party sent him to study in the Soviet Union. In the summer of 1930, he returned to the country from the Soviet Union. The party Central Committee assigned him to the Changjiang Bureau as secretary of the military committee. At a meeting of the Presidium of the Changjiang Bureau on 3 September, he relayed the instructions on Wuhan's work given by Comrade Zhou Enlai as representative of the party Central Committee. He prevented the execution of the adventurist plan calling for an insurrection in Wuhan. The likely damage arising from "leftist" putschism was avoided. In January 1932, Comrade Bocheng joined the central soviet area and acted for the first time as president of the Red Army College and concurrently political commissar. In October, he served as chief of the General Staff of the Red Army helping Comrades Zhou Enlai and Zhu De in directing operations and achieving a great victory in the fourth counter-"encirclement" campaign. During the Long March, Comrade Bocheng assumed weighty responsibilities and worked uncomplainingly. Before the Zunyi meeting, he brought up the rear of V Corps, giving the central organ cover in breaking through four enemy blockade lines. At the end of 1934, the central authorities transferred Comrade Bocheng back to the military committee. He again acted as chief of the general staff and concurrently commander of the central column. After the Zunyi meeting, Comrade Bocheng led an advance force seizing important points and paving the way for the advance of the whole army. This enabled the Red Army to get across the Jinsha River, through the area of the Yi nationality and across the Dadu River to reach the Sichuan-Xikang plateau and join forces with the 4th Front Army. In the spring of 1937, Comrade Bocheng was appointed as the commander of the army sent to help the Western Route Army. At this time, the Western Route Army was fighting a hard battle with the enemy on the Hexi corridor with neither the support of the party nor a mass foundation. It was hard put to obtain grain and munition supplies. Bocheng urged his army units to start on their way quickly. He was worried over the plight of the Western Route Army. He was overflowing with class sentiment. When his army reached Zhenyuan, the Western Route Army had unfortunately been defeated. Bocheng and Political Commissar Zhang Hao led the masses of cadres and fighters of the 4th Front Army in correctly waging a struggle to criticize Zhang Guotao's mistakes.

After the outbreak of the anti-Japanese war, Bocheng was appointed the commander of the 129th Division of the 8th Route Army. Together with Political Commissar Deng Xiaoping, Deputy Divisional Commander Xu Xiangqian and other comrades, he led the effort to establish the Shanxi-Hebei-Henan anti-Japanese base in the Taihang Mountains. They successfully organized and directed the battles of Shentou Ridge and Xiangtangpu; led their army units to break through the encirclement of nine routes by the Japanese renegades and smashed the policy of imprisonment pursued by the Japanese renegades, opening up and developing vast areas eastward to the Jinpu road, westward to the Tongpu road, northward to the Cangshi road and Zhengtai road, and southward to the Huanghe River. Thus, they established the Shanxi-Hebei-Shandong-Henan base, which became one of the important anti-Japanese bases. In September 1945, the militarymen and civilians of the whole Shanxi-Hebei-Shandong-Henan area launched a massive counterattack against the enemy. In a short period of time, they annihilated more than 50,000 enemy troops and recaptured 59 counties and towns. Bocheng was one of the main leaders responsible for this brilliant achievement.

After the victory in the anti-Japanese war in 1945, the Chiang Kai-shek KMT in September that year launched an attack on the Shanxi-Hebei-Shandong-Henan liberated area and occupied six towns in our Shangdang Prefecture. Bocheng and Comrade Xiaoping led their army units to fight bravely in self-defense. At one stroke, they annihilated 13 enemy divisions composed of more than 35,000 people. This provided effective support for Comrades Mao Zedong and Zhou Enlai in their peace talks in Chongqing. Chiang Kai-shek was forced to sign the "double 10th agreement." But Chiang Kai-shek gave lip service to peace on the one hand and concentrated large numbers of troops to push northward from Xinxiang along the Pinghan road on the other. Bocheng and Comrade Xiaoping immediately sent forces eastward and organized and directed the Pinghan battle, annihilating two army corps comprising 23,000 people. Another army corps and a column revolted and crossed over while in the battlefield. Thanks to the great victories achieved in Shangdang and Pinghan and in other battlefields, half a year of peace ensued. On 26 June 1946, Chiang Kai-shek blatantly tore the peace agreement to pieces and launched an all-out attack on the liberated area. Together with Comrade Xiaoping, Bocheng organized and directed the battles of Longhai, Dingtao, Juye, Juancheng and Huaxian. Victories were achieved in all the five battles. Ten and a half brigades of the intruding Chiang troops or more than 70,000 people were annihilated. This gave an effective boost to the efforts on other battlefields in the country. Chiang Kai-shek's plan for an all-out attack was smashed. In June 1947, to crush Chiang Kai-shek's concentrated attack, Bocheng and Comrade Xiaoping led their troops to cross over the natural barrier of the Huanghe River at one stroke. After annihilating nine and a half brigades of enemy troops in southwest Shandong, they advanced quickly making straight for the Daibie Mountains. This was the enemy's most strategically sensitive and yet weakest area--a vantage point of ours jeopardizing Nanjing to the east, Wuhan to the west, the Changjiang River to the south and threateningly overlooking the central plains. It was like a sharp blade thrust at the enemy's heart, pinning down 90 of the 160 brigades on their southern front and raising the curtain on the strategic counterattack in the war of liberation.

At the end of 1948, together with Xiaoping, Chen Yi, Su Yu, Zhen Lin and other comrades, Comrade Bocheng directed a decisive battle on an unprecedentedly large scale--the Huai-Hai campaign. They achieved a great victory annihilating 22 army corps and 56 divisions or 555,000 enemy troops and realizing Comrade Mao Zedong's prediction before the battle: "Given victory in this battle, not only will the situation north of the Changjiang River be brought under control but also the national situation as a whole can be basically taken care of." In January 1949, Comrade Bocheng acted as the commander of the 2d Field Army. Together with Political Commissar Comrade Deng Xiaoping, he led troops to cross the river liberating vast areas of Anhui, Zhejiang, Jiangxi and Fujian. Not long after, they received orders to attack southwest China. They resorted to the practice of making a big detour and a big encirclement--beating the enemy to it in occupying important points and cutting off their retreat. The enemy troops ran away helter-skelter, revolted, crossed over, or were killed. There were 900,000 such enemy troops. With southwest China under control, the war of liberation basically ended. Thus, the long period of battle life also ended for Comrade Bocheng.

During the long period of revolutionary war, Comrade Bocheng displayed the poise and talent of a great strategist who was both prudent and decisive in directing operations. He was capable of arriving at a correct understanding and judgment of the enemy's strategy and battle plans. He was no less skilled in deploying his own troops in light of the conditions concerning the enemy and ourselves. Therefore, he could foresee the development of the war and seize the initiative in fighting. Comrade Bocheng often stressed that commanders and fighters at all levels must have a clear idea of given tasks, information about the enemy, our own position, the terrain, and the time factor. He called these points "five tricks." He consistently opposed fighting in a "rigid" way and opposed the strategy of "meeting force with force." Instead, he called for "capitalizing on every favorable factor and avoiding all unfavorable ones and annihilating the enemy flexibly." In practice, he carried on and developed many tricks in war, such as "encircling a city and attacking the reinforcements," "concentrating on one point, attracting the attention of the relief troops, tackling a given part of them and annihilating them one by one," "making an encirclement on three sides, leaving one side open, providing a make-believe route of escape and setting a trap," "aiming for the heart of a fierce tiger," and the snake-beating art of "pinning down its head, grabbing its tail and cutting it in two." He was skilled in using military dialectics to organically unify strategy, battle and tactics. This provided a magic weapon for defeating the enemy. In a fair assessment and a graphic description of him, Comrade Chen Yi said: "He is the modern version of Sun Wu when it comes to the military art. In his dedication to protect national territory, he is the match of Fan Han in ancient history." A review of Comrade Bocheng's revolutionary life of battle shows that he really "has the style of well-known ancient generals and is a general with expertise rarely seen in the country."

These great achievements of Comrade Bocheng are inseparable from his assiduous study and research efforts. He had a busy military life and was always on the move. But he took time out to seriously study military works by Engels and Mao Zedong and well-known works on the military art by writers in modern and ancient times at home and abroad. Having regard to changes in the situation and our army's needs, he translated many works related to the civil war in the Soviet Union and the antifascist war--works of all kinds from small-scale to large-scale fighting and from defense to attack. The aim of making the past serve the present and foreign things serve China was really achieved. Comrade Bocheng paid great attention to summing up experiences in fighting. He wrote many good military works. The "Selection of Military Writings by Liu Bocheng" soon to be published is the crystallization of his brilliant thinking on military life. His military works and his translations were his magnificent contributions to our military history. They have produced and will continue to produce a great impact on the building of our army. Military commentators have traditionally held that a good strategist should combine the three arts of leading soldiers, training soldiers and using soldiers. Comrade Bocheng is a master of all the three arts. He is called a Marxist strategist and military theorist. His repute is well deserved.

The Founder of Our Military Colleges

During the protracted revolutionary war, Comrade Bocheng was deeply aware of the fact that all the powerful armies, at all times and in all countries, could not "fight without given training." To give training, it was first necessary to train cadres. Therefore at the time of the Lushun uprising, at the time he first entered the central soviet area, at the time the 4th Front Army was attacked by Zhang Guotao and from the time of the war of resistance against Japan to after the nationwide liberation, he always attached great importance to setting up a military college. Sometimes, he concurrently supervised the work of the college in the capacity of commanding officer, and at times, he devoted his whole attention to the work. He worked conscientiously and painstakingly and took infinite care in turning out batch after batch of qualified people versed in polite letters and martial arts for the army.

Before the nationwide liberation, our army was scattered in rural areas among various strategic areas. There was only a single poorly equipped arm in the army. Although there were military schools in various major areas, most of them were still in the primitive stage of learning to fight by taking part in actual fighting. After winning nationwide political power, just as Comrade Mao Zedong pointed out: "A basic change has already taken place in this kind of objective condition. We are now at the higher stage of army building, or the stage of mastering modern technology." For the sake of enabling our army to complete this new historical change, it was necessary to set up military colleges in keeping with modern conditions. Comrade Bocheng, who advocated "to run the army well, we must run military colleges well," resigned from his post as chairman of the Southwest Military and Political Committee and earnestly proposed to the Central Committee: "The war is now over, let me go and set up military colleges!" The Central Committee handed this difficult task to Comrade Bocheng. This indeed could be described as picking the right man for the job!

In October 1950, Comrade Bocheng received instructions to set up a military college. He made light of the hardship and braced himself for the vigorous effort of making a success of the work. With this revolutionary spirit of bravely exploring, he discovered the experience for properly setting up regular higher command schools in the new historical period. In drawing up training policies for the military college, he proposed: Using Mao Zedong's thinking on integrating theory with practice to unify military thinking, reorganize the style of study, oppose empiricism and guard against dogmatism. He stressed that attention must be paid to opposing two tendencies in training: First is the tendency of casting away our former foundation, the fine tradition of the PLA and Mao Zedong's military thinking. The other is the tendency of stubborn conservative unwillingness to accept new things and modern military sciences. With regard to the purpose of training, he proposed: Train senior commanders and staff officers loyal to the party and to the revolutionary cause of the Chinese people led by the party and who are good at organizing and commanding modern units composed of regiments, divisions and various services in coordinated operation. These policies and principles for setting up military colleges were basically affirmed at that time.

Under the historical conditions of that time, Comrade Bocheng studied the advanced experience of the Soviet Union in accordance with the instructions of the Central Committee. He insisted on learning the organizational and command experiences of the Soviet Army on the basis of summing up the battle experiences of our army. He translated and edited a complete set of teaching materials on military theory and gradually built a Red and expert contingent of instructors. For the sake of bringing theoretical study and planning exercises closer to reality, the military college organized a total of 35 military maneuvers and 12 large-scale field exercises from 1951 to 1955. These activities not only unified thinking, but they also trained and toughened the ability of the cadets to actually command a composite army in battle and played a vital role in the education and training of the units. For the sake of fitting in with the needs of modern warfare, naval, air force, artillery and armored departments were added one after the other not long after the setting up of the military college. When these departments could independently fulfill their teaching assignments, they were also expanded into independent command colleges for the services with the approval of the Military Affairs Commission. This enabled our army to have a more comprehensive college system and thereby promoted the process of building a modern and regular army.

In his "Instructions to the Military College," Comrade Mao Zedong highly appraised Comrade Bocheng's work. He said: "The founding of the military college and its teaching over the past year and more have made an important contribution to the building of a regular and modern national defense unit." Naturally, some shortcomings and mistakes existed during this period of military education and some unsuitable things were copied from the experience of the Soviet Army. These minor aspects which emerged in our advance because we had no experience in building a modern army were immediately corrected upon discovery. This was reflected in the bimonthly work report submitted by Comrade Bocheng to the Military Affairs Commission of the Central Committee.

However, in the so-called "oppose dogmatism movement" suddenly launched in 1958, such labels as "dogmatism" and "mistakes of the bourgeois military line" were imposed on Comrade Bocheng, and large numbers of comrades in charge of military training were also wrongly criticized. From then on, "leftist" guiding ideology began to develop in the army. When Lin Biao was in control of the Military Affairs Commission, he actually negated the orientation of building a regular and modern army and even preposterously abolished military training and dissolved large numbers of military colleges. This caused serious damage to army building. The leading comrade of the Military Affairs Commission has pointed out that the oppose "dogmatism" of that time was wrong. He also said that the many military colleges established after the founding of the People's Republic had achieved great successes, but later suffered two serious reverses. One was from oppose "regularization" and the other was from oppose "dogmatism." The words of the leading comrade of the Military Affairs Commission are in keeping with historical facts, and they have not only reaffirmed the past achievements of Comrade Bocheng in setting up military colleges, but are also of important actual significance in bringing order out of chaos on the orientation of army building and the policy of training.

Model for Communists

Comrade Bocheng has lofty communist moral character. He never takes advantage of his great merit or fame. He lives frugally and simply and is honest in performing his official duties. He is open and aboveboard, and is not afraid of shouldering responsibility. He is a model for us communists.

He is boundlessly loyal to the party and consistently submits to the leadership of the CPC Central Committee, the Central Military Commission and the party organization at various levels. He used to say: "When I joined the party, my oath was 'absolute obedience to the party.' Since then, I have always exhorted myself: I am a senior cadre of the revolutionary army led by the party, and I must be boundlessly loyal to the party. I must set myself up as an example and teach the troops under me to fully accept the unified leadership of the party and become glorious tools of the party." Comrade Bocheng has faithfully carried out the oath he took when he joined the party scores of years ago. At critical moments, he showed no fear of personal hazard in safeguarding the party organization. In the autumn of 1947, when Bai Chongxi dispatched more than 30 brigades to lay siege to Dabieshan, Comrade Bocheng was heading the evacuation of the organs of the Central China Bureau. When they were camped in the Beixiangdian district of Guangshan County, Henan Province, they happened to run into the enemy's 11th Division. Bocheng's first thought was for the safety of the Central China Bureau. When the comrades by his side urged him to quickly evacuate from the dangerous situation, he solemnly and firmly said: "I will not leave without establishing contact with the Central China Bureau." Five minutes passed, and then 10 minutes...it was not until the liaison staff reported that the Central China Bureau had safely evacuated that he would make his departure.

He can take the interests of the whole into account and make concessions. He has strong party spirit and good party work style. In 1939, he was dissatisfied with the blockhouse policy and positional warfare pushed by the leaders of the "leftist" line. He would neither give advice nor offer plans and was not tolerated by them. Using his quarrel with Le De as an excuse, the "leftist" leaders dismissed him from the post of chief of the general staff and assigned him as chief of staff of the 5th Army group. He was not dejected and said: "The practice of a year of battle has proved that the broad masses of cadres and fighters of our Red Army are brave and skillful in battle. However, there are problems in our strategy and tactics which must be changed." In 1936, when Zhang Guotao insisted on moving south and made a split with the party and the Red Army, he righteously pointed out: "The split is a mistake and will have no popular support!" Zhang Guotao consequently sent him to work in the Red Army University of the 4th Front Army. Comrade Bocheng took advantage of the opportunity to patiently propagate the correct advocation of the Central Committee to the cadres and, together with Comrade Zhu De, carried out a great deal of work in the leftist army. Particularly after the "oppose dogmatism movement" in his old age, he had no choice but to leave his leadership post at the military college. This aged but ambitious warhorse has actually lost its chance of galloping a thousand li. When I think of it, I feel sorry for him! However, even in his dotage Comrade Bocheng is still concerned about military defense matters and army building, and is always thinking and worrying about them. He called himself an "auxiliary staff officer." He is always thinking about what military work should be constructed on the border, which strategic highway should be quickly repaired and what should be done for urban civil air defense. When he has an idea, he will ask his staff officer to write it down and send it to the comrades of the Military Commission and the chief of the general staff for consideration. He donated more than 2,000 volumes of works on military matters he had collected over the years to what was then the Military and Political University. In the autumn of 1972, I paid a visit to Comrade Bocheng. The moment he saw me, he said: "You have come to teach at the Military and Political University? Good. I am already old. Make a success of the work."

He firmly believes that the masses are the makers of history. In June 1947, party, government and mass representatives from all walks of life in northern Hebei Province presented him with an embroidered inscription with the characters "Evervictorious general." He modestly said: "You have called me an evervictorious general. I really do not deserve this. I have not been always victorious. If I win most of the time that is already not bad. I only performed my duty under the leadership of Chairman Mao and Commander in Chief Zhu and with the support of the people in the rear areas. The credit should belong to the party and the people. I dare not claim credit for the achievement of other people. Without the civilians providing us with food and clothing, the army cannot fight in a war." These simple and unpretentious words are not a polite remark but his world outlook. He constantly educated the cadres: "Some of our cadres think that they have won this battle and I have won that battle, or, I have opened up this region and he has opened up that region. Actually, without the masses joining the army where does your army come from? Without the workers making clothes and guns, how can you win a battle without the workers making clothes and guns, how can you win a battle without clothes and guns? If the masses do not organize mass organizations and do not elect the political power, how can your region be opened up? Therefore, all the credit should belong to the working people. We ourselves are only members of the masses." This is the way he understands the relations between the generals and the masses. He has lectured the cadres on numerous occasions to explain this viewpoint and to oppose the tendency of claiming credit for oneself and becoming arrogant.

On Comrade Bocheng's 50th birthday, Comrade Deng Xiaoping composed an essay to him: "His fervent love for the country, the people and his party is a fine quality every communist must possess. Our Comrade Bocheng not only possesses this quality, but he has also dedicated his whole life to the country, the people and his party." To learn from Comrade Bocheng, we must proceed by wholeheartedly dedicating our lives to the motherland, to the people and to the party.

PROPERLY USING POWER ENTRUSTED BY THE PEOPLE--READING COMRADE MAO ZEDONG'S FIVE LETTERS TO RELATIVES AND FRIENDS

Beijing RED FLAG in Chinese No 16, 16 Aug 82 pp 10-11

[Article by RED FLAG commentator]

[Text] Comrade Mao Zedong's five letters to his relatives and friends, which are carried in this issue of our journal, were written from 1950 to 1957. They raised a serious question: How should the cadres of the party in power properly use the power the people entrusted to them; should they seek private gain for themselves or a few people, or work for the interests of the masses of people? An important factor is how they treat their relatives and friends. This is an important question concerning our party's nature and purpose. Comrade Mao Zedong's letters expounded the correct principles toward this question. They are brilliant examples for us in this respect.

The principles expounded in Comrade Mao Zedong's five letters can be summarized into the following three points: 1) Comrade Mao Zedong was very glad to hear from his relatives and friends about his "hometown situation." He hoped that they would "often write to me and tell me something about our hometown." While telling Comrade Mao Zedong about his "hometown situation," some relatives and friends also requested him to respond in one or two words about his hometown so as to directly help solve some problems. Comrade Mao Zedong politely declined their request. He said: "It is not appropriate to give independent and preferential consideration of the interests of a few localities." "As to local affairs, I would like to collect some materials for reference. But I would not, and indeed should not, directly handle local problems of a general nature, because that would embarrass the local party committee and government." 2) To those relatives and friends who asked for help in finding jobs or admission to a school, Comrade Mao Zedong politely declined and furthermore patiently tried to educate them. In his letter to Wen Nansong he wrote: "As to Yunchang's work, it is inadvisable that he get a job through my recommendation. He should do something among the people and win their faith before he can get a job." In his letter to Sun Peijun he wrote: "It is not suitable for me to write to the school, so far as your study at a higher school is concerned, whether you can be admitted should be decided by the school only." 3) Comrade Mao Zedong advised the party branch and government of

Shicheng township to supervise and educate his relatives and "not to feel awkward or balk at criticizing their shortcomings, mistakes and backwardness because they are my relatives." He said that he hoped his relatives would be "treated exactly the same as the masses and would not be given any preference." In short, the main spirit of Comrade Mao Zedong's five letters can be summed up as follows: Never use one's position and power to seek private interests and preferential treatment for one's relatives, friends and hometown, strictly require one's relatives and friends "not to seek privilege," and resolutely support the party and government organizations to criticize and deal with the shortcomings and mistakes of one's relatives and friends. This is the attitude Comrade Mao Zedong adopted toward his relatives and friends. It is also the only correct communist attitude.

Comrade Mao Zedong set a good example in this respect. So did many other veteran proletarian revolutionaries like Zhou Enlai, Liu Shaoqi and Zhu De and the majority of the thousands upon thousands of high and middle-ranking officials and grassroots cadres. Since they acted in strict accordance with the party's principles, set strict demands on their relatives and friends as well as on their own children, asking them not to seek privilege, and did not use their positions and power to seek private gain for their relatives, friends and children, they won the trust and admiration of the people. Comrade Luo Shunchu, a former leader of the consultative group of the PLA Shenyang units and a veteran Red Army soldier, set strict demands on himself and his children throughout his life. He fostered a revolutionary atmosphere in his family. Facts show that there are many such examples within our party. This is a good tendency and a fine tradition of our party.

Not using one's position and power to seek personal gain for one's relatives and friends is a principle determined by the nature of our party. Marx and Engels pointed out in their "Communist Manifesto": "All previous movements were movements of a few people, or movements for the interests of a few people. The movements of the proletariat are, however, movements of the majority and are for the interests of the majority of people." ("Selected Works of Marx and Engels," Vol 1, p 262) Ours is a proletarian political party which seeks the interests of the majority of the people. Every party member, especially every cadre, has the duty of serving the people heart and soul, and is granted no privileges. If a cadre thinks that he is a cut above other people and certainly has the privilege to seek personal gain for his wife and children and other relatives and friends, then he is running counter to the purpose of the Communist Party, and what he does does not conform to the description and role of a party member and a cadre.

During the decade of internal disorder, the Lin Biao and Jiang Qing counterrevolutionary cliques seriously damaged our party's work style through their factionalist and illegal activities. They preached such fallacies as "power means everything" and "power may expire and become invalid," which greatly corroded people's minds. Their pernicious influence on some cadres has not yet been totally eliminated. An example of this is that some cadres have not acted according to principles in treating their relatives and friends. They have placed their family or personal relationship above the revolutionary relationship and have taken advantage of their position and power to solve such problems as school enrollment, employment, joining the party, receiving a promotion, going abroad and returning to work in cities for their relatives and friends through improper or illegal channels. When their relatives and friends committed mistakes or crimes, they tried all possible means to protect them and cover up their mistakes and evil deeds, or even took advantage of their power to bully others so as to obstruct the execution of discipline and the laws. Another expression is that some "warmhearted people" have, under the pretext of "caring for comrades and showing consideration for leaders," sought personal gains by various means for the relatives, friends and children of their leaders and friends. They have actually attempted to seek preferential treatment for themselves and their relatives, friends and children by fawning over their leaders. Instead of regarding it as a disgrace, they took it as an honor. They did not realize that this is a reflection on themselves of a feudalist privilege mentality and the corrosive bourgeois ideology.

The socialist system is a new social system. Under this system, the relationship between man and man, including the relationship between family members and relatives and friends, must first be comradeship on the basis of revolutionary principles. Every party member and cadre must closely relate his family, relatives and friends to the destiny of the state, the nation and the people. The interests of the former must never be placed above the fundamental interests of the latter. Like a mirror, the attitude of a party member and cadre toward his family, relatives and friends clearly reflects his party spirit and work style. It also has an important bearing on the relationship between the party and the masses. After the founding of the PRC, Comrade Zhou Enlai repeatedly stressed that cadres must pass "five tests," that is, the ideological test, the political test, the social test, and test of relatives and friends, and the test of hard life. At present, under the new historical conditions, it is necessary for our party members and cadres to check themselves again to see whether they have successfully passed these tests.

Lu Xun said: "Not exactly all passionless men are real heroes." We communists have never denied the passionate feelings between relatives and friends and have never prohibited people from establishing normal contacts with their relatives and friends. However, we have our own principles in dealing with these feelings and contacts. We hold that personal feelings must be related to the passionate feelings toward the peoples, and the former must never be played above the latter. Personal relationships must be subordinate to the revolutionary relationships and must never surpass the latter. When one's relatives and friends commit mistakes or crimes, one must not protect them and try to cover up their mistakes and evil deeds. One must not protect "private feelings" at the expense of "public laws." In short, in treating our relatives and friends, we must always adhere to the party's stand and principles and always have our party's purpose in mind. In this respect, we must earnestly learn from the proletarian revolutionaries of the older generation represented by Comrade Mao Zedong, and actually follow their examples in our actions. We must all learn something from Comrade Mao Zedong's five letters to his relatives and friends, raise our consciousness and unify our understanding so that we can encourage each other to properly use the power entrusted by the people and advance forward side by side.

COMMUNISTS SHOULD UPHOLD PRINCIPLES IN HANDLING FAMILY PROBLEMS

Beijing RED FLAG in Chinese No 16, 16 Aug 82 pp 12-13, 40

[Article by Zhu Yan [2612 1484]]

[Text] The Communist Party has nearly 40 million members, every one with his or her own relatives and family. Communist Party members, as the leading section of the proletariat class must, when dealing with the problems of relations between family members and relatives, uphold the party line and certain principles. The most important thing is that they set an example while teaching and helping their family and other relatives that the most important thing is to act for the benefit of the party and the people, that the good of the party and the people must come before the good of the individual or the small family unit, and to prevent or correct any actions which might be damaging to the good of the party or the people.

Of course, it should be made very clear that the vast majority of party members carry out such duties very well. The older generation of proletariat revolutionaries and various other outstanding communists may all be cited as paragons of the communist way of thinking in terms of their correct handling of family problems. However, we cannot ignore the fact that some communists, including some leading cadres, do not perform their duties well in this area; one might even say in some cases, that they are very bad. Some choose to socialize and never talk about anything of any importance with their families, tend to spoil and pamper their children, creating very unfavorable tendencies which then go unchecked and become overlenient. Some tend to take advantage of their position and use the back door for their families and relatives, helping them to do such things as move to the city, to school, get jobs or receive promotions. Some, in a brazen attempt to satisfy the unreasonable demands of their families, take over organizational distribution and actually make alterations in work conditions, while others find every means possible to create a "nest of hedonism" for their families. There are still others who resort to deception so that their children or other relatives may go to Hong Kong or leave China without a care for the integrity of the country or the individual. But what is of a more serious nature are those who either overtly or covertly support and connive with their families to engage in smuggling and illegal selling as well as speculation, swindling and corruption. Some even directly involve themselves and their families in such fraudulent and illegal activities. Such phenomena are clear illustrations of the egoism of the capitalist classes which has developed in the hearts of some communists and their families, causing them to lose their original leadership spirit. Not only do such people harm the great reputation of the Communist Party, they also damage the party structure and are a very bad influence on the general mood of society. Every level of the party structure must take a serious look at this problem, and make every effort to rectify it.

The Communist Party of China is a well-formed and tested proletariat political party armed with the philosophy of Mao Zedong and Marxism and Leninism. Not only does it take a serious attitude toward and openly expose and criticize negative elements within the party, it must also rely on its own strength to overcome these negative elements, transforming bad into good, educating every party member and strengthening the party structure. The party's history already speaks for itself in terms of such determination. Examples such as the smashing of the "gang of four," the restoration of order after chaos and the correct rerouting of the party line are all evidence enough. The party has already made great efforts to correct the mistakes of some communists in their handling of family problems including the severe punishment of some very bad criminal elements. The extremely important task now before us is to clarify to a greater extent the principles of family behavior to each party member and to set up a correct and revolutionary view of the family.

The family is a cell within society and family relations always reflect a certain historically developed stage in production relations. In China, both the victory of the revolutionary task of the people and the transformation by socialism of the previous system of private ownership of the means of production are basically finished, necessitating the establishment of a new form of socialist family relations. Within this new kind of family, not only is it necessary to destroy the outdated idea of subordination of one family member to another, which is rooted in the basis of the system of private ownership of the means of production, but it is also vital to reestablish new relations between the family and society. In other words we must bind tightly together the happiness and pleasures of each family with the future and destiny of countless millions of others as well as the future and destiny of our socialist homeland. The families of Communist Party members should become models for this new kind of family. Every single party member, regardless of his or her position within the family, should adopt philosophies and actions of this advanced core of the proletariat to influence and guide every member of the family, strictly adhering to party philosophies and principles to eradicate contradictions within family life and should strive to create unified harmony within the family to form a revolutionary collective struggling together for the causes of socialism.

Should the Communist Party lay down principles related to family love? Of course it should. But it is not the feudal and patriarchal kind of love that is reflected in the old sayings such as "When a man goes to heaven so does his entire family," nor is it the vulgar love of the bottom levels of the capitalist classes which takes enjoyment and money as its central themes.

It is instead a love emanating from a Communist Party member, under the guidance of the party and its principles, helping to unite the spirit of his family and relations with the revolutionary cause of the proletariat. He or she should promote mutual concern, consideration, help and understanding with his or her spouse, parents, children and other relatives. But anyone who wants to put the narrow confines of the family above the good of the party, the country and the people, is contravening a law of the party and the government and is committing a crime against the moral principles of socialism and communism. Under the conditions of socialism, if the good of the individual family is put above the good of the country and the people, a conflict will arise, often resulting in undesired results which in the long run are bad for the country, the people and the individual family.

In dealing with the question of whether a party member is correctly upholding party principles when dealing with family problems it is important to examine, after he or she has come to terms with power they possess, whether they are abusing this power to benefit their family.

After the Communist Party began to rule the country, many party members were given certain powers and thereafter lived for a long time in a peaceful environment, with a stable family life and ever-increasing family relations. Among some party members, the number of cadres who became more involved in family affairs and their children's situations increased and we saw the appearance of some people who wanted to use their powers within the family to gain special "favors and allowances." Under this situation our comrades were faced with the problem of how to correctly manipulate the powers bestowed on the people. The question of whether our party members are able to stand up to this sort of test or whether or not they have good family relations is not a question related to individuals, but is a question of great concern to the whole positive or negative mood within the Communist Party. If some people decide to adopt an attitude of abusing the power they have been given and wasting their time while gaining advantages for their own families by means of the power they possess, then the power bestowed on them becomes abused and lessens in quality, they themselves are abusing their positions as public servants and there is even a danger of overturning the stability of the society. In order to avoid this danger, the party has for many years stressed the importance of correcting these few errant communists and cadres. It is clearly stated in "Concerning the Principles of Political Life Within the Communist Party" that it is forbidden for anyone to abuse their power to gain benefits for their own family, it is forbidden for anyone to separate public and private and to use public office for private gain. Furthermore, it is forbidden for any leader or cadre to transgress any of the party's criteria and structural principles for cadres or to promote or aid the promotion to a leadership position of any member of one's family. It is forbidden for anyone to reveal state or party secrets to family members, and no one may overstep one's authority and meddle in the work of the party or state or see to it that a family member is placed in a position of crucial importance in relation to one's own position. Such rules reflect the fundamental good of the party, the country and the people and in addition embodies the expectations and respect of the party and the people toward the party members and hence, every self-respecting self-possessed party member, especially leading cadres, should without exception strictly observe these guidelines or rules.

Communists who uphold these principles in handling family problems should not simply handle each problem one at a time but should constantly strengthen education along the party lines, encouraging and giving support to using communist thinking in fighting against individualism and other nonproletariat thinking. While creating an objective world, every party member should consciously build a subjective world and firmly establish a communist world view and morality and build up strength to resist the corrosive influence of exploitive capitalist thinking. It should be said here that most Communist Party members have already reached this level of consciousness, but there will always be a certain number of people who lack such a consciousness and indeed under some circumstances it can occur that those with consciousness may lose it. Thus the importance of party member and cadre consciousness must be stressed. In addition we must have supervision by the organization and supervision by the masses, as one is vital to the other. Recently the supervision of cadres by the masses has intensified and the number of people who have dared to criticize those who abuse power to their own ends has increased. Initially this was a very good thing but later many cadres began to feel awkward about the situation and started to use their powers to pressure or carry out reprisals against their critics. Obviously the party cannot in any way ignore these "special party members," and the more they concern themselves with their families and themselves, the greater the necessity for strict supervision. The recently investigated economic criminal cases helped step up the supervision by the organization and by the masses and made a move toward helping to solve some of these problems. Such problems which are present in any areas or departments should be immediately investigated by party members in authority, thereby helping to strengthen softened and lapsed party structures. We must encourage and insist on finding those cadres and party members from conniving and protective families who have committed various crimes and get them to quickly correct their mistakes and severely punish those who instigate or participate in activities and crimes involving family members and who refuse to repent and mend their ways. We believe that if the whole party works with unremitting efforts we can achieve these goals and thereby deeply impress and educate the wide spectrum of party members and cadres with the party line. In this way, not only will we be able to put a relatively quick stop to the incorrect thinking of some party members in terms of their family problems, but at the same time we will be able to encourage all Communist Party members to conscientiously strive toward the establishment of a new kind of family setup which will correspond to the principles of socialism. This without a doubt would have a deep influence on and be felt by the millions of families in China, resulting in an improvement and change in the mood of society, both in the cities and the countryside, and would powerfully spread the material, cultural and spiritual facts of socialism.

ON THE WORKING CLASS AFTER THE ELIMINATION OF THE BOURGEOISIE AS AN EXPLOITING CLASS IN OUR COUNTRY

Beijing RED FLAG in Chinese No 16, 16 Aug 82 pp 14-18

[Article by Yu Yannan [2456 3601 0589]]

> [Text] Editor's Note: From this issue onwards, this publication will publish a series of articles on the current situation of the working class in our country. These articles will later be compiled into a book by the RED FLAG Publishing House.

Over the past 30 years or more since the founding of the country and in the wake of the advancement of our country's socialist cause, the contingent of our country's working class has greatly developed. According to statistics, the total number of workers in the country was 8 million in 1949 and was 109 million in 1981, an increase of more than 1,200 percent. In 1949, there were only 3.9 million industrial workers who formed the main body of the working class--workers of the units owned by the whole people including industrial, capital construction, communications and transportation, and postal and telecommunications units, but the number was raised to 46 million in 1981, showing an increase of about 1,100 percent. In 1952, there were only 164,000 engineers and technicians in the units owned by the whole people, but the number rose to 1.862 million in 1980, showing an increase of more than 1,000 percent. In 1981, the proportion that workers occupied in the country's total urban population was raised to about 60 percent from 14 percent in 1949. Of this, the proportion that industrial workers working in units owned by the whole people occupied in the country's total urban population also rose to 35 percent from 7 percent in 1949. In certain medium-size industrial cities such as Changzhou, Yangzhou, Wuxi and Suzhou in Jiangsu, the number of workers already accounts for over 60 percent of the total urban population. Before the founding of the country, the output from modernized industry only accounted for about 10 percent of the GNP, and in 1981, the proportion of industrial output in the GNP was raised to above 70 percent. This is a great historical change. This change has, and is still playing, a very important role in our country's socialist modernization drive, the consolidation and perfection of our country's socialist system, the development of our party's ideology, politics and organizational construction and the development of our entire economic life, political life, cultural life and other aspects of life.

The status and role of the greatly developed and strengthened working class in our country in state life and social life, and its labor situation, ideological and political situation, cultural and educational situation and other situations not only represent to a large extent the development of our country's economic, political and cultural situation, but also inevitably exert great influence on other social classes and people of various classes and exert great influence on the development and future of the party and the state. Thus, we must attach great importance to investigation and research into the situation of the working class under the socialist conditions and into the ideological, political and organizational construction of the contingent of the working class. In addition, we must raise the level of our work concerning the working class to the important agenda of various party and government departments at all levels.

Currently, some comrades both inside and outside the party fail to correctly understand the historical relation of the unity of opposites of mutual interdependence between the bourgeoisie and the proletariat and that they are prerequisites for one another. They hold the view that since the bourgeoisie in our country has been fundamentally eliminated as an exploiting class, the working class as its antithesis will discontinue to exist as a class. This view fundamentally distorts the actual social situation of our country and seriously affects work in many respects. This view accounts for many problems that we encounter in actual practice such as neglecting the building of the contingent of the working class, giving up education among the working class, slackening efforts in giving play to the advanced role of the working class, not being enthusiastic enough in imbuing the peasants and masses with the ideology of the working class, thinking that everything is unanimous between the working class, peasants and intellectuals judging by their unanimous fundamental interests, and denying class distinctions in a socialist society. Thus, we think that when talking about the question of the working class now and discussing the building of the contingent of the working class, we must primarily clarify this incorrect view. We must unswervingly affirm both inside and outside the party the basic Marxist view that when the bourgeoisie has been eliminated as an exploiting class, the working class will not only exist but will become a strong and advanced class for a long time, a leading class and the principal force of a socialist society, and that it will exert great influence on other classes and strata.

Undoubtedly, like all other classes and all other historical phenomena, the bourgeoisie and the working class come into being and develop in history, and must all become extinct in history. However, we cannot naively interpret this conclusion of development laws which has been highly generalized and the relation of the unity of opposites between two antagonistic classes as meaning that they can come into being in the same morning and become extinct in the same morning. In history, except for the simultaneous elimination of the two antagonistic classes of slaveowners and slaves, the two antagonistic classes of landlords and peasants have not been simultaneously eliminated in the wake of the abolition of the feudal system of exploitation and it is impossible for the two antagonistic classes of the bourgeoisie and the working class to be simultaneously eliminated in the wake of the abolition of the bourgeois system of exploitation. In our country, with the abolition of the feudal system of exploitation, the landlords were eliminated as the exploiting class. However, the class of peasants still existed and has started off on the socialist road after undergoing socialist transformation of the system of private ownership of the means of production. After socialist transformation was basically completed, our country's bourgeoisie was also basically eliminated as an exploiting class. However, the working class was not eliminated in the wake of the elimination of the bourgeoisie but has become stronger. Today, the Chinese working class, as the representative of the advanced productive forces and production relations, is standing like a giant in the Orient. By means of its vanguard force--the Communist Party of China, it leads the PRC and the Chinese people in carrying out the great cause of socialist modernization, and is playing an important role in world affairs. Why? Does this violate the law of the unity of opposites or violate the historical law of development that socialism means eliminating classes? The answer is absolutely no. Fundamentally speaking, the continued existence, and existence for long years to come, of the working class and the peasants in our country is attributable to the fact that our country's social productive forces are still far behind the standard required for eliminating all classes and class distinctions and that the Chinese working class has not yet fulfilled the mission entrusted to it by history.

The historical mission of socialism, in simple words, is to eliminate classes and prepare conditions for ultimately making the transition to a proletarian communist society. This is also the great historical mission shouldered by the working class. This point has already been expounded in Marxist theories. However, actual socialist practice has shown that elimination of classes is a lengthy and complicated historical process. This historical process must be realized in two stages: First, the working class and its vanguard force must lead and unite the broad masses of people, eliminate the system of exploitation and the exploiting class by means of a socialist revolution, and consequently, eliminate in history the class distinction between the exploiting class and the exploited whose fundamental interests contradict each other and are antagonistic to each other; then, by fully developing the social productive forces and creating conditions in various aspects over a long period of time, eliminate the class distinction which is of a consistent nature between the working class and the peasants, who enjoy the unanimous fundamental interests of the laboring masses, and eliminate other social distinctions, and consequently eliminate the working class itself and push society forward to communism based on a proletarian structure. Only by realizing these two steps can the working class ultimately fulfill its historical mission. The historical process of class elimination can only advance on the road determined by this objective law. In our country, it is absolutely impossible for the working class to eliminate all class distinctions and other major social distinctions in social life in a short time. This is because our country was originally a semicolonial and semifeudal state and has never undergone a stage in which capitalism was fully and independently developed. As a result, social, economic and cultural development were backward. Although the establishment of the socialist system has opened up a wider channel for the development of the productive forces, our country's current level of development of productive forces is still rather low. The elimination of the class distinction between the workers and peasants, the distinction between the urban and rural areas, the distinction between physical and mental labor and other major social distinctions as a result of insufficient development of the productive forces can only be realized on the basis of achieving a rapid development of the social productive forces and improvement of the cultural and educational level and political awareness. Thus it is a fairly difficult and lengthy task which is necessary for eliminating the system of exploitation and the exploiting class. It is necessary to undergo a long historical development process before we can fulfill this historical mission. Since the development of the social productive forces progresses step by step, the historical process of eliminating the distinction between workers and peasants, the urban and rural distinction and the physical and mental labor distinction inevitably bears the historical characteristic of progressing step by step. As far as the basic content and basic orientation of this historical process is concerned, it is a process in which the working class transforms the whole society according to their own image and is also a process of working-classizing [gong ren jie ji hua 1562 0086 7132 4787 0553] all members of the society. In the wake of the gradual improvement of the social productive forces and the social cultural and educational level, class distinction and social distinctions are gradually reduced, the peasants and other members of the society are gradually more closely connected with the workers. When all the members of the society have become working-classized, these distinctions will be eliminated. Thus, in this long historical process of progressing step by step, the working class gives fuller play to its advanced role and its contingent becomes stronger. All this totally complies with the laws and with dialectics which governs the development of history.

In our country, it is impossible, in a short time, to eliminate all class distinctions and other major social distinctions or to completely eliminate the social phenomenon of class struggle from our country's social life. To be sure, we have eliminated the system of exploitation, eliminated the bourgeoisie and other exploiting classes, and have consequently eliminated class struggle between the exploiting class and the exploited. Undoubtedly, this is a critical step for the working class in our country in the course of fulfilling its historical mission of achieving the elimination of its own class, class struggle and class distinctions. We absolutely cannot underestimate its great significance and role. However, class struggle has not completely ceased and it will continue to exist for a long time within certain limits in our country's society. When we say that the bourgeoisie has been eliminated in our country, we mean that this class has been eliminated on the mainland of our country. This class still exists as a whole exploiting class in Taiwan, Hong Kong and Macao and still plays the roles determined by its class interests and class nature. Outside the country, the capitalist system and the bourgeoisie still exist. Capitalism is an international phenomenon. Similarly, the existence of the working class is also an international phenomenon. The working class' struggle against capitalism is inevitably a class struggle within international limits. Class struggle in a socialist society is related with the class struggle within international bounds. Our socialist modernization cause cannot be carried out by closing the country to international intercourse, we must adopt and adhere to the open-door policy and, on the basis of upholding the principle of equality and mutual benefit, develop economic, trade and cultural intercourse with various countries in the world including many capitalist countries. Under the circumstances of incessantly expanding the situation of being open to foreign countries, the foreign bourgeoisie will inevitably and greatly affect, infiltrate and corrupt our country's social life. Thus, the Chinese working class will shoulder tougher tasks of struggle in opposing and overcoming such influences, infiltration and corruption. At the same time, due to the fact that the semicolonial and semifeudal system in our country has only been overthrown for a short time and that the feudal class and the bourgeoisie have only been eliminated for a short time, their traces cannot be completely wiped out in the wake of their overthrow and elimination. Because our socialist system is still in a stage of initial development, is far from being perfect and well-established and does not have the essential economic, political and social conditions which enable us to completely get rid of the hostile elements, there still exist in our society various hostile elements who deliberately sabotage and subvert the socialist system. These hostile elements include the small number of former counterrevolutionaries, enemy agents, a small number of old exploiting elements who still uphold a reactionary stand, certain new counterrevolutionaries, new exploiters who are engaged in corruption and theft, speculative activities and smuggling and selling of contraband, and those people who jeopardize socialism. We stress that class struggle will continue to exist within certain limits in our country, and this class struggle within certain limits mainly means the struggle between the people and these hostile elements. With regard to these hostile elements, the working class, peasants and the intellectuals must maintain sharp vigilance and must exercise powerful dictatorship over them by means of the state power of the people's democratic dictatorship. In addition, among the people, due to the influence of the system of exploitation and the exploiting class outside socialist society and the remnant ideological influence of the exploiting class, bourgeois and nonproletarian ideas and deeds such as bourgeois liberalization, anarchism, and extreme individualism exist among a certain number of people. All these ideas and deeds contradict the interests of the socialist system, the working class and all the people. Generally speaking, this contradiction, among various social contradictions of a socialist society, is one which embodies the nature of class struggle. However, it belongs to a kind of contradiction among the people. This contradiction is still very commonly found in our current socialist society. Thus, it is necessary for the working class and the majority of the people to adopt appropriate methods, mainly the method of criticism and active ideological struggle. to overcome these ideas and deeds so that the contradiction will be effectively solved.

In light of the above analysis, we can clearly see that the Chinese working class must still make more arduous efforts and more contributions in order to complete its historical journey and fulfill its historical mission of eliminating all class struggle phenomena and all class distinctions within our society. This will only be achieved in the remote future. Before the completion of the historical journey, the working class as a class will not disappear from our country's political and social arena.

Some comrades do not deny that the working class, as a class, still exists in our country. However, they hold that today's working class is no longer the working class in the same sense as before, and that the definitions given by Lenin of the working class and other classes no longer apply to their modern counterparts. We do not recognize such a viewpoint as being correct. The working class, like all other things that emerge and finally vanish in history, has to undergo a course of development. In this course, it inevitably undergoes changes of some kind. Following the victories of the new democratic revolution and socialist revolution in our country, the working class of our country has indeed experienced enormous changes and now has a new face and new characteristics. These changes include the change of its status from a ruled class in the past to the ruling class in the new society, from wage laborers who did not possess means of production in the past to the masters of the new society who own the means of production today; the constant enrichment and development of its inherent class character during the continuous social practice in the new historical conditions; and so on. This is not only the case of the working class. The peasantry has also undergone considerable changes, which can be seen in the change in its status from a class of small property owners in the past to the peasantry which is organized under the system of collective ownership in socialist society today, the noticeable improvement of its cultural, technical and ideological levels, and so on. But, in general, the working class has not lost its original nature despite these changes. And, as a legacy of the class society in history, the class difference between the workers and the peasants has not vanished because of these changes either; their relations with the means of production are still different (the labor of the working class is mainly based on the system of ownership by the whole people, while that of the peasantry is mainly linked to the system of collective ownership); and their roles in the organization of social labor, their concrete forms in the distribution of social revenue and social alimony are also different from each other. These several aspects are exactly the basic characteristics which Lenin pointed out in his "A Great Beginning" and other articles to distinguish between different classes. Therefore, although socialist society, by eliminating the system of private ownership of the means of production, has eliminated the demarcation line which divided the members of a society into a group of people who owned the means of production and another group of people who did not own the means of production, every member of society is not completely equal in terms of their relationship with the means of production. Lenin's definition of class is by no means completely outdated. It basically applies to all classes in socialist society. We should interpret the changes, which our country's working class has undergone since the victory of the revolution, and the abolition of the bourgeoisie as an exploiting class, as inevitable phenomena which China's working class, as the rival of China's bourgeoisie, working class, had to experience in the long and uncompleted course of its emergence, development and withering away.

In the final analysis, the history of mankind is a history which records the production of means of subsistence, and the struggle of the laboring people who are the producers of means of subsistence. This is the basic viewpoint of Marxism on the development of social history. In our socialist society, workers, peasants and intellectuals are the basic force in socialist construction, and therefore they play the main roles in historical evolution. Nevertheless, the working class remains the leading force of our society, and the most advanced and the best organized class with the highest political consciousness. The reason why our country's working class can play a leading role under socialist conditions is, first of all, because of its objective status in the system of socialist economic relations--most workers are working in enterprises under the system of ownership by the whole people which is the highest form of socialist ownership, and the economy under the control of the ownership by the whole people is the leading and decisive factor in our country's national economy. In the second place, it is because our country's working class has been linked to socialized mass production since its emergence in history, has stood the tests of revolutionary struggle over a long period of time, has obtained rich experiences in revolution, and has cultivated a high degree of collectivist spirit and sense of revolution, organization and discipline. Furthermore, in the practice of socialist construction, our country's working class has constantly improved its political quality and quality in other aspects. For the above reasons, the leading status and role of our country's working class in socialist society is an objective existence independent of man's will. And this status and role of the working class will never change even though there are various temporary negative factors within the class.

Of course, our country's working class cannot spontaneously exercise its leadership of socialist construction but mainly leads it through the activities and work of its vanguard--the CPC. The party is the force at the core leading the socialist cause forward. The leadership of the working class is embodied in the formulation and implementation of the party's line, guiding principles and policies; in the political work, organizational work and other work of the party; in the education carried out by the party for the whole people with the communist ideological system and, of course, also in the advanced ideology and exemplary acts of the members of the working class which may influence, and thus bring along, the broad masses of the people. Without the party's activities and work, the leadership of the working class can never be realized since the prerequisite and guarantee for exercising such leadership do not then exist. During the 10 years of turbulence, in flaunting the banner of the working class as the leading class, and in "promoting revolution by discarding the leadership of party committees," Lin Biao and the "gang of four" replaced the leadership of party committees at various levels with worker propaganda teams. They directly gave orders and thus vigorously distorted and destroyed the position and role of the working class in history, and seriously spoiled the working class' reputation. Such pernicious influence left behind by them must be thoroughly eliminated. In order to correctly and effectively exercise its own leadership, and to represent the working class' will and accomplish the working class' historical mission in a better way, the party undoubtedly has to conscientiously attach importance to constantly maintaining close ties with the working class, unremittingly absorb wisdom and strength from the working class, and give full play to the advanced role of the broad masses of workers in the life of the state and the life of society.

As Lenin pointed out, "The main thing in the doctrine of Marx is that it brings out the historic role of the proletariat as the builder of a socialist society." ("Selected Works of Lenin," Vol 2, p 437) Today, to more thoroughly elaborate on the position and role of the working class in the construction of our country's socialist modernization in light of our new historical conditions and new historical mission after the elimination of the bourgeoisie and other exploiting classes in our country remains an important task in our party's Marxist ideological work. We must conscientiously redress some wrong viewpoints which, stating that our country's working class no longer exists as a class, and so on, do not conform with the objective reality in our country and go against Marxism. Moreover, in view of the present situation that the working class' sense of class has been worked, we need to adopt various vivid forms to strengthen the correct propaganda on the historical position, the historical mission and advanced role of the working class so as to promote the class consciousness of the working class, reinforce the sense of class of the working class, arouse the sense of glory and sense of responsibility of the working class, and thus push ahead with the building of work class contingent.

Do we mean that the working class should enjoy any privilege when we emphasize the working class' leading position and role in socialist social life? Of course not. On the contrary, we just mean that the working class has to undertake an arduous historical mission with regard to the future of the state, the nation and the people, and with regard to the future of the socialist cause. Acknowledging this historical mission of the working class in no way means to play down the role of the people belonging to other classes and strata in the socialist construction. It is under the party's leadership and through firm unity and close cooperation with the whole people that the working class will fulfill its historical function and unremittingly push ahead the socialist cause.

ON THE BASIC CHARACTERISTICS AND CONTENTS OF THE DRAFT OF THE REVISED CONSTITUTION

Beijing RED FLAG in Chinese No 16, 16 Aug 82 pp 19-25

[Article by Lu Zhichao [4151 0037 6389]]

[Text] After the "Draft of the Revised PRC Constitution" was promulgated, the people of all nationalities throughout the country held warm discussions on it and deemed that this is a fairly good draft of the constitution which tallies with the needs of the Chinese people at present and for a considerably long time. In order to do better work in the discussion by the entire people on the draft of the constitution and its further revision, it is quite necessary to both theoretically and politically understand the basic characteristics and contents of this draft.

The Basic Characteristics of the Draft

With the exception of "A Common Program" which was similar to a provisional constitution, the 1954 constitution was the first constitution that China ever promulgated following the founding of the PRC. At that time, we were in a stage of transition from new democracy to socialism. Under the leadership of the CPC, the Chinese people seized the state power and established the people's democratic dictatorship, led by the working class and based on the alliance of workers and peasants. However, the socialist social system had not yet been set up. The major tasks of the Chinese people were to further consolidate and develop the people's democratic system and to realize socialist industrialization and the socialist transformation of individual farming, the handicrafts and capitalist industry and commerce step by step by relying on this state system. All these matters were fully reflected in the 1954 constitution. At that time, Comrade Mao Zedong said: "This constitution of ours is a socialist-type constitution but is still not yet a socialist constitution in the full sense. It is a constitution for the transitional period." This remark summarized the characteristics of the 1954 constitution quite well. As the first constitution after the founding of the PRC, the 1954 constitution summed up the long years of experience of the Chinese revolution, affirmed the socialist component parts and defined the orientation of building socialism. It was of immediate significance not only at that time but many of its basic principles and basic institutions were also of long-term significance to our country. Therefore, it can become the foundation for us today to revise the constitution.

China's socialist transformation of the private ownership of the means of production was basically completed in 1956. Since then, the stage for all-round socialist construction has begun. On the one hand, major achievements were scored and rich experiences were gained in China's economic and political construction and educational, scientific and cultural undertakings, and on the other hand, for quite a long time, grave mistakes were committed. In regard to the work of the party and the state, we failed for 20 years to conscientiously and unswervingly shift the work onto the course which takes economic construction as its center. This was an extremely profound lesson. The aim of revolution is, of course, to liberate the productive forces. Overthrowing the rule of the reactionaries, establishing the state's power of the people's democratic dictatorship, eliminating the exploitative system and setting up the socialist system are all aimed at removing the obstacles of the development of productive forces. When the obstacles are basically removed, the contradiction between the increasingly growing demand by the people for material goods and culture and the backward social production will naturally become the principal contradiction which China has to solve; and in addition, concentrating our efforts on developing the social productive forces and carrying out the socialist modernization program with economic construction as the center should naturally become the main task of the people throughout the nation and the focus of work of the party and the state; and all other types of work, including the class struggle which is carried out in accordance with actual conditions, should center on and serve this main task. We have taken a long roundabout path because of the failure to correctly understand and solve this problem, both in theory and practice, and even committed the grave error of the "Great Cultural Revolution," an error comprehensive in magnitude and protracted in duration. It was precisely at this stage, when we took a roundabout course and committed errors, that the 1975 constitution was promulgated. It reflected China's extremely abnormal political life during the "Great Cultural Revolution." The basic characteristics of this constitution were to affirm the theory on the "basic line," which took class struggle as the key link, and on the theory of "continued revolution under the dictatorship of the proletariat" in a form of fundamental law, and affirm the practice of the "Great Cultural Revolution." As a result, the central task of carrying out economic construction and developing the productive forces was squeezed to a much less important position.

The 1978 constitution was formulated shortly after the smashing of the Jiang Qing counterrevolutionary clique. Owing to historical conditions and cognitive restrictions, no fundamental changes were made in the 1975 constitution (nor in the serious shortcomings).

The 3d Plenary Session of the 11th CPC Central Committee held in December 1978 put an end to the course that hovered about erroneous theories and practice and began the new historical stage which took socialist modernization and the building of a high level of civilization and democracy as the fundamental task. It was only after several years of bringing order out of chaos since the 3d Plenary Session of the 11th CPC Central Committee, after the comprehensive and profound summarization of the basic historical experience since the founding of the PRC—a summarization made at the 6th Plenary Session of the 11th CPC Central Committee and in the situation in which not only the focus of work of the party and the state has been resolutely shifted to socialist modernization program but also many major reforms have been made in fields such as the systems of economy, politics and state leadership--that it is possible for our country to draw up a draft of the revised constitution as we have today.

In short, since the founding of the PRC, we have gone through three stages and promulgated four constitutions: the 1954 constitution, which correctly embodied the characteristics and tasks during the transitional period; the 1975 and 1978 constitutions, which reflected the faults and errors in our guiding ideology; and the new constitution, which is now under discussion among the entire people and will be adopted this year, a constitution which correctly embodies the characteristics and tasks of the new historical stage. History has taken a zigzag road. Our constitutions are its record.

Today we have gradually embarked on a new and victorious broad road. A road which is clear, definite and correct is stipulated in the draft of the revised constitution which is now under discussion. The basic characteristics of this draft of the revised constitution are as follows: First, it clearly defines the fundamental task of the Chinese people during the new historical stage and the bases, conditions and guarantee for fulfilling this task. The stipulations concerning the various fields, such as the tasks and principles of the economic and political systems and education, science and culture should center around and serve this fundamental task. The fundamental task of the new historical stage is both the center of our present work and our long-term goal of struggle. Therefore, the various stipulations of the draft of the revised constitution should be suited to China's current actual conditions on the one hand and should take China's relatively long-term development prospects into account. The principal contradiction and fundamental task of the new historical stage will not change for a considerably long historical period. The new constitution which correctly reflects this contradiction and task will also certainly contain the characteristic of long-term stability. Second, it has correctly and profoundly summed up historical experience. This draft of the revised constitution was promulgated after we had traversed a long course of historical twists and turns. Therefore it is a crystallization of historical experience. For example, regarding the fundamental task of socialist construction, the adherence to the four basic principles, the strengthening of the building of socialist democracy and socialist legality, the ensuring of the basic rights of citizens and of the inseparability of their rights from their duties, the safeguarding of social order and the state's laws and discipline, the reforms of the systems of economy, politics and state leadership and so on, it is impossible to formulate them in such a practical and concrete way. It is also impossible for the people to have such a profound understanding of them in a time when the socialist transformation was just basically completed and without the following 20-odd years of experiences, both positive and negative, and particularly without the lesson of the "Great Cultural Revolution." That is to say, the valuable experience for which hundreds and millions of people have paid a high price have now become a long-term constitution for running the country well and giving the people peace and security. Third, it continues to affirm the correct principles and systems since the founding of the PRC in a new sense. This draft has inherited and developed the basic principles of the 1954 constitution and reserved and reinstated many of its stipulations which are still suited to present conditions. However, this draft has enriched and developed the contents of the 1954 constitution rather than a simple reservation and revival of the 1954 constitution. For example, the stipulation of the draft on the people's democratic dictatorship led by the working class and based on the alliance of workers and peasants is largely the same as that of the 1954 constitution, but owing to the tremendous changes in the class situation in China's society over the past 20-odd years, its content has been considerably changed. Some of the stipulations concerning the system of people's congresses and the basic freedoms and rights of citizens are also basically and even completely the resurrection or revival of the clauses concerned of the 1954 constitution, but with 20 years and more of experiences full of complications, its meaning and the way the people understand it are entirely different from what it was in those years. It is precisely as one case and is the same motto for life. Its meaning is not at all identical, like the understanding between a juvenile who has not seen much of the world and an adult who has experienced the hardships of life. The draft of the revised constitution shows that the country and the people are becoming increasingly more mature in the course of building socialism.

The Basic Contents of the Draft

By the so-called basic contents, we mean, of course, the several important contents which are related to the characteristics and fundamental task of the new stage rather than the whole contents and stipulations. They are mainly as follows:

1. On the Socialist Economic System and Economic Construction

The socialist system is the basic system of the PRC. Its basis is the socialist economic system, that is, the socialist relations of production. When we say that the socialist system is an advanced system and has tremendous superiority, this is first because when compared with the old-time relations of production, the socialist relations of production are more commensurate with the nature of the development of productive forces. Over the 30-odd years since the founding of the PRC, although we failed to bring this superiority of the socialist economic system into full play, owing to lack of experience and committing repeated errors, there still have been innumerable facts proving its superiority and vitality. Upholding and unceasingly perfecting the socialist economic system is an important guarantee for us to win victory in the socialist modernization program. As the fundamental law of the state, the constitution must contain clear and definite stipulations on the socialist economic system and the principles and policies of the economic construction which are related to the socialist economic system.

The draft of the revised constitution on the socialist economy contains the most concrete and detailed clauses of all the previous constitutions since the founding of the PRC. From Article 6 to Article 19 of the "General Principles," there are 14 stipulations on the socialist economic system and the principles and policies of economic construction. These clauses are a summary of the 30-odd years of experiences and lessons and a record of the positive achievements of bringing order out of chaos and of the reforms of the economic system since the 3d Plenary Session of the 11th CPC Central Committee.

Usually, when we talk about the socialist economic system we first refer to the aspect of the basic principles of this system, such as the public ownership of the means of production, the distribution of the personal means of subsistence according to work done, the planned economy and so on. All the socialist countries during the whole socialist historical stage are the same in this respect. However, because of the difference in the various socioeconomic conditions, and particularly in the situation of the development of productive forces, the socialist economic system in different countries or in different historical stages of a country must have different concrete forms which are manifested in the various concrete systems and policies. To uphold the socialist economic system and give full play to the superiority of the socialist system, we must proceed from actual conditions and in light of the situation and requirements of the development of productive forces, create the concrete economic systems which are suited to the development of productive forces and carry out the principles and policies which are commensurate with the development of productive forces, and in addition, with the development of productive forces and the changes in the situation, we must constantly transform and perfect these concrete systems and policies. In reviewing the "leftist" errors we committed in our previous economic construction, we found that they were by and large related to the failure to correctly understand and solve this problem. For example, we imagined a set of fixed development patterns of the socialist relations of production by deviating from the actual conditions of the development of China's productive forces and we held that the larger the scale of public ownership, the more advanced its superiority would be; we imposed excessively rigid control on planning and management; in economic construction, we overlooked the principle of doing things in light of actual conditions and within the limits of our own capabilities; in economic activities with other countries, we one-sidedly understood the principle of self-reliance and thus emerged a situation in which the country was closed to international relations. Such circumstances were the results of the ossified and oversimplified understanding of the socialist economic system and economic construction, deviating from China's reality and violating the principle that the relations of production must correspond to the situation and requirements of the development of productive forces. Of course, while correcting these "leftist" errors, if we have doubts and take a wavering attitude toward the basic socialist economic system, for example, the public ownership of the means of production, the planned economy and the centralized and unified leadership of the state over the national economy and so on, our attitude is similarly quite wrong. Historical experience tells us that on the question of the socialist economic system and economic construction, it is necessary to integrate well the universal theory of Marxism with the concrete practice of the Chinese revolution and to integrate the principle of adhering to the basic socialist system with the flexibility of adopting various forms and methods in accordance with actual conditions. Since the 3d Plenary Session of the 11th CPC Central Committee, our party and state have carried out a policy of domestically revitalizing the economy and internationally opening up the door to other countries, reformed the economic system and readjusted the principles and policies of economic construction. The aim of all this is to solve the question of this "integration" and to discover appropriate forms and a correct path which uphold the socialist road and develop the socialist economy under the present conditions of our country.

The achievements gained both in understanding and practice in this respect since the 3d Plenary Session of the 11th CPC Central Committee have been fully absorbed in the draft of the revised constitution. First, on the question of the ownership system of the means of production, on the one hand, it holds that the basis of the socialist economic system is the state sector of the economy, that is, the economy under the ownership system owned by the whole people, is the "dominant force in the national economy" and that the various forms of the cooperative economy in the countryside and the cities and towns constitute a socialist sector of the economy collectively owned by the working people. In particular, an additional special clause is added, which stipulates in a relatively clear manner that mineral resources, water, forests, mountains, grasslands, underdeveloped lands, beaches and other natural resources, seas and land, are owned by the state or are collectively owned, thus ensuring the nature of the socialist public ownership of these basic and important means of production; at the same time, it clearly affirms the principle of "socialist public property shall be sacred and inviolable," and in accordance with this principle, it stipulates many concrete regulations in the clauses concerned. On the other hand, it still affirms that the various forms of the collective ownership system are in the cities and the countryside, that the individual economy of the urban and rural working people, within limits prescribed by law, is a complement to the socialist sector of the economy owned by the public, that the right of the peasants who are members of organizations of the rural collective economy to farm plots of agricultural and hilly land, engage in household sideline production and keep livestock for their own needs and affirms the various forms of the socialist responsibility system in operations and management, and so on. Second, on the question of the planning and management of the national economy, it clearly stipulates that the principle of "the state plans of the national economy on the basis of socialist public ownership" should be upheld, and at the same time, while affirming the supplementary role of regulation by market mechanism, it stipulates that "the state ensures the proportionate and coordinated development of the national economy through the comprehensive balancing of economic plans, with regulation by market mechanism as a subsidiary." In regard to state-run enterprises and collective economic organizations, in accordance with their different conditions, on the one hand, the draft separately stipulates that they should submit to the unified leadership of the state, carry out the state plan or accept the planning and guidance of the state and abide by the laws concerned, and on the other hand, it respectively stipulates the different forms of decisionmaking power gained by the two types of enterprises and the different forms of power of democratic management enjoyed by the working people of the enterprises. Third, on the question of the principles and policies of economic construction, it stipulates the aim and means of socialist production and the relationship between accumulation and consumption and between the state, the collective and the individual, and it affirms the principle of gradually improving the livelihood of the people on the basis of the development of production. Fourth, in accordance with the principle of developing the economic and technical cooperation with other countries on the condition of achieving independence and self-reliance through rejuvenation, an additional clause for permitting foreign enterprises or foreign individuals to invest in China or carry out various forms of economic cooperation in accordance with the provisions of state laws is stipulated in the draft, and so on. All this briefly records the achievements and orientation of the reforms of the economic system and the principles and policies of economic construction since the 3d Plenary Session of the 11th CPC Central Committee in the form of succinct and precise legal articles and thus embodies the integration of principle and flexibility. There are still many concrete problems concerning the economic system and economic policies which demand further exploration and solutions but the basic form and path have been clearly defined. It is of tremendous and long-term significance to the development of China's socialist economy to affirm them in the form of the fundamental law of the state.

2. On the Building of Socialist Spiritual Civilization

The development of civilization always includes material and spiritual aspects. Socialist construction undertakings similarly embrace two aspects: One is to develop the economy and create increasingly sophisticated conditions for material production and more and more material products and the other is to develop culture and enhance the ideological and moral levels. After the socialist system has been established, it is wrong not to place economic construction as the central task of the people all over the country; however, when the focus of the work of the state has been shifted to modern economic construction, it will also be wrong not to concurrently put the building of socialist spiritual civilization in an important position. This is because without the building of spiritual civilization, the people will be ignorant and backward and unable to free themselves from the old ideas and old habits which were shaped under the exploitative system and the private ownership of the means of production. This being the case, it is obvious that it is impossible to accomplish socialist modernization and also build a highly advanced material civilization. Furthermore, as a new social system, socialism must raise the socialist and communist political consciousness and moral level of the entire people and establish a new-type relationship between man and man in light of new ideas rather than confining itself to establish new-type economic ties and improving material living conditions. The socialist system was, as it should be, founded under the guidance of advanced and scientific ideology, and the continued advance of socialist society will surely be achieved under the guidance of this advanced ideology, and moreover this advanced ideology should be gradually spread among the whole body of the members of society. Otherwise, the socialist system cannot possibly develop healthily and there may even emerge a phenomenon of shrinkage and retrogression in this respect. Therefore, the building of socialist spiritual civilization is a question of fundamental importance concerning the consolidation and development of the socialist system. The constitution during the new historical period has to work out principled stipulations from various aspects on this question.

There are two main aspects in the draft of the revised constitution regarding the contents of spiritual civilization: One is to develop socialist education, science, public health and various cultural undertakings and the other is to encourage social virtues and educate the people on the ideas and ethics of communism.

Article 20 in the "General Principles" stipulates in principle the development of such undertakings as education, science and culture. In particular, the following clear stipulations have been drawn up concerning the educational system and tasks: 1) Universalize primary education and wipe out illiteracy. This is the prerequisite for raising the whole nation's scientific and cultural level. 2) Develop secondary, vocational and higher education. This involves the question of establishing a rational educational structure and helping education suit itself to the requirements of scientific and cultural development and the modernization program. 3) Promote political, cultural, scientific, technical and professional education among the workers, peasants and other working people (Article 41 still stipulates that necessary vocational training should be provided to citizens who have not yet been assigned work). This is the education for adult working people who are at their posts. It has a bearing on the constant improvement of the political and technical quality of people who are capable of full-time labor in industry, agriculture and various other trades. 4) Promote the spoken Han language for wide use throughout the country to facilitate the development of cultural and educational work. This is of tremendous significance to the cultural exchange of the various regions and various nationalities all over the country and also one of the basic measures for increasing the scientific and cultural level of the people throughout the nation. The above-mentioned matters are all extremely important work which should be undertaken for a long period and conscientiously carried out. Developing educational undertakings is the basis for the whole cultural construction. Doing a good job in this type of work is of great strategic significance to improving the cultural quality of the whole nation, to raising the quality of labor of the entire working people and to the balanced development of the country's cultural undertakings and the unity and prosperity of the country.

Article 22 of the draft is a stipulation concerning one important aspect of socialist spiritual civilization--political consciousness and ideas and ethics. This article embraces three contents: One is to promote the virtues of love for the motherland, the people, labor, science and socialism. Listing "loving five things, that is, the motherland, the people, labor, science and socialism," which the state promotes as social virtues, into the constitution means determining the common codes of conduct for all citizens. The other is to educate the people in the ideas and ethics of patriotism, collectivism, internationalism and communism. This education serves as the consolidation and development of the socialist system which takes the public ownership of the means of production as the foundation and serves as the core of building socialist spiritual civilization. Still another is to oppose the influence of capitalist ideas, the remaining feudal ideas and other decadent ideology. The building of socialist spiritual civilization is not carried out in a vacuum. Putting forth the task of such ideological struggle in light of China's domestic conditions and international conditions is the important guarantee for building socialist spiritual civilization. In short, the three tasks which complement each other and are stipulated in the draft are the program for building socialist spiritual civilization in the field of education in ideas and ethics.

The draft has not only formulated programmatic stipulations on the building of spiritual civilization but also concretely stipulated the legal codes and moral standards which should be followed by the whole citizens in the clauses concerned. For example, they concern the matters of the principle that socialist public property shall be sacred and inviolable and the various concrete stipulations related to it; of work being a glorious duty of every able-bodied citizen and the due attitude toward labor which the working people should hold; of the principle that all citizens are equal before the law and the various concrete stipulations on equality between different nationalities, between man and woman and between citizens' rights and duties; of the stipulations that the state functionaries and armed forces must serve the people; that the state and society take care of and train young people and children, give help to citizens who are old, ill or lost their abilities to work, ensure the livelihood of the disabled members of the armed forces and help arrange for the livelihood and education of handicapped persons; of the requirements for citizens to observe work discipline, observe public order and respect social ethics and beneficial customs and habits; of the stipulations that marriage, the family, the mother and the child should be protected, that children have the duty to support their parents and that maltreatment of old people, women and children is prohibited; of the sacred duties of citizens to be duty-bound to safeguard the unity of the country and the unity of all nationalities and to safeguard the security, honor and the interests of the motherland and to defend the motherland and resist aggression. All this is a new-type relationship between man and man and a code of conduct which are both based on the socialist system of public ownership. The aim of establishing this relationship and carrying out this code of conduct is to enable the people throughout the country to become disciplined socialist citizens with ideas and virtues. Putting these stipulations into the fundamental law of the state is first aimed naturally at establishing the people's socialist political relationship and legal standards and at the same time aimed at establishing the people's socialist ideological belief and moral standards. This is because the stipulations in the constitution concerning the new-type relationship between man and man which a socialist society should have are not only manifested in concrete systems and laws but also should go deep into the people's ideology and life and become the codes of conduct which the people should abide by. In order to suit the requirements of the modernization program and to perfect the socialist system during the new stage, such concrete and clear and definite stipulations on the building of spiritual civilization have been formulated. This is a naked characteristic of this draft of the revised constitution.

3. On the Building of a Highly Democratic Socialist Political System

The socialist system is not only an economic system but also a political system. The socialist political system which corresponds to the socialist public ownership of the means of production and under which the entire people enjoy in a political sense the supreme power to administer the affairs of the country means the system of the people's democratic dictatorship. Building a highly democratic socialist political system is the guarantee for accomplishing socialist modernization and building spiritual and material civilizations. Because the socialist cause is an undertaking by the whole people, only when we realize in a political sense a high level of democracy and practice centralism on the basis of a highly advanced democracy, can we ensure the political situation of long-term stability, bring the enthusiasm of the broad masses for socialism into full play, make a tremendous united force and ensure the smooth development of socialist construction. At the same time, realizing a high degree of democracy and fully ensuring the entire people's right of being the masters of the country and the legal freedoms and rights of individual citizens themselves are also some of the important goals of the Chinese people for building socialism. Therefore, formulating systematic stipulations on highly advanced socialist democracy in a way ranging from principle to concrete system is a fundamental requirement of the revision of the constitution.

Highly advanced socialist democracy includes two meanings: On the one hand, in terms of the nature of the state system, socialist democracy, that is, the people's democratic dictatorship, indicates the entire people's ruling position and their position of being the masters of the country. This is a democracy in which the entire people are the masters of the country and for this reason, it is a democracy of a higher degree compared with that of the bourgeoisie. On the other hand, in terms of the various democratic systems and democratic life under socialism, we are now far from sufficient in this respect and achieving highly advanced democracy still requires a course of long-term development. For this reason, we take the realization of a highly advanced democracy as an important task of building socialism. The two meanings we have talked about here are, in fact, the state system and political system of a socialist country. These two meanings are interrelated. Without overthrowing the rule of the reactionary classes and establishing the people's democratic dictatorship led by the working class, highly advanced democracy is out of the question and any allegations, such as "the majority of the people decide" and "the minority should submit to the majority," are nothing but empty talk. So the state power under the people's democratic dictatorship is the prerequisite for achieving highly advanced socialist democracy. However, after the people's democratic dictatorship is established, if the building of the highly democratic political system is not strengthened according to democratic centralism and the perfect socialist legality of this system is not displayed, it will be impossible to fully ensure that the entire people can exercise their right of being the masters of the country. Therefore, strengthening the building of democracy and the legal system is an important condition for upholding the people's democratic dictatorship. Our previous lessons lie in the serious neglect of the building of various socialist democratic systems and the legal system. This is precisely one of the important reasons why the "Great Cultural Revolution" could come into being. Since the 3d Plenary Session of the 11th CPC Central Committee, while summing up historical experiences and lessons, our party has once again stressed the importance of realizing highly advanced socialist democracy, and over the years, it has done a lot of work in the reforms of the country's political and leadership systems and in the building of the democratic and legal systems, thus enabling China's socialist democracy to revive and greatly develop.

The profound understanding of realizing highly advanced socialist democracy, which we gained from historical experience, and the advances which we achieved in the building of democracy and the legal system find expression in a centralized way in the clauses of this draft of the revised constitution. In the "Preamble" of the constitution, the draft takes the building of a modern socialist country with a high level of democracy and culture as the fundamental task of the people throughout the country in the days to come. Article 1 through Article 5 of the "General Principles" stipulate the fundamental principles of our country's political system, including the state system of the people's democratic dictatorship and the system of people's congresses, which are organized according to democratic centralism. The stipulations in the chapter on the "Fundamental Rights and Duties of Citizens" concerning the freedoms and democratic rights of citizens are derived from the principles of socialist democracy, which are included in the "General Principles." The chapter on "The Structure of the State" is the objective of China's socialist political system--the system of people's congresses. These stipulations stress from many angles the building of socialist democracy and socialist legal system. First, in order to conscientiously ensure that the people can really exercise state power, the chapter strengthens the building of the state organs at the various levels, in particular the building of the system of people's congresses in accordance with the principle of democratic centralism, such as strengthening the functions and powers of the National People's Congress and its Standing Committee; restoring the post of the state chairman; establishing the Central Military Commission, which is responsible to the NPC; raising the work efficiency of the administrative organizations; enlarging the functions and powers of the State Council and practicing the premier-minister responsibility system; strengthening the functions and powers of the local people's congresses at the various levels, and so on. All this will enable the state organs to better represent the interests and will of the people and better serve the people and to effectively lead and organize socialist construction. Second, in accordance with the principle of socialist democracy, the chapter concretely stipulates the various basic rights and duties of citizens and establishes the social political relationship between man and man and between the individual citizens on the one hand and the state and society on the other; restores, increases and substantiates the clauses on the citizens' rights of democracy and freedoms; establishes the principle that all citizens are equal before the law and stipulates that no organization or individual shall enjoy privileges that transcend the constitution and the law; establishes the principle that the rights of citizens are inseparable from their duties, stipulates the duties every citizen should observe and that when exercising their freedoms and rights, citizens must not infringe upon the interests of the state, society and the collective and other legal freedoms and rights of citizens. This provides legal bases to correctly handle the relationship between democracy and centralism, between freedom and discipline and between rights and duties in accordance with the principle of democracy. Third, except for the exercising of state power through people's congresses, the chapter on the "General Principles" stiuplates that "the people have the right to administer the affairs of the country and its economic, cultural and social affairs, according to the provisions of the law, through various channels and in various forms." In keeping with this, separate stipulations are made on the right of citizens to make criticisms of and proposals to any state organ or any department therein and on their rights to supervise; the right of workers in the state-run enterprises and in units of the collective economy, urban or rural, to take part in or exercise democratic management, and of the right of the residents in urban and rural areas to practice autonomy of a mass character, and so on. This enlarges socialist democracy in the various fields, such as the political, economic, cultural and social life of the people all over the country. Fourth, the principles of socialist legality are established. The chapter on the "General Principles" clearly stipulates that "the state upholds the uniformity and dignity of the socialist legal system" and "all state organs and people's armed forces, all political parties and public organizations and all enterprises must abide by the constitution and the law." This provides a constitutional and legal guarantee for the institutionalization of socialist democracy. The new constitution itself is the supreme legal basis for the institutionalization and legalization of social democracy. It will play a tremendous role in building the socialist political system with a high level of democracy.

STRENGTHEN THE GREAT UNITY OF ALL NATIONALITIES

Beijing RED FLAG in Chinese No 16, 16 Aug 82 pp 26-31

[Article by Ismail Amat]

[Text] The "Resolution on Certain Questions in the History of Our Party Since the Founding of the PRC" approved by the party's sixth plenary session pointed out: "It is of profound significance to our multinational country to improve socialist relations among our various nationalities and strengthen national unity." More than 30 years' history in Xinjiang has proved that, under the leadership of the CPC Central Committee, people of all nationalities should strengthen unity and march in unison in the great socialist family of the motherland. This constitutes an important guarantee for the cause of opposing hegemonism, consolidating the unification of the motherland, promoting the common prosperity of the various nationalities and smoothly carrying out the socialist modernization program.

I

Our great motherland has been a multinational state since ancient times. The Chinese nation, including Han and other minority nationalities, is an entity. Although in history splits and disunity have occurred on many occasions among the various nationalities, they have been only temporary phenomena while unification has always been the main aspect of China's historical development. Chinese history of the past thousands of years is one of founding and defending the motherland by the people of various nationalities who are interdependent and are inseparable from one another. It is a history of the people of various nationalities who live in compact societies and who get along well with, and help, one another. Xinjiang, like all other minority nationality autonomous regions in our country, is an integral part of the great motherland. As early as 2,000 years ago, the Western Han dynasty exercised its sovereignty over Xinjiang by setting up administrative organs. In the past 2,000 years and more, the people of various nationalities in Xinjiang and the Han people have drawn on each other's experiences in politics, economics and culture. This has vigorously promoted economic development and enriched the cultural treasure house of the motherland. In the course of historical developments, the various minority nationalities have introduced from the Han region advanced production tools and techniques and thus promoted the economic and cultural development of the border region. The Han people have also introduced from the minority nationalities particular strains of crops and cultivation techniques nonexistent in many areas of the central plains and thus promoted the agricultural development of the central plains. The people of Xinjiang consist of 13 nationalities including the Uygur, Han, Kazak, Monggol, Hui, Kirgiz, Xibo and Tazik. They have been working hard to build up and defend this beautiful and richly endowed border region of the motherland. Many outstanding political, military, scientific and literary and artistic personages from various nationalities in Xinjiang have made great efforts to safeguard the unification of the motherland and the unity of all nationalities and, with their outstanding talents, greatly contributed to the higher education and culture of the motherland. A large number of artifacts that have been uncovered in Xinjiang over the years, such as ancient books, documents, contracts, letters and inscriptions on tombs, bear witness to the historical fact that, since ancient times, the people of various nationalities in Xinjiang have closely united with, and got along well with, the Han people.

In the struggles against imperialism and feudalism, the people of all nationalities in Xinjiang were united as one and fought side by side. They fought heroically and unremittingly against invaders from czarist Russia and the feudal rule of the Qing dynasty and performed many moving deeds. The common cause of defending territorial integrity and national unity against national split and exploitation and oppression by the reactionary ruling classes have bound the people of all nationalities tightly together. They depend on one another for survival and are inseparable. Especially during the new democratic revolution, the people of all nationalities in Xinjiang, under the leadership of the CPC, set off a mighty revolutionary movement. As early as 1933, the CPC successively sent party members to Xinjiang to engage in revolutionary work. In 1939, it again sent Comrade Chen Tanqiu, a member of the CPC Central Committee, to serve as a party representative in Xinjiang. Together with Mao Zemin and many other comrades, he spread Marxism-Leninism-Mao Zedong Thought in Xinjiang and pointed out to the people of all nationalities the correct way to revolutionary struggle. With their outstanding work, the Chinese communists in Xinjiang managed to awaken the people of all nationalities who had suffered for a long time under the reactionary rule of the warlords and the KMT. The revolution that broke out in the three prefectures of Ili, Tacheng and Altay in the autumn of 1944 dealt a telling blow to the KMT reactionary rule. This was an integral part of the people's democratic revolution throughout the country. Exemplary communists, including Comrades Chen Tanqiu, Mao Zemin, Lin Jilu and Qiao Guozhen remained staunch and indomitable in the enemy's prison and were murdered in cold blood. They dedicated their precious lives to the revolutionary cause of all nationalities in Xinjiang. Their revolutionary spirit of complete dedication and wholehearted service to the people of all nationalities in Xinjiang will always be remembered by the people in Xinjiang.

In the early postliberation period, in accordance with Comrade Mao Zedong's instructions on marching into Xinjiang, stationing troops to open up the wasteland and defend the border and doing more good for the people of all nationalities, Comrades Wang Zhen and Wang Enmao marched into Xinjiang at the head of their troops. A large number of Han cadres enthusiastically answered the call of the CPC Central Committee and Comrade Mao Zedong and came to Xinjiang from various localities thousands of li away. Later, the CPC Central Committee again transferred and dispatched a large number of cadres and scientific and technical personnel of the Han nationality to Xinjiang. Most of these Han cadres, whether they came at an earlier or later date, were diligent and conscientious in serving the people of all nationalities in Xinjiang. Shouldering heavy responsibilities on various fronts, they modestly learned from the cadres and masses of minority nationalities, conscientiously implemented the party's policy toward nationalities, respected the customs and habits of minority nationalities, were as dear to the minority nationality cadres as members of their family and fought side by side with them. They have done a lot of good deeds for the people of all nationalities and have made tremendous contributions in the great struggle to defend and build up the border region. Many veteran cadres working in Xinjiang, who had experienced the agrarian revolution, the 25,000-li Long March, the war of resistance against Japan and the liberation war and who had gone through all kinds of hardships and difficulties by fighting north and south on many fronts, consistently keep and carry forward the glorious traditions of hard work and plain living and the Nanniwan spirit and devote all their energy to the cause of building up the border region. They are cadres with relatively high political consciousness, with a work style of arduous struggle, with practical experience in building up the border region and with rich experience in national work. They are familiar with Xinjiang's natural conditions and have a profound feeling for the people of minority nationalities. They have set an example for the cadres of various nationalities to learn from. In the protracted struggle to build up and defend the border region, not only have they painstakingly and loyally led the people of various nationalities in overcoming difficulties and winning fresh victories in both construction and revolution, they have also, with a high degree of political enthusiasm and patience, helped a large number of minority nationality cadres to reach maturity. At present, quite a few minority nationality cadres who are in leading positions in the various departments of our region, including myself, have grown up with the solicitude and cultivation of the party and with the help of Han cadres. According to statistics, in 1949 there were only more than 3,000 minority nationality cadres throughout the region, but in 1981, the number increased by 51.95 times, to more than 158,800 minority nationality cadres throughout the region. In 1950 there were only 460 professional and technical cadres of minority nationalities throughout the region, but, in 1981, there were more than 44,700 persons, an increase of 96.17 times. With the education of the party, the numerous minority nationality cadres have gradually heightened their political consciousness, working ability and cultural and technical levels. They love the party, the motherland and socialism, are familiar with the past and present conditions of their nationalities, understand the sentiments, habits and special characteristics of the people of minority nationalities and have a close link with the masses of people in the localities. These cadres include veteran comrades from the revolution in Ili, Tacheng and Altay and middle-aged and young cadres who grew up after liberation in the course of revolution and construction. At their own respective posts, they study assiduously, work hard and maintain close links with the masses, thus winning the praise of the party and the people of the various nationalities. In the difficult years of pioneering work in production and construction, the minority nationality cadres throughout the region, along with the Han cadres, shared weal and woe. They supported and made allowances for each other and, united as one, marched forward hand in hand. The growth of many Han cadres is also inseparable from the enthusiastic help of minority nationality cadres.

Facts have fully proved that since the existence of recorded history, Xinjiang has always been a component part of the history of our motherland. Over the years, the minority nationalities and Han people in Xinjiang have been working and fighting in this beautiful and richly endowed land. Han people have helped the minority nationalities; the minority nationalities have also helped Han people.

Bound by a common cause, the various nationalities are as close as flesh and blood and live amicably and inseparably together like members of one family. We must certainly cherish the glorious history of the motherland and inherit and carry forward the glorious traditions of unity and friendship among all nationalities.

II

In his article "Certain Questions in China's Policy Toward Nationalities," Comrade Zhou Enlai pointed out: "Our socialist state is aimed at modernizing all fraternal nationality regions and autonomous regions. The modernization of the whole country must be achieved in an all-round way. We should have this spirit, a spirit of genuine equality and friendship in this great family of nationalities. We should not let the backward areas remain backward forever. If we do, we are creating inequality; and, this is a mistake." Strengthening the great unity of the people of all nationalities is precisely the requirement for realizing socialist modernization.

The motherland's modernization program is closely linked with the common prosperity of various nationalities. The social and economic structures of the various nationalities in our country are extremely uneven in their development. Generally speaking, economy and culture develop quite speedily in the Han region while in the outlying regions where the minority nationalities live in compact communities, due to some natural conditions and historical causes, the social, economic and cultural developments are rather slow. Without the leadership and help of the party and state and without the vigorous support of fraternal provinces, municipalities and autonomous regions in manpower and in material and financial resources, it would be impossible for the nationalities which are rather backward politically, economically and culturally to speedily get rid of their backwardness and catch up with the advanced regions. This has been proved in the past and will continue to be proved in the future.

In the past 30 years and more, the cadres and masses of various nationalities in Xinjiang, with the solicitude of the CPC Central Committee and the support of relevant state departments and fraternal provinces, municipalities and autonomous regions, have made common efforts and engaged in arduous struggle. They have achieved great successes in various undertakings, bringing about earthshaking changes to the north and south of the Tianshan Mountains. In the early postliberation period, the region had only a dozen or so small, poorly equipped factories or workshops and access to the region was very difficult. Now, relatively modern industrial enterprises--including iron and steel, machine building, coal, power, petroleum, chemical, cement, nonferrous metal, textile, paper and sugar making--have been built. We are more than self-sufficient in some products. We have not only supported the state and some fraternal provinces and regions but also sold products abroad. In 1981, the region's total industrial output value was 45.25 times the 1949 figure; total output value of agriculture and animal husbandry was 5.33 times the 1949 figure. Of these, total grain output was 4.6 times the figure of the early postliberation period while the number of livestock was 2.72 times the figure of the early postliberation period. The region's industrial and agricultural output value is increasing at an average progressive rate of 7.8 percent every year. The communications network, consisting of railways, highways and civil aviation, links up all parts of the region. With the development in production, financial revenue has constantly increased. Cultural, educational, sanitation, scientific and technological undertakings are thriving and the material and cultural life of the people of various nationalities has greatly improved compared with the early postliberation period. Before liberation there was only 1 small college with 185 students; now the region has 12 universities and colleges with nearly 8,000 minority nationality students. The number of secondary and primary school pupils has increased still more. In 1949 there were only 48 small hospitals while now the region has 903 hospitals, 17.8 times the 1949 figure. Scientific research institutes and technological departments can be found all over the region and a large number of middle and high-level scientific and technical personnel of various nationalities are emerging on various fronts. However, we should also soberly note that although we have achieved great successes and attained fairly great developments in the economic and cultural construction of our region, we still lag far behind the advanced fraternal provinces and regions. We still fall short of the requirements of the four modernizations by a greater margin. These facts conclusively show that in developing and building up Xinjiang, not only did we need in the past the strong leadership and vigorous support of the state and the enthusiastic help of the cadres and scientific and technical personnel of fraternal nationalities in the hinterland, but we also need them now and shall still need them in the future.

Naturally, help between various nationalities in our country has always been mutual. The minority nationalities need the help of Han people and vice versa. This has been decided by the interests of the party, state and nation and the long-range goal of communism. Achieving socialist modernization is the common goal of struggle for the people of all nationalities. This constitutes a basis for further strengthening the great unity of the people of all nationalities. The minority nationalities in our country have relatively sparse population but they are scattered over vast regions. There are abundant resources and hidden treasures in these regions. Due to different weather and natural conditions, there are great varieties of agricultural crops that can be developed and we enjoy exceptional advantages in some products. In animal husbandry, all the five great natural pasture grounds in our country are situated in the minority nationality regions, where there are also abundant forestry resources. There is still a greater potential for developing mineral resources. Xinjiang is a valuable place where there is vast territory and abundant resources and where development and construction is urgently needed. It also plays an important role in promoting the four modernizations of the motherland. The four modernizations desperately need the active support and participation of the people of all nationalities. Only by making concerted efforts and making up for each other's deficiencies will it be possible for the people of all nationalities to build a modern socialist motherland and achieve common prosperity for the people of all nationalities. The cadres and masses of our various nationalities must proceed from the viewpoint that the four modernizations program has a direct bearing on the fundamental interests of the people of all nationalities and conscientiously safeguard and strengthen the great unity among the various nationalities.

Xinjiang is an important strategic place for national defense in the western part of our country. The CPC Central Committee and the leading comrades of the central authorities have issued a series of important instructions on work in Xinjiang. A very important aspect of these instructions is that, in thinking and working, the cadres and masses of all nationalities should proceed from the overall situation of unity against hegemonism and of strengthening border defense, and strengthen unity between the army and the government and unity between the army and people in order to genuinely build Xinjiang into a powerful fighting force.

In the protracted struggle of building and defending the border region and in the struggle to oppose the aggressive, subversive and sabotage activities of hegemonism, the people and cadres of all nationalities, the staff and workers of the production and construction corps, police cadres and militiamen unite closely and fight side by side with the commanders and fighters of the PLA units stationed in Xinjiang. They are as close as fish and water and have cemented ties of deep friendship. The people of all nationalities in Xinjiang will always remember the difficult years in the early post-liberation period when the PLA units stationed in Xinjiang, carrying forward the glorious traditions of being a fighting force, working force and production force, suppressed bandits, opposed local despots and engaged in democratic reforms together with the cadres and masses of minority nationalities; they developed production by opening up wasteland and carrying out farming; they lived frugally and set up iron and steel, textile, machine building and many other factories through self-reliance, thus laying a foundation for Xinjiang's industrial construction. In the socialist revolution and construction period, the commanders and fighters of the PLA units stationed in Xinjiang, carrying forward the revolutionary spirit of "fearing neither hardship nor death," facing blizzards, eating in the wind and sleeping in the dew, have guarded the frontiers of the motherland with high vigilance. They have strengthened the army-civilian joint defense and helped the people with their production. Wherever conditions are the hardest and most dangerous, there you are sure to find the people's own army. They have done a lot of good deeds for the people of all nationalities and managed to foil the hegemonists' scheme of aggression; they leave no opening for a handful of foreign and domestic enemies to exploit. The people's army love the people and the people love the liberation army. In the past 30 years and more, the cadres and masses of all nationalities in Xinjiang have regarded the difficulties of the people's own army as their own and, in manpower and material resources, have actively helped the PLA successfully fulfill the tasks of defending and building up the border area. Now, whether in the rural areas or grasslands, whether in the army barracks or at sentry posts, the stories of supporting the army and cherishing the people and of unity between the army and people and between the army and government are being widely circulated. The western frontier defense of the motherland is more consolidated and the wall of army-civilian joint defense is indestructible.

Comrade Mao Zedong said: "One of the reasons why the imperialists dared to bully China in the past was because the various nationalities in China were disunited. However, this era has passed forever. Since the founding of the PRC, the various nationalities in China have united into a great family of friendship and cooperation. This is sufficient to vanquish any imperialist aggression and to build our motherland into a prosperous and powerful country." Now, the hegemonists are threatening our country and are employing various means to carry out subversive and sabotage activities in Xinjiang in a vain attempt to split our country. A handful of domestic enemies are also engaged in the criminal activities of undermining national unity and splitting the unification of the motherland by every possible means. The people of all nationalities in Xinjiang, cadres at various levels, commanders and fighters of PLA units stationed in Xinjiang, the staff and workers of the production and construction corps, police cadres and the militiamen should greatly heighten their vigilance against the enemy. The more the enemies fear our unity, the more closely should we unite. We should also make all preparations and struggle against foreign and domestic, overt and covert enemies that undermine our national unity and split the unification of the motherland. We should guard well the western gate of the motherland with one heart and one mind and achieve a still greater victory in building and defending the border region.

In Xinjiang, both historical experiences and the tasks confronting us demand that, in considering every problem and doing any work, we must attach great importance to national unity. All our tasks must be subservient to unity, which constitutes an overall situation. If we neglect or forget this overall situation, we will be committing a big mistake.

The key to strengthening unity among all nationalities lies in the correct implementation of the nationalities policy of the party and in the consolidation and strengthening of regional national autonomy. The party's policy on regional national autonomy is the party's basic policy for solving national problems. In the course of long history, the Han people and the minority nationalities as well as the various minority nationalities themselves have lived and mixed in compact communities. Most of the minority nationalities live in small compact communities over vast regions. Therefore, in most autonomous regions, the "nationalities that practice autonomy" do not command a majority. This is a special feature of the regional national autonomy in our country and is particularly advantageous to the development of socialist national relationship. Our country's policy on regional national autonomy has affirmed the rights of the minority nationalities to become the masters of their own affairs. It ensures that the various minority nationality regions, under the unified leadership of the central authorities and the leading bodies at a higher level, have the right to modify the policies of the party and the state to suit their special conditions. Efforts should be made to help these regions develop their own economy and culture, to respect the minority written and spoken languages, customs and habits, to train and select cadres from among minority people and to bring their role into full play. However, this policy should not be misunderstood to mean that the Han cadres are not needed or that cultural, educational, scientific and technical personnel and masses of the Han nationality are not needed. It should be pointed out that, due to serious interference and sabotage by Lin Biao and the "gang of four," some people have a vague idea of the party's policy toward nationalities. Especially among the large number of youths that have grown up recently, we have not conducted a good education on the Marxist viewpoint on nationalities and the party's policy toward nationalities. This merits our particular attention. To this end, we should conscientiously and frequently conduct publicity and education among the minority cadres on the party's policy toward nationalities and on national unity so that the minority cadres can penetratingly study Marxist national theory and foster a Marxist viewpoint on nationalities. It is necessary to improve party work style and strengthen party spirit. In order to do a good job of inner-party democracy and promote, through this, the great unity of the people of all nationalities, it is necessary to wage struggles, through criticism and self-criticism, particularly through opposing and rectifying the erroneous tendencies and national prejudice within the party on the national question, against the ideas and acts that run counter to the party's national policy and the principles of party spirit.

Comrade Hu Yaobang once pointed out: The Han cadres and cadres of minority nationalities should be united. They cannot be divorced from each other. Our cadres of all nationalities, especially leading cadres at various levels, must set examples with their own conduct and take the lead in promoting unity among cadres and the masses of all nationalities. Both Han cadres and cadres of other nationalities should not say anything harmful or do anything detrimental to unity. Criticism and self-criticism must be held often among cadres of all nationalities and heart-to-heart talks must be encouraged among them so that they will be really able to have mutual affinity, show utter devotion toward each other, and value the interests of the party and the people above everything else. In handling problems involving relations between nationalities, we must be firmly convinced that the great majority of cadres and the masses of every nationality uphold the leadership of the party, love the socialist motherland and safeguard national unity. Those who disrupt national unity and whip up national split are only a few bad elements. We should never waver in this firm conviction. If the conviction wavers, we will commit dreadful mistakes. In viewing any dispute or problem between one or two individuals of Han nationality and a minority nationality, cadres of all nationalities must make a concrete analysis in line with the spirit of seeking truth from facts. A problem should be determined by its real nature. The problems of a certain person should not involve others. Problems of one individual should not be termed as a problem of one nationality. Bad elements who provoke incidents and disturbances and disrupt national unity must be dealt with according to law and must be handled strictly regardless of nationality. A solid unity among people of all nationalities can be ensured only when ideology is unified, relations improved and unity strengthened among cadres of all nationalities. This has been repeatedly proved by practice and the experience of many localities and departments in our region.

In order to further enhance unity among the people of all nationalities, the regional CPC committee and people's government have called on the party organizations and government departments at all levels to attach primary importance to cementing the unity of all nationalities, especially the unity of cadres of all nationalities. Leading cadres at all levels should pay attention to the work on national unity while giving instructions for assigning work of other fields, and while examining and summing up work of other fields. In places like our Xinjiang, relations among nationalities and unity should be considered as major criteria in measuring the work in one district, one department and one unit and the work of one leading cadre. Safeguarding national unity should be considered as one of the essential aspects while assessing and promoting cadres of all nationalities. We must make further efforts to implement the policies of the party and thoroughly redress all unjust verdicts, false charges and mishandled cases so as to properly handle all pending problems. National unity should be taken as one of the important aspects in building spiritual civilization. Education on the policy toward nationalities and national unity should be once again stressed extensively and penetratingly throughout the region. It should spread into every department and every unit of the party, government, military, civilian and educational organizations. Courses on policy toward nationalities and national unity should be established in kindergartens, primary schools, middle schools and universities. The party's policy toward nationalities should be made known to every household, striking root in the hearts of the people. Departments in charge of historical science, literature and art, press, publication, radio and television should make much of national unity, publicize the great significance of enhancing national unity, building and safeguarding the frontier region and commend stirring deeds relating to national unity and unity between the army and the people so that a new situation in which everybody pays attention to and safeguards national unity will appear.

Engels once pointed out: "Only the proletarians can cease the state of estrangement among all nationalities, and only the awakening proletariat can foster fraternal affection among all nationalities." ("Collected Works of Marx and Engels," Vol 2, p 666) Before liberation, national oppression existed in China; but all nationalities were also oppressed by imperialism, so they were oppressed nations too. As a result of imperialist aggression and oppression, all Chinese nations came to realize from their common sufferings that they had to unite and struggle against imperialism and its lackeys. Through protracted struggle under the leadership of the CPC, at long last they achieved victory in revolution, with the founding of the People's Republic of China under a united flag of all nationalities and embarking on the road of socialism. The founding of new China discarded a system of national oppression which had lasted over thousands of years and opened up a new era of national equality and unity in our country. Under the leadership of the CPC, the people of all nationalities have established a new style socialist relationship of unity and friendship. Like the people of all nationalities in other provinces, municipalities and autonomous regions of our country, the people of all nationalities in Xinjiang constitute, too, a major member of the big socialist community of the motherland and share the right of equality in managing state affairs. Cadres and the masses of all nationalities in our region should greatly treasure the right. Under the leadership of the party Central Committee and under the brilliance of the light of the party's policy toward nationalities, they will work hard for enhancing national unity, safeguarding the frontier regions of the motherland and protecting the integrity of the motherland. And they will work hard for the common development and prosperity of all nationalities and for the realization of communism--a common goal of all nationalities.

SEVERAL PROBLEMS CONCERNING THE CURRENT RATIO BETWEEN ACCUMULATION AND CONSUMPTION

Beijing RED FLAG in Chinese No 16, 16 Aug 82 pp 32-36

[Article by Chen Feizhang [7115 2431 4545] and Jiang Zhenyun [5592 2182 7189]]

[Text] Since the 3d Plenary Session of the 11th CPC Central Committee the whole party has conscientiously summed up the experiences and lessons in economic construction and clearly seen that the practice of high accumulation rate and low consumption which we adopted for years in the past should by no means be allowed to continue. The CPC and the government have adopted a series of measures and strived to solve the problems in this respect. At present, what is the ratio between accumulation and consumption? What problems remain unsolved? These questions have aroused the extensive attention and concern of the people. Here we are going to discuss our understanding of these questions.

I

In 1979, the CPC Central Committee decided to readjust the national economy. One important decision was to adjust the ratio between accumulation and consumption funds in the distribution of national income and to gradually reduce the accumulation rate. Through several years of efforts, remarkable achievements have been scored.

First, in accordance with the principle of doing things within the limits of our capabilities, we have reduced the accumulation funds, mainly the scope of capital construction and correspondingly increased the expenditure on consumption funds. In 1978, the accumulation rate had reached 36.5 percent, the third highest since the founding of the PRC following that in 1959 and 1960. After readjustment, the accumulation rate has decreased year after year and it dropped to 28.3 percent in 1981.

Second, in the distribution of accumulation funds, spending of a production nature has been gradually reduced, while spending of a nonproduction nature has been considerably increased, thus initially putting an end to the longstanding situation in which the "bones" and the "flesh" were not suited to each other. Of the total investment in capital construction in 1981, the proportion of a production nature used for enlarging reproduction fell to 58.8 percent from 82.6 percent in 1978 and the proportion of a nonproduction nature used for satisfying the people's material and cultural needs rose from 17.4 percent to 41.2 percent. The aggregate sum of investment spent by the state on nonproduction construction in the last 3 years was equal to 140 percent of the total sum of investment spent during the decade-long "Great Cultural Revolution," or 54 percent of the total sum of investment spent during the 29 years between 1950 and 1978. Of the investment in nonproduction construction in 1981, the proportion for housing alone rose from 7.8 percent in 1979 to 25.5 percent. The aggregate sum of investment spent by the state over the last 3 years on the construction of houses in the cities and towns was 29.1 billion yuan. The floorspace of newly completed houses totaled 223 million square meters and the average annual increase was more than 74 million square meters or more than 300 percent of the total average floorspace completed annually during the 10 years of the "Great Cultural Revolution."

Third, in the distribution of production construction investment, the ratio between light and heavy industry has also been readjusted. The proportion going to light industry rose from 6.1 percent in 1978 to 10 percent in 1981, while that going to heavy industry fell from 50.9 percent to 40.3 percent.

The above-mentioned adjustment of the ratio between accumulation and consumption has improved the life of both urban and rural people remarkably in all aspects.

First, let us start with the 800 million peasants. The further implementation of the rural economic policies and the rapid development of agricultural production was the fundamental guarantee for the improved livelihood of the peasants. However, what must not be ignored is that the state has given more money to the peasants through the redistribution of national income. The rise in state purchasing prices of some farm produce and sideline products, coupled with the practice of paying more for production in excess of the quota, has cost the state 48.1 billion yuan in the last 3 years. This sum of money has become the income of the peasants. During this period, the state has still adopted the measures of reducing or remitting part of rural taxation, which cost it 7.8 billion yuan. That is to say, these two things combined have meant a gain in income of 55.9 billion yuan for the peasants, an average of 70 yuan each. According to the State Statistics Bureau's sample survey of 28 provinces, municipalities and regions, the average per capita increase in the peasants' net income added up over the last 3 years was 89 yuan, equivalent to 220 percent of the increase in income achieved during the 20 years between 1957 and 1976. Again according to a "survey of 100 villages" conducted by the former State Agricultural Commission in March this year in 27 provinces, municipalities and regions, the number of villages where the livelihood of the peasants has been improved or remarkably improved constituted 95 percent of the total.

Next, let us have a look at the living standards of the residents in cities and towns. Over the last 3 years, most staff and workers have seen their wages rise, with some going up one grade and others up two grades. With more than 26 million people employed, the widespread implementation of the bonus system among enterprises and undertakings, and staff and workers receiving subsidies to compensate for nonstaple food price increases, the total wages of the staff and workers throughout the country in 1981 were 44 percent more than in 1978 and the average increase in the wages of the staff and workers was 25.7 percent. The average staff member or worker's wage has still registered an increase of 12 percent over the figure for 1978, after taking into account the factor that the prices for some commodities have risen in varying degrees during this period. The population which every employee had to support (excluding the employee himself) dropped from 1.06 people in 1978 to 0.77 people in 1981.

There are two pronounced indications of the improvement of the living standards of the urban and rural population. One is the substantial increase in total sales of consumer goods, with the figure for 1981 being 60.4 percent higher than in 1978. New changes have taken place in the structure of consumption. In the consumption of the families of staff and workers in cities and towns, more and more people are tending to buy medium- and high-grade commodities and durable consumer goods. By the end of 1981, every 100 staff and worker families had 58 TV sets, 70 sewing machines and 100 radios, or they increased by 320 percent, 32 percent and 61.2 percent respectively compared to 1978. In the consumption of the peasants, besides improving the quality of their food and clothing, the peasants need larger quantities of durable consumer goods. Particularly in housing, in some communes and their subdivisions with high incomes, almost every family has built a new house. According to incomplete statistics, over the last 3 years, the floorspace of housing built by commune members throughout the nation themselves was about 1.4 billion square meters. The current housing floorspace of every rural resident is, on the average, nearly 10 square meters. The other is the big increase in the amount of savings deposits. The remaining sum of the savings deposits of the urban and rural population in 1981 reached 52.4 billion yuan, an increase of 150 percent over 1978.

The above-mentioned facts have irrefutably shown that the living standards of urban and rural people have indeed improved. In addition, in the short space of 3 years, fairly big advances were made in improving the people's well-being. This was scored through the great determination and efforts exerted by the party and the government. It is also a great achievement gained in readjusting the ratio between accumulation and consumption.

II

Over the last few years, new problems concerning the ratio between accumulation and consumption have arisen which warrant attention and urgent solution. They are mainly as follows:

First, the marked improvements of the people's livelihood have been achieved under a situation in which the national income has increased limitedly. Nearly all of the newly increased national income has been used for consumption. From 1979 to 1981, the usable amount of national income increased by 87.4 billion yuan, of which 87.1 billion yuan was spent on consumption (including the consumption of the people and of society). The growth of the consumption funds is mostly arranged by the state plan. It is entirely necessary to adjust the excessively high accumulation rate and put an end to the situation in which no improvements were ever made for many years in the people's livelihood. However, it must also be admitted that a part of the consumption funds has been increased blindly outside the targets of the state plan, which is manifested in increasing purchase prices of agricultural products sold in excess of the quota and in issuing bonuses among the enterprises in cities and towns. This has resulted in loss of control over the growth of consumption funds to a great extent. The problem now which should be taken into account is that on the one hand, the accumulation rate should be reduced rationally so as to ensure the continued increase in the level of consumption and, on the other hand, a certain growth rate of the national economy should be maintained. This requires us to raise the economic effect of accumulation funds by every possible means and to increase national revenue by a big margin.

It should be acknowledged that over the last few years, the economic effect of accumulation funds has been very poor. The national revenue created by every 100 yuan of accumulation funds has decreased year by year rather than increasing year by year, that is, it decreased from 33.7 yuan in 1978 to only 20.2 yuan in 1981. The drop in the accumulation rate has resulted in a decrease in the economic effect of accumulation funds. This has brought about new difficulties to the development of the national economy. Failure to solve this problem will interfere not only with the growth rate of the national economy but also the continued improvement of the people's standard of living.

Second, despite steady growth in production, state revenue has dropped. The method of everybody "eating in separate kitchens" practiced in the financial system, the expansion of the decisionmaking power of enterprises, the widespread implementation of the bonus system among enterprises and undertaking units and the correction of the drawbacks of excessively centralized state control over the distribution of the national income have produced marked achievements in arousing the enthusiasm of the localities, enterprises and staff and workers and rejuvenating the economy. Nevertheless, a new problem has also cropped up, that is, despite a certain growth rate maintained in the national economy year by year, state revenue has been on the decrease. Compared with 1978, in 1981, the total output value of industry and agriculture rose by 180 billion yuan (excluding the factor of price fluctuation), whereas the state's revenue decreased by 11.7 billion yuan. With the development of production, why has the state's revenue decreased? This involves a multitude of factors. But the main cause was a reduction in profits turned over to the state. The ratio of the state's revenue in the national income was 37.2 percent in 1978, which was, as it should be, on the high side. It was manifested in the relatively high degree of centralization by the state and the limited amount of reserve financial resources of local administrations and enterprises. The ratio in 1981 was only 27 percent, which seemed to be on the low side. It found expression in the fact that the country did not have sufficient money whereas the ex-budgetary funds of local administrations, mainly the money of the enterprises, increased by a big margin roughly equal to more than half of the state revenue. In the last 2 years, the state has had to borrow money from local administrations and enterprises in order to make up financial deficits. Exploration into the proper ratio for the state's revenue in the national economy should be continued. But one thing is certain, that is, with the funds being decentralized and without money in hand, the country will accomplish nothing big or significant. It will not do to let things go on for a long time in this way. It is not a permanent solution for the country to get along by depending on borrowing money from local administrations and enterprises. The problem to which consideration should be given now is that the country should appropriately amass funds and undertake the work which should be done and what is more, be done urgently, and the work which is conducive to the overall situation but cannot be undertaken by local administrations and enterprises.

Third, all kinds of subsidies for improving the lives of urban and rural people and promoting industrial and agricultural production have been on the increase. During the 3 years from 1979 to 1981, the total amount of state subsidies reached 104.3 billion yuan, of which the amount in 1981 was 42.9 billion yuan, an increase of 170 percent over 1978. The ratio of state subsidies in the state's revenue within the same year was 14.2 percent in 1978, and in 1979, 1980 and 1981 was 25.9 percent, 32.7 percent and 42.7 percent respectively. Of state subsidies, subsidies compensating for commodity price increases come first and in 1981 reached 32 billion yuan, constituting 74.7 percent of the total amount of subsidies within the same year. According to rough statistics, at present, the number of subsidized items amounts to more than 80. Take the important ones for example, the subsidies spent on the people's livelihood, such as on the price difference between the purchase and sale of grain, edible oil, nonstaple foodstuffs, coal and industrial articles for daily use, and subsidies spent on agricultural production, subsidies for losses in marketing chemical fertilizers, farm chemicals, farm machinery, plastic films and small-sized farm implements and for the price difference in supplying diesel oil and electricity in preferential prices; the subsidies spent on industry, such as on the losses and subsidies resulting from the price difference in supplying such materials as cotton, leather, coal, bamboo and timber, and silkworm cocoons. Huge amounts of state subsidies are spent on the consumption of the people. Because of the subsidies for price differences and the reduction in, or exemption from, taxation, in 1981, subsidies to the people in urban and rural areas averaged 32 yuan per capita--a total of 31.6 billion yuan. That is to say, the improvement of the living standards of the people in our country has resulted not only from the increased income from labor and collective welfare but also from the portion of state subsidies. Without doubt, it is entirely necessary to practice state subsidies at a time when there are some latent dangers in finance and market prices. At such a time, our major task is to stabilize the economy. It constitutes a most important prerequisite and concerns the overall situation. The fact that we adhered to the method of state subsidies in the previous stage has, in fact, played a considerable role whether in stabilizing market prices, improving the people's well-being, providing conditions for readjusting the economy or promoting the development of industrial and agricultural production. This is precisely an indication of the superiority of the socialist system of our country. The problem to which consideration should be given now is that in a situation when the economy has gradually been stabilized but state revenue has been on the decrease, with more and more money spent on various kinds of subsidies and a heavier and heavier load on the state, it is impossible for the state to amass funds for much needed construction.

All these problems have resulted from misapplying some aspects of the present economic system, from the irrationality of the pricing system, and from hastiness in adjusting accumulation and consumption rates. Above all, haphazard use of accumulation funds and economic inefficiency have been basic causes. The reform of the economic system and pricing system cannot be accomplished within a short time. Carrying out the reform without full preparations and an overall plan will lead the economy to chaos. As for the problems in the ratio between accumulation and consumption, they can be solved so long as all of us have a unified understanding of them and do a good job in achieving an overall balance and rational arrangements. So, the key to the problem lies in the fact that we should raise economic effect and put an end to waste on the one hand and the state should amass necessary funds and put them to rational use under overall arrangements on the other.

III

After the 3d Plenary Session of the 11th CPC Central Committee, in the course of correcting the "leftist" mistakes committed in economic work, some comrades in the economic theoretical circles and professional departments probed and discussed the rational limits of the ratio between accumulation and consumption. After analyzing historical experience, some departments pointed out that under normal circumstances, the proper accumulation rate was about 25 percent. In our opinion, that is suitable. Seen from the last few years of practice, it was precisely because of the reduction in the accumulation rate that the level of consumption could be raised and the people's livelihood could be considerably improved. In the future, provided we rationally arrange and use the accumulation funds well and substantially raise their economic effect, we can help develop production at a fairly rapid pace and help increase the national income considerably. This will be able to fulfill the requirements of both reducing the accumulation rate and gradually increasing the absolute amount of accumulation funds.

In a speech delivered at an important meeting, Comrade Chen Yun pointed out that one major policy of our economic work is "first, the 1 billion people must have enough to eat; second, socialist construction must be carried out." This is our guiding ideology for correctly arranging the ratio between accumulation and consumption. In accordance with this guiding ideology and in light of the actual conditions of the ratio between accumulation and consumption, at present, proper arrangements should be made for the following aspects:

First, in the distribution of national income, the ratio of the funds for redistribution amassed by the state (that is, state revenue) should be increased in order to guarantee the construction of necessary major state projects. At present, the state's revenue has not increased but the funds outside the budgeted targets of local administrations and enterprises have increased by a big margin. True, this has played a fairly great role in solving the financial difficulties of the local administrations and enterprises and in undertaking some work conducive to developing the local economy and revitalizing enterprises. However, generally speaking, there are very big contradictions in this respect. Ours is a big country with a population of 1 billion. In order to carry out the modernization program, we must have a big overall arrangement of the disposition of the productive forces anyway, and we have to undertake a batch of backbone projects which will play their part for many years and have a bearing on the national economy and the people's livelihood. The formation of a rational layout of the productive forces and the construction of large-scale projects are outside the power of local administrations and in undertaking them, it is even difficult to produce satisfactory results by depending on the joint efforts of several local administrations. They can be undertaken only by depending on the state's unified arrangements. Therefore, it is imperative for the state to appropriately amass the scattered funds and to use them in the production construction of overall importance. Of course, by the state amassing funds, we do not mean taking the old road in which excessively rigid control was imposed on everything, all financial resources were centralized in the hands of the central authorities and as a result, local administrations and enterprises did not have any power to manage their financial affairs in a flexible way; but we mean adjusting the ratio of the distribution of the interests of the state, the collective and the individual so as to ensure a relatively big increase in the portion of funds amassed by the state and give proper consideration to the needs of local administrations and enterprises rather than negating and putting an end to the measures for reforming the economic system which have been carried out in the last few years and have produced certain results, measures including the method of everybody "eating in separate kitchens" practiced in the financial system, the expansion of decisionmaking power of enterprises and the introduction of the economic responsibility system in industrial enterprises. In studying the proper ratio of the portion of funds amassed by the state, the professional departments concerned are encouraged to consult with local administrations. In giving consideration to the imbalanced development of the economies of the various regions, more care should be given to the economically backward provinces and regions and different regulations should be worked out, for different trades and enterprises. It is not suitable to impose uniformity on all trades and enterprises.

Second, strive to raise the economic effect of the use of accumulation funds. The key problem is to conscientiously readjust the work of capital construction. Judged from the situation in the last few years, funds allocated for capital construction within the state budget have been cut considerably. The number of projects arranged according to the state plan have decreased, while that of projects constructed with funds raised by local enterprises themselves and with funds from bank loans have greatly increased.

The trend in this respect is tending to get out of control. The solution to this problem is to bring the construction projects based on funds collected by local administrations and local enterprises into line with state planning, strike an overall balance and draw up overall planning for them. This will enable us to control the general scope of capital construction and at the same time, to concentrate our efforts on undertaking the projects which are most badly needed by the state at present and the projects which are preparing for the development over the next 10 years. Arranging the capital construction projects concerns not only the question of financial resources but what is more important, also the question of material resources. At any one time, the state has only a certain amount of materials. If we overextend the scope of capital construction, have no guarantee for material supply and fight a protracted war of attrition, then huge accumulation funds will stay idle in the numerous projects under construction and it will be impossible to form them into productive force so they can play their part in the production of material goods. In arranging capital construction projects in the future, we must base ourselves on the capabilities of the state's financial and material resources and on what the state urgently needs and succeed in fighting a quick battle to force a quick decision and strive to complete the project in one vigorous effort once a project is undertaken. Only in this way can we genuinely manage to shorten the construction cycles of capital construction and raise economic effect. The enthusiasm of local administrations and enterprises for carrying out capital construction should be brought into play but deviating from the needs and capabilities of the overall situation of the country will lead to blindness. We must take the whole country into account, strike an overall balance and overcome blindness so as to make the limited accumulation funds produce the most satisfactory economic effect.

Third, accumulation funds must be spent on key projects in a centralized way. At present, energy and communications are the pronounced weak links in the national economy. Owing to a strain in energy supply and in communications and transportation, many enterprises are operating below capacity and there has been a failure to give full play to the existing productive forces. Therefore, it is a pressing task to spend the accumulation funds amassed by the state in a selective way on boosting the energy and communications. The construction of energy and communications projects requires huge investments and a long construction cycle and cannot possibly provide products and service to society within a short period of time and contribute to the acceleration of the economic growth gained in recent years. However, so long as full preparations are made to concentrate funds, equipment and materials in this respect, construction cycles can surely be shortened and the construction of energy and communications projects can produce economic returns in the minimum possible time. With these bases, other branches of industry will then have conditions for rapid development. Seen in the short term or from a regional angle, using funds in a decentralized way for developing the processing industry in a big way rather than concentrating funds on energy resources and communications may ensure a relatively rapid development and produce some economic effect, but eventually this practice will be handicapped by the shortage of energy supply and transportation capacity and as a result, the already formed productive forces will not be able to be brought into full play. In addition, this will delay the construction cycle of energy and communications and interfere with the future growth rate. We must avoid the occurrence of this situation. Of course, by concentrating funds on energy and communications construction projects, we mean striving to strengthen energy and communications--two weak links in our national economy--through 3 or 5 years of efforts by concentrating on completing the projects arranged by the annual state plan rather than attempting to undertake a considerable number of projects within a short period of time.

The construction funds collected by local administrations and enterprises themselves should also be used in a centralized way, mainly in the technical transformation of existing enterprises, and particularly in the technical transformation centered around energy conservation. In this way, it seems that no new construction projects have been undertaken and no new enterprises have been set up. However, upgrading the level of technology and equipment of existing enterprises will not only accelerate the renewal and replacement of products, increase product varieties, improve product quality, cut material consumption and alleviate the strain in energy supply but also substantially boost production output.

Fourth, measures should be taken to reduce state subsidies. At present, the total amount of state subsidies is amazing and it is justifiable to say that the number has reached the limit. In our opinion, state subsidies in the future can only be reduced rather than increased. Now one fairly practical aspect in our work is to strengthen overall reorganization of enterprises, raise economic results, quicken the pace of commodity circulation and capital turnover, reduce the losses of the enterprises which are being run at a loss or change the losses into profits, enable most of the enterprises to increase their profits and help maintain the growth of profits of enterprises or help their profit growth rate surpass the growth rate of their production. There is abundant potential in this respect. No matter whether it is industrial, communications or financial units, or whether it is rural communes and their subdivisions, they must all think about the interests of the country, reduce their dependence on state subsidies as far as possible and make greater contributions to the state.

Fifth, the improvement of the people's livelihood must be realized step by step on the basis of the development of production and the enhancement of labor productivity. With the development of production, we will have a material basis for improving the living standards of the people. Compared with the people's well-being in the past few years, the people's livelihood has been remarkably improved but the overall level of consumption is still not high. There is no doubt that the improvement of the people's livelihood must be continued. The steady improvement of the people's level of consumption will not only further arouse the enthusiasm of the broad masses of people for production but also promote the development of industrial and agricultural production and other undertakings through the growth of consumption and boost the national income. Nevertheless, there must be a guiding principle in raising the people's level of consumption: One is to manage both to ensure the continued improvement of the people's livelihood and to carry out economic construction in light of the current national strength, and the other is to arrange the growth of the consumption funds disbursed by the state strictly in accordance with the state plan. Blindly increasing the consumption funds by deviating from the capabilities of the nation and from the arrangements of the state plan does not tally with the long-term interests of the people throughout the country.

With satisfactory solutions to the above-mentioned problems in five areas, the new problems that have cropped up in the current ratio between accumulation and consumption may possibly be solved fairly properly.

BE VIGILANT AGAINST THE DANGER OF A REVIVAL OF JAPANESE MILITARISM

Beijing RED FLAG in Chinese No 16, 16 Aug 82 pp 37-40

[Article by RED FLAG commentator]

[Text] In the course of screening school textbooks, the Japanese Education Ministry has brazenly distorted the history of Japanese aggression and absolved the Japanese militarists of their war crimes. This incident has naturally evoked strong indignation and protests from the Chinese, Korean and other East and Southeast Asian nations. The Chinese Ministry of Foreign Affairs has made representations to the Japanese Government demanding that it assume the responsibility of correcting the mistakes made by the Japanese Education Ministry. The situation is still under review. A flood of condemnation from various countries, including public opinion in Japan, is swelling. As pointed out by many commentators, this is definitely not a simple dispute over the use of words or over the accidental mistakes made by the Japanese authorities concerned. It is a grave signal that the danger of a revival of militarism exists in Japan.

Why is the Japanese Education Ministry trying to cover up and distort historical facts?

As everybody knows, Japan entered the imperialist stage of development in the latter part of the last century and the early part of the present century. One of the basic characteristics of imperialism is external expansion, contention for colonies and spheres of influence and partition of the world. By means of wars of aggression, Japan successively annexed Taiwan and the Penghu Islands from China in 1895 and completely swallowed up Korea in 1910. Lenin, in "Imperialism, the Highest Stage of Capitalism," listed Japan with Britain, Russia, France, Germany and the United States as one of the six biggest imperialist nations. In 1914 these six possessed 92 percent of all the colonies in the world. Japan ranked fourth among them, only after Britain, France and Russia. In 1931 Japan invaded and occupied the three northwest provinces of China, and in 1933, invaded and occupied Jehol Province. In 1937 it launched the full-scale aggression against China and occupied large areas of north China, east China, the central plains and south China. In December 1941, Japan also started the Pacific war and occupied the Philippines, Malaysia, Singapore, Indonesia and Burma. In all the wars of aggression and the colonial rule which followed, the

Japanese militarists brought great suffering to the Chinese, Korean and other Southeast Asian nations. These aggressions by the Japanese militarists and their aftermaths are historical facts which have been clearly recorded in the history books and textbooks of many countries in the world.

What should be particularly pointed out is that during the war of aggression against China from the 1930's to the 1940's, the Japanese militarists committed countless inhuman crimes against the Chinese people. They burned, killed and looted everywhere they went, raped the women, carried out large-scale massacres of old and disabled people as well as women and children and committed all kinds of atrocities. In particular, they carried out an extremely brutal policy of "burn all, kill all, loot all" in the anti-Japanese base areas which were under the leadership of the CPC. In the occupied territory, they also forced Chinese workers to engage in slave labor and created many "mass graves" filled with corpses. The big Nanjing massacre, which shocked the country and the whole world, was only one of their sordid crimes. To the Chinese people who suffered deeply from the war of aggression, all these events will never be forgotten. The war of aggression launched by the Japanese militarists also exacted a heavy price from the Japanese people. As for the Japanese people, they should also always bear this lesson in mind.

In modern Chinese history, it was the lofty ideal and goal of all progressive Chinese as well as the common desire and national sentiment of millions of Chinese both at home and abroad, to completely liberate the nation from the oppression of imperialist Japan and other imperialist powers. For half a century, and particularly in the 1930's and 1940's, the Chinese people waged a heroic and indomitable struggle, despite extreme hardships and difficulties, against the Japanese invaders and wrote a glorious chapter in the annals of the world national liberation movement. During World War II, as a result of the joint efforts of the Chinese people and other peoples of the world, Japanese imperialism was defeated together with the German and Italian fascists. At that time, the Japanese Government shouldered the blame for the war and signed the surrender. Such major war criminals as Hideki Tojo and Ishine Matsui, who directed the Nanjing massacre, were tried by the International Military Tribunal and received the punishment they deserved.

It has long been a verdict of history that the Japanese militarists committed a serious crime of aggression against the Chinese, Korean and Southeast Asian people. These butchers, who massacred the people of various countries, have been locked forever in the pillory of history.

Now, the Japanese Education Ministry has distorted the history of this half century in the screening of Japanese textbooks and has denied that Japan carried out aggression against China. They have used such words as "advance into north China" to cover up the full-scale war of aggression against China which began in 1937. They actually made a counterattack and described the indiscriminate killing of Chinese civilians after the occupation of Nanjing by the Japanese invading army as the result of "provocations" caused by the resistance of Chinese soldiers and civilians.

Besides the Japanese Education Ministry, some high officials in the Japanese Government have also come forth to express support for this distortion. Among them is Yukeyasu Matsuno, head of Japan's National Land Agency, who even argued: "When Japan 'advanced' into foreign countries, it did not call its actions aggressions, and to present 'advance' as aggression is a distortion of history." According to the principles of international law generally recognized by the world, the violation of the territorial integrity and sovereignty of other countries and the act of plundering and enslaving the people of other countries by any country constitutes aggression. Moreover, is it not a fact that Japan has practiced such acts of aggression against China for almost half a century? According to the logic of certain people in Japan, aggressions and aggressors do not exist in world history, and not only should the whole history of Japanese aggression against China be completely rewritten, but the whole history of World War I should also be completely rewritten. From the attitude a person adopts toward the mistakes and crimes he committed in the past, one can see what this person will do in the future. This also applies to a country as well as to a nation. The attitude adopted toward crimes of external aggression in history has a bearing on this country and the trend of the future development of this nation. In 1972 when Chinese Premier Zhou Enlai was normalizing relations between China and Japan, he made an allegorical statement pregnant with meaning regarding the past incidents caused by the Japanese militarists' invasion of China. He said: "The invasion of China by Japanese militarists has caused great sufferings to the Chinese people, and the Japanese people have also suffered deeply. Past experience, if not forgotten, is a guide for the future. We must firmly bear in mind such experiences and lessons." The reason the human race cannot forget the past and must respect history is because they can learn from history, draw useful lessons and take warning so as not to make the same mistake as their predecessors. Therefore, we should not cover up the true picture of history and, moreover, we cannot distort history. This deliberate distortion of history to defend aggressions in history means that some day Japan will probably retrace the old footpath of militarism. The incident of the distortion of history by the Japanese Education Ministry indicates that this danger is already looming in present-day Japan.

The Japanese militarist forces suffered a crushing defeat in World War II. Since the war, the militarists have always been thinking of staging a comeback, but they have never been able to succeed because of the resolute resistance of the Japanese people and the strong opposition of the people of various Asian countries. What should be noticed is that the militarist elements have by no means vanished in Japan; there are many of them in the numerous extreme rightwing groups in the country today. These people are carrying out all kinds of activities in a bid to revive militarism and are vainly thinking of turning Japan from an economic into a great military power and reliving the old dream of the "Great East Asia Coprosperity Sphere." These people are praising the barbaric and ignorant bushido spirit, beautifying the history of Japan's external aggression, absolving the militarist ringleaders and war criminals of blame and even worshipping them as "national heroes" and praying for their souls. The film "Dai Nippon Teikou" ("The Great Japanese Empire") recently released in Japan wantonly glorifies the war criminal Hideki Tojo and propagates the notion that Japan's launching of aggressive wars was for its own "protection" and the "liberation of Asia." According to an advertisement in NIHONG KEIZAI SHIMBUN, the purpose of the film is to "restore a historical view of the great East Asian war that is favorable to the Japanese." This has clearly explained the purpose of certain Japanese in reversing the verdict against the militarists. Cultural education is the reflection of economics and politics, and ideological opinion is the precursor of action. The distortion of history is precisely for the sake of preparing public opinion in an attempt to revive militarism and is an important manifestation of this political trend.

World War II brought unprecedented disaster to the whole of mankind, and its memory is still fresh in the minds of the people. This great war was started by the Japanese full-scale war of aggression against China. One important lesson learned from the outbreak of this great war was: When the Japanese militarists kept on expanding the scale of aggression against China, when Mussolini was carrying out a war of aggression against Abyssinia and when Hitler was embarking on such adventurist actions as intervening in the Spanish Civil War, annexing Austria and occupying Czechoslovakia, the anti-fascist countries either lacked vigilance or adopted a policy of appeasement toward the aggressors. They did not curb the danger of a world war in its germinating stage. Today the situation of the whole world and the balance between the forces of peace and war are vastly different than before. However, the danger of a world war still exists. A common urgent task facing the people and all peace-loving countries of the world at present is to curb any factor which might lead to the outbreak of a new world war and making it possible to breed or grow.

The Chinese people and government have always adopted a reasonable, magnanimous and farsighted attitude regarding the historical question of the Japanese invasion of China. We believe that China and Japan are separated by only a strip of water, that the people of both countries have a long history of friendly relations and that the Japanese aggression against China occurred under conditions which were entirely against the wishes of the Japanese people. Therefore, we have made a distinction between the Japanese people, who could not decide for themselves at that time, and the Japanese ruling class; between elements of the Japanese ruling class who did not approve of the war of aggression and the militarist forces; and between those in the Japanese Government who at that time were willing to carry out a friendly and good-neighbor policy and those in the Japanese Government who should take the blame for launching external wars of aggression in history. Japan, which has practiced external aggression in its history, owes a debt to the countries victimized by its aggression. As far as China is concerned, over 10 million people were killed by Japan's war of aggression in the 1930's and 1940's, while property damage exceeded $50 billion. Japan, which has now become an "economic big power," should retrace its roots. Was not a considerable part of its capital and wealth in fact plundered from other countries by aggressive war and colonial rule?

From the Sino-Japanese War of 1894-1895 alone, Japan extorted from China reparations equivalent to what was then 350 million Japanese yen, and "the funds guaranteed the maintenance of the empire's armaments and the establishment of modern industry." ("History of Japan's Foreign Affairs" by Seisaburo Nobuo) Regarding the half century from the Sino-Japanese War of 1894-1895 to the end of World War II, it is even more difficult to estimate the wealth Japan looted from China, Korea and other Asian countries (including wealth created by laborers from these countries). The Chinese people do not demand that the present Japanese Government assume responsibility for the war, and, for the sake of friendship between the people of the two countries, they have also dropped the demands for reparations. However, the Chinese people and all Asian peoples who suffered from Japanese aggression have the right to demand that the present Japanese Government assume a political and moral responsibility to curb the attempts of extreme rightwing forces in Japan to revive militarism, to tell the Japanese people--and particularly the younger generation--the historical truth, and to teach them that they must never again allow Japan to become a militarist state or to launch external wars of aggression. At present, some of the people in the Japanese Government are not only unwilling to do so but, instead, are trying to distort history and glorify aggression. This is a dereliction of duty. It should be pointed out that to distort the history of Japanese aggression against China is, in essence, an extreme insult to the Chinese people. The Chinese Government has approached the Japanese Government and asked for a correction. This is the legitimate right of the aggrieved party. But some high-ranking Japanese officials, on the contrary, tried to find fault with China by saying that this is "interference in Japan's internal affairs." Their disregard for morality and justice has reached a level that is impervious to reason. However, public opinion from all walks of life in Japan has also proved that this behavior of the Japanese authorities is also intolerable to the Japanese people. Kazuo Asukada, chairman of the Japanese Socialist Party and member of the Diet, pointed out: "They attempted to play down the aggression perpetrated in the past against the Asian countries, cover up the injuries caused by the conduct of the Japanese militarists and erase such things from history. It is only natural that this tendency will evoke strong indignation among peoples of various Asian countries who were the victims of such acts of aggression." Toluma Utsunomiya, president of the Japan-China Friendship Association, said: "Pandering to the rightwing tendency, the Japanese Government attempts to use textbooks to blot out the Japanese people's self-reproach for aggression. We cannot agree to this." An editorial in YOMIURI SHIMBUN pointed out: "Over 60 percent of the people in Japan at present belong to 'the generation who do not know anything about the former war.' Therefore, the important thing is to teach them not to blot out the responsibility for the war. However, the screening (of textbooks) has done just the opposite. This cannot but be considered as a distortion of historical facts." The National Conference of the Japanese History Education Workers Association has unanimously demanded that the Education Ministry change the practice of distorting history at once. All these reflect the sentiment of the Japanese public from all walks of life who are willing to have friendly relations with the people of China and other Asian countries.

As a result of the concerted efforts of the Chinese and Japanese peoples as well as people of insight, diplomatic relations between China and Japan were normalized in 1972 and a joint statement was issued in this connection by the governments of the two countries. The treaty of peace and friendship concluded between China and Japan in 1978 affirmed that "the joint statement is the basis for the development of peaceful and friendly relations between China and Japan, and various principles indicated in the joint statement must be strictly observed."

The joint statement pointed out: "The Japanese side is keenly aware of Japan's responsibility for causing enormous damages in the past to the Chinese people through war and deeply reproaches itself." This showed the attitude of self-reproach adopted by the Japanese Government for the wars of aggression launched against China in the past. It was written as a major principle into the Sino-Japanese joint statement on the establishment of diplomatic relations and is also affirmed by the treaty of peace and friendship. It is a prerequisite for the development of peaceful and friendly relations between China and Japan. This prerequisite cannot be overthrown. To do so means to wreck the basis for the establishment of peaceful and friendly relations between the two countries. The Chinese people have all along valued the friendly relations with the Japanese people. The broad masses of Japanese people also have friendly feelings for the Chinese people. Just as pointed out by the joint statement of the two governments, "the normalization of diplomatic relations between the two countries and the development of neighborly and friendly relations between the two countries conform to the interests of the peoples of both countries and will also contribute to the easing of tension in Asia and the safeguarding of world peace." Only by solemnly accepting historical facts, respecting the political basis for the establishment of diplomatic relations between the two countries and educating the younger generation in accordance with this guideline can friendly relations between China and Japan develop and can the peoples of both countries get along as friends from generation to generation. The Japanese Government should squarely face the distortion of the history of Japanese aggression against China made by the Education Ministry in the process of screening textbooks, an affair which is damaging Sino-Japanese relations, and take practical action to defend the basis for friendly relations between the two countries by correcting this mistake. As far as the Chinese people are concerned, we are willing to work together with the Japanese people and the peoples of other Asian countries, unite with them and make joint efforts to prevent the danger of a revival of militarism.

CADRES' STUDY SHOULD BE ASSESSED AND EXAMINED

Beijing RED FLAG in Chinese No 16, 16 Aug 82 pp 41-42

[Article by Cheng Shu [2052 5289]]

[Text] While promoting reform of the organizational structure, our party also attaches great importance to cultivating cadres. It has called for making the education of cadres a regular, constant practice and an institution. It has clearly defined targets which cadres of central party and government organizations should attain after they have been theoretically, professionally and culturally trained in the next 5 years. It has decided that a system should be set up for arranging a short-term sabbatical study for cadres after working a few years in posts, appointing and promoting cadres according to the results of their training, and checking and examining cadres' study. The formulation of the policies and systems fully shows that the party Central Committee attaches great importance and pays adequate attention to the education of cadres. It not only reflects requirements for the development of building socialist modernization, but also expresses the eager desire of vast numbers of cadres.

The great majority of cadres uphold the system of checking and examining their study. However, some cadres have doubts about the necessity and possibility of doing so. Therefore, it seems it is necessary to offer some explanations on this issue.

The system of checking and examining cadres' study constitutes part of the whole system of conducting education on cadres. Its essential contents demand that after a period of concentrated study, every cadre should be assessed and examined according to the requirements of his study plan, with marks to be kept in his file to help in making the appropriate appointment. If the study is arranged in accordance with the teaching plans, teaching outlines and subjects at the middle school, polytechnic school or college levels, comrades who pass the exams will then be able to acquire diplomas. A test system like this will help promote cadres' study and progress, and will contribute to the formation of a rank of cadres that is younger, better educated, more advanced professionally, and more revolutionalized.

Cadres of the party and government organizations are leaders and organizers in the arduous struggle for the realization of socialist modernization. Their quality, level of Marxism, professional knowledge and educational level in meeting demands for building modernization have a bearing on the success or failure of our cause. All our cadres are servants of the people, doing everything on their behalf. The people call on us to do everything well with high efficiency and quality, so we must unceasingly enhance our theoretical, cultural and professional levels and work proficiency. With a view to achieving fruitful results in study, cadres should meet strict demands and abide by the system. Slackness, carelessness and perfunctoriness in the training are not allowed. Since the education of cadres has been made regularized and systematized, every one of our cadres now has the right to take a sabbatical leave for study according to a scheduled plan. And he is also bound to study a great deal in the assigned period of time. Checking, attesting or examining results of cadres' study is a normal practice. In a certain sense, it is a kind of motive power to promote the study. On the other hand, superior organizations will be able to know every cadre well from the records in his file concerning his knowledge, proficiency and marks in study and traniing. And thus the superior will also be able to cultivate every cadre according to his practical deeds in work and know him well enough to assign him a job and promote him commensurate with his ability. This is essential not only for the growth of every cadre but also for the formation of the whole rank of cadres.

Such a test system in cadres' study is not a new phenomenon. As early as during the war years, many cadres' schools organized by our party in various forms had strict testing systems. After the founding of the People's Republic, those who took time off to go to a worker-peasant short program high school and those who received specialized training could graduate only after formal exams. In addition, in some localities those who studied Marxist theories while still working had to have tests on a certain number of courses. In 1955, the party Central Committee issued a report submitted by the central propaganda department, demanding a system of exams for in-service cadres who studied Marxist theories in party schools or political schools. This system played an active role at that time in promoting initiative among cadres studying in these schools. Some cadres now are not used to the exam system, or have doubts about such a system. This mainly results from the protracted weakening of cadres' education work since the late 1950's, the result of an error in the party's guiding ideology. However, in recent years, more and more cadres have demanded a change in the aimless, unsystematic education of cadres, and in the lack of a relationship between cadres' training and job assignment. Under these circumstances, most cadres will accept an exam system once they realize the reasons for such a system.

It can be said that now objective conditions are mainly ripe for establishing such a test system. Such conditions are: Since the third plenary session in 1978, party committees at various levels have strengthened leadership over cadres' education work. Material conditions for cadres' education have improved. We have accumulated experience in conducting education on cadres from massive cadres' training. We have set up bases for cadres' education on a certain scale, which can be further expanded according to the amount of cadres available for training. And we have had an experienced teaching corps which is loyal to the cause of cadres' education. In addition, the central departments concerned and local party committees at various levels have worked out the proper length of schooling and teaching plans for courses on Marxist theories, basic professional knowledge, specialized occupational knowledge, and cultural and scientific knowledge. And different curricula are being arranged to suit cadres of different scholastic backgrounds and with different needs. All these have created good conditions for practicing a test system in cadres' study.

Some comrades may worry whether exams will come as "a surprise attack" without considering the different situation of each cadre. In accordance with the spirit of the central authorities, from now on, cadres' training should be flexible enough to adapt to different aims, work requirements and different scholastic levels in theory, profession and culture. Exams should be designed to satisfy the demands of a cadre's study plan. Therefore, it is not necessary to worry about the exams. Some comrades may also worry whether the exams will be implemented as in full-time schools. It must be made known that the education of cadres is part of adult education. It is different from that of youngsters, so the method of examination should not be indiscriminately imitated on that used for the young students in full-time schools. In recent years, some methods of assessment and examination which are specially adaptable to the education of cadres have been used in some party schools and cadre schools. For example, some courses are only assessed and some must be examined. The subjects assigned for exams stress the knowledge applicable for cadres to master and use in the future, but do not aim at reciting a lesson from memory. The open-book and closed-book exam systems are both adopted. Sometimes the exams can be done by writing a report on what one has learned from the study or by drawing up a plan for solving practical problems in work with the knowledge one has acquired. The methods of examination can still be further explored and renovated by continuously summing up experience from the practice of teaching work. On the problem of exams, we must not only pay attention to the characteristics accompanying cadres' education, but must also set strict demands on them and adopt a stern attitude toward the problem.

WHAT CAN BE LEARNED FROM THE WESTERN EXPERIENCE IN ENTERPRISE MANAGEMENT?

Beijing RED FLAG in Chinese No 16, 16 Aug 82 pp 43-45

[Article by Zhou Shulian [0719 0647 5571]; passages within slantlines published in boldface]

> [Text] Editor's Note: Many readers have pointed out that in studying economic theory it is very important to relate the theory to practice and with an open mind and dynamic thinking, not only study the economics of a socialist country but also examine and draw on the experiences of capitalist countries' methods of management and administration. These ideas reflect the shared demands of a certain number of cadres and we are now publishing this article by Zhou Shulian so that our readers may examine such ideas themselves.

In the process of studying the Marxist theory of economics, we should always examine and summarize China's own experiences in enterprise management while at the same time not completely ignore, indeed we may even borrow from, some experiences in economic management gained by Western countries and thereby do everything possible to find ways of improving enterprise management.

Marx said: "All direct processes of production reflect the form of the combined processes of society and are not expressions of the isolated labors of one independent producer, but should engender both controlled and organized labor." ("Collected Works of Marx and Engels," Vol 25, p 431) Both capitalist and socialist enterprises are built on the societal foundations of production and it is in this sense that they are related. Over the years, Western countries have accumulated a wealth of experience in enterprise management, some of which is well worth our taking note of. For, as Comrade Mao Zedong pointed out: "Within the enterprises of industrially developed countries the work force is low, efficiency is high and there is an understanding of how to do business. Thus we may be able to improve on our own work by learning some of the principles and reasons behind these phenomena." ("Selected Works of Mao Zedong," Vol 5, p 287) Thus on the basis of our present need to raise the level of enterprise management in China, we must take careful note of and learn from their experiences in organizing social mass production. For example:

/We can learn from their experiences in managerial policymaking./ In order to survive and develop within constantly changing internal and external surroundings, Western enterprise has always, and indeed is increasingly, seriously examining the question of management policies. The American management expert Xi Meng [6007 5536] considers that "management means policymaking." Traditional thinking has always viewed policymaking as a very last-minute thing. Modern theorists of policymaking see it more as a process involving the gathering together of all the facts, examining them, analyzing them and making decisions and choices from a selection of all the possibilities available. They consider that it is possible to divide the process of policymaking into the following three stages: 1) The gathering together of information: involving the collection of relevant economic and technological information both inside and outside the enterprise for the purpose of analysis. 2) The drafting of a plan: drawing up all feasible plans on the basis of the information gathered in the first stage. 3) Choosing a plan: making a choice of the best plan from all the feasible ones. Thus, in the process of policymaking, the role of information is always stressed. Furthermore, policymaking theorists distinguish between finalized and nonfinalized policymaking; the former type of policymaking, involving finalization and procedure, has set patterns to follow, while the latter, nonfinalized policymaking is characterized by a lack of set rules to follow. China's socialist enterprise, by the nature of its subordination to changes in national plans, is relatively unique. It must not only have good administration but also good management. Having ignored enterprise management in the past, it is doubly important that we attach importance to it now and study and learn from the experiences of policymaking within capitalist countries' enterprise management.

/We can learn from their experience of closely linking production and sales./ In order to be competitively successful, Western enterprise not only attaches importance to production but also to sales, thereby closely linking the processes of production and circulation. The most important measures adopted within Western enterprise include: 1) Implementation of market-limited production. When an enterprise fixes its production plans it first determines the variety and amount of production according to market demands, and after this continually alters these plans in accordance with changes in the market situation. 2) Examination and study of the market situation. The enterprise either undertakes such studies itself or enlists the aid of experts in market studies and advertising agencies to carry out the studies. Such studies include examinations of purchasers, competition, the expansion capacity of the market and consumers' opinions. 3) The drawing up of market forecasts. On the basis of examinations and studies of the market situation, market forecasts are drawn up. Such forecasts include the extent of sales of specific commodities, sales areas and period of sales. Most forecasts are either annual, seasonal or monthly, while some forecasts are more long-range, sometimes 3 or even 5 years. 4) Moves to raise the quality of service and customer convenience. A great deal of importance is attached to improving the quality of the work and service performed by salesmen. In addition, the need is recognized to catch the customer's interest through sales activities, to grasp the psychology of the customer and stimulate his or her need or desire for a product, thereby encouraging the customer to make a purchase. Emphasis is also placed on the importance of post sales service. The above experiences provide several lessons worth learning from for socialist enterprise.

/We can learn from their experiences in raising product quality and lowering production costs./ Many enterprises in Western countries make use of expert help when organizing their labor force, and in terms of saving power and raw materials, they apply scientific and technological skills as well as using advanced and sometimes imported management tools and management skills, and there are valuable lessons to be learned from the experiences of such an approach. Particularly worthy of China's attention is their experience in raising product quality and lowering production costs. The improvements in quality and management may be seen as having occurred in stages. Initially it is based on a simple examination of the situation after it has happened. Since the 1920's quality examination has been based on statistics. Learning to control the process of production leads to control of product quality. In the 1960's general quality control was developed and product design, purchasing of raw materials, production and fitting all the way up to post sales service all conformed to the set requirements for product quality. Many enterprises developed a "perfectionist movement" whereby workers were mobilized to eliminate any flaws in the work process and thus ensure a constant high quality of production. In order to bring down production costs, many Western companies have adopted an approach to production costs management known as value analysis or value engineering. The U.S. firm General Electric was an early practitioner of this scheme. In essence it involves achieving low production costs by doing one's utmost to find the simplest production methods and cheapest raw materials while not letting the quality of the end product suffer. In carrying out value analysis it is important to find out whether there is a need to use a certain type of raw material, and find out what profit can be made from it. In addition it must be ascertained whether there are any excesses in the quality of the raw materials and whether it would be possible to adopt even cheaper production methods. Furthermore one must check that there is a rational breakdown of the production costs, whether there are any cheaper prices or any better suppliers and whether the selling price is worthwhile in terms of production costs.

In Japan, the Toyota Company feels that its own achievements in this area have been "to make quality guarantees the heart of technological work" and "to make reductions in production costs the main aim of enterprises." Our socialist enterprises must therefore set up firm principles on raising quality and lowering production costs and the above experiences of Western enterprises are well worth our taking note of.

/We can learn from their experience in improving the enterprise management system and the setting up of good relations between centralization and decentralization./ Capitalist enterprise has one problem with the management system, the solution to which is often a prerequisite for the successful organization of production for the enterprise. For example, since the 1920's the United States has run centralized management systems but as enterprises gradually grew bigger, the faults of such a system became more and more apparent with the result that some large enterprises began a system of departmentalization. Such a system has three main characteristics: 1) Each department is a decentralized unit with the enterprise granting the department whatever limited powers are necessary. 2) Each department is a unit responsible for its own profits, having defined responsibilities in terms of profits, thereby reaping the benefits in accordance with the ups and downs of the management situation. 3) Each department is a unit responsible for its products and hence must actively try to expand the market and put the products through market tests. Under certain conditions the departmentalization system can be helpful in allowing a large company to accurately balance centralization and decentralization and also carry out management policy decisions. It is considered by many Western enterprises that to achieve an ideal relationship between centralization and decentralization, many factors must be taken into consideration such as the scale of the enterprise, management make-up, regional distribution, the number of management employees and their standard of work, the company history and external relations. Thus, the larger an enterprise is, the greater, in general, the need for decentralization. With a low number of management employees and low quality of work, decentralization will be harder. If a company's outside relationships change very quickly, then decentralization will be relatively simple. Certain restrictions have also been defined for the powers of decentralized departments within an enterprise. For example: 1) The extent and range of such powers should be related to the nature and extent of responsibility of the department. 2) The powers of each level of managerial departments must be clearly defined and differentiated. 3) The relations between each functioning department of the enterprise must be clearly laid down. 4) Each department only takes orders from one superior department, thereby avoiding a situation in which a subordinate department is at a loss as to what to do, having received two conflicting orders. These few ground rules should be learned by China in its move to revolutionize the economic management system and set up a system of economic responsibility.

Furthermore, /we should take note of Western enterprises' experiences in training management personnel./ In the United States of America, for example, management education is fairly well developed and not only should our Education Ministry take note of this, but our enterprises as well. In the United States many large companies train their own management personnel and, according to statistics, in 1976 U.S. companies trained 1.4 million personnel on company work time in various managerial positions, spending a total of U.S.$43 million. Many companies have "management personnel training centers" where they train people in whatever areas of management they are needed.

In learning from the experiences of Western enterprise management what are the things that we should be most careful of?

/1. We must recognize the fundamental differences between capitalist enterprise management and socialist enterprise management./

Marx scientifically clarified the dual nature of management in that the content and style of management is restricted by production forces and production relations. Since production relations of socialism and capitalism couldn't be more different, the nature of enterprise management is different too. In terms of the content of enterprise management, capitalist enterprise management embodies capitalist exploitation. As Lenin pointed out, capitalism is predatory by nature. Capitalist enterprise management is designed to allow the capitalist to reap the greatest possible profits, while socialist enterprise management is designed to fulfill society's and every member's material and cultural needs. A socialist enterprise should also strive for greater profits because profits are the main source of financial accumulation and without such accumulation it is possible to develop production and society and satisfy the needs of the people. But we must not, on any account, copy the capitalist enterprise system and engage in speculation and profiteering, resort to deception and harm others to benefit the individual, purely for the sake of increased profits. Socialist enterprise must accord with the country's plans and it must not weaken or destroy these plans merely to achieve greater profits.

When one considers the style of enterprise management, one can see that capitalist enterprise management is extremely autocratic with all important decisions being made by the capitalists and their representatives. Today, some capitalist enterprises have set up "democratic management," but because of the emphasis on the capitalist's profits and the severe limitations of its power, it has not been able to change the basic face of capitalist enterprise management. In socialist enterprises it is essential and therefore possible to closely link scientific and democratic management. It is important that one can recognize these basic differences between the two types of management before one can take a correct stance in learning from the experiences of Western enterprise management.

/2. We cannot totally adopt and copy the experiences of capitalist enterprise management./

Lenin said the Taylor system "is a combination of the refined brutality of bourgeois exploitation and a number of the greatest scientific achievements in the field of analyzing mechanical motions during work, the elimination of superfluous and awkward motions, the elaboration of correct methods of work, the introduction of the best system of accounting and control, etc." ("Selected Works of Lenin," Vol 3, p 511) Mao Zedong also pointed out at a very early stage that "to reject out of hand all foreign science, technology and culture without analysis is not a Marxist approach, and likewise, total acceptance of all things foreign is equally unacceptable and neither of these stances will advance the cause of socialism." ("Selected Works of Mao Zedong," Vol 5, p 287) It is necessary to promote the study of scientific advances and methodology of Western enterprise management, but on no account should we simply copy and imitate. And of course, those areas of enterprise management which do not correspond with socialist concepts should not be adopted within the socialist enterprise.

/3. We should take an all-round scientific view of the Western capitalist class' theory of enterprise management./

In the case of some very soundly based theories, we must look for the possibility that the theory contains some scientific truth and in its application we must see to what extent it upholds the exploitive system of capitalism. When we are examining these theories and the feasibility of using them or ways of applying them in a system of socialist enterprise management, we must not forget our task of adhering to the socialist road. Socialist enterprise management must help develop the forces of production as well as help consolidate and develop socialist production relations.

Finally, /when we learn from the experiences of foreign enterprise management, we must base what we learn on the actual situation in China today and remember the importance of integration with the concrete conditions existing within each area and unit./

We must remember the importance of our own experiences and traditions, for, since liberation, China's socialist enterprises already have a 30-year history and if one goes back to the foundations of the revolution, then we have a history of nearly half a century. Within this time period we have amassed considerable experience in terms of enterprise management and have developed our own fine traditions. For example, from the very first days of China's socialist enterprise system, importance has been attached to ideological politics, to following the mass line and to introducing democratic management. All of these things represent our fine tradition and experience. Today, on a foundation of summarizing and popularizing China's own experiences and traditions in this field, we must make more use of the experiences of other countries and thereby gradually build up a modernized and scientific socialist enterprise system which corresponds to China's specific needs and situation.

WHAT IS THE DIFFERENCE BETWEEN THE URBAN YOUTHS WAITING FOR JOBS IN OUR COUNTRY AND UNEMPLOYMENT IN CAPITALIST COUNTRIES?

Beijing RED FLAG in Chinese No 16, 16 Aug 82 pp 46-47

[Article by Chu Zhengkun [0443 2973 0981]]

[Text] Outwardly there are some similarities between the urban youths waiting for jobs in our country at present and unemployment in capitalist countries, and yet these two aspects are different in nature.

First, these two aspects have different origins and different natures. Unemployment is a natural product of the capitalist system. Under the capitalist system, following the development of production and the improvement of the organic formation of capital, the proportion of changeable capital in gross capital is becoming less and less with each passing day and the demand on labor force by capital is also relatively decreasing. At the same time, the supply of labor force in general will increase following the development of capitalism. The supply of labor force exceeds the needs of capital and this situation consequently gives rise to enormous unemployment. At the same time, the existence of excessive unemployment constitutes an indispensable condition for the existence and development of the capitalist mode of production. Therefore the existence of enormous unemployment forms an invisible pressure on employed workers while capitalists make use of this situation to step up their exploitation of workers. In addition, a capitalist economy is characterized by cyclical crises and during these crises a great number of workers are sacked. But on the other hand, during economic upsurges, many workers are employed again. Capitalist production needs a reserve of industrial workers that are subject to exploitation at any time. Therefore, the existence of unemployment is an objective need and a natural consequence of the capitalist system. Marx termed this situation as a relative surplus of population. That is to say, relative to the needs of the production of surplus value by capitalists, the supply of labor force exceeds demand, some workers cannot be included in the process of production and consequently they become "surplus" persons in society.

Ours is a socialist country that is based on the system of public ownership of production. The purpose of our production is to meet the increasing needs of people's material and cultural life. At the same time, socialism practices a planned economy, and not only is the production of goods and materials carried out in a planned way, the growth of population is also put under control and these situations provide the possibility of eliminating unemployment and solving the employment of all the laborers. The present situation in which some young people in urban areas are waiting for jobs has been mainly caused by the mistakes we made over the past long period in our guiding ideology and work. We are undertaking socialist construction in a country which is poor and yet with a huge population. Therefore in order to solve the employment question, it is imperative to spare no efforts to develop production and at the same time to control the growth of population so that our population will grow according to plan. But we made "leftist" mistakes in our guiding ideology for a long period in the past and made one mistake after another in our work. On the other hand, the proportions of the national economy were seriously out of balance. As a result, the development of our economic construction was slowed down to affect our ability to absorb the newly added labor force. Furthermore, we did not pay enough attention to training laborers while our education was divorced from employment and this situation has resulted in the fact that there are some jobs with no one to do them. On the other hand, we did not pay attention to the proportionate development between the production of goods and materials and the growth of population. As a result, the development of production has been out of step with the growth of population. This is the basic reason why at present some youths in urban areas are waiting for employment to be arranged for them. With regard to ownership systems, for quite a long period in the past we only paid attention to the system of ownership by the whole people, neglected the system of ownership by the collective and squeezed and impaired the individual economy. In the industrial structure, we paid attention to heavy industry and neglected light industry, commerce and service trades.

Such irrational ownership structure and industrial structure have seriously limited the employment of the newly increased labor force in urban areas. The policy of "unified guarantee, unified arrangement" for employment that has been implemented for a long time has resulted in a wrong understanding that only working in state-owned enterprises with an "iron rice bowl" is considered as employment and that individual operations and cooperative operations do not constitute employment. Thus the road for employment has become narrower and narrower. In fact, the situation in which part of the population in urban areas is waiting for jobs has no definite connection with the socialist system, nor is its nature that of surplus population as mentioned by Marx.

Second, the two aspects have different methods for solving problems and different prospects. Many years have passed since the bourgeoisie and their representatives declared that they would "eliminate unemployment" and "realize full employment"; but they have not done so; nor is it possible for them to do so. The bourgeoisie will be compelled to take some moderate measures and decrease unemployment to some extent only when the number of the jobless is so excessive as to cause serious social problems, large-scale strikes and to seriously threaten the capitalist politico-economic system. But they can in no way really solve unemployment. In order to eliminate unemployment it is imperative to overthrow the capitalist system.

The current problem of waiting for jobs in our country is a temporary phenomenon that is caused by mistakes in our work. This problem can be completely resolved as long as we are able to correct our ideology, carry out correct principles and policies and display the advantages of the socialist system. Since the 3d Plenary Session of the 11th CPC Central Committee, the party and government have paid much attention to the problems of youths in urban areas waiting for jobs. Finally, a series of correct principles and policies have been implemented such as readjusting the structure of the ownership system, developing the collective economy in a big way and appropriately developing the individual economy; readjusting the industrial structure, paying attention to the development of light industry and developing commerce and service trades in a big way; readjusting employment policy and opening up more ways for arranging employment. Thanks to these policies and measures, considerable achievements have been made. From 1978 to 1981, employment has been arranged for 34 million people across the country. Many medium and small towns across the country have basically resolved the problem of employment. Of course, in order to thoroughly solve the problems of employment in our country, we must spare no effort to develop production and control the growth of population in a planned way so that the reproduction of population and labor force will accord with the development of the whole national economy.

WILL STRENGTHENING OF PLANNING GUIDANCE IMPAIR THE DECISIONMAKING POWER OF PRODUCTION TEAMS?

Beijing RED FLAG in Chinese No 16, 16 Aug 82 pp 47-48

[Article by Zheng Youyun [6774 1635 7189]]

[Text] Some comrades regard respecting the decisionmaking power of production teams as contradictory to the implementation of state planned guidance over agricultural production. According to their view, to respect the decisionmaking power of production teams means not to stress the importance of state planned guidance and means that production teams must be allowed to arrange production by themselves and grow however much of whatever crops they want. If stress is given to state planned guidance, the decisionmaking power of production teams will eventually be impaired. This view is one-sided and not correct.

The socialist economy is a planned economy that is based on the system of public ownership. Agriculture is the foundation of the national economy, therefore agricultural production and circulation must also be carried out in a planned way. Our country has a population of 1 billion, of which 800 million are peasants and therefore agricultural production occupies a particularly important position in the economic activities in our country. At present, about 80 percent of the daily necessity goods in urban and rural areas are agricultural and sideline products and goods processed from these products; about 70 percent of the raw materials that are needed by light industry are supplied by agriculture while in our foreign trade, half of the revenue from foreign exchange is gained through exports of agricultural and sideline products and goods processed from these products. In order to guarantee that the socialist economic construction can be carried out smoothly, and that agricultural and sideline products are distributed in a planned way and rationally while social needs are ensured, it is imperative for the state to keep a certain amount of agricultural and sideline products. Consequently, the production and sales of major agricultural products in various places must be included in state planning. The various departments of agricultural production such as agriculture, forestry, animal husbandry, sideline production and fisheries produce many items of their own and objectively there exist certain proportionate relations among these production departments and production items. Therefore it is necessary for the state to consider natural conditions and economic conditions as well as the needs and possibility, and to do a good job of zoning so as to give planned guidance over the production in various places and form a rational agricultural production structure. At present, there are 6 million production teams across the country. Most of these production teams are basic accounting units. The production quotas and work quotas that are assigned by production teams to individual peasants' households are carried out individually. Therefore it is difficult for both production teams and peasant households to understand in an overall way the market situations of agricultural and sideline products and predict the development of these situations. Consequently they also need state planned guidance so that they will not carry out production blindly.

To stress the importance of agricultural production being put under the state planned guidance does not mean to abolish the decisionmaking power of production teams. By production team decisionmaking power we mean that the decisionmaking power of production teams must be put under state planned guidance. The "Resolution of the CPC Central Committee on Certain Questions in Stepping Up the Development of Agriculture" points out: "Under the premise of persisting in socialist orientation, implementing state policies, laws, and rules and regulations, and accepting state planned guidance, all the basic accounting units of the people's communes have the right to carry out farming according to their specific conditions, to decide on measures for increasing production, to decide on management methods, to distribute their own products and cash, and to oppose any unrealistic directive from any leading body or leading person." If we consider the decisionmaking power of production teams as a way to depart from state planned guidance and to permit production teams to grow whatever crops they consider profitable, apparently this view is not in line with the spirit of the decision made by the CPC Central Committee about the decisionmaking power of production teams. The state planned guidance we are talking about means following the needs of natural and economic laws, proceeding from reality and working out agricultural production plans according to specific conditions and all these accord with respecting the decisionmaking power of production teams. The state now does not generally draw up plans for the acreage of crops grown by production teams; it only defines the tasks of state purchase and assigned purchase of the major agricultural and sideline products that affect the national economy and people's life. Under the premise of respecting the state planned guidance and fulfilling the tasks of state purchase and assigned purchase, production teams have the right to arrange their own production. It is groundless to think that while we are stressing the importance of planned guidance, we do not respect the decisionmaking power of production teams.

Of course, there may appear to be contradictions between state planned guidance and the decisionmaking power of production teams. For example, by proceeding from the overall situation, the state requires that all places that are suitable for growing grain crops must grow such crops, because it is only in this way that the grain that is needed by the state can be guaranteed. This practice will also enable the places that are unsuitable for growing grain crops to undertake forestry or animal husbandry or when conditions permit, to grow industrial crops. But as the price parity between grain crops and industrial crops has yet to be rationalized, the income from growing grain crops is lower than that from growing industrial crops. As a result, production teams are not willing to grow grain crops rather than industrial crops. Another example is that the state requires production teams to sell greater quantities of some agricultural and sideline products; but production teams consider their own intermediate interests and consequently they are reluctant to respond to such requirements. In order to solve these contradictions, it is imperative, on the one hand, to step up ideological and political work among cadres and peasants in production teams so as to help them foster the idea of "taking the whole country into account" and correctly handle the relations of interest among the state, the collective and the individual. On the other hand, while working out guiding planning, the departments concerned must step up study and investigations so that the planning may accord with reality. When there are changes in reality, the planning must accordingly be amended or measures must be taken to look after the interests of production teams and peasants so as to minimize the difficulties involved in the production teams accepting state planned guidance.

AQUATIC BREEDING AND THE QUESTION OF EATING

Beijing RED FLAG in Chinese No 16, 16 Aug 82 inside back cover

[Article by Xing Xiangchen [0438 3276 5256]]

[Text] Statistics showed that 60 million tons of protein is needed annually throughout the world as food for mankind; of this figure, 40 percent is animal protein. Fish is an important source of animal protein. At present, the average per capita world figure for aquatic products is 33 jin while the figure in our country is less than 10 jin, and when shells, moss and damage are deducted from this figure, the average per capita figure is just over half a jin per month. In order to solve the problem of feeding the 1 billion population in our country as soon as possible and to provide more and better protein for the urban and rural population, it is imperative to continue to develop grain production and improve the protein content of our grain crops and at the same time to spare no efforts to produce animal protein and develop animal husbandry and fishery. In developing fishery, it is imperative to further utilize and exploit the resources of ocean and hinterland waters so as to develop aquatic breeding.

The aquatic breeding industry in our country dates back a long time and has advantageous natural conditions. Our country's coastline is more than 18,000 kilometers long, with many rivers and much fertile water and therefore it is suitable for fish propagation. The area of continental-shelf fish-breeding grounds with a depth of less than 200 meters is 1.5 million square kilometers while the area of shallow sea and seashore that is suitable for manmade breeding grounds is 7.4 million mu. Our country is characterized by many rivers of various sizes and is dotted with lakes, ponds and reservoirs. The number of rivers with an area of more than 100 square kilometers each is more than 50,000. The total area of fresh water lakes is 36,000 square kilometers with the area suitable for fish breeding amounting to about 25 million mu. The number of big, medium and small reservoirs is more than 82,000 while the area suitable for fish breeding is more than 30 million mu. But of this enormous water area, only a little has been used for developing the aquatic breeding industry. For example, the utilization rate of the 75 million mu of water in the hinterland is less than 60 percent; a great amount of water surface is yet to be utilized. The output of the water surface that has been utilized is very low. For example, the average production of water ponds is only 113 jin per mu; the average production of lakes is less than 20 jin per mu while that of reservoirs is as low as only about 12 jin per mu.

In order to supply more and better aquatic products for our people and solve the problem of "no fish to eat," it is imperative first of all to improve our understanding, step up leadership, correctly handle the relations between grain and fishery production, put the latter on the agenda and do a good job in this respect. It is necessary to follow the principle of "giving play to advantages and avoiding disadvantages," with breeding as the key and to combine breeding with catching.

Second, it is necessary to sum up the experiences of aquatic breeding in our country and to popularize advanced technology. We have many traditional breeding methods such as combining agriculture with animal husbandry and fishery to solve the problem of fodder, making use of low-priced agricultural and sideline products and their "rejects" and particularly to use grass and droppings as the main fodder for increasing aquatic products. This method is also in the interest of maintaining the ecological balance and protecting the environment. In addition, we have also created such technical measures as mixed-breeding and coupled-breeding of various species and rotational catching and breeding that are important for increasing per unit output. We must also import and popularize advanced science and technology from other countries such as net-box breeding, the warm-running-water breeding method and other new methods.

Third, readjust fishery policy and develop many forms of aquatics production. Some regions with certain conditions may concentrate their efforts on setting up a number of aquatic breeding bases. Commune members, state-owned undertakings and collective undertakings must be encouraged to carry out fish breeding in some water areas that are scattered and where it is not easy to implement unified management. Incomplete statistics from the five provinces of Hunan, Hubei, Jiangxi, Jiangsu and Guangdong show that at present, more than 1 million peasant households are undertaking fish breeding. With correct policy, this method of fish breeding will achieve better results with less investment.

Fourth, step up the building of the ranks of technicians. From the viewpoint of the whole national economy, there is a shortage of science and technology in our agriculture, but the shortage of technology in aquatic breeding is even more acute. Therefore at present it is imperative to reorganize the ranks of aquatic technicians, set up a system and adopt all sorts of methods to train a planned and organized contingent of technicians that are both Red and expert.

COMMUNIST IDEOLOGY AND OUR PRACTICE

Beijing RED FLAG in Chinese No 17, 1 Sep 82 pp 2-8

[Article by RED FLAG editorial department]

[Text] The 12th CPC National Congress has successfully opened. This congress will hold higher the banner of communism, analyze and answer major problems cropping up in the new stage of socialist construction with communist ideology and further point the way forward for the communist movement during the period of socialism. This is a congress of great historical and immediate significance. In order to study, propagate and implement all the documents and decisions of the congress in a satisfactory way, it is necessary, first of all, for us communists to study communist theory, enhance communist political consciousness, arouse our communist spirit and educate and unite the people with this theory.

I

What is communism? Communist theory and practice have told us that communism is a twofold thing: one is the communist social system and the other is the movement to realize communism. As the ultimate goal of our party, communism refers to the communist social system. Furthermore, to attain and realize the communist social system, it is necessary to pass through and depend on the communist movement. Why is our party called the Communist Party? This is because the goal of our struggle is a communist social system and our revolutionary practice is the communist movement. The Communist Party and communism are indivisible. Without the Communist Party, there would be no communist movement and the realization of a communist system would be out of the question; moreover, the Communist Party would not be worthy of its name if it did not struggle for a communist social system and carry out the communist movement. This is a most basic fact and also the most elementary knowledge.

What kind of system is the communist social system? Why does the Communist Party take it as its ultimate goal of struggle? This is because the communist social system is the most progressive, rational and fine social system in human history. In a communist society, classes and class differences will be completely eliminated, all major social distinctions and inequalities will be abolished, the whole people will have highly advanced communist political consciousness and moral values, the social productive forces will be highly developed, social products will be extremely abundant, the principle of "from each according to his ability, to each according to his work" will be implemented, labor will become a pleasurable undertaking and everybody will really become a person who enjoys freedom and develops in an overall way. It goes without saying that this is the happiest social system which has ever been seen in human history. The oppressed and exploited proletariat and other working people yearn for this social system day and night and warmly cherish the ideal of it. The Communist Party which takes the realization of the communist social system as its ultimate goal entirely reflects and represents the fundamental interests and wishes of the proletariat and other working people. This is an extremely great and lofty historical mission.

Some people say that the communist social system is a "daydream" and a "utopia." There have been people saying so ever since Marx and Engels put forth the scientific communist doctrine. Now there are still people saying so. This is not in the least strange. Among the people who say so are both bad and innocent people. We must strike a resolute counterblow at the enemy who slander and abuse communism; with regard to those who are unaware of the truth or the well-intentioned skeptics, we must conduct painstaking persuasion and explanation work among them. This is also extremely clear, definite and unequivocal.

Communism has appeared in the form of a "daydream" or "utopia" in history. For example, the socialism and communism of Robert Owen, Claude Henri de Saint-Simon and Charles Fourier in the early 19th century were in such a category. Owen and others criticized, censured and flung abuse at capitalist society and fancied that a better system would replace it. However, they failed to indicate the real way out. They not only failed to expound the nature of the capitalist system of wage slaves and bring to light the laws governing the development of capitalism but also failed to find out the social force to create a new society. The proletariat was, in their eyes, only a class which was subject to suffering and hardship. Therefore, their socialism and communism could be nothing but a "daydream."

The emergence of utopian socialism and communism not only indicated the protest of the proletariat against capitalist oppression and exploitation but also reflected the immaturity of the proletariat, that is, the proletariat had not entered the historical stage as an independent political force at that time. Engels pointed out: "Immature theory is suited to the situation of immature capitalist production and of an immature class. The solutions to social problems remain in the underdeveloped economic relationships and thus they have to come out of the brains. What the society reflects is only drawbacks, and the elimination of these drawbacks is the task of thought. This necessitates the invention of a new and more perfect social system and its imposition on society from outside through propaganda and typical demonstration if possible. This new social system is doomed from the outset to become a daydream. The more meticulously it is designed, the more it will degenerate into a sheer daydream." ("Selected Works of Marx and Engels," Vol 3, p 299)

In order to turn socialism and communism into a science, Marx and Engels put it on the basis of reality. In accordance with historical materialism and the theory of surplus value which they founded, Marx and Engels regarded socialism and communism as the result of the development of the socioeconomic movement of modern capitalist society and as the inevitable outcome of the struggle between the proletariat and the bourgeoisie rather than as the fortuitous discovery of some geniuses. The task of scientific socialism and communism is to study the economic course of the history which inevitably gave rise to these two classes and the struggle between the two, and to proceed from the resulting economic and political circumstances to find the means to solve contradictions and conflicts rather than conjuring up a possibly perfect social system. The communist social system emerges as the opposite of the capitalist social system. It is the result of the function of the social force brought about by capitalism. Therefore, the basic characteristics of the communist social system can be logically brought to light from the inherent contradictions of the capitalist social system. Of course, these characteristics can only be the general orientation and a rough sketch and are not, and cannot, possibly be well conceived and detailed concrete stipulations.

Marx and Engels were absolutely loyal to their own scientific communist doctrine. They always determined what could be determined in the light of actual conditions. Just as Lenin said: "There is no trace of an attempt on Marx' part to make up a utopia or to indulge in idle guesswork about what cannot be known. Marx treated the question of communism in the same way as a naturalist would treat the question of the development of, say, a new biological species, once he knew that it had originated in such-and-such a way and changed in such-and-such a definite direction." ("Selected Works of Lenin," Vol 3, p 243) It can thus be seen that the communist social system put forth by Marx and Engels is based on a host of absolutely true facts. It has nothing whatsoever to do with a "daydream" or an "illusion." If those who regard the communist social system as a "daydream" or a "utopia" are not muddleheaded, they must have ulterior motives. Those who are muddleheaded will become politically awakened so long as they are willing to earnestly study the works of Marx, Engels and Lenin.

We communists have never concealed our own political propositions. Our ultimate goal is to be determined to make China advance to a communist society. This is already fixed and admits of no doubt whatsoever. The name of our party and our Marxist world outlook already clearly point out this future, boundlessly bright and splendidly supreme ideal. At present, we are unswervingly marching toward this goal. No difficulties and obstructions can deter us.

II

Communism is an undertaking throughout ages. The realization of a communist social system in any country cannot be accomplished in one move. It will always go through a long process of practice. Without the unswerving disciplined hard work and heroic sacrifices of many generations, it is impossible for communism to make the transition from ideal to reality.

It is precisely in this sense that communism is not only a social system but also a movement and above all a movement. Marx and Engels pointed out long ago: "We call communism the real ["real" in boldface as published] movement which abolishes the present state of affairs." ("Selected Works of Marx and Engels," Vol 1, p 40)

The communist movement began the very day the Communist Party was founded. Internationally, the founding of the Communist League and the publication of the "Communist Manifesto" indicated the beginning of the communist movement. The first remark of the "Communist Manifesto" which clarifies the purpose and main theme from the very beginning is that "a specter is haunting Europe--the specter of communism. All the power of old Europe has entered into a holy alliance to exorcise this specter: pope and czar, Metternich and Guizot, French radicals and German police." ("Selected Works of Marx and Engels," Vol 1, p 250) The "specter" making all reactionary forces in Europe extremely frightened which Marx and Engels stated here means the communist movement. With the spread of communist ideas in the 1870's there emerged the Paris Commune in France; at the beginning of this century, the October Revolution took place in Russia. Neither of them practiced a communist social system but they undoubtedly all constituted the great communist movement which was of far-reaching significance.

The communist movement in China already has more than 60 years of history. From the day the CPC was founded, the CPC led the proletariat and the revolutionary people in embarking on the communist movement in the land of China in an organized and programmatic way. During the 28 years before the founding of the PRC, although the struggle we carried out was the new democratic revolution with the spearhead of struggle being directed at imperialism, feudalism and bureaucrat capitalism, it was an indispensable step in realizing communism in China and an important stage which we had to pass through. Therefore, during this stage, we smashed the warlords, struggled against the landlords and shared out the land, fought a bloody battle against the Japanese imperialists and overthrew the reactionary and decadent Chiang [Kai-shek] dynasty. All this constituted the communist movement. Party members and the broad masses of the revolutionary people carried out a persistent and heroic struggle for the cause of communism and thousands upon thousands of revolutionary martyrs gave their lives for it, shouting the slogan of "Long live communism." The struggle which we party members and party cadres carried out and the work which we did at our own posts constituted, in fact, a part of the great communist movement. Our enemy was also perfectly clear about this matter. At that time, they called our base areas the "communist-controlled areas." It was justifiable for them to say so because our base areas were where we started the communist movement. They called our army the "Communist Army." That was also justifiable because our army was exactly an armed group which was engaged in the communist movement.

However, some of our comrades find it hard to understand this matter. Regarding the new democratic revolution as a communist movement, as they see it, seems not to tally with Marxism. Actually, they precisely forget Marxism. Marx and Engels said: "The communists struggle for the immediate goal and interests of the working class but concurrently represent the future of the movement." ("Selected Works of Marx and Engels," Vol 1, p 284) They also pointed out: "At the various stages of development traversed by the struggle between the proletariat and the bourgeoisie, the communists represent all along the interests of the whole movement." ("Selected Works of Marx and Engels," Vol 1, p 264) The historical facts are exactly like this. The new democratic revolution led by our party was not only for the sake of the immediate goal and interests of the working class and other working people but more important, was also for the sake of the ultimate realization of communism in China. Concerning this matter, our party's program has made quite clear statements. Comrade Mao Zedong said: "The Communist Party has an immediate and a future program, a minimum and a maximum program, with regard to the social system it advocates. For the present period, new democracy, and for the future, socialism; they are two parts of an organic whole, guided by one and the same communist ideology." ("Selected Works of Mao Zedong," Vol 2, p 647) For this reason, winning victory in the new democratic revolution is only our minimum program and realizing communism is our maximum program. Did we party members not all make a solemn vow to dedicate our whole lives to the realization of communism when we joined the party? Is there not a phrase the "Internationale is bound to be realized" in the "Internationale" which we often sing with spirit? That is to say, our ultimate goal is to realize communism. In the course of the new democratic revolution, our party has educated thousands and tens of thousands of party members and advanced elements with this communist ideology to devote themselves to the noble cause of communism. If it had not been for communist ideology that guided us in our struggle, we would not have been able to win complete victory in the new democratic revolution, let alone to realize the transition from new democracy to socialism.

Since the founding of the PRC, the communist movement has been developing more vigorously in China. Following the complete victory of the new democratic revolution, our party led the people in completing the task of the socialist transformation of the private ownership of the means of production, putting an end to the history of the exploiting classes and exploitative system which had existed for several thousand years in China and establishing brand-new socialist political and economic systems. Then, our party again led the people in carrying out large-scale socialist construction. Although in the course of construction we traversed a tortuous path, no one can obliterate the achievements scored in construction. We have now entered a new historical stage. The party is leading the whole party and the people of all nationalities throughout the country in carrying out the socialist modernization program in all spheres to build our country into a country with highly advanced material and spiritual civilization. This is a grand-scale and far-reaching communist movement that has never been exceeded since the founding of our party. The full-scale development and full maturity of this movement under socialism will bring us nearer and nearer to the ultimate goal of communism. To fulfill this great task, we must hold high the banner of communism, carry forward the communist spirit, and persist in carrying out the revolutionary struggle in all spheres until the supreme communist ideal is fully realized. The

"Resolution on Certain Questions in the History of Our Party Since the Founding of the PRC" adopted by the 6th Plenary Session of the 11th CPC Central Committee pointed out: "This is a great revolution, unprecedented in human history. Our present endeavor to build a modern socialist China constitutes but one stage of this great revolution." This is the glorious task which history has entrusted to us. All of us party members and party cadres must devote ourselves to doing our bit for this great revolution.

Differing from the communist movement during the period of the new democratic revolution and also from that during the period of the transition from new democracy to socialism, the communist movement in which we are now engaged has its own characteristics. With the establishment of a socialist social system, it has become a communist movement during the stage of socialist society. At present, the conditions, whether objective or subjective, for us to struggle for the cause of communism are better than in any preceding period. First, through several decades of the party's efforts to conduct propaganda and education, communist ideas have increasingly taken root in the hearts of the people, with more and more people believing in communism and fewer and fewer people doubting and even opposing communism. Next, in the socialist society in which we live, there exist many communist factors. With the continuous development of socialist society and the reinforcement of education in communist ideas, there will surely emerge more communist new people and things. Again, through the 60-odd years, and particularly the last 30-odd years, of the communist movement since the founding of the PRC, our party has accumulated rich historical experiences, both positive and negative, and formulated entirely correct line, principles and policies which are suited to the state of things at the present stage. In sum, as the primitive phase of communist society, the basic content of socialist society is to prepare both material and spiritual conditions for moving on to communist society. This determines the nature, orientation and tasks of the communist movement under socialism.

The communist movement has more than 60 years of history in China. That is to say, the communist ideology founded by Marx and Engels has for more than 60 years been tested by practice in China and has been proved, and will continue to be proved, to be an incomparably correct scientific truth. However, when discussing the question that practice is the only criterion for testing truth in 1978, some comrades unexpectedly put forth the following argument: Communism is a truth but it has not been tested in practice. It can therefore be seen that truth should not necessarily be tested by practice and practice is thus not the only criterion for testing truth. This is out-and-out nonsense. The history of the practice of the communist movement in which our party has been engaged since its founding, as stated above, essentially refutes this erroneous view. Are all struggles which we carried out during the period of the new democratic revolution actually not the great practice of the communist movement? Are the socialist revolution and socialist construction in which we have been engaged since the founding of the PRC not precisely the great practice of the communist movement? If we say that communism has not been tested in practice, then what is the purpose of our holding meetings to sum up experience? What is the fundamental nature of this experience? By summing up experience, we mean summing up our experiences in practicing communism at the different stages of development, that is, the experiences in developing the communist movement. The "Resolution on Certain Questions in the History of Our Party" adopted by the enlarged 7th Plenary Session of the 6th CPC Central Committee was the summarization of the practical experiences in developing the communist movement during the 24 years after the founding of the CPC; and the "Resolution on Certain Questions in the History of Our Party Since the Founding of the PRC" adopted by the 6th Plenary Session of the 11th CPC Central Committee was the summarization of the practical experiences in developing the communist movement during the 32 years since the founding of the PRC. This shows that communism, this great truth, has for years experienced the test of historical practice in China. Practice has proved it to such an extent that to this day every one of us can feel it in real life. With regard to the future communist social system, we have not yet practiced it. Marx and Engels made general assumptions on the communist social system. The correctness of these assumptions, and in particular, whether or not they can be realized according to the ways and patterns which they assumed, needs of course to be tested in practice. The comrades who put forth the above-mentioned erroneous argument do not refer to this point alone. They fundamentally negate that communism is a process of practice. In this way, they do away with the indispensable relationship between communism and practice. Furthermore, doing away with this relationship will lead nowhere other than to an erroneous conclusion, that is, negating that all the revolutionary struggles we carried out in the past, and are carrying out at present, have the nature of putting communism into practice, and as a result, negating that communism is a scientific truth and regarding it merely as a hollow and abstract belief.

III

The communist movement, from the outset, has been directed by communist ideology. Without the communist ideological system founded by Marx and Engels, there would be no communist movement for us to speak of. The communist movement, from a "specter" haunting Europe, has become, after the experience of 100-odd years, a great mass movement which is sweeping the world with tremendous momentum. This is wholly due to the guidance of communist ideology. The victory of the international communist movement is the victory of communist ideology and the victory of the Chinese communist movement is also the victory of communist ideology.

It is no accident that communist ideology has unparalleled might. Lenin pointed out: "Communist theory--the science of communism created mainly by Marx, this doctrine of Marxism--has ceased to be the work of a single 19th century socialist, even though he was a genius, and it has become the doctrine of millions and tens of millions of proletarians all over the world, who are applying it in their struggle against capitalism." "That was because Marx based his work on the firm foundation of human knowledge acquired under capitalism. After making a study of the laws governing the development of human society, Marx realized the inevitability of capitalism developing toward communism. What is most important is that he proved this on the sole basis of a most precise, detailed and profound study of this capitalist society by fully assimilating all that earlier science had produced." ("Selected Works of Lenin," Vol 4, p 347) He went on to say: "The Marxist doctrine is omnipotent because it is true. It is comprehensive and harmonious, and provides men with an integral world outlook irreconcilable with any form of superstition, reaction, or defense of bourgeois oppression." ("Selected Works of Lenin," Vol 2, p 441) Communist ideology not only guides the communist movement but at the same time is also tested by the communist movement. It advances with the development of the communist movement. The more than half a century of the party's revolutionary practice has further developed Marxism-Leninism and enriched the contents of communist ideology which can thus more powerfully guide the communist movement.

The communist movement led by our party has undergone many historical stages. As we have mentioned above, what we are now engaged in has become the communist movement during the period of socialist society--the primitive phase of communism--rather than the communist movement in the general sense. In accordance with historical experience, the strengthening of the guidance of communist ideology is even more necessary during the period of socialist society. Just as without the Communist Party, socialism cannot be built, without communist ideology, it is impossible to build socialism. However, some people even go so far as to say that spreading communism and strengthening propaganda and education in communist ideas and ethics in the period of socialism is "transcending historical stages" and "contradictory to the policy of distribution according to work," and so on. These viewpoints and arguments are utterly wrong.

First, during the period of the new democratic revolution, we were already adhering to guiding all our work with communist ideology, standardizing the words and deeds of the party members and advanced elements, and spreading the communist spirit, such as serving the people wholeheartedly, "being selfless" and "utter devotion to others without any thought of self." We have now entered the stage of socialist society--the primitive phase of communism--so why can we now not do so? This cannot be explained away.

Second, in socialist society, we resolutely uphold the implementation of the principle of "from each according to his ability, to each according to his work," continuously perfect it as a matter of policy and strive to overcome egalitarian drawbacks. However, implementing this principle precisely needs, rather than excludes, the encouragement of a communist attitude toward labor among the masses of people. Party members and party cadres in particular must energetically engage in work without fixed quotas, regardless of remuneration and self, of their own accord and in the spirit of discharging their responsibilities for society to the best of their ability rather than confining themselves to the principle of "distribution according to work." In fact, inside and outside the party there are people who are engaged in this noble labor in all matters. Just imagine, can the advanced deeds of those who sacrifice themselves to save others, and particularly the thoughts and actions of those who sacrifice their own happiness and even give their lives for the sake of safeguarding the motherland

and the lives and property of the people be explained by the principle of "distribution according to work"? Upholding the principle of "distribution according to work" and encouraging the communist attitude toward labor are mutually complementary rather than being contradictory. Encouraging a communist attitude toward labor and advocating handling various social relationships with communist ethics are the required conditions for ensuring the correct implementation of the principle of "distribution according to work" rather than obstacles to the implementation of the principle. Innumerable facts have shown that wherever education in communism is strengthened, the principle of "distribution according to work" is satisfactorily implemented, the enthusiasm of the people for labor is high, the people tackle difficulties themselves and make things easy for others, they work with one heart and one mind and help one another in unity; and wherever the education in communist ideas is discarded or weakened, there emerges the trend of "doing everything for the sake of money," the principle of "distribution according to work" turns into "working according to remuneration," with everyone haggling over every ounce and even "not working despite receiving remuneration," discipline becomes lax, dereliction of duty occurs and out-and-out egoism and anarchy run rampant. These phenomena call for deep thought.

Third, in socialist society, class struggle will continue to exist within certain limits for a long time to come and the corrosive influence and attacks of capitalist ideology are still very serious. "Distribution according to work" is a socialist principle and is antagonistic to the capitalist principle of distribution. However, facts have indicated that it is impossible to resist the corrosive influence and attacks of capitalist ideology by relying on the principle of "distribution according to work" alone. To effectively resist the corrosive influence and attacks of capitalist ideology, it is imperative to rely mainly on communist ideas. Some veteran party members and veteran cadres were not conquered by the enemy's force of arms during war years and were not compelled to submit by the despotic power of the Lin Biao and Jiang Qing counterrevolutionary cliques during the 10 years of internal disorder. They are worthy of the title of hero and fighter. But they were defeated and became captives in the face of the corrosive influence and attacks of capitalist ideology. Where does the reason lie? It is mainly because they have discarded communist ethics, lost the purity of communism, and forgotten and abandoned their original intention of vowing to struggle for communism. This lesson is quite profound.

Theory and practice as well as history and reality tell us that in the socialist society, we must propagate communism boldly and forcefully. First we must teach all the party members and party cadres to preserve their own purity of communism, to standardize their words and deeds with communist ethics and observe and handle all matters with communist ideology. Then we should influence and unite the broad masses of people through the model and vanguard role of all the party members and party cadres and, together with the masses of people, develop socialist spiritual civilization with communist ideas as its core and train the Chinese people into men with revolutionary ideas, revolutionary morality, revolutionary discipline and culture. Only in this way, can the orientation of socialism be upheld and the modernization program be victorious.

Of course, by adhering to guiding our actions and work with communist ideology during the period of socialism, by no means do we need to carry out immediately the policy of realizing top-level communism. In the wake of the October Revolution, in the process of leading the socialist revolution and construction, Lenin time and again stressed that the work of spreading communist ideas on the most extensive scale should be propagated, and he highly praised and warmly supported the communist factors and buds (such as "weekend voluntary labor") which emerged at that time. At the same time, he again pointed out that the communist system should not be prematurely carried out, and held that it was harmful and dangerous to do so before the material basis was ensured for carrying out the communist system. While leading the new democratic revolution in China, Comrade Mao Zedong also said: "Beyond all doubt, now is the time to spread communist ideas more widely and put more energy into the study of Marxism-Leninism, otherwise we shall not only be unable to lead the Chinese revolution forward to the future stage of socialism, but shall also be unable to guide the present democratic revolution to victory. However, we must keep the spreading of communist ideas and propaganda about the communist social system distinct from the practical application of the new democratic program of action; we must also keep the communist theory and method of investigating problems, undertaking research, handling work and training cadres distinct from the new democratic line for national culture as a whole. It is undoubtedly inappropriate to mix the two up." ("Selected Works of Mao Zedong," Vol 2, p 666) We must firmly bear in mind and follow the principles concerning the relationship between communist ideology and existing policies, which were expounded by Comrades Lenin and Mao Zedong. We are now in a stage of socialism. As the primitive phase of communism, there are many communist factors in socialism and moreover it is advancing and developing toward its higher phase--communism--but there is, after all, a distinction between socialism and its higher phase--communism. In the past we paid a high price for mixing up and obliterating the demarcation line between the primitive and advanced phases of communism and being overanxious to overstep the primitive phase. It goes without saying that this should not be repeated. Therefore, during the period of socialism, we must adhere to the guidance of communist ideology and strengthen the education in communist ideas and must not be vague and waver in the slightest degree on this matter; at the same time, we must determine our policies under the guidance of communist ideology and in light of current actual conditions and resolutely carry them out. The argument and practice of mixing up the two different stages of development, socialist and communist, in the conditions of the present policies is wrong. The argument and practice of approaching problems in an isolated and one-sided way, denying the nature of our socialist system as being the primitive phase of communism, and thus proceeding to deny the guidance of communist ideology and deny the practice of the communist movement guided by this ideology, is also wrong. That is to say, we must conduct the struggle between two lines both in theory and practice. On the one hand, we must not isolate socialism from communism and set the former against the latter in theory and practice and negate the necessity of taking communist ideology as the guiding ideology in socialist society and on the other hand, we must also not mix up and equate socialism with communism in terms of the stage of development, and must not carry out the policies of its higher phase--communism--in the period of socialism. Only when this extremely important Marxist principle is effectively grasped and implemented, can it be ensured that our communist movement will consistently and healthily develop along a correct course.

We should have the whole world in view and look forward to the future. With a rosy future, we are full of pride and enthusiasm. Under the direction of the line of the 12th national congress of the CPC, let us hold high the banner of communism and continuously push the communist movement during the period of socialist society forward to the long-range goal of communism in a down-to-earth and highly effective way.

FURTHER PROMOTE THE SUCCESSION OF OLD CADRES BY NEW ONES

Beijing RED FLAG in Chinese No 17, 1 Sep 82 pp 9-11, 26

[Commentator's article]

[Text] The succession of old cadres by new ones has been going on steadily and healthily since the 3d Plenary Session of the 11th CPC Central Committee, thanks to the exemplary role of the proletarian revolutionaries of the old generation in vigorously, patiently and carefully pushing forward the work in this respect. This year, the CPC Central Committee has regarded streamlining of the administrative structure as a major task for the whole year, thereby greatly accelerating the progress of the succession of old cadres by new ones and making it possible for this succession to progress smoothly among the leading cadres of the central organs of the party and state. Our current task is to further promote the succession of old cadres by new ones from the top downward and in an overall manner and to make this an important matter, a matter of strategic significance to our party's communist cause, to produce the desired results.

The succession of old cadres by new ones means to build powerful, energetic leadership organizations fully capable of accomplishing socialist modernization and to set up leading groups which are more revolutionary, younger in average age, better educated and more professionally competent in all leading organs of the party and state. Specifically, this means that in the leading groups of the party and state at various levels, a number of old cadres will retire and at the same time a number of middle-aged and young cadres who have both ability and political integrity will be promoted to the leading posts.

Because of historical reasons and other reasons arising from work, our ranks of cadres are faced with the question of the succession of old cadres by new ones. At present, the leading organs of the party and state at various levels are vexed with the questions of "senility" and "inadequate knowledge." These questions are very serious in some localities. In some leading organs of the party and state, there is an acute contradiction between these questions and the demands put on leadership work during the new historical period. This situation can be thoroughly changed by starting from the top down to promote the succession of old cadres by new ones. Therefore, the succession of old cadres by new ones is not just a task for a few central organs of the party and state but is a common task confronting the leading organs of the party and state at all levels. Negligence of this question of succession will seriously impede the establishment of a leading group which is more revolutionary, younger in average age, better educated and more professionally competent. Now much headway has been made in the replacement work in the central party and state. The replacement work will start soon in all leading organs of the party and state at the provincial, municipal, autonomous regional, prefectural and county levels. Only when the replacement work has been accomplished by all leading organs ranging from the central to the grassroots levels in accordance with the plans and principles drawn up by the CPC Central Committee can we establish a powerful, energetic leading body suited to the needs of the four modernizations. This is the only way to convince the cadres and the masses to minimize the obstacles of all kinds hindering replacement work and, subsequently, to accelerate progress in this work.

The key to carrying out replacement work lies in the promotion of thousands of outstanding middle-aged and young cadres. That is to say, it is imperative to promote hundreds of thousands and even millions of these cadres and absolutely not just a few or a few dozen of them. For a long time in the past, in handling the question of promoting revolutionary successors, we held the wrong viewpoint that only a few people should be promoted. We consciously or unconsciously linked the future development and the destiny of the proletarian revolution with only a few people and neglected the role of the vast number of cadres and the broad masses of people. This method of thinking and work was incompatible with the principle of the proletariat. Our mistake taught us many lessons. During the last few years of his life, Lenin did some hard thinking about a series of questions regarding the training of successors to the revolutionary cause of the proletariat. Many of his valuable opinions still provoke our deep thoughts and serve as our guide today. In a letter dictated by him to the congress in 1922, he first proposed increasing the number of Central Committee members. As we see it today, the essence of this proposal was to train and cultivate large groups of successors to the revolution. He held that this increase is good in that it might serve "a double or even a treble purpose." He said: "Such a reform would considerably increase the stability of our party" and "the stability of our party would gain a thousandfold." ("Collected Works of Lenin," Vol 36, pp 615-616) During the period of China's socialist construction, Comrade Mao Zedong pointed out more clearly: "In order to guarantee that our party and country do not change their political color, we must not only have a correct line and correct policies but must train and bring up millions of successors who will carry on the cause of proletarian revolution." (Quoted from 14 July 1964 RENMIN RIBAO) Undoubtedly, these opinions are very correct and we can learn from them the great importance of training and bringing up millions of successors to the revolution. Today, our party has put forth that it is necessary to promote hundreds of thousands and even millions of middle-aged and young cadres. This is not only a summing-up of our party's experiences and lessons on the question of succession but also a summing-up of the experiences and lessons on this question acquired in the international communist movement. Our party is now leading the socialist modernization in a big country with a population of 1 billion. The socialist modernization is an extremely important stage of development in our entire historical course of achieving the great ideal of communism. Whether for the purpose of guaranteeing the continuity and stability of our party's line and policies, or for the purpose of preserving our party's purity of communism, or even for the purpose of accomplishing the various historical tasks at the present stage, it is necessary for us to promote middle-aged and young cadres as an important task which should be carried out in a planned way. The party's organizational departments and the party and government organs at all levels should jointly carry out this task. Any crude and careless styles of work and rash and arbitrary actions may lead to a new disaster.

The most important point in promoting millions of middle-aged and young cadres is to consider their political qualities. We must be vigilant against "three kinds of people." That is to say, we must never promote those who rose to prominence by rebellion, those who displayed strong factionalism and those who indulged in beating, smashing and looting. None of them should be promoted. Those among them who have been promoted must be resolutely dismissed. These "three kinds of people" are political dangers. Once leadership power is in their hands and the political climate is good for them, they will make trouble and again play the tricks of the "gang of four." For this reason, before the middle-aged and young cadres are promoted, their behavior during the "Great Cultural Revolution" must be seriously considered. At the same time, their political record after the downfall of the "gang of four" and in particular after the 3d Plenary Session of the 11th CPC Central Committee must be considered. Those who politically, ideologically and organizationally oppose the four basic principles, those who stubbornly resist the party's Marxist line, principles and policies and those who have committed serious political, economic and organization crimes must not be admitted into the leading groups. Those who grovel at the feet of the capitalists and those who are interested in the capitalist tricks and hanker after the bourgeois way of life are degenerates inside our ranks. They will play an enormous role in eroding our party organizations and our revolutionary ranks. Their serious danger should not be underestimated. Those who are seriously imbued with selfish ideas, whose political qualities have always been undesirable and whose work is not motivated by principle must not be allowed to sneak into the leading groups. We must specially emphasize that a party cadre, no matter how high his position and how important his work, must be a "servant of the people," treat others as equals and appear among the masses as an ordinary member of the working people. He must remain humble and prudent, honest, open and aboveboard, energetic in work and must never exploit his office to seek private gain and to profit at the expense of the masses and the state. In his actions he must observe the revolutionary discipline, faithfully carry out the party's policies and keep in line with the CPC Central Committee. He must not hesitate to sacrifice his all and to fight his whole life for the communist cause. In short, our purpose of promoting middle-aged and young cadres is to make sure that there are successors to the cause of proletarian revolution and that the communist movement may be carried on generation after generation. For this reason, the middle-aged and young cadres who are to be promoted must, first, have the political qualities of being loyal to the people and holding themselves responsible to the people and, second, are capable of serving the people. That is to say, they must be both Red and expert and have both ability and political integrity. It is extremely wrong to promote a cadre by seeing only that he is young and capable and without considering his political performance and quality.

In promoting middle-aged and young cadres, special attention should be paid to promoting and using those who are intellectuals. After the founding of the PRC and before the "Great Cultural Revolution," about 5 million intellectuals graduated from colleges and universities or attained equal educational level through private study. They have already become the backbones in our country's socialist modernization. Close attention should be paid to bringing their role into full play. Facts have shown that in an enterprise, department or locality, our work in all fields will develop if there is a group of "people in the know" who have special knowledge and are active in work and capable of maintaining ties with the masses. We must understand that qualified personnel can be trained only by being boldly used and that experience can be accumulated only through practice. The intellectuals' shortcomings should not be indiscriminately dealt with. For example, arrogance certainly is a shortcoming which should be overcome. However, one who does not have a bit of confidence can achieve nothing. Moreover, some of the shortcomings of the intellectuals are caused by their being divorced from reality. They can be corrected if the intellectuals are helped to maintain ties with the masses even though they may be holding some leading posts. There are qualified personnel around. They are before your eyes once you widen your field of vision. Once the guidelines put forth by the CPC Central Committee are implemented, it is definitely possible to discover and promote large groups of qualified or outstanding middle-aged and young successors.

In short, to further promote the succession of old cadres by new ones, it is necessary to implement the CPC Central Committee's policy on the succession of old cadres by new ones at all levels without exception, to promote hundreds of thousands and even millions of middle-aged and young cadres and to closely consider the political qualities and performances of the middle-aged and young cadres to be promoted. In this way, we can gradually, steadily and comprehensively accomplish the succession of old cadres by new ones and establish a leadership system suited to the tasks of socialist modernization. This is a demand imposed on us by socialist modernization. We must not even slightly slacken our efforts, hesitate and fall short of this demand. Otherwise, our ardent wish and strategic plan for attaining our great goal at the end of this century will come to nothing because we have a weak leading group.

The exemplary role of the old comrades is of utmost importance in further promoting the succession of old cadres by new ones. The old comrades are a valuable treasure of our party and state. In the struggle to found and develop our state, they showed no fear of self-sacrifice and fought bravely, making tremendous contributions. Now they will retire from their work posts, painstakingly select successors from among the middle-aged and young cadres, thus ensuring that the ranks of cadres are more revolutionary, younger in average age, better educated and more professionally competent and that there are successors to the cause of the proletarian revolution. This is yet another historic contribution they make to the party. It will be remembered forever by the future generations. The realization of our great communist cause needs the arduous struggle and the continuous course of succession of the old by the new throughout many, not just a few, generations. At all times and under all circumstances, a proletarian revolutionary fighter must never slacken his efforts but must struggle ceaselessly. The old comrades understand that although they have now retired, their revolutionary spirit must never recede and they must still carry out the work of passing on experience, giving help and setting examples in training the middle-aged and young cadres. Only by doing this work well will they have contributed their last ounce of strength to the party and the revolutionary cause. They also see this point very clearly: They are old and weak. They must live a few more years in order to contribute more to the party. In order to live a few more years, they should do less work. In this sense, doing less work means having more time for doing the work; doing more work means having less time for doing the work.

All our comrades, the old ones in particular, must have a high sense of responsibility for the work of promoting the succession of old cadres by new ones and must be aware of the urgency with which this work should be done. In fact, it is now time for solving without fail the problem of promoting middle-aged and young cadres, who have both ability and political integrity, to the leading posts at all levels and in various fields. Meanwhile, there are conditions for solving this problem. In particular, proletarian revolutionaries of the older generation are still around, a large number of old comrades are consciously displaying their revolutionary spirit and playing an exemplary role, and a large number of middle-aged and young cadres have both ability and political integrity and are capable of shouldering the responsibility of inheriting the past and ushering in the future. Our middle-aged and young cadres do not have so much revolutionary experience as the old cadres do. However, generally speaking, they have been trained after the founding of the PRC and are better educated. They also have acquired a great deal of experience in revolutionary work, thanks to their training in practical work for many years. Judging by those who have been promoted to the leading posts, almost all of the middle-aged and young cadres are full of vigor and highly enthusiastic in their work and, with the help of the old comrades, can do their work competently. Therefore, if we choose the right ones among them and if the old comrades do well their work of passing on experience, giving help and setting examples in training the new ones, the middle-aged and young cadres who have both ability and political integrity and who have been promoted can gradually assume the leadership work of the party and state at all levels. We should have full confidence in them.

From now on, the succession of old cadres by new ones should be gradually institutionalized. That is to say, it is necessary to establish the cadres' retirement system and to abolish the de facto lifelong tenure of office of the leading cadres. The establishment and application of this system are of great significance to the building of our party and the development of the cause of proletarian revolution. Facts tell us that the existence of the lifelong tenure of office of the leading cadres dampens the enthusiasm of the middle-aged and young cadres, causes the gradual "senility" of the leading groups and leads to the "senile cycle." Under these circumstances, our leading groups can hardly maintain their exuberant vitality and subsequently our socialist modernization cannot be smoothly carried out, our state can hardly cope with the sudden changes in the international field and will have to face sudden social upheavals caused by the question of successors. Precisely for this reason, after careful consideration, our party has determined to reform the present cadre system. Of course, due to the present conditions in our cadre ranks, some transitional methods have to be adopted to gradually enforce the cadres' retirement system and to finally and completely abolish the de facto lifelong tenure of office of the leading cadres.

The succession of old cadres by new ones has always been a major problem in our party. Serious lessons on this problem have been learned in the international communist movement and in our party. Now our party actively, systematically and methodically carries out replacement work within the cadre ranks. This shows that the CPC has taken a step forward in becoming a mature, great party. Under the leadership of this mature, great party, the succession of our old cadres by new ones can surely and triumphantly be accomplished and our communist cause will definitely prosper and be carried on from one generation to the next generation. There is no doubt whatsoever about this.

THE DEEPLY RESPECTED COMRADE CAI CHANG

Beijing RED FLAG in Chinese No 17, 1 Sep 82 pp 12-16, 32

[Article by Ou Mengjue [0575 1125 6030]]

[Text] Comrade Cai Chang is a proletarian revolutionary of the elder generation, an outstanding leader of the women's movement of our country, and a noted activist in the international progressive women's movement. She is deeply beloved and respected by the people. As early as in early 1926 I had the privilege of making her acquaintance. Since then, for more than 50 years, I have worked alongside her on various occasions. She has greatly impressed me with her affectionate concern and patient teaching. She was and is my good teacher. When I heard and read the message of greeting extended to her by the 7th Plenary Session of the 11th CPC Central Committee, I was greatly excited. Each and every word of the message brought to me a reminiscence of the past.

I

Comrade Cai Chang always stood at the forefront of the struggle in the various historical stages of the country's revolution. In this way, she has made an immortal contribution to the revolutionary course of the proletariat. Truly, she was the most outstanding feminine revolutionary of our party.

Comrade Cai's native place is Yongfeng village of Xiangxiang County (now known as Shuangfeng County), Hunan Province. Quite a number of relatives of her family are known to have sacrificed their lives for the sake of the revolution. Her mother, Ge Jianhao, was a revered old lady who was always keen for advancement, progressive in thinking, and imbued with a determined fighting spirit. Her elder brother Cai Hesen was one of the leaders of our party in its initial stages and was an outstanding proletarian revolutionary and theorist. He was killed in 1931 by the Kuomintang reactionaries. Her sister-in-law Xiang Jingyu was also one of the leaders of our party during its early stages. She was an outstanding leader of the feminist movement. She was killed in 1928 by the KMT reactionaries. She had another brother, Cai Luxian, a graduate of the Whampoa Military Academy and a member of the Communist Party. During the big Guangzhou-Hong Kong strike he acted as the commander of the Workers' Picket Corps. He was killed in the course of the struggles. Comrade Cai Chang was brought up in a family environment of this nature.

In her early youth, under the influence of Mao Zedong, Cai Hesen and Xiang Jingyu, Comrade Cai Chang took part in various progressive campaigns such as the May 4th movement, and in this way received new ideas and new culture.

Before and after the May 4th movement, Mao Zedong, Cai Hesen and others started a movement to organize young Hunanese to study in France as students under the part-work and part-study system. Xiang Jingyu and Comrade Cai Chang jointly organized an association of Hunanese girl students for the same purpose. From 1920 to 1924, Comrade Cai Chang was in France studying in such a capacity. She was able to mingle well with Chinese workers and French workers. She studied diligently the French language and various Marxist-Leninist publications such as the "Communist Manifesto." She was an active participant in such movements as the "28 February" movement under the leadership of Comrade Cai Hesen and the "Reject Indemnity" and "Occupy the Sino-French University of Lyons" movements led by Comrades Cai Hesen, Zhou Enlai, Zhao Shiyan, and others. In 1920, she became a member of such progressive bodies as the New People's Study Society, and the Workers' World Study Society. In 1922, she joined the China Socialist Youth League (European Branch). The following year, through the introduction of Comrade Zhao Shiyan and Liu Bojian, she became a regular member of the Communist Party of China (European Branch). In 1924, she was sent to the Soviet Union by the party organ to study at the Eastern University in Moscow.

There she made a more intensive study of Marxism-Leninism and the experiences of the Soviet Union's socialist revolution.

While Comrade Cai Chang was studying in the Soviet Union, a new revolutionary high tide was surging in China. To meet urgent needs, the party organization transferred her back to China. In August 1925, she arrived at Guangzhou and took part in the Northern Expedition. She served as assistant secretary and then secretary of the Women's Committee of the Guangdong-Guangxi CPC Committee. That period was the first period of KMT-CPC cooperation. The party sent her to serve as a cadre in the Central Women's Department of the Kuomintang and concurrently as the dean of the Research Institute of the Central Women's Movement, helping He Xiangning, head of the department, to promote the women's movement. As a result of efforts rendered by He Xiangning, Deng Yingchao, and herself, the women's movement in Guangdong enjoyed rapid development. Following the start of the Northern Expedition, Comrade Li Fuchun became the party representative of the 2d Army. She likewise followed the troops northward to Nanchang and took part in political work in the army as well as in the women's movement of Jiangxi Province. Soon afterwards, she arrived in Wuhan and became the head of the Women's Department of the Hubei Provincial CPC Committee. In April 1927, she attended the fifth party congress.

The failure of the great revolution caused the death of thousands of Communist Party members. Comrade Cai Chang then proceeded to Shanghai, the city of White terror, to engage in underground work. She led the strikes of the women workers in the Huxi Cotton Mill and the Zhabei Silk Factory. In June 1928, she attended the sixth party congress in Moscow and also attended the sixth congress of the Communist International. Afterwards, she traveled back and forth between Hong Kong, Shanghai and other places to continue to engage in the party's underground work.

At the end of 1931, Comrade Cai Chang proceeded from Shanghai to the central revolutionary base. At first she worked at the Political Department of the Ruijin Red Army Academy. She personally lectured on the history of social development to army cadres. The cadres who attended her lectures can still recollect that Comrade Cai Chang's lessons and lectures were impressive and moving, made people increasingly interested and enabled them to learn many of the truths of Marxism. Afterwards, she journeyed to places such as Xingguo and Ningdu and became the head of the Organizational Department of the Jiangxi Provincial CPC Committee, concurrently head of the women's department, chairwoman of the supervisory committee for industry and agriculture of Jiangxi Province, and so on. Subsequently, she took part in the world-famous 25,000-li Long March.

At the end of the Long March, Comrade Cai Chang at first worked in the Shaanxi and Gansu provincial CPC committees. She served as the head of the united front department, head of the organization department and secretary of the Zhongxin County party committee. Afterwards when in 1941 the party Central Committee reorganized the Central Women's Committee, she succeeded Wang Ming and served as acting secretary of the Central Women's Committee. She was generally responsible for promoting women's participation in the anti-Japanese struggle. In April 1945, she attended the seventh party congress and was elected a member of the Central Committee. In the same year, she was elected head of the Women's Union of China's Liberated Areas.

Following the triumphant conclusion of the anti-Japanese war, Comrade Cai Chang left Yanan and arrived at the northeast China liberated zone. She continued in her capacity as secretary of the CPC Central Women's Committee and concurrently served as the secretary of the Northeast China Bureau Women's Committee. She organized the vast masses of women to take part in the war of liberation. Following the peaceful liberation of Beijing, she organized and took charge of the convening of the First All-China Women's Congress. She was elected chairwoman of the All-China Democratic Women's Union.

After liberation, Comrade Cai Chang, in her capacity as chief representative of the All-China Women's Union, took part in the first session of the Chinese People's Political Consultative Conference. She was elected a member of the central people's government. She served as first secretary of the Women's Committee of the CPC Central Committee and continued to act as the chairwoman of the All-China Women's Union. Furthermore, she was successively a member of the 8th to 11th CPC Central Committees and was also the vice chairwoman of the Standing Committee of the 4th and 5th National People's Congresses. She thus worked wholeheartedly and diligently for the party and the people.

In the course of our party's various struggles against erroneous thinking, Comrade Cai Chang was unwavering in her stand. She spontaneously supported the correct line held by Comrade Mao Zedong and other comrades. During the period of the first KMT-CPC cooperation, Chiang Kai-shek singlehandedly engineered the "Zhongshan gunboat incident" and brought forth the "party reform program" in an endeavor to attack the Communist Party and break the KMT-CPC cooperation. Comrade Cai Chang maintained the same stand as Mao Zedong, Zhou Enlai, Chen Yannian and other comrades and was firmly determined to strike back at Chiang Kai-shek. Both before and after the "April 12th" and "July 15th" counterrevolutionary incidents, as well as at both the fifth and sixth party congresses, she was firmly opposed to the errors of Chen Duxiu's rightist capitulationism toward the Kuomintang's rightist elements. During the anti-Japanese war, she continued her determined opposition to Wang Ming's "leftist" and rightist errors. All this fully demonstrates her allegiance to the basic principles of proletarianism.

During her several decades of revolutionary struggles, Comrade Cai Chang insisted on learning and researching on Marxism-Leninism and Mao Zedong Thought. She was extremely loyal to the party and to the revolutionary cause. Toward the elder revolutionaries such as Mao Zedong, Zhou Enlai, Liu Shaoqi, Zhu De and others, she harbored deep proletarian feelings. Over several decades, she offered her entire energy to the party. For this reason, she won high respect from the entire Chinese people and even people of the entire world. Just as Miss Ning Mo Wei Er Si [1337 6206 7279 1422 2448] wrote in her book "Recollections of the Westward Journey (Continued)": Cai Chang is "China's leading female communist member," "the most active female revolutionary," and a "superior female revolutionary."

II

From the time of the Northern Expedition to after the liberation of the whole country, Comrade Cai Chang devoted herself to the women's movement under the leadership of our party. In fact, she has persevered for over half a century in the struggle for the complete liberation of Chinese women and the development of the progressive women's movement of the world and has made enormous contributions thereto.

First, she has faithfully followed and carried out the party's line for the women's movement and firmly insisted on the direction of the women's movement of the proletariat. As early as in the Northern Expedition, Comrade Cai Chang led the Guangdong Provincial Federation for Women's Liberation to struggle against the women's organizations of the rightist elements of the Kuomintang. She clearly pointed out that the "liberation of women must join forces with the national revolution and with the liberation of the working class," and in this way put the women's movement on the right track. In her article "The Russian Revolution and Women," she introduced the experiences of the women's movement in Russia. She pointed out: "The laboring women's movement is part and parcel of the entire proletarian movement." The women's movement must be linked with the liberation cause of the proletariat to become a "new contingent" of the proletariat. Only in thoroughly overthrowing the exploitation system and establishing the proletariat's own political control and domination can we talk about a real women's movement. She sounded the call: "If the Chinese women want a thoroughgoing liberation, the only way is to unite themselves and actively take part in the revolutionary movement." It may be said that from the beginning, our party's women's movement, under the leadership of comrades such as Xiang Jingyu, Cai Chang, Deng Yingchao and others, has followed the correct track of the proletariat. During the anti-Japanese war, the women's work of the party was under the leadership of Wang Ming who called in vain slogans such as "economic independence," "freedom of marriage," "opposition to the fourfold oppression," and so forth, but failed to organize women to take part in actual production and in revolutionary struggle. In this way, the women's movement segregated itself from the populace, fell into formalism, and took the wrong direction. Endeavoring to rectify Wang Ming's errors, Comrade Mao Zedong issued the call to organize women to take part in production and to render aid to the front. In 1943, based on this spirit, Comrade Cai Chang drafted for the Central Committee a "resolution on the guideline for women's work in the various anti-Japanese base areas." Comrade Mao Zedong carefully edited each and every word of the draft resolution. This was subsequently known as the "1943 Resolution." The resolution pointed out that for women to take part in economic work constituted the "most suitable work for women" and the "central link in protecting women's own interests," and would be equivalent to the same "glorious task" as the warriors fighting on the front line. The resolution clearly pointed out that this should be the "new direction of women's work in the various anti-Japanese base areas." In addition, Comrade Cai Chang personally wrote an important article entitled "Greetings to the New Direction in Women's Work." The article propagandized and explained in detail the "1943 Resolution." She thus devoted her utmost efforts to the thoroughgoing adoption and execution of this resolution. After that, Wang Ming's erroneous guideline was discredited and the "1943 Resolution" has guided the women's movement of our country ever since. Comrade Cai Chang was truly a glorious standard-bearer of the women's movement in China.

Second, she organized and led the vast women's masses to participate in the revolution and production. During the period of the Northern Expedition, I worked beside her and saw with my own eyes how she led the work of the Women's Liberation Federation of Guangdong Province, how she organized the formation of the Guangzhou-Hong Kong Joint Association of Women Workers on Strike, and how she efficiently handled the convening of a large-scale Guangzhou-Hong Kong Congress of Women Workers. At her recommendation, and with the approval of Minister He Xiangning, the women workers on strike in these two localities successively organized factories to produce reed sandals, sewing plant and knitwear plants. Women were also mobilized to solicit contributions to help solve the financial difficulties of workers on strike. Thus valuable support was given to the Guangzhou-Hong Kong strike and the way was cleared for mobilization and preparation for the Northern Expedition. In the central revolutionary base areas, for the sake of mobilizing women to take part in production and to support the war, she took the lead in going out to the field and broke the feudal superstition that "women who dare plow the fields will be struck dead by a thunderbolt." She thus succeeded in organizing the womenfolk into a huge army of workers. During the anti-Japanese war and the war of liberation, under the party's leadership, the women's movement particularly prospered and grew, and much of this was due to Comrade Cai Chang's immortal contributions. At that time, it was found that in the liberated areas the vast masses of women were busily occupied in one or another of the following pursuits: Taking part in production to support the war; or going directly to the frontline to slaughter the enemy; or bidding farewell to husband or son who were joining the armed forces; or serving as stretcher bearers or nurses attending to the wounded; or, behind the enemy lines, engaging in guerrilla warfare, strengthening the defenses and clearing the fields and working together with the civilian armed forces to resist and break the enemy's "mopping-up" campaigns; or taking part in suppressing bandits, resisting unruly elements, engaging in land reform and staging struggles against reactionary landlords, and so on. After liberation, the women of our country continued to display the traditions of the war years. On the socialist revolutionary and construction fronts, their activities literally covered "half the sky." This, in effect, was indivisible from the efforts made by Comrade Cai Chang.

Third, she trained up many women cadres and promoted the development of nursery enterprises. In Comrade Cai Chang's understanding, the development of the women's movement in our country required the existence of a large force of women cadres who were both virtuous and talented. As early as in 1926 during the Northern Expedition, she already paid great attention to the training of women cadres. She took charge of the setting up of training schools for the women's movement. She trained a number of women cadres who were subsequently sent to various parts of the country and became the backbone force of the revolution. Wherever she went, she showed intimate concern for the interests of women and gave her support to struggles such as those against feudal oppression, fighting for freedom of marriage and claiming equality between the sexes. She actively encouraged women to leave their homes in order to take part in revolutionary work. She fervently helped them to acquire culture and learning and to raise their political consciousness and thus to create conditions for their participation in the revolution. Many cadres have subsequently become the party's leading cadres thanks to her concern and encouragement. Even today many comrades can be found who have benefited from her teaching and who would fondly point her out as the first teacher ever to guide them to take part in the revolution. In the actual revolutionary struggle, Comrade Cai Chang managed to summarize a set of experiences in cadre training. She said: We must systematically train up party and nonparty women cadres. Women cadres must be discovered and trained up amid struggle. While we must pay great attention to giving vital training to comrades from families of industrial workers or peasants, we should not confine ourselves to the theory of the unique importance of class origin. We must boldly select people who are "upright, good in labor, can unite the populace, and dare to struggle" and people who are both virtuous and capable. We must pay attention to training up women cadres who belong to the intelligentsia while, for those women cadres who already possess a known degree of intelligence and technology, we should guide them to do more intensive study and research so as to become specialists. As to the method of training, we can set up cadre schools, or short-term training classes, or let the elder or more experienced people teach the new. These experiences summarized by Comrade Cai Chang are still very valuable today. In May 1949, Comrade Cai Chang gave her vigorous support to the establishment of an All-China Training School for Women

Cadres. This school exists even now (although classes were interrupted for a brief period) and has trained up for the various localities a large number of women cadres. At the eighth party congress, she delivered a speech on "Actively Training and Promoting More and Better Women Cadres." In the speech, she specially dwelt on the importance of selecting, training and promoting women cadres and on the method of training these cadres.

Concurrently with actively training up women cadres, Comrade Cai Chang's attention was also directed at children's welfare. She was particularly concerned with the orphans of martyrs and took a special interest in fostering successors to the revolution. During the Yanan period, through Comrade Cai Chang's efforts, Yanan's first nursery school was established. It provided care and education to many of the martyrs' children and cadres' children. Following the martyrdom of Comrades Zhang Tailei, Guo Liang, Cai Hesen and Xiang Ying, she was extremely concerned with the well-being of their children and with their subsequent education and growth. When she was convalescing in Moscow, she paid frequent visits to the international nursery to see the Chinese children entrusted to its care. The children themselves were very fond of her and affectionately called her "Mother Cai." In addition, she set up nursery classes to train up cadres for children's welfare and devoted much effort to bringing up the revolution's younger generation.

Fourth, she committed herself to the international democratic women's movement, extended the influence of the Chinese revolution to the international front, and rendered aid to the struggle for liberation of the world's women workers. At the end of World War II, on 1 December 1945, the International Democratic Women's Union was established with the purpose of establishing everlasting peace and strengthening the friendship and unity of women all over the world. At the end of that year, the Women's Union of China's Liberated Areas became a member of the International Women's Union. In 1946, Comrade Cai Chang was elected a director of the International Democratic Women's Union and in the following year was elected vice president. In November 1948, when the Second International Women's Congress was convened in Budapest, Hungary, Comrade Cai Chang led a delegation of China's women representatives to take part in the congress. This writer happened to be a member of the delegation to Hungary. Comrade Cai Chang delivered a speech at the congress. She analytically explained the relationship between the proletarian revolution and women's liberation and systematically told the congress the state of development, role and experience of China's revolutionary women's movement. In great anger, she unveiled and condemned the atrocities of the American soldiers and the Kuomintang reactionaries in exploiting, oppressing and inhumanly trampling on the rights of womenfolk in the KMT-dominated areas. Her speech won deep sympathy and support for the Chinese women from the delegates in attendance. In the early period of the formation of the PRC, our country was entrusted by the International Democratic Women's Union to handle the preparatory measures for convening the Asian Women's Congress in Beijing. Comrade Cai Chang was head of the preparatory committee and took up the responsibility of preparing for the convention of the congress. In the course of such international intercourse, Comrade Cai Chang propagandized to the world China's revolution, in this way expanding the influence of the Chinese revolution, strengthening China's international status, and winning honor and glory for Chinese women. At the same time, the development of the international progressive women's movement was fostered.

III

The whole people and people of the entire country loved and respected Comrade Cai Chang because of her determined and firm party "character," elegant personal integrity and high moral character. Truly, she is a superior representative of the proletariat. Her many virtues constitute indeed a valuable spirit and wealth for eternally educating the millions of party members and people. Our Chinese women take great pride in having amidst them such an outstanding proletarian woman revolutionary.

Comrade Cai Chang has a deep faith in communism. Imbued with this faith, she has worked relentlessly for the revolution and never paused for a moment in the endeavor. Over several decades of struggle, she has from beginning to end demonstrated an unyielding, indomitable, resolute and determined revolutionary spirit. In her family alone, several members have already fallen victim to the reactionaries' ruthless slaughter, but she was never frightened. What she did was to bury the dead, take over their baton and flag and continue determinedly with the struggle. While engaging in underground work in the White-terror stricken cities like Shanghai, Guangzhou and Hong Kong, she was always in danger of being caught or killed but she was never mindful of her own safety. In the Long March, she scaled snowy mountain tops or crossed the grassland and all the time insisted on doing propaganda and promotion work and on toiling along with the populace. Sometimes when the comrades were fatigued, she would loudly sing the "Internationale" or the "Marseillaise" thus imparting faith and strength to the populace and fully demonstrating the steel-like aspirations of Communist Party members. In the 10 years of internal disorder, Comrade Li Fuchun suffered humiliations of various sorts and was branded as "going against the current," or being a "black ringleader." She herself was implicated. But even in such circumstances, she and Comrade Li Fuchun never forgot to study Marxism-Leninism-Mao Zedong Thought. They would talk about the party's history with other comrades to augment their faith in the party. Mao Zedong said: Comrade Cai Chang is an honest person. This gave her much encouragement.

In 1973, a tea party was held in the Great Hall of the People in celebration of the 8 March International Women's Festival. Comrade Zhou Enlai specially invited her to be present and warmly praised her in the course of the party. On her 80th birthday, Deng Xiaoping, Deng Yingchao, Kang Keqing, Zhuo Lin and other comrades went to her residence to offer their congratulations. Comrade Nie Rongzhen additionally brought her a gift, a Chinese potted landscape adorned with a miniature evergreen tree. All of them conveyed the party's warm feelings and concern, in the hope that she would live comfortably in her last years.

When Comrade Cai Chang was still young, she saw with her own eyes such scenes as communist intellectual elements like Mao Zedong, Cai Hesen and others, with only an umbrella and a pair of sandals but not a cent in their pocket going about everywhere, penetrating deep into the peasant villages to do investigation work and fraternizing with the workers and peasants. This deeply impressed on her that in revolution if you do not go deep among the masses and if you segregate yourself from the realities of China, then the revolution can hardly succeed. Since taking part in the revolution, she has taken such people as Mao Zedong, Cai Hesen and others as a model, gone deep into the worker and peasant masses and engaged in research and investigation work. In Guangzhou, at the time of the Northern Expedition, she frequently visited factories, rural villages and schools to do investigation and publicity work, encouraging the workers in the work. When doing underground work in Shanghai, she went deep among the worker masses. As a result, the attempts of the reactionaries to arrest her were foiled more than once. In the central revolutionary bases, she was entirely one of the masses. She would labor like the masses and intimately coached them in culture and learning. She penetrated deep into the families of the masses to learn the real situation and to do ideological work. In 1941 when she took up the post of acting secretary of the Central Women's Committee, she at once dispatched investigation and research teams to the counties and municipalities in the Shaan-Gan-Ning [Shaanxi-Gansu-Ningxia] border area. Comrade Mao Zedong's article "On Investigation in Rural Villages," was based on talks with the investigation teams at that time. This was Comrade Cai Chang's way of insisting on penetrating deep into a subject and learning the facts from all sides and then proceeding to shape the guideline for work in accordance with the actual conditions. This completely rectified Wang Ming's vulgar work style of formalism, objectivism, and doctrinairism. In 1942 a special issue of the Yanan JIEFANG RIBAO carried a reprint of Mao Zedong's caligraphy which urged "going deep among the masses and avoiding empty talk." These Chinese characters represented warm coaching to the women's work under the leadership of Comrade Cai Chang. They vividly described just what she was doing.

Comrade Cai Chang is a friendly and amiable person. Before her comrades and her subordinates she is untiring in her persuasion and has the utmost patience in doing educational work. She stands on principle and makes rigid demands. At the same time, she is friendly and always endeavors to unite comrades together. In my recollection, she would always meet people with a smiling face. I never had any occasion to see her angry. She has the tender heart of an affectionate mother. She treats comrades sincerely, warmly and straightforwardly, and is always glad to help others. To brothers and sisters of other classes, she is full of affectionate sentiments. I remember that on one occasion in Guangzhou, a peasant girl by the name of Cheng Furu left her home to escape from a mercenary marriage. Comrade Cai Chang gave the girl refuge in her own home. She helped her to solve her living problems. Following patient educational work, this girl was finally converted to the path of revolution and eventually joined the Communist Party of China. In Yanan, many leading cadres lived near her cave. Whenever there was a family dispute, she was invited to mediate. Everybody treated her as an intimate acquaintance. Just because of her possession of such qualities, within our party she has won everybody's respect. The entire party all fervently called her "Big Sister Cai."

Comrade Cai lives strictly within her means and lives very frugally. This has always been her style, be it in war years or in peacetime. When doing underground work in Shanghai, she worked very hard every day. Besides, she suffered then from a stomach ailment and occasional headaches. She did not have the heart to spend her money and preferred to economize on food and clothing. She put aside Comrade Fuchun's meager salary and eventually contributed the money to the party's coffers to serve as party expenses.

After liberation, she and Comrade Fuchun continued to live frugally. Even now she wears clothes from the 1950's. The savings from her and Comrade Fuchun's salaries were not accumulated or reserved for their children on their younger generation. Rather, the whole of the savings was contributed to the party. Following the death of Comrade Fuchun, she contributed a sum of 100,000 yuan under her name and Comrade Fuchun's name to the party as "party fees." In fact, several years earlier, she had already contributed 30,000 yuan for the same purpose. She has always felt that the party had given her much but she had contributed little in return and that therefore she must devote her entire efforts to the service of socialist construction.

Comrade Cai Chang has never been proud or arrogant. Rather, she has always been modest and cautious. She herself is a superior woman revolutionary while her brother Cai Hesen, sister-in-law Xiang Jingyu and her husband Li Fuchun were all noted leaders in the party. However, she has never publicized herself or her family members. On one occasion, a correspondent of ZHONGGUO FUNU [CHINESE WOMEN] magazine visited her and asked for information about her past history and family background. She courteously rejected the request. In her estimation, revolution is the people's undertaking. We should propagandize the party and the people and should not heap the achievements on any one individual's account. This is indeed a lofty virtue of a Communist Party member. Although for a long time she has occupied a leadership position in the party and in the government, she and Comrade Fuchun never once utilized their power and position for private gain. Nor did they allow their relatives, friends or children to do so. She has always maintained the "color" or lifestyle of a public servant of the people. She has a strict organizational concept, has always spontaneously taken part in organizational life, paid the party fees on due time, and rigidly observed the party's security protection system and various kinds of disciplinary codes. What she wants for her children is especially stern and demanding. She sent her only daughter to study agricultural technology in the Soviet Union so as to devote her life to the reorganization of China's backward agriculture. One of her grandchildren was staying with her, but she made him take his meals in the public canteen for staff and workers. She also made him take part in the labor and in production. She always taught him to learn from the workers and peasants and to make friends with the latter's children.

In recent years, she wholeheartedly responded to the party's call to abolish the lifelong tenure system for leadership cadres. She wrote on various occasions to the party and the state to offer her resignation from her party and government posts, in order to better train up her successors. In 1978, she relinquished the post of president of the All-China Women's Union. In September 1980, she was no longer the vice chairwoman of the National People's Congress. This year, she no longer took part in the party's 12th national congress and resigned from all her party posts. Her action fully demonstrated an old Communist Party member's breadth of vision and earned her even greater respect from the whole party and whole people.

THE 3D PLENARY SESSION OF THE 11TH CPC CENTRAL COMMITTEE CREATES A NEW PATH FOR AGRICULTURAL DEVELOPMENT IN OUR COUNTRY

Beijing RED FLAG in Chinese No 17, 1 Sep 82 pp 17-21

[Article by Zhan Wu [6124 2970] and Liu Wenpu [0491 2429 3877]]

[Text] Since the 3d Plenary Session of the 11th CPC Central Committee, a profound change has taken place in the features of the countryside and an excellent situation of unprecedented vitality has appeared. This is manifested by an all-round development in agriculture, forestry, animal husbandry, sideline production and fishery, and a big and extensive increase in production. Between 1979 and 1981, the average annual growth of 5.6 percent in gross agricultural output value surpassed the average annual growth rate of 4.4 percent between 1950 and 1981. There was a pronounced improvement in the living standard of the peasants. The net income of peasant households showed an unprecedented average growth rate of 18 percent between 1979 and 1981. The proportion of affluent production brigades with an average per capita income of more than 150 yuan from collective distribution rose from 3.8 percent in 1978 to 15.6 percent in 1981. A large number of communes and production brigades began to shake off the condition of economic backwardness, straitened circumstances and lack of initiative among commune members, and the number of poor counties with an average per capita income of less than 50 yuan from collective distribution dropped from 381 in 1978 to 211 in 1981.

The main reason why the rural economic situation has been able to quickly take a turn for the better is because, since the 3d Plenary Session of the 11th CPC Central Committee, we have more thoroughly corrected the long-standing "leftist" mistakes in agriculture and adopted a series of important policies and measures such as raising the prices of some agricultural sideline products, reducing or exempting taxes by taking circumstances into consideration, improving credit and agricultural sideline products purchasing work, encouraging and backing the commune members to make a success of their private plots and family sideline production, restoring country fair trade, popularizing various forms of responsibility system, respecting the ownership rights and decisionmaking power of the collective economy, suiting measures to local conditions and supporting the collectives and individuals to develop a diversified economy. This has enabled the agricultural economy to embark on a new path in keeping with the conditions in our country within a few short years.

The Important Thing Is To Arouse the Enthusiasm of the Peasants

The "Decision of the CPC Central Committee on Certain Questions Concerning the Acceleration of Agricultural Development" adopted by the 4th Plenary Session of the 11th CPC Central Committee pointed out: "The first point of departure in affirming agricultural policy and rural economic policy is to give full play to the superiority of the socialist system and to the enthusiasm of the 800 million peasants in our country. We must ideologically strengthen socialist education over the peasants, and at the same time, economically show full concern for their material interests and politically safeguard their democratic rights. Divorced from given material interests and political rights, the enthusiasm of any class cannot spontaneously emerge." This has grasped the crux of our agricultural problem. In the 20 or more years since cooperativization, we have wasted a great deal of energy on rural work. However, prior to the 3d Plenary Session of the 11th CPC Central Committee, about one-third of the production teams still had an average per capita income of less than 60 yuan and lived in the straitened circumstances of "relying on resold grain for food, relying on loans for production and relying on relief for existence." Although the grain output of some of the economic units of advanced collectives rose, the economic effect was not ideal. That was because they did not grasp this crux of solving the material interests and political rights of the peasants and did not touch on the basic defects in the agricultural policy and the management system. They suppressed the enthusiasm of the masses and caused agricultural economic development to lack any kind of intrinsic motivation. These defects were mainly manifested in:

First, one-sided emphasis was given to the development of heavy industry, and the economic interests of the peasants were ignored and infringed upon. High indexes, high purchasing quotas, blind commands and inappropriate restrictions on the peasants to prevent them from developing avenues for making money resulted in the fact that production could not be properly developed and the livelihood of the peasants could not be properly improved in many areas.

Second, the peasants lacked decisionmaking power. Many production policies did not come from the peasants themselves but from the upper levels. The policymakers were also far away from the scene of production and did not have to assume any responsibility for mistakes in commanding production. This was the basic reason for blind commands. Blind commands inflicted a heavy economic burden on the peasants.

Third, egalitarianism was practiced in the internal distribution of the collective economy, everybody ate out of a "big pot" and the economic interests of the individual were not linked with the fruits of labor. The peasants had no economic incentive, consequently their production initiative and labor enthusiasm were dampened.

In the light of the above defects, the agricultural policy decisions since the 3d Plenary Session of the 11th CPC Central Committee have used carrying out the production responsibility system as the turning point supplemented by various comprehensive countermeasures to firmly grasp this basic problem of arousing the enthusiasm of the peasants. Therefore we have been able to sweep away the depressing atmosphere in the countryside within a few short years and witness the appearance of a dynamic and vigorous situation.

From the tortuous path of development taken by our collective economy, we can obtain the following revelations:

First, in socialist construction, we must adopt an extremely cautious attitude in coordinating the economic interests of the state and the peasants. The state must accumulate funds and carry out industrialization, and the peasants should make contributions. At the same time, we must carry out work in accordance with the capability of the peasants and must not try to achieve high rates of industrial growth at the expense of the peasants' rightful economic interests. Otherwise, we will dampen their enthusiasm and damage agriculture, and in the end, the whole national economy will also suffer. One of the important policy decisions made after the 3d Plenary Session of the 11th CPC Central Committee was to readjust the proportion between agriculture, light industry and heavy industry and provide enormous material benefits to the peasants by raising the purchasing prices for agricultural sideline products and reducing taxes. This has played a very important role in arousing the enthusiasm of the peasants. Naturally, the material benefits given by the state to the peasants cannot exceed the extent the state can afford. If this extent is exceeded, the balance of financial revenue and expenditure as well as price stability will also be affected. This would be disadvantageous to the state, and ultimately, to the peasants.

Second, rural economic policy must be based on showing concern for the material interests of individual peasants and correctly handle the economic interests of the state, the collective and the individual peasant. The reason why the production responsibility system can produce such obvious results is because it has closely integrated the personal interests of the peasant with those of the state and the collective. Because of this, the peasants will profoundly feel that they are the masters of the collective economy and will wholeheartedly throw themselves into socialist construction.

Third, respect the decisionmaking power of the peasants. The "Decision of the CPC Central Committee on Certain Questions Concerning the Acceleration of Agricultural Development" stipulated: "Under the premise of upholding the socialist orientation, implementing the policies, laws and decrees of the state and accepting the planned guidance of the state, all basic accounting units of the people's communes have the right to carry out planting in line with local conditions, the right to determine measures for increasing production, the right to determine methods of management and administration, the right to distribute their own products and cash and the right to resist the blind commands of any leading organ or member." This has played a very good role in arousing the enthusiasm of the peasants. The production contracts signed between the peasants and the production teams and the supply and marketing contracts signed between the peasants and the state commercial departments which appeared everywhere have more clearly defined the rights, responsibilities and interests of the peasant, the collective and the state. They not only safeguard the decisionmaking power and rightful interests of the peasants, but also safeguard the implementation of the plans of the state and the collective.

Rural Economic Development Must Take a Chinese-Style Path of Modernization

Since the 3d Plenary Session of the 11th CPC Central Committee, leading comrades of the Central Committee have successively proposed that our agricultural development must take a Chinese-style path of modernization. This includes transforming agriculture from solely grasping grain to all-round development and from purely carrying out farmland water conservancy construction to properly grasping the planting of trees and afforestation and improving the plant cover at the same time. Our policy is, we absolutely cannot slacken up on grain production and the active development of a diversified economy. Our agriculture must take the path of garden-style cultivation and horticulturalization [zou yuan lin hua yuan yi hua de dao lu 6382 0954 2651 0553 0954 5669 0553 4104 6670 6424], the path of all-round development of agriculture, forestry, animal husbandry, sideline production and fishery and the path of comprehensive operation of agriculture, industry, commerce and transportation. After several years of practice under the guidance of these guiding principles, we have initially developed a path for agricultural development that is in keeping with our national conditions and tangible results have already been achieved.

What are the distinguishing features of the so-called Chinese-style path of agricultural modernization, and what is its objective inevitability?

1. In the utilization of cultivated land, it is necessary to carry out garden-style cultivation and horticulturalization. China has a huge population and little land, and the population will continue to grow in the future. Therefore, our policy can only be to keep on raising the utilization rate of the land and take the path of intensive operations, garden-style cultivation and horticulturalization.

In the process of readjusting the production structure and developing diversified economy, the most conspicuous contradiction is the struggle between grain and cash crops for land. This is mainly because the degree of intensive management of agricultural production in our country is not high and extensive management has been carried out on a very large part of the cultivated land. To solve this contradiction, we can only find a way out from garden-style cultivation and horticulturalization. Regardless of whether in grain or in cash crops, we must keep on raising the level of intensive cultivation and greatly increase the yield per unit area. Here, we must also properly handle the question of long-term and immediate relations. Taking the long-term view, we must continue to readjust the production structure of agriculture. A considerable part of the cultivated land will gradually shift to various areas of the diversified economy in order to greatly increase the ratio of diversified income in agricultural income.

Otherwise, it will be difficult to quickly develop the rural economy and also difficult to more speedily bring general affluence to the peasants. However, readjusting the production structure is, in the final analysis, conditioned by the level of productive forces and the level of the supply of commodities and grain in particular. Under the present condition of the level of our agricultural productive forces being very low and the grain problem still rather tense, the steps of readjusting the production structure cannot be too quick. Under the condition that there is no evident improvement in unit grain yield, the area of grain field should be stabilized at a certain level and can no longer be reduced. All areas suitable for the planting of grain must develop grain crops. Areas which are not only suitable for the planting of grain but are also suitable for the development of cash crops should give priority to the planting of grain. A small number of sandy land, alkaline land and sloped land areas not suitable for the planting of grain but suitable for the development of cash crops or forestry and livestock production naturally must not have grain planted on it. The extent of readjusting the production structure must be determined in accordance with the margin of increase in the unit yield of grain and cash crops. An important aspect at present is to transform the medium- and low-yield fields which accounted for two-thirds of the existing cultivated land in our country. If effective measures can be taken to raise the unit yield of this portion of cultivated land, the contradiction in the struggle between grain and cash crops for land can be greatly mitigated.

2. Rural economy must implement the all-round development of agriculture, forestry, animal husbandry, sideline production and fishery as well as the comprehensive management of agriculture, industry, commerce and transportation. For a long time, one of the serious defects in the development of agriculture was focusing attention only on the 1 billion and more mu of cultivated land and neglecting the use of the vast mountain areas, grasslands and water areas. Since the 3d Plenary Session of the 11th CPC Central Committee, we have broadened our field of vision. We understand that people can make use of the abundant resources of these places to produce ligneous oil, ligneous grain, dry and fresh fruit products, aquatic products and livestock products. All of these are excellent foods. They not only can satisfy the various livelihood needs of the people but can also reduce the pressure on grain. We understand that grain production is the basis for the development of forestry, animal husbandry, sideline production, fishery and diversified economy, that forestry also provides excellent ecological environment for the development of agriculture and animal husbandry, and that forestry, animal husbandry, sideline production, fishery and diversified economy supply fertilizer and funds to the planting industry. As a result of the implementation, an excellent situation has appeared of the all-round development of agriculture, forestry, animal husbandry, sideline production and fishery promoting each other.

China has a population of 1 billion people, of which 800 million live in the countryside. China has a labor force of 400 million people, of which 300 million are engaged in agriculture. Since 1957, our agricultural labor force has increased by about 50 percent and our agricultural machines and power for agricultural use have increased 10 times, scores of times and even hundreds of times, but the cultivated land worked by the agricultural labor force has been reduced by half and there is a great surplus of agricultural labor. Since the institution of the production responsibility system, this problem has become even more pronounced. Where can we assign this surplus agricultural labor? Our national economy is backward, and the ability of urban industries, commerce and service trades to absorb surplus rural labor is limited. Moreover, the increase of the population in cities and towns is also conditioned by the situation of commodities and grain supply, and there will be no basic change in this situation for a relatively long time to come. Therefore, we must keep most of the surplus agricultural labor in the countryside and find a place for them there. This is advantageous to the all-round development of agriculture, forestry, animal husbandry, sideline production and fishery. At the same time, we must develop rural industries, commerce, transportation and service trades in a planned manner, promote the development of rural towns, bring about the development of rural culture, education, social welfare and public undertakings and progressively diminish the gap between towns and villages.

3. Agricultural production must develop along the direction of making concentrated use of labor and knowledge. We must give play to this superiority held by the rich agricultural labor resources of our country. Automation and mechanization of agriculture can only be selectively carried out in key points, and we cannot blindly run after wholesale mechanization and automation under existing conditions in China. For the sake of satisfying the constantly growing material and cultural needs of our society, we must not only pay attention to improving labor productivity, but we must also pay attention to improving the productivity of the land. To do so, merely relying on increasing capital and means of production is not enough. We must raise the level of intensive cultivation and put in more work and know-how. Our agriculture has a fine and longstanding tradition of intensive cultivation. We must continue to give play to this distinguishing feature and integrate it with modern science and technology. For this reason, we must attach great importance to the promotion of rural intellectual development. Without a large number of peasants with a good grasp of science and technology, there will not be a Chinese-type modernization in agriculture. Rural intellectual development must begin with an improving rural education, the setting up and perfecting of a sparetime cultural and technical education system and a setup for popularizing rural technology to the peasants is a path for raising the technical level of rural areas that requires little investment and produces faster and better results.

Under the Premise of Public Ownership of the Means of Production, Management of Collective Economy Must Be Flexible and Diversified

For a long time, people have developed this kind of understanding: After the cooperative transformation of agriculture, collective management, centralized labor and unified distribution should be practiced. This traditional concept has been smashed by the practice of the peasant masses since the 3d Plenary Session of the 11th CPC Central Committee.

At present, the two forms of the responsibility system practiced by most of the communes and production brigades are "production contracted to each household" and "responsibility for the task assigned to each household." Some changes have taken place in the unified management and unified distribution system of the production teams, and what they practice is decentralized management with the family as a unit, or the collective economy has adopted the form of household management. This reform in management reflects a change in rural relations of production. It cannot be denied that various districts have a number of well-run production teams. Their economic level, management level and the income level of their commune members are higher. They have accumulated more public property and a very great change has taken place in the features of their production and livelihood. This kind of production team can, and also should, continue to practice the form of unified management and unified distribution with the production team as a basis. However, such production teams are actually very few in number. As for the communes and production brigades in many districts, household management has become the principal management form of the collective economy.

Why is it that socialist collective agriculture can adopt the form of household management, and will not this form of household management change the socialist character of the collective economy? Outwardly, the form of household management adopted by the collective economy at present bears a certain resemblance to the individual economy. However, the character of a mode of production should not be judged on the basis of its form. We should go beyond the form to analyze its internal economic relations. The distinguishing features of management by separate household are: 1) It is carried out on publicly owned land. The ownership by the collective over the land is protected by law and the land cannot be leased or sold. There are also stipulations regarding the use of the land, and if necessary, it can be readjusted or taken back. Therefore the economic position of the contracting peasant households is entirely different from that of individual peasants. They have no means to freely amass land, and polarization is also inevitably restricted. 2) As the contract-awarding unit, the collective economy can supervise and direct the activities of peasant household management in accordance with the terms of the contract. It also possesses essential material means such as large and medium-size farm machines and implements as well as water conservancy facilities able to influence the production of the subcontracting households and bring them into line with the plans of the state and the collective. 3) In addition to administrative methods, the state also has at its disposal to orient production all essential economic means, including large-scale industries, commerce, credit, subsidies and taxation. These conditions will shift decentralized household management from the socialist course and place it in the service of socialist interests. Therefore, it is an integral part of the collective economic structure of socialist agriculture and a form embodying the socialist mode of production.

For a new mode of production to adopt the shell of the old mode of production at the initial period of its establishment, because productive forces are not strong enough, is not a unique phenomenon in history. At the initial period of its establishment, the capitalist mode of production had extensively adopted the form of household industries, and judging from the appearance in connection with such characteristics as the employment of household labor, the use of the home as a factory and the independent household management, there was almost no distinction between these household industries and the former household handicraft industries of capitalism. However, because they had established contract relations with large capitalist factories, Marx correctly pointed out that with the exception of a similarity in name these household industries were completely different in essence from the household industries of the past. They were the external sections of capitalist factories and their workers also increasingly became wage workers. For the same reason, separate household management under the publicly owned economy is only using the form of the small peasant economy, but its essence has basically been changed.

However, we should see that household management also has its limitations. Most have not broken away from the state of natural economy, and management items are small and complete. This situation is in contradiction to the demand for the further development of production. This is most sharply manifested in: It is detrimental to the specialization of production techniques, and people with specialized technique also cannot easily bring their skill into full play. Contracting everybody to work in large fields is detrimental to changing the state of the unitary production structure. Separate management has made it difficult to centralize for production the surplus funds and labor scattered around the countryside. It affects the rational utilization of large and medium-size agricultural machines and water conservancy facilities as well as the popularization of advanced science and technology. Moreover, it can also be easily divorced from the plans of the state and the collective. It is detrimental to developing the commodity economy and raising the marketability of commodities. Therefore, our socialist agriculture must certainly develop along the direction of specialization and socialization. Such household management on the basis of public ownership will also gradually head toward specialization and socialization along the three paths listed below.

1. Specialization of contract management and household sideline production. The specialized households and key households that have emerged everywhere at present are an embryonic form of specialization and socialization. They are a transitional form of development from natural economy to modernized agriculture. In terms of the whole country, their number is still very small. As they require little investment but produce better economic results and more commodities with high marketability, they have already shown great vitality. They have a common tendency, which is that they have gradually broken away from the small and complete natural economy. They have first of all separated the planting industry from the livestock and poultry-raising industry. Since then, specialized division of labor has also appeared within the planting industry and the livestock and poultry-raising industry and they have also set up all kinds of socialized technical service companies and organizations.

2. Strengthen the ties and joint operations of the socialist-owned economy. After carrying out separate household management, some of the better-run production teams have, on the principle of unifying what should be unified and separating what should be separated, strengthened unified control and use of large and medium-size agricultural machines and water conservancy facilities, and some of the sideline industries not suitable for decentralized management have been placed under the unified management of production teams or production brigades. Based on the demands of the state plan and the needs of the collective economy, they have worked out a unified production plan and have also properly organized contract work to guarantee their implementation. They have drawn necessary funds, including accumulated funds, from the reserves kept by the collective to give play to the material base of unified management and expanded production. In this way, they have strengthened the economic ties and leadership to the collective economy over various peasant households, with notable results. Along with the raising of the degree of specialization and socialization of various peasant households (especially specialized households and key households), the ties between the management activities of the peasant households and the commercial, transportation, agricultural product processing and technical service departments of the state and the collective have steadily strengthened, and some of them have also set up joint operations with the above-mentioned organizations. The higher the degree of specialization and socialization, the greater the reliance of the management activities of peasant households on the socialist publicly owned economy and specialized service departments and the more they are conditioned by socialist planned economy.

3. Organization of new economic cooperation and alliances. In areas carrying out the "production contracted to each household" and "responsibility for the task assigned to each household" systems, economic cooperation and alliance between the contracting households have experienced varying degrees of development in recent years. On the whole, they can be divided into: 1) Temporary production cooperation. The distinguishing features are: voluntary production cooperation, with separation and integration or alliance but no integration of a seasonal nature, for the sake of solving the contradiction between the dissemination of advanced technology over a large area and decentralized management. The nature of labor cooperation among the peasant households takes such forms as labor exchange, mutual help and joint soaking and raising of seedlings. Some have used their hardcore technical forces to contract with peasant households for certain technical and production tasks, such as the prevention and control of plant diseases and elimination of pests. Certain peasant households have set up unified planning and technical service organizations. 2) Establishment of an independent economic alliance. Generally speaking, this is led and organized by people who have a good grasp of technology with those taking part putting in investment and buying a share. Some have mainly taken advantage of their natural resources, some have joined forces to raise money for running sideline production.

There are still many problems facing agriculture, and we cannot treat them lightly or be unrealistically optimistic. However, the course has been charted and the way clearly pointed out. It has only been a short time since the implementation of the policies affirmed by the 3d Plenary Session of the 11th CPC Central Committee, but the changes taking place in the countryside have already manifested the powerful vitality of these policies. We are positive that they will continue to promote the development of our agricultural and rural situation in a favorable direction.

A MAJOR PROBLEM IN IMPLEMENTING THE POLICY TOWARD INTELLECTUALS

Beijing RED FLAG in Chinese No 17, 1 Sep 82 pp 22-26

[Article by RED FLAG commentator]

[Text] Earnest and overall implementation of the party's policy toward intellectuals, in particular toward middle-aged intellectuals, is an important question affecting the overall situation in the socialist modernization of our country.

Since the smashing of the "gang of four," especially since the 3d Plenary Session of the 11th CPC Central Committee, the party Central Committee has attached great importance to the question of intellectuals. It has done much theoretical work in straightening things out in this respect and has adopted a series of measures to implement the policy toward intellectuals. For example: Those who were unjustly, falsely and wrongly charged before and during the "Great Cultural Revolution" have basically been redressed and most of them have been offered appropriate posts; a large number of old intellectuals have been restored to leading posts and a large number of outstanding middle-aged and young intellectuals have been elected to leading groups at various levels to strengthen them; a large number of outstanding intellectuals have been admitted into the party; assistants have been assigned to some old specialists; the situation that some intellectuals cannot make use of what they have learned or cannot make use of their strong points has been changed as a result of the readjustments made, and the question of ensuring intellectuals to use what they learn is being gradually resolved; in many departments and units, many cadres engaged in professional work have been examined and given higher technical titles; the problems of couples living separately in different localities or couples without a child living with them to take care of them have been solved for many people; and the work and living conditions of intellectuals have been preliminarily improved. These measures show that the party and the people are concerned with intellectuals and have aroused their enthusiasm in dedicating themselves to socialist modernization. However, for various reasons, many problems remain unsolved in implementing the policy toward intellectuals. Therefore, it is imperative to earnestly check the work in implementing the policy toward intellectuals in accordance with the party Central Committee's instructions.

At present, the results of checking the work in implementing the policy toward the intellectuals throughout the country show that, comparatively speaking, the work in implementing the policy toward old intellectuals is better; whereas the work in implementing the policy toward middle-aged intellectuals, that is, raising their political status, giving full play to their role and improving their work and living conditions, is not yet satisfactory. However, implementing the policy toward the middle-aged intellectuals is the key to implementing the policy toward all intellectuals. This question has already drawn the attention of the whole party, the people of the whole country and the people in all walks of life.

The middle-aged intellectuals are basically those who were directly nurtured by the party and matured after the founding of new China. Most of them suffered from hardships inflicted on the nation and the classes to which they belong and their world outlook was fostered in the early 1950's-1960's when our party's work style and the general mood of the society were the very best ever. Therefore, their political consciousness is relatively high and they have a deep love for the party. They have unswerving faith in socialism, great enthusiasm toward the revolutionary cause and the spirit of dedicating themselves to it. Although many comrades among them have been unjustly treated or have suffered hardships in some political movements, in particular during the "Great Cultural Revolution," they have all along loved the party and socialism and have great faith in the victory, destiny and future of our party and motherland. Moreover, the intellectuals of this generation have received relatively more systematic education and training in specialized fields and their knowledge of science and culture is relatively better. Even during the adverse conditions during the 10 years of internal disorder, many comrades continued to diligently study and closely followed the development of modern science and technology. Therefore, although changes occur every day in all fields of knowledge at present, they are still able to keep pace with new situations, acquire new knowledge and make new achievements in science and technology. All this shows that the various fine qualities and special skills of our country's intellectuals can be collectively found in the middle-aged intellectuals. They are a very valuable treasure of the party and the people.

Intellectuals of the older generation in our country have made important contributions to socialist modernization in various fields and they have been highly commended by the party and the people. At present, most of them are over or well over 60 years old. Although they have lofty aspirations and are still working their hearts out for the socialist cause, they find their ability unequal to their ambition. There are quite a few young and capable intellectuals but they are still growing to maturity and they still have to make further improvements and advanced studies in politics and their work. Under these circumstances, the position and role of the middle-aged intellectuals, who are in the prime of their lives and constitute the main body of our country's intellectuals, have become very prominent. For example, of the 179 scientific and technological workers who were prize-winners 96 times in scientific research achievements of the first and second grades in the Beijing area of the Chinese Academy of Sciences in 1978-79, 158 are 36-50 years old, accounting for 88 percent of the total. Again, of the 100 scientific research items in the Jiangsu Agricultural Research Institute, 71 are in charge of middle-aged scientific and technological workers. The situation on the education front is more or less the same. The middle-aged teachers of the ship dynamics department of the Shanghai Jiaotong University account for 65 percent of the teachers of the whole department; of the 50 courses offered in this department in one year, 48 are taught by middle-aged teachers, accounting for 96 percent; of the 6 major items of scientific research achievements made by this department and awarded by Shanghai municipality or the state, 5 were organized and directed by middle-aged teachers. These facts clearly show that the middle-aged intellectuals are the mainstays and backbones of the entire ranks of intellectuals. They are shouldering the historical mission of inheriting the past and ushering in the future in making our country's science, education and culture prosper. Whether or not we can give play to their role involves the inheritance and development of our country's science, education and culture, the orientation and level of development of material civilization and socialist spiritual civilization and the success or failure of our country's socialist modernization.

It is not enough just to understand the position and role of the middle-aged intellectuals in our country's socialist modernization. We must also understand their initiative toward this undertaking. The line, principles and policies formulated by the party Central Committee since the 3d Plenary Session of the 11th CPC Central Committee have further aroused their tremendous enthusiasm. They are proud of the historical mission they have shouldered. This is the spiritual motive force that makes them work selflessly in their posts on the scientific, technological, educational, cultural and other fronts, and attain tremendous achievements. We must be fully aware of the latent initiative and creativeness of the middle-aged intellectuals. We are not telling the truth if we say that the mental state of the middle-aged intellectuals is gloomy and pessimistic. The broad masses of middle-aged intellectuals will not agree to this either.

The selfless spirit of the broad masses of middle-aged intellectuals dedicating themselves to the struggle for the cause of socialism is worth respecting and commending. Besides, the party and the state are fully aware of their difficulties. In order to give full play to their initiative and creativeness, we must provide favorable conditions for them so that they will be able to concentrate and energetically display their talents in the socialist modernization drive. At present, the party Central Committee regards solving problems for the middle-aged intellectuals as the main task in implementing the policy toward intellectuals. This is an important decision with far-reaching significance. The implementation of this decision will undoubtedly speed up the progress of our country's socialist modernization. We must consciously and resolutely implement this decision of the party Central Committee and must never adopt a passive attitude in this respect.

In implementing the policy toward the middle-aged intellectuals, we must give full play to their special skills so that they can make the best use of what they have learned. What distresses many middle-aged intellectuals most is that they cannot rationally use their knowledge in specialized fields which they acquired during the years when they were educated by the party. This is the most urgent demand of the middle-aged intellectuals at present. Party committees at all levels must pay great attention to this problem and earnestly solve it. We must truly understand them, trust them and provide conditions for them to display their wisdom and talents. We must elect outstanding middle-aged intellectuals with moral integrity, capability and ability to do organizational work in leading posts at various levels and see that their authority commensurates with their posts and duties. This is also an urgent task in making the cadres in leading groups become more revolutionary, younger in average age, better educated and more professionally competent. We must admit into the party in good time, just as we treat advanced elements among the workers and peasants who want to be admitted into the party, all advanced elements among the middle-aged intellectuals who have satisfied the requirements for becoming a party member and must not discriminate against them or treat them with prejudice. In addition, in accordance with the situation of uneven distribution and actual needs of professional people in various departments and localities, we should encourage a rational directional flow of these people and establish rational management systems for the distribution, use, examination, flow and advanced studies of these people. The fundamental question in arousing the enthusiasm of the middle-aged intellectuals at present is to use them rationally and appropriately. If we do a good job in this respect, their ideals and enthusiasm for participating in socialist modernization will find sustenance and there will be a basis for solving other problems for them.

An important question which is closely linked with the questions of having full faith in them and letting them have a free hand in their work is that we must be determined to gradually improve the work and living conditions of the middle-aged intellectuals. We must resolve actual difficulties in their work and daily life and provide necessary material guarantee in order to give full play to their role. For example, we must gradually increase their wages, improve their housing conditions, reduce their household chores, give them necessary books, material, apparatus and equipment for their work and so on. All this is very necessary to protect their energy and health and to raise their efficiency. If we have not done a good job in this respect, we cannot say that we have truly implemented the policy toward intellectuals.

In order to earnestly implement the party's policy toward intellectuals, in particular toward middle-aged intellectuals, we must also solve some ideological problems. First, we must make clear that improving the working and living conditions of the middle-aged intellectuals and giving full play to their role are in keeping with the interests of the broad masses of the people. In deciding to solve the problems of the middle-aged intellectuals, the party Central Committee proceeded from the interests of the working class, the people and the nation. Whether or not we can build a highly developed material civilization and a highly developed socialist spiritual civilization and attain the goal of our 20-year struggle depends on the foundation we lay in the 1980's. If we can do a solid job in the coming

10 years, we will bring about bright prospects in endowing our economy with vitality in the future and will create conditions for a highly developed socialist spiritual civilization. In order to lay a good foundation in this respect, we should, of course, carry out structural reforms and make material preparations but the most important preparation is to train the necessary capable persons. The experience of many economically developed countries has proved that economic prosperity depends to a very great extent on science, technology and education and the training of capable persons. Without intellectuals, it will be impossible to develop our country's science and education or to speed up the development of our country's productive forces by means of science and technology. Without intellectuals, it will also be impossible to raise the scientific and cultural level of the whole nation or to make our next generation become new people with good education, lofty ideals, moral integrity and cultural knowledge and people who will observe discipline. We must, with the broad-mindedness and far-sightedness of the proletarian, carefully handle and earnestly resolve the important question of the intellectuals, which involves the overall situation. Otherwise, we are prone to be "short-sighted."

We should realize that many people are suffering from "short-sightedness." The longstanding "leftist" ideas of belittling science, culture and the intellectuals and the pernicious fallacies about the intellectuals spread by the "gang of four" are still affecting the minds of some comrades. Much effort is needed to eliminate this influence. Today, this influence is manifested in: 1) Ideologically and theoretically, some people have not yet truly realized that the great majority of the intellectuals are components of the working class who have mastered relatively more knowledge in science and culture. 2) Some people do not really understand that the further we go on with the modernization, the more we need the intellectuals. They even think that "without the intellectuals, production will be carried on and houses will be built just the same" and so on. It is high time this kind of prejudice and narrow-mindedness was gotten rid of. If we do not realize that the intellectuals are components of the working class, we will not adopt an equal and comradely attitude toward them. If we do not understand the role played by the intellectuals, we will not look squarely at their difficulties and demands. Our leaders at all levels must remain sober-minded and use Marxist views to theoretically clarify the position and role of science, technology, education and culture in the socialist modernization and the position and role of the intellectuals and educate the cadres and the masses in this respect. We must make everybody understand that in modern large-scale production, we cannot stick to the old ways or be complacent and conservative. Without the prosperity of science, technology, education and culture, we will lag behind and be vulnerable to attack. Stalin said that theoretical mistakes never brought benefit, nor would they ever bring us any. It is not easy to eliminate the influence of the "leftist" ideas if we do not theoretically and thoroughly clarify all questions of concern; nor will it be possible to increase our consciousness and to reduce our blindness in implementing the policy for the intellectuals.

Second, we must overcome the idea of looking down upon mental labor. It is undoubtedly a correct attitude of historical materialism to criticize the erroneous idea of regarding "everything inferior to study," give an appropriate place to physical labor and respect physical laborers. However, we should not play down mental labor or show contempt for knowledge and the intellectuals. The separation between mental labor and physical labor is the product of social development at a certain stage. Its emergence was of progressive significance and promoted the development of science and culture. In a class society, this separation is based on class antagonism. In a socialist society, the nature of class antagonism between mental and physical labor no longer exists. However, protracted efforts are needed to eliminate the differences between them, and the elimination of these differences is precisely the important revolutionary task to be implemented during the whole historical period of socialism. Under the conditions of socialism, both mental workers and physical workers are laborers. They are only assigned different jobs and have no basic conflict of interests. The relationship between them is a comradely relationship of mutual cooperation among comrades. Only in a communist society will the differences between mental and physical labor finally disappear when these two kinds of labor merge together. The process of this merging is inevitably realized by increasing mental labor and reducing physical labor and not otherwise. Therefore, the idea of despising mental labor is entirely wrong.

Mental labor has its own characteristics. These characteristics are usually manifested in its creativeness, continuity and complexity. Creativeness means that it continuously makes new achievements for the spiritual life of human beings and for the transformation and regeneration in production and promotes the development of spiritual and material civilizations. Continuity means that mental labor is work which often takes longer time to complete and requires greater efforts before achievements can be made and which cannot be interrupted at will or even interfered with in any way. Complexity means that mental labor is to mainly probe into the inherent laws of things. It often comes across in new questions and therefore needs a rich accumulation of knowledge which continues to develop in depth through practice. Generally speaking, mental labor is complicated work which only people who have received special training can do. Marx said: Labor power which can do complicated labor "is trained at higher educational costs and for a longer period of time than ordinary labor power. Consequently, it has a higher value. Since this kind of labor force has a higher value, it is engaged in high-level labor and turns out more value within the same period of time." ("Complete Works of Marx and Engels," Vol 23, p 223) It is precisely because the labor of the intellectuals has the above characteristics, that their treatment, work conditions and living conditions should be suited to these characteristics. For example, since the value created by their labor is greater, they should have higher remuneration. We must change the irrational phenomenon of middle-aged intellectuals earning lower wages than skilled workers of the same age group so that the mental and physical energy consumed in the labor of the former can be duly compensated. We must pay attention to solving their housing problem and their problem of having to do heavy household chores so that they can have a quiet environment and an undisturbed mind, and so on. All these must be solved step by step in the course of implementing the policy toward the intellectuals.

Third, we must overcome the idea of egalitarianism. Egalitarianism reflects narrow-sightedness of petty producers and is the product of the handicraft industry and small-scale peasant economy. The old China was under the feudal system for a long period of time. There were countless petty producers and the influence of egalitarianism was great. The implementation of the principle of to each according to his work in a socialist society is a way to negate egalitarianism. However, due to the prolonged influence of "leftist" ideas, egalitarianist ideas often spread extensively. This was particularly so during the 10 years of internal disorder. Its manifestation in actual life is inappropriate control of distribution according to work, including inappropriately evening remuneration for mental and physical labor and for complicated labor and simple labor and making the remuneration for mental labor less than that for physical labor. Therefore, in implementing the policy toward the middle-aged intellectuals, we must oppose egalitarianism, foster a general social mood of respecting mental labor and treasuring capable persons and create good conditions for them in terms of public opinion and material benefits.

Of course, in improving the working and living conditions of the middle-aged intellectuals, we must do our work step by step according to the development of the country's economy, and it is impossible to solve all problems at one go. But there are things which can be done under the present situations without spending much money. We must do these things without delay or hesitation. Party committees at all levels must put the issue of solving problems of the middle-aged intellectuals on the list of important work of the day and administrative departments of various units must be sincerely concerned with the life of the intellectuals and try their best to help them overcome their difficulties. Besides, we must also stress that leading comrades at all levels must earnestly make friends with the intellectuals and must understand them and know their demands well. Many intellectuals eagerly hope that leading cadres will frequently go among them, be concerned with them, talk with them and listen to their views. If leading cadres act in this way, even if some problems in their work and life are not solved for the time being, the intellectuals will still be heartwarming. This is extremely helpful in implementing the policy toward the intellectuals and in giving play to the socialist enthusiasm of the broad masses of intellectuals.

That the party and the state show concern and attach importance to the middle-aged intellectuals shows that the party and the state trust them and place their hopes on them. It also means that the middle-aged intellectuals are shouldering heavy responsibilities. The broad masses of middle-aged intellectuals must be modest and prudent and learn modestly from the workers, peasants, intellectuals of the older generation, young comrades and more advanced comrades. Only if they continuously remold their own subjective world while transforming the objective world will they be able to shoulder the historical mission. We hope that the broad masses of intellectuals, in particular the middle-aged intellectuals, will further arouse themselves, continuously increase their capability in practice and together with the broad masses of people make even greater contributions to building our country into a modern powerful socialist country.

CORRECTLY APPRAISE THE NEW GENERATION OF THE CHINESE WORKING CLASS

Beijing RED FLAG in Chinese No 17, 1 Sep 82 pp 27-32

[Article by Yu Yannan [2456 3601 0589]]

[Text] The replacement of old workers by young workers in Chinese working class has increased dramatically since the 1970's. From 1949 to 1969, the number of workers increased on average by more than 2 million annually while between 1970 and 1981, the number increased by an annual average of 4 million. The number of old workers who began their work prior to liberation and in the early days of the founding of new China has drastically decreased, while the proportion of young workers has grown bigger and bigger. According to close of 1981 statistics, the number of young workers under the age of 35 who began to work in 1966 was more than 60 million nationally, making up about 60 percent of all workers. The young workers have become the main body of the Chinese working class and this is an important fact. A very important question is that of how to appraise the more than 60 million young workers. There are different views among many comrades as to how to appraise this young generation of the Chinese working class. Through study and investigation, our basic view is that, taken as a whole, the general outlook and nature of the young workers are good and that their weak points and shortcomings can no doubt be overcome through education and help. They represent a hopeful new generation of the Chinese working class. This basic appraisal accords with objective reality and with the basic principle of the theory of dialectic materialism and the theory of historical materialism.

In order to correctly appraise the new generation of the Chinese working class, we must first of all understand the basic fact that the majority of these 60 million young workers are active in the front line of production and have become the main force and backbone of production in various trades. For example, the mechanical workers in the Shanghai No 7 Cotton Mill under the age of 35 make up more than 90 percent. The crew of the Guangzhou Ocean Shipping Company under the age of 35 make up 88 percent of the total. The statistics of the maintenance service section and workers' service section of the Zhengzhou Railway Subbureau and the Zhengzhou north railway station show that young workers under the age of 35 who are working in the front line of transportation make up 66 percent of the total. In the Daqing oilfield, of the 1,222 production team leaders, 68 percent began their work in 1966 or later. The proportion of young workers in the trades with a higher labor circulation rate (such as building construction) is still bigger. In short, extensive investigation shows that the new generation of the working class has historically begun to shoulder the heavy task of realizing the national modernization program and have begun, in particular, to shoulder the task of modernizing our industry. Since the 3d Plenary Session of the 11th CPC Central Committee, there have been tremendous achievements in economic and other construction, and in the various causes of the working class there have also been tremendous developments. If we consider that the basic condition of the young workers who make up 60 percent of the total workers in our country is one of disorder, it is obvious that this view runs counter to the logic of life.

In order to correctly appraise the new generation of the working class in our country, it is necessary to analyze in an overall way the basic features of the young workers and the reasons for the appearance of these features. The new generation of our working class differs very much from the older generation in such aspects as social experience, cultural level, class consciousness, mental outlook and mode of life, for the older generation was subject to political oppression and economic exploitation in the old society, was emancipated following the victory of the revolution and has made tremendous contributions to socialist construction. In effect, what are the features of the new generation of the Chinese working class, and how should we understand and treat these features? The following are our views, based on extensive reference from investigation.

1. Most of the new generation of workers are from urban workers' families, while their predecessors were mainly from bankrupt peasants' families. The majority of veteran workers who began to work before liberation are from poor peasant families or handicraft workers' families in rural areas. Most of the new workers who began to work soon after liberation also came from the rural areas. But the situation now is different. The majority of the new generation of workers are from cities. Statistics show that in 1957, there were 7 million new industrial workers, of whom about 30 percent were from worker families. Reference materials from recent investigations show that 80 percent of the new workers who have worked in factories since 1966 are from worker families (the proportion of new workers from peasant families who are working in such enterprises as coal mines and oilfields is bigger). Generally speaking, the young workers who are from worker families, including urban cadre and intellectual families, have grown up in a peaceful environment. They have spent happy childhoods and they have beautiful memories because their families, thanks to the party and socialist system, spent their days in happiness. They themselves experienced a good social atmosphere and received a regular education in their early days. Following the downfall of the "gang of four" and particularly since the convening of the 3d Plenary Session of the 11th CPC Central Committee, the political situation and living standards of these young workers and their families have, thanks to the implementation of the party's various policies, development of production and expansion of employment, improved considerably. Recent investigations show that the majority of young workers support the party's line, principles and policies. A number of typical investigations

show that most young workers have affection for the party and for socialism. But, because they did not experience the oppression and exploitation of the old society to compare the new society with the old one, generally speaking, their feelings are therefore not as strong and profound as those of their predecessors. These young workers are also less conscious than their predecessors regarding a sense of responsibility as the masters of their own state, in overcoming hardships and in abiding by organizational discipline.

2. The cultural level of the young workers is higher than that of the old workers. Following the liberation and particularly since the mid-1960's, junior secondary school education has been popularized in the cities, while since the 1970's, senior secondary school education has also been popularized in the cities. But most of the young workers, who are mainly from the cities, are junior and senior secondary school graduates and, consequently, their cultural level is higher than that of their predecessors. Statistics researched by the departments concerned show that in 1957, the cultural level of workers across the country was at that time, less than 20 percent below secondary school, 64 percent primary school level and 15 percent illiterate. But now, more than 90 percent of young workers are junior or senior secondary school graduates and only a few are illiterate. Of course, because of the delay and influence caused by the "Great Cultural Revolution," regular education received by many young workers did not correspond with the level of their education. The actual cultural level of a number of young workers is lower than their education level and this situation has been termed as the "level" lower than "diploma." But in modern life in the cities there are many ways for people to acquire knowledge. For example, many young workers have acquired scientific and cultural knowledge through TV programs, broadcasts and exhibitions, and such knowledge cannot be acquired in schools. Investigations show that apart from an education level that does not accord with actual cultural level, the actual cultural level of young workers now is higher than that of their predecessors. Still, if the cultural level of the young workers is compared with the objective needs of modern construction, it is still far from meeting such needs. Therefore, it is necessary to constantly raise the cultural and scientific level of the young workers through cultural education for workers.

Investigations show that when young workers have a higher cultural level, they are quick to learn new technology. Many young workers are able to master in 2 to 3 months and 2 to 3 years the production skills and experience that the old workers needed many years to accumulate in their practice in production. The past few years have been characterized by the replacement of many old workers by young workers and, apart from the situation in which the young workers are yet to be trained to master certain technologies, this replacement does not, in general, affect production. And this situation is largely related to the fact that young workers have a higher cultural level and are good at learning technology. Many production departments have enormously absorbed educated and physically sound young workers to renew the production force and, consequently, have promoted production. Last year, 140,000 young workers in Shanghai completed production tasks 2 months ahead of schedule. As the young workers have a higher cultural level, consequently they have a wider scope of vision, are more active ideologically with less conservative thinking, are able to learn political theory with better results and to understand more complicated social political problems quicker, and have a strong impetus in transforming some irrational situations. All these are favorable to young workers in the understanding and acceptance of Marxism-Leninism-Mao Zedong Thought and the party's principles and policies.

3. The young workers experienced a complicated life during the 10 turbulent years. The young workers under 35 should have enjoyed this precious time in receiving socialist education in regular schools, but instead, they experienced 10 turbulent years during the "Great Cultural Revolution." Therefore, their experience during this period has been termed as "to have been born under the red flag and have grown up in turmoil." At that time, "classes were stopped for carrying out revolution." The majority of these young workers joined the "Red Guards" because they trusted Comrade Mao Zedong and the party and because of their revolutionary zeal. Because of their ignorance and under the instigation of some ultraleftist slogans, quite a number of these young people went too far and consequently caused, against their own will, considerable damage. These young people were lacking in political experience and, consequently, their souls were hurt and their ideology was in a chaotic situation. Later, they were sent to rural areas to settle down and then they returned to the cities, waiting for jobs. Thus having traversed a tortuous path, these young workers have a more complicated ideology, world outlook and outlook on life. Now, a few young workers are fed up with politics. However, they are seeking "material benefit," they have no revolutionary idealism and they have the serious ideology of a wage laborer. They do not even have confidence in the prospects of socialism and in the party's leadership. All these shortcomings cannot be separated from the fact that during the 10 turbulent years, a large number of cadres, intellectuals and model workers were subject to slander, that the achievements of the revolution and construction made in decades were denied and the relations between us and the enemy were topsy-turvy. Neither can all these be separated from the sufferings of their families during this period. A few young people have violated labor discipline, taken away state property or engaged in fighting, and all these are a result of the anarchism and ultra-individualism which were rampant during the 10 turbulent years. With regard to individual young workers who violated laws, were degenerate and even committed crimes in robbing and raping, in the final analysis, all these to a great extent are also the grave consequences of the 10 turbulent years.

In short, the family background and individual experiences of these young workers differ very much, not only from those of their predecessors who began to work prior to liberation, but also from those middle-aged workers who were already grown up in the 1950's and 1960's. Now some of our comrades have not concretely understood and analyzed the features of these young workers, their history and their situation. Instead, they have just seen that some aspects of these young workers are lagging behind the old workers and that some of these young workers are passive. Consequently, these comrades consider that this generation of the working class has a much lower political standard. They even hold that this generation of workers has lost the class nature of the working class and, finally, they have lost confidence in these young workers. Through comprehensive analyses of extensive reference materials from investigations, we hold that these views do not correspond with reality and, therefore, they are incorrect.

In order to correctly appraise the new generation of the Chinese working class, it is imperative that the ideological situation and reality of the ranks of the young workers be classified and studied and that quantitative analysis be made. Analysis and study of extensive reference materials from investigations show that young workers can be divided into the following five categories:

1. Those who belong to this category have great aspirations and have done a good job in their positions. They have constituted a political backbone and they are a shock force in production. They are good at learning and eager to make progress, conscientious in their studies and consciously abide by labor discipline. They make up about 20 percent of the total of young workers.

2. The young workers who belong to this category are able to give prominence to their work, which they carry out in a down-to-earth way. They pay attention to safety in production. They have a desire to become advanced workers, are hard working and live a simple life and dislike flighty and undisciplined behavior. They make up about 50 percent.

3. Those who belong to this category are able to fulfill their production tasks. But they do not have aspirations and do not care about politics. They pay particular attention to "material benefit," regard "everything from the point of money" and think that "to become workers means making money and earning their living." These young workers make up about 25 percent.

4. People in this category have empty minds, work halfheartedly and do not observe discipline. They seek only temporary material comforts, and while they do not make any big errors, they continue to make small ones. They account for about 5 percent of the young workers.

5. Those who belong to this category have violated laws and committed crimes. They have been sent to receive labor education or have been legally punished. Their number is less than 5 in every 1,000 young workers.

These proportions may be different in different regions, trades and industrial and mining enterprises because of their different situations. But investigations made in some regions and enterprises showed that the majority of young workers are good.

Some of the young workers are called "graduates in 3 years" and merit our special attention. They are junior and senior secondary school graduates from the 3 years 1966, 1967 and 1968. These young workers experienced social chaos in the early days of the "Great Cultural Revolution" and were also sent to settle in rural areas. Consequently, they have traversed a tortuous path. But most have received education directly from workers and peasants, have experienced production practice and have been trained to overcome difficulties. We must also understand that prior to the turbulent 10 years, they had generally already received regular school education, family education and social education for 7 to 12 years. They have a comparatively solid cultural foundation and a better world outlook and moral training. In addition, they joined the ranks of the working class earlier and have been trained in the environment of socialized mass production for about a decade. Eventually, a number of these young workers have succeeded to the fine morality and good tradition of the working class and have gradually become a backbone in both political work and production and construction of enterprises. According to statistics from some enterprises, about one-half of production team leaders are these young workers. The roles of such young workers include advanced furnace team leaders, workshop leaders, fine branch secretaries of the CYL and party branch secretaries. Although they traversed a tortuous path during the 10 turbulent years, many still maintain their confidence in the revolution and revolutionary zeal. In addition, through repeated comparisons in practice and serious study, their feelings for and understanding of the party and socialism have become deeper and deeper. They have great influence and prestige with the young people around them. Consequently, they are able through their own experiences, to grasp the ideological features of these young people, help raise their understanding and solve various ideological problems and, consequently, these young worker leaders have become an important force for the party in carrying out political and ideological work. In strengthening work among young workers, the party and CYL organizations at grassroot level must rely on these young workers so that they will be able to fully display their roles.

In order to correctly appraise the new generation of the Chinese working class, it is necessary to grasp the Marxist scientific analytical method and be good at grasping, from their manifestation, the nature of things. In his book "The Condition of the Working Class in England," Engels specifically described and analyzed the condition of the British working class in the first half of the 19th century on the basis of his own investigations and reliable reference materials. It was true that there existed various negative phenomena in the ranks of the working class at that time, but Engels did not consequently deny the historical status and historical role of this class. On the contrary, he profoundly expounded that it was none other than this class which had shouldered the heavy historical task as "gravediggers for capitalism." Today, in analyzing the young workers in our own country, we must also resort to this basic stand and method of historical materialism. Young people, and particularly the young workers who are related with the socialist social and socialized mass production and who have a higher cultural level, are the most active and vigorous force in our society. Some comrades have failed to appraise correctly the main aspects and unessential aspects of the young workers. They have paid more attention to the negative features of these young workers and less attention to their positive factors. Consequently, their appraisals of the new generation of our working class do not accord with reality. This is primarily because these comrades often simply just appraise the young workers today with the criteria for appraising the old workers and middle-aged workers. They neglect the changes in our social and historical conditions, fail to understand that the young workers and old workers have different ways of thinking, different modes of life because of the different living conditions of their families, different cultural levels and different social experiences. In spite of making concrete analyses, these comrades analyze the condition of the young workers of the 1980's with the criteria used in the 1950's. They also fail to carry out political and ideological works according to the features of the young workers. For example, our old and middle-aged workers suffered in the old society. Through the education of recalling the past miseries and comparing them with the present happiness, they will be helped to profoundly feel that they are liberated. This method of education helps inspire their innate class feelings for the party and socialism. But the young workers do not have such experiences. So, generally speaking, the traditional ideological and political work of "recalling personal sufferings" and "recalling family sufferings" are not of much help to them. Also, some comrades often regard the situation as one in which the young workers are refusing such education. Another example: Unlike their predecessors, the young workers like playing, joking and beauty and like to raise questions and put forth their opinions. But in spite of encouraging these features in the young workers, the comrades link these features with some bourgeois decadent thinking and style of work. All this has hindered us in correctly appraising the young workers. We must understand that although these young workers are not as good as their predecessors in overcoming difficulties, they have a higher cultural level, are quick in mastering technology, relatively sharp in ideology, do not easily believe in everything and are quicker in understanding and correcting their shortcomings and mistakes. Some comrades do not really understand the features of these young workers, which are very much in the interest of our socialist modernization program, and therefore do not work hard to develop these features. In fact, some of our comrades were previously old workers themselves or have had experiences that are similar to those of the old workers. This situation has also become a reason why these cadres demand that the young workers have the standards of the old workers.

It is undeniable that the young workers have various shortcomings and problems. We have to understand that the emergence of these shortcomings and problems not only has its own reason but is also mainly because of the fact that during the 10 turbulent years and over the past few years we slackened the education of the young workers (some places even discarded such education). Some young workers lack revolutionary aspirations and a sense of responsibility as the masters of their own country and this situation has been greatly related with the fact that in the past, these young workers did not receive systematic education in political theory and historical knowledge and education in the fine tradition and morality of the Chinese working class. Because of this lack of education, the young workers are strangers to those things with which the old workers are familiar. They are also very far from really understanding their motherland, the CPC, Marxism-Leninism-Mao Zedong Thought, the socialist system, the happy and beautiful tomorrow of socialism, the historical tasks, the glorious revolutionary tradition and the fine morality and nature of the working class. Thus, without this knowledge, how can they foster revolutionary ideals and a sense of responsibility as the masters of their own country? This situation has also been caused by the mistakes we made in our work. It is improper and unfair to blame this situation on the young workers. Recently, the Tianjin Soda Factory, Yangzhou Cotton Mill and many other industrial enterprises have strengthened this aspect of education. As a result, the class consciousness of the broad masses of the young workers has been greatly raised and their revolutionary initiative has risen. Facts prove that as long as we are able to correctly appraise the young workers and step up and improve their education, the shortcomings of these young workers will no doubt be overcome.

The majority of the young workers are good, but we can in no way neglect the problems of a few young workers who are lagging behind. These backward young workers are only a small proportion of the whole working class, but we must take active measures to reform them through education. We must understand that taken as a whole, the fact that some young workers are backward or degenerate is a phenomenon under particular historical conditions. If the whole society is concerned for the growth of this part of the young workers and the management departments concerned are able to succeed and develop the rich experience and fine tradition of the party in educating and reforming as well as mobilizing the masses to help these young workers patiently and meticulously, the majority of these young workers will be turned, through education, into an active strength and will even, with the exception of a few who are incorrigible, become advanced elements. This has been proven in practice by many factories and enterprises. Although for the time being, these few young workers are backward or even degenerate, they have grown up in our socialist motherland. We must understand that these young workers can by nature be reformed. We can in no way put them in the same place as young people in capitalist societies who have become the "collapsing generation" as they turn decadent and degenerate because of the defects of the whole society and because they have no future. Of course, we must be fully aware that it is a very difficult task to reform these young workers. It needs time and effort before we are able to heal the wounds suffered by them during the 10 turbulent years. Externally, we have now implemented the correct open-door policy and internally we have implemented an economically activating policy. The old ideology and concepts of the old exploiting classes, the influence and corrosion of the decadent bourgeois ideology inside and outside socialist society cannot but have a negative effect on the part of the young workers. Therefore, the education of these young workers has become even more complicated. But we, the working class, constitute the most advanced class in the history of our country and our party is the advanced vanguard of the working class which has mastered the most advanced science in the world--Marxism-Leninism-Mao Zedong Thought. History has proved that our party and working class are able not only to educate and reform themselves but also to guide the whole nation and to educate and reform it. Therefore, we must be fully confident that by resorting to powerful ideological and political work and systematic education, we will be able to constantly overcome the influences and corrosion of the various forms of the ideology of the exploiting class and educate and reform these backward young workers so that they will be turned into qualified members of the new generation of the Chinese working class.

The history of the development of the working class both at home and abroad shows that this class is in a position to educate, reform and digest various idle class elements and people with various forms of nonproletarian ideology (such as the lumpen proletariat) so as to expand its own ranks. Modern and socialized big industry is a big furnace that is coupled with the injection of the ideology of the advanced working class, rich experience in revolutionary struggles, tradition in revolutionary struggles and education in modern science and culture. Therefore, this furnace can melt various nonproletarian elements into true members of the working class. Today, the working class in our country is the leading class of the country while our party is leading the national political power on behalf of the working class. In addition, we have conditions for resorting to all means outside and inside factories in our efforts to bring up the new generation of our working class. Marx said: "The most advanced workers are fully aware that the future of their class and, consequently, the future of mankind totally depend on the education of the growing new generation of workers." ("Collected Works of Marx and Engels," Vol 11, p 217) These words have been proved by facts. We must put the education of the young workers into an important position and pay much attention to it. We have restored order today. It is imperative for our party, which is the vanguard of the working class, to make more efforts in strengthening the work of the young workers so as to train them into a new generation of the working class who are imbued with communist ideology and morality, who have modern scientific knowledge and production skills, who are united and cooperating and who have strict discipline, and to enable them to help unite and influence young people in society.

At the present stage in our country, workers, peasants and intellectuals are the forces on which our party relies. Of course, we must rely on the working class, but because of the present great changes in the organizational structure of our working class, the target of the party's key work within the working class must also be shifted from the old workers who began to work in factories after the founding of new China as the main target, to the young workers as the main target (of course, we cannot neglect the backbone role of the middle-aged workers). This work is demanded by history and by objective reality. In order to effectively build the ranks of our working class both ideologically and organizationally and in carrying out all work concerning the working class, we must pay full attention to this change in the target of education.

A LETTER TO A READER

Beijing RED FLAG in Chinese No 17, 1 Sep 82 inside back cover

[Article by Xiong Fu [3574 1788], editor in chief of RED FLAG]

> [Text] Editor's note: Comrade Chen Baozhu, a young cadre of Jilin Province, wrote a letter to Comrade Xiong Fu, editor in chief of RED FLAG, saying that he was going to write an article about the building of the party in the new historical period. Comrade Chen Baozhu hoped that Comrade Xiong Fu would correct his article. The following is Comrade Xiong Fu's reply.

Comrade Chen Baozhu:

How are you!

I have received your letter dated the evening of 10 May. Let me first say that we are equal members of the party's contingent, only we have different direct responsibilities and types of work. Comparatively speaking, I am older than you, and naturally have more experience than you. While you are working at the basic level, you have more practical knowledge than I do. Is this not right?

It is good that you are going to write an article about the building of the party in the new historical period. It can doubtless be said that you would not write such an article as a pastime or to seek the limelight, but to share the party's and the country's cares and burdens. You fully know the situation in basic-level organizations, and have a party member's sense of responsibility, particularly that which a worker of the party should have toward the party's work. You ask me to help you write this article well. I will naturally help you, because it is my duty, as well as my responsibility.

I have read the enclosed contents of your letter to the party Central Committee. If you write according to those contents, the article may possibly cover too large a subject, and it will not be easy to write. A good subject must be chosen when writing an article. If the range of the subject is small, it is comparatively easier to begin. If the range of the subject is too large, the theme and elaboration will be full of empty words. Furthermore, we must proceed from actual conditions, centralize the problems that emerge in actual life, explain how we look at the problems (that is, our viewpoints) and expound (that is, state our reasons). Theory is not at all mysterious. Comrade Mao Zedong said that theory meant drawing something from objective reality (drawing is abstract, meaning summing up) and obtaining something that has been proved in objective reality. In addition, when expounding, we must have factual arguments as well as points of view. These two must be combined to form a certain logic. This means fully stating reasons. Minor principles should be subordinated to major ones. Principles and ways of saying things must be in conformity with each other. They should not contradict each other. That is to say they should not be, as the saying goes, speaking incoherently. According to the general requirements of writing articles, and according to your feeling that the party's good policies cannot be thoroughly implemented in basic-level units, you may narrow the range of the subject of your article to the analysis of the ideological and political conditions of party members at the basic level and to how to strengthen their education. In this way, you can help them raise their level of implementing policies. I do not have a good knowledge of the situation at the basic level. But I am afraid that the main thing is not "effectiveness," but the varying levels of understanding policies. Many comrades do not really understand the party's policies. My suggestion is only for your reference.

In addition, you have mentioned that you do not agree with "relaxing" our policies. You are worried that if our policies are changed too often, we cannot win the confidence of the people. You regard "changing too often" and "relaxing" as an organic whole, and you misunderstand these two concepts. Have our policies changed? Compared with the "leftist" mistakes made during and before the "Cultural Revolution," our policies have of course changed, and they have changed in a fundamental sense. But viewed from the angle of the consistency and continuity of policies since the 3d Plenary Session of the 11th CPC Central Committee, and from the orbit of the guiding thinking for formulating policies, that is, Mao Zedong Thought, we cannot say that our policies have changed in a variety of ways, because our party's policies are suited to the present actual conditions of our country and have been proved correct. As to "relaxing" our policies, there are three main aspects in the rural areas. 1) The method of "abolishing" the individual economy too early has been changed. 2) The method of controlling the collective economy too tightly has been changed. 3) The method of "eating from the same pot," adopted in the past in allocating the results of labor, has been changed. With regard to these three aspects, our party's present policies are as follows: The policy of assisting the individual economy is adopted under the condition that the socialist public ownership system occupies the dominant position. The policy of appropriately enlarging the autonomy of the collective economy is adopted under the prerequisite that the collective ownership system is consolidated. The principle of to each according to his work and more pay for more work is implemented in allocating the results of labor. This is bringing order out of chaos, insofar as past "leftist" mistakes are concerned. This is what we mean by "relaxing" our policies. Such "relaxation" of policies is necessary, and has absolutely nothing to do with "changing in a variety of ways."

That's all for now.

Wishing you success in your work!

Yours,

Xiong Fu

RESOLUTION OF THE 12TH CPC NATIONAL CONGRESS REGARDING THE 11TH CENTRAL COMMITTEE'S REPORT (ADOPTED ON 6 SEPTEMBER 1982)

Beijing RED FLAG in Chinese No 18, 16 Sep 82 p 2

[Text] The 12th CPC National Congress approves the report made by Comrade Hu Yaobang on behalf of the party's 11th Central Committee. The congress holds that the lines, principles and policies implemented since the 3d Plenary Session of the 11th Central Committee are correct and that good results have been achieved in the work. The congress holds that the correct program and the series of principles and policies for creating a new situation in all fields of socialist modernization set forth in this report shall be the cardinal guide for the party's work in all fields.

During the 5 years between this and the next congress, the whole party should strive for a basic turn for the better in the state's financial and economic situation, the mood of the society and the party's work style. For this purpose, it is necessary to adopt many important measures, principally reform of structure and economic setup; making cadres revolutionized, younger in average age, better educated and more professionally proficient; building socialist material civilization and at the same time building socialist spiritual civilization, developing socialist democracy and strengthening the socialist legal system; dealing blows at serious crimes in the economic and other fields; and rectification of the party organization and work style. The congress calls on the comrades of the whole party, under the leadership of the 12th Central Committee, to unite the people of all nationalities throughout the country, hold high the great banner of Marxism-Leninism-Mao Zedong Thought, invigorate themselves; work persistently, dauntlessly and energetically strive to create a new situation in all fields of the socialist modernization.

RESOLUTION OF THE 12TH CPC NATIONAL CONGRESS ON THE 'CONSTITUTION OF THE CHINESE COMMUNIST PARTY' (ADOPTED ON 6 SEPTEMBER 1982)

Beijing RED FLAG in Chinese No 18, 16 Sep 82 p 2

[Text] The 12th CPC National Congress hereby approves the "Constitution of the Chinese Communist Party" submitted by the 11th Central Committee and decides that the new party constitution will come into force on the day of its approval.

The congress decides that party committees at all levels and every party organization must conscientiously organize studies of the new party constitution and strive to make all party members seriously understand the party constitution's general program and all its stipulations. In the course of the study, it is necessary to carry out comradely criticism and self-criticism in the light of the actual conditions to enable all party members, especially all party members who are also cadres, to enhance their understanding so that they can be fully prepared for rectifying the party style and consolidating the party organization in an all-round way and building the party into a strong core of leadership for the cause of socialist modernization.

THE OPENING SPEECH AT THE 12TH CPC CONGRESS (1 SEPTEMBER 1982)

Beijing RED FLAG in Chinese No 18, 16 Sep 82 pp 3-5

[Speech by Vice Chairman Deng Xiaoping]

[Text] Comrades, I now declare the 12th National Congress of the Communist Party of China open.

There are three main items on the agenda of our congress: (1) consideration of the report of the 11th Central Committee and decision on the party's program for striving to create a new situation in all fields of socialist modernization; (2) consideration and adoption of the new constitution of the Communist Party of China; and (3) election of a new Central Committee, a Central Advisory Commission and a new Central Commission for Discipline Inspection in accordance with the provisions of the new party constitution.

With the accomplishment of the tasks of this congress, our party will have a more clear-cut guiding ideology for socialist modernization, the party will be strengthened in a way more suited to the needs of the new historical period, and in the highest leading organs of the party there will be cooperation of old and new cadres and succession of the new to the old, thus making these organs a more vigorous command headquarters.

A review of the party's history will show this congress to be a more important meeting since the seventh national congress.

The seventh congress held in 1945 under the chairmanship of Comrade Mao Zedong was the most important one in the period of democratic revolution since the founding of our party. It summed up the historical experience gained in the tortuous development of China's democratic revolution in the previous 20 years and more, formulated a correct program and correct tactics and overcame the erroneous ideas within the party so that unity in understanding based on Marxism-Leninism and Mao Zedong Thought was attained. As a result the party became more united than ever before. The seventh congress laid the foundation for the nationwide victory of the new democratic revolution.

The eighth congress of the party held in 1956 analyzed the situation following the basic completion of the socialist transformation of the private ownership of the means of production and put forth the task of all-round socialist construction. The line of the eighth congress was correct. However, because the party was not adequately prepared ideologically for all-round socialist construction at that time, in practice that line and many correct opinions put forward at that congress were not adhered to. After the eighth congress, we suffered serious setbacks, though we also achieved many successes in socialist construction.

The present congress is being held in circumstances vastly different from those at the time of the eighth congress. Just as the 20-odd years of tortuous development of our democratic revolution before the seventh congress taught the whole party how to grasp the laws governing that revolution in China, so the 20-odd years of tortuous development of our socialist revolution and construction after the eighth congress taught the whole party profound lessons. Since the 3d Plenary Session of the 11th Central Committee (held in December 1978), our party has restored its correct policies in the economic, political, cultural and other fields of work and adopted a series of new and correct policies after studying the new situation and new experience. By comparison our party has, since the eighth congress, gained a much deeper understanding of the laws governing China's socialist construction, acquired much more experience and become much more conscious and determined in carrying through our correct principles. We have every reason to believe that the correct program to be formulated at this congress will create a new situation in all fields of socialist modernization and bring prosperity to our party, our socialist cause, our country and all our nationalities.

In our modernization program, we must proceed from China's realities. Both in our revolution and construction, we should learn from foreign countries and draw on their experience. But mechanical copying and application of foreign experience and models will get us nowhere. We have had many lessons in this respect. To integrate the universal truth of Marxism with the concrete realities of China, blaze a path of our own and build socialism with Chinese characteristics--this is the basic conclusion we have reached in summing up long, historical experience.

China's affairs should be run in our own way and by our own efforts. Independence and self-reliance have always been and will forever be our basic stand. While we Chinese people value our friendship and cooperation with other countries and people, we value even more our hard-won independence and sovereign rights. No foreign country can expect China to be its vassal, nor can it expect China to swallow any bitter fruit detrimental to China's interests. We will unswervingly follow a policy of opening to the outside world and actively increase exchanges with foreign countries on the basis of equality and mutual benefit. At the same time, we will keep a clear head, firmly resist corrosion by decadent ideas from abroad and never permit the bourgeois way of life to spread in our country. We Chinese people have our own national self-respect and pride. We deem it the highest honor to love our country and contribute our all to its socialist construction, and we deem it the deepest disgrace to impair the interests, dignity and honor of our socialist motherland.

The 1980's will be an important decade in the historical development of our party and state. To intensify socialist modernization, to strive for reunification and particularly for the return of Taiwan to the motherland, and to combat hegemonism and safeguard world peace--these are the three major tasks of our people in the 1980's. Economic construction is at the core of these tasks as it is the basis for the solution of China's external and domestic problems. In a long period to come, at least in the 18 years or more up to the end of this century, we must diligently do the following four things: to restructure the administration and the economic setup and make the ranks of cadres more revolutionary, younger in average age, better educated and more professionally competent; to build a socialist spiritual civilization; to strike at criminal activities in the economic and other fields that undermine socialism; and to rectify party style and consolidate the party organization on the basis of a conscientious study of the new party constitution. These will be the most important guarantee for our adherence to the socialist road and the concentration of our efforts on modernization.

Ours is now a big party, with a membership of 39 million, that exercises leadership over the whole state power. However, the members of the Communist Party will always be a minority in the whole population. None of the major tasks set forth by our party can be accomplished without the hard work of the masses of the people. Here, on behalf of our party, I wish to pay high tribute to all Chinese workers, peasants and intellectuals who have worked diligently for our socialist modernization, and to the Chinese People's Liberation Army--the Great Wall of steel safeguarding the security and socialist construction of our motherland.

China's democratic parties fought together with our party in the period of the democratic revolution and have advanced and undergone tests together with us in the period of socialism. In the construction work ahead, our party will continue its long-term cooperation with all patriotic democratic parties and all patriotic democrats. Here, on behalf of our party, I wish to express our sincere gratitude to all democratic parties and all our friends without party affiliations.

The cause of our party has enjoyed the support and assistance of the progressive personages and friendly countries throughout the world. Here, on behalf of our party, I wish to express our sincere gratitude to them.

We must do our work well and carefully, strengthen our unity with the people of all nationalities in the country and with the people of the whole world and struggle hard to make China a modern socialist country that is culturally advanced and highly democratic, and to oppose hegemonism, safeguard world peace and promote human progress.

CSO: 4004/7

CREATE A NEW SITUATION IN ALL FIELDS OF SOCIALIST MODERNIZATION--REPORT TO THE 12TH NATIONAL CONGRESS OF THE COMMUNIST PARTY OF CHINA (1 SEPTEMBER 1982)

Beijing RED FLAG in Chinese No 18, 16 Sep 82 pp 6-30

[Report by Hu Yaobang]

[Text] Comrades: On behalf of the 11th Central Committee of the Communist Party of China, I will now make a report to the 12th national congress of the party.

I. A Historic Change and Our Great New Task

Since the smashing of the Jiang Qing counterrevolutionary clique in October 1976 and, in particular, since the 3d Plenary Session of the 11th Central Committee held in December 1978, we have accomplished, through the arduous efforts of the whole party, the whole army and the people of our nationalities, the difficult task of setting the party's guiding ideology to rights and have won major successes in setting right our practical work on all fronts, thereby effecting a great and historic change.

The mission of the present party congress is, through the summing-up of the historic achievements of the past 6 years, to chart a correct course and define correct strategic steps, principles and policies so that we can more thoroughly eliminate the negative consequences of the decade of domestic turmoil, make further progress and create a new situation in all fields of socialist modernization. The Central Committee of the party is confident that our congress can shoulder this momentous historical task.

What are the main indicators of the historic change that has been brought about?

In the sphere of ideology, we have resolutely broken the fetters of dogmatism and the personality cult which existed for a long time, and have reaffirmed the Marxist ideological line of seeking truth from facts, thus infusing a dynamic and creative spirit into all fields of endeavor. We have restored the original features of Mao Zedong Thought and persisted in and developed it under new historical conditions.

We have put an end to years of social turbulence and brought about a political situation characterized by stability, unity and liveliness. Socialist democracy and the socialist legal system are being gradually perfected, equality and unity among all our nationalities have been strengthened anew, and the patriotic united front has expanded further. Thanks to this political situation, the present period is one of the best since the founding of our People's Republic.

The leading bodies of the party and the state at all levels have been gradually readjusted, improved and strengthened. By and large, the leadership in the party and state organizations at all levels is now in the hands of cadres loyal to the party and the people.

We have resolutely shifted the focus of work of the party and the state to economic construction and, liquidating the "left" mistakes that persisted in our economic work over the years, have conscientiously implemented the correct principle of readjustment, restructuring, consolidation and improvement. Having tided over the most difficult phase, our national economy is now on the sound path of steady growth.

Our endeavors in education, science and culture are on the right track and, with some initial successes, are beginning to thrive. Relations between the party and the intellectuals have improved enormously. Unity among the three main social forces, namely, the workers, peasants and intellectuals is also fairly good now.

We have made tremendous efforts to build a modern regular revolutionary army. The People's Liberation Army has achieved marked successes in improving its military training and its ideological and political work, in bettering its relations with the civil authorities and the people, in defending our frontiers and safeguarding national security and in helping socialist construction. It has further enhanced its military capability and political consciousness in line with new historical conditions.

In the course of leading the people in effecting this historic change, our party has withstood tests and remolded itself. It has done much to rectify party style, gradually revived its fine traditions and become more mature and firmer in the course of struggle.

Looking back at our path of struggle in these 6 years, we see that it has been an uneven one. The decade of domestic turmoil inflicted grievous wounds on the party and the state. Our victory has not been easy. It was won only after the Central Committee led the entire party and people in overcoming enormous difficulties of all kinds.

The "left" mistakes made before and during the "Cultural Revolution" had a deep and extensive influence and caused serious damage. While thoroughly exposing and repudiating the Lin Biao and Jiang Qing counterrevolutionary cliques, we found it necessary to make a clean sweep of all such "left" mistakes. This unavoidably involved the mistakes made by Comrade Mao Zedong in his later years. Comrade Mao Zedong's contributions to the Chinese revolution were great and indelible; that is why over long years he enjoyed enormous prestige in the party and among the people and will continue to do so in the years to come. Whether we had the Marxist courage to conduct self-criticism of our party's mistakes, including those made by Comrade Mao Zedong, and whether we could conduct such self-criticism correctly and in a historical perspective constituted the key issue deciding whether things could be set right. During the 2 years before the 3d Plenary Session of the 11th Central Committee, the question of rights and wrongs in the party's guiding ideology was not clarified as it should have been and the work of setting things to rights proceeded haltingly; this was because in the early days after the smashing of the Jiang Qing counterrevolutionary clique, our party was not ideologically prepared for an overall liquidation of the "left" mistakes and also because the principal leading comrade in the Central Committee at the time continued to make "left" mistakes on a series of important issues. The 11th party congress announced the end of the "Cultural Revolution" and reaffirmed the task of building a modern and powerful socialist state, thus playing a positive role in mobilizing the masses. However, the political report to the 11th party congress still approved of the erroneous theories, policies and slogans of the "Cultural Revolution," thus exerting a negative influence by seriously obstructing our effort to set things right. The historic service of the 3d Plenary Session of the 11th Central Committee was precisely that it thoroughly shattered the heavy chains imposed by the protracted "left" mistakes, set right the guiding ideology of the party and reaffirmed the Marxist ideological, political and organizational lines. Subsequently, our party thoroughly summed up its historical experience in all spheres and scientifically explained numerous questions encountered in practical work, which concerned theory and policy in the building of socialism. The "Resolution on Certain Questions in the History of Our Party Since the Founding of the PRC" adopted in June 1981 by the 6th Plenary Session of the 11th Central Committee marked the successful conclusion of our work in setting the party's guiding ideology to rights. Drawing on the collective wisdom of the broad sections of cadres and masses, our party subjected the protracted "left" mistakes and Comrade Mao Zedong's mistakes in his later years to scientific analysis and criticism, while firmly upholding the fine traditions developed by the party during long years of struggle, safeguarding the scientific truth of Mao Zedong Thought and affirming Comrade Mao Zedong's historical role. This helped not only to differentiate right from wrong but also to strengthen unity in our ranks, thus providing a basic guarantee for the healthy development of our revolution and construction.

Since the third plenary session, our party has made every effort to conform to objective reality in formulating and implementing a series of principles and policies and to avoid focusing on the criticism of one erroneous tendency to the neglect of another. In times of historic change, people are apt to think one-sidedly because of the profound influence of old ideas and customs and because of lack of experience in dealing with new things, plus the effect of other social and political factors. In recent years, mistaken ideas representing different tendencies have arisen among sections of the party members and cadres with regard to such major questions of principle as the party's policy of mental emancipation, the assessment of

Comrade Mao Zedong and Mao Zedong Thought and the appraisal of class struggle at the present stage of socialism. Unable to free themselves completely from the influence of the former "left" mistakes, some comrades wanted to return, wittingly or unwittingly, to the old track of "taking class struggle as the key link." Others, deviating from the Marxist path, went so far as to doubt or even negate the leadership of the party and the socialist road. On such major questions of principle, our party has all along taken a firm stand and waged timely and appropriate ideological struggles on two fronts--against both the "left" and the right deviations. On the one hand, in its effort to prevent the recurrence of mistakes that would lead to the broadening of the scope of class struggle, the Central Committee has systematically liquidated the erroneous theory of "continuing the revolution under the dictatorship of the proletariat" put forth during the "Cultural Revolution," a theory that envisaged a continuing "revolution whereby one class overthrows another," and it has vigorously developed socialist democracy and a socialist legal system and restored and expanded our united front work. On the other hand, the party has reiterated the four cardinal principles centering on upholding the leadership of the party (the four cardinal principles are adherence to the socialist road, to the people's democratic dictatorship, to the leadership of the Communist Party and to Marxism-Leninism and Mao Zedong Thought), criticized and curbed the tendency toward bourgeois liberalism and resolutely cracked down on all types of criminal activity that disrupt socialist construction. In handling various practical problems, we have done our best to act in the scientific and all-sided way as required by Marxism. This has enabled us to deal fairly successfully and relatively speedily with many complex ideological problems and social and political contradictions.

A jumble of problems accumulated during the 10 years of domestic turmoil. Many things that needed to be done or needed to be reformed claimed our attention. Moreover, the progress of new work inevitably gives rise to new problems. The party therefore had to draw up a list of priorities, do its work systematically and solve problems step by step.

Take economic work for example. The third plenary session first grasped the link of agriculture, laying emphasis on overcoming the longstanding "left" mistakes in the guidelines in this sphere. This involved restoring and expanding the power of decision of the rural people's communes and their production brigades and teams; restoring the private plots, family and collective sideline production and village fairs; and gradually introducing, in various forms, the system of responsibility for production in which payment is linked to output. At the same time, the state purchasing prices of grain and some other agricultural products were raised; then the policies providing for a diversified economy were formulated. As a result marked changes have taken place in agriculture, in which vigorous growth has replaced stagnation. For many years, the peasants have not been so happy as they are today. This has done much to start a turn for the better in the whole economic and indeed the whole political situation.

Following the improvement in agriculture, we began to readjust the structure of industry, laying emphasis on remedying the disproportion between light and heavy industries and on readjusting the service orientation of heavy industry. The result has been a rapid expansion of light industry. At the same time, we readjusted the ratio between accumulation and consumption and reduced the scale of capital construction which had been overextended. This has resulted in improved living standards for the people as well as better proportions between the various branches of the national economy. In other fields, we have, by and large, used the same method--that of tackling the key problem first to facilitate the solution of the rest.

In the final analysis, our party has been successful in the above efforts because it has adhered to the scientific Marxist principles of combining theory with practice and of recognizing the people as the makers of history. The facts are plain enough. The party firmly trusts the people, relies on them and acts in compliance with their wishes and the trend of historical development. With the crushing of the Jiang Qing counterrevolutionary clique, the people placed high hopes on the party. They demanded that wrongs be set right, that stability and unity be achieved, that efforts be concentrated on socialist modernization and that the level of our country's socialist material and spiritual civilization be raised. It is by crystallizing the will of the people and formulating correct lines, principles and policies that the party has been able to bring the cause of socialism in our country back onto the sound path. The people's trust in the party and their support for it are the key to the continuous success of our cause.

Looking back over the course of struggle we have traversed in the past 6 years, we naturally recall two previous instances of historic change during China's democratic revolution led by the party, namely, the change from the failure of the Northern Expedition (1924-27) to the outbreak of the agrarian revolutionary war (1927-37) and the change from the failure of the struggle against the Kuomintang's fifth "encirclement and suppression" campaign to the launching of the war of resistance against Japan (1937-45). At both junctures, when the party and the people had suffered heavy losses and the revolution faced grim crises, enemies both at home and abroad concluded that we were doomed to total defeat, and not a few people in our own ranks wavered and grew pessimistic. But the party was not overwhelmed by the enormous difficulties. Under the leadership of a number of outstanding figures of whom Comrade Mao Zedong was representative, the party displayed rare revolutionary courage and fortitude, fought on tenaciously, strove creatively to find a revolutionary path suited to China's specific conditions and finally turned the tide, resuscitating the revolutionary cause and bringing about a new situation of victorious advance.

Compared with the two previous ones, the present change has taken place under vastly different historical conditions. Today, our party is the leading core of nationwide political power and our country has already experienced a long period of socialist revolution and construction. The people are far more powerful than they were in the period of the revolutionary wars. Despite the tremendous damage done to it by the "Cultural Revolution," the cause of socialism retains its great and invincible vitality. Although we have lost Comrades Mao Zedong, Zhou Enlai, Liu Shaoqi and Zhu De and other veteran proletarian revolutionaries, we still have as the mainstay of our cause many other veteran revolutionaries who fought shoulder to shoulder with them. Moreover, we have as our core force many old comrades who went through the test of revolutionary wars and large numbers of young and middle-aged comrades who have been tempered and have matured since the founding of our People's Republic. Under the leadership of the Central Committee, we have at last succeeded in effecting another historic change, thanks to the arduous efforts of the party organizations at all levels and the concerted struggle of all party comrades and millions upon millions of people throughout the country.

Comrades! The great successes we have achieved in the past 6 years are evident to all. But, instead of resting on our laurels, we must realize that there are still many shortcomings and difficulties and that there is still much to be desired in the work of the party. We must enhance our revolutionary spirit, plunge into work and strive for new and still greater successes.

The general task of the Communist Party of China in this new historical period is to unite the people of all our nationalities in working hard and self-reliantly to achieve, step by step, the modernization of our industry, agriculture, national defense and science and technology and to make China a culturally advanced and highly democratic socialist country. In the 5 years from the present party congress to the next, we should, as this general task and China's actual conditions require, energetically promote the socialist material and spiritual civilization, continue to strengthen socialist democracy and the socialist legal system, earnestly rectify the party style and consolidate the party organization and strive to bring about a fundamental turn for the better in the country's financial and economic situation, in the standards of social conduct and in the style of the party. At the same time, together with all the patriotic people, our compatriots in Taiwan, Xianggang (Hong Kong) and Aomen (Macao) and including Chinese nationals residing abroad, we shall pursue the great aim of reunifying the motherland. We shall also join the people of the rest of the world in carrying on the struggle against imperialism and hegemonism in defense of world peace. These are the lofty tasks of creating a new situation in all fields that lie before us.

II. Bring About an All-Round Upsurge of the Socialist Economy

Of the various tasks for bringing about an all-round new situation, the most important one is to push forward the socialist modernization of China's economy. For this purpose, the party has formulated the strategic objective, priorities and steps of our economic construction as well as a series of correct principles in a spirit of realism.

The general objective of China's economic construction for the two decades between 1981 and the end of this century is, while steadily working for more and better economic results, to quadruple the gross annual value of industrial and agricultural production--from 710 billion yuan in 1980 to 2,800 billion yuan or so in 2000. This will place China in the front ranks of the countries of the world in terms of gross national income and the output of major industrial and agricultural products; it will represent an important advance in the modernization of its entire national economy; it will increase the income of its urban and rural population several times over; and the Chinese people will be comparatively well-off both materially and culturally. Although China's national income per capita will even then be relatively low, its economic strength and national defense capabilities will have grown considerably, compared with what they are today. Provided that we work hard and in a down-to-earth manner and bring the superiority of the socialist system into fuller play, we can definitely attain our grand strategic objective.

From an overall point of view, what is most important in our effort to realize this objective in economic growth is to properly solve the problems of agriculture, energy and transport and of education and science.

Agriculture is the foundation of the national economy, and provided it grows, we can handle the other problems more easily. At present, both labor productivity and the percentage of marketable products are rather low in our agriculture; our capacity for resisting natural calamities is still quite limited; and, in particular, the contradiction between the huge population and the insufficiency of arable land is becoming ever more acute. From now on, while firmly controlling the population growth, protecting all agricultural resources and maintaining the ecological balance, we must do better in agricultural capital construction, improve the conditions for agricultural production practice scientific farming, wrest greater yields of grain and cash crops from limited acreage, and secure the all-round development of forestry, animal husbandry, sideline occupations and fishery in order to meet the needs of industrial expansion and of higher living standards for the people.

Energy shortage and the strain on transport are major checks on China's economic development at present. Growth in energy production has slowed down somewhat in the last few years, while waste remains extremely serious. Transport capacity lags far behind the increasing volume of freight, and postal and telecommunications facilities are outmoded. To ensure a fair rate of growth in the national economy, it is imperative to step up the exploitation of energy resources, economize drastically on energy consumption and at the same time strive hard to expand the transport and postal and telecommunications services.

The modernization of science and technology is a key link in our four modernizations. Today, many of our enterprises are backward in production techniques, operation and management; large numbers of workers and staff members lack the necessary scientific knowledge, general education and work skills; and there is an acute shortage of skilled workers, scientists and technicians. In the years to come, we must promote large-scale technical transformation in a planned way, popularize technical measures that have yielded good economic results, and actively introduce new techniques, equipment, technologies and materials. We must step up research in the applied sciences, lay more stress on research in the basic sciences and organize people from all relevant fields to tackle key problems in scientific research. We must improve our study and application of economics and scientific business management and continuously raise the level of economic planning and administration and of the operation and management of enterprises and institutions. And we must work vigorously to universalize primary education, strengthen secondary vocational education and higher education and develop educational undertakings of all types and at all levels in both urban and rural areas, including training classes for cadres, workers, staff members and peasants and literacy classes in order to train all kinds of specialists and raise the scientific and educational level of the whole nation.

In short, in the next 20 years we must keep a firm hold on agriculture, energy, transport, education and science as the basic links, the strategic priorities in China's economic growth. Effective solution of these problems on the basis of an overall balance in the national economy will lead to a fairly swift rise in the production of consumer goods, stimulate the development of industry as a whole and of production and construction in other fields and ensure a betterment of living standards.

Population has always been an extremely important issue in China's economic and social development. Family planning is a basic policy of our state. We must do our utmost to keep our population within 1.2 billion by the end of this century. The total number of births is now at its peak. Excessive population growth will not only adversely affect the increase of per-capita income but also cause serious difficulties in food supply, housing, education and employment, and it may even disrupt social stability. Consequently, we must never slacken our effort in family planning, especially in the rural areas. We must conduct intensive and meticulous ideological education among the peasants. Provided that we do our work well, we can succeed in bringing our population under control.

In order to realize our objective for the next two decades, we must take the following two steps in our strategic planning: In the first decade, aim mainly at laying a solid foundation, accumulating strength and creating the necessary conditions; and in the second, usher in a new period of vigorous economic development. This is a major policy decision taken by the Central Committee after a comprehensive analysis of the present conditions of China's economy and the trend of its growth.

Our national economy has grown steadily even in the past few years of readjustment, and the achievement is quite impressive. In many fields, however, the economic results have been far from satisfactory, and there has been appalling waste in production, construction and circulation. We have yet to equal our best past records in the materials expended in per unit products, in the profit rate of industrial enterprises, in the construction time for large and medium-sized projects and in the turnover rate of circulating funds in industrial and commercial enterprises. Apart from some objective factors not subject to comparison, the main causes for this are the "left" mistakes of the past, which resulted in blind proliferation of enterprises, an irrational economic structure, defective systems of economic administration and distribution, chaotic operation and management and backward production techniques. Things started to pick up a little in 1982, with the stress laid on better economic results. Nevertheless, it is impossible in a brief space to solve all such problems which have piled up over a long period. We have to bear this basic fact in mind when drawing up the strategic plan for China's economic development.

In the period of the Sixth Five-Year Plan (1981-85), we must continue unswervingly to carry out the principles of readjustment, restructuring, consolidation and improvement, practice strict economy, combat waste and focus all economic work on the attainment of better economic results. We must devote our main efforts to readjusting the economic structure in various fields, streamlining, reorganizing and merging the existing enterprises and carrying out technical transformation in selected enterprises. At the same time, we must consolidate and perfect the initial reform in the system of economic administration and work out at an early date the overall plan for reform and the measures for its implementation. During the Seventh Five-Year Plan (1986-90), we shall carry out the technical transformation of enterprises on an extensive scale and gradually reform the system of economic administration, in addition to completing the rationalization of the organizational structure of enterprises and the economic structure in various fields. We must also undertake a series of necessary capital construction projects in the energy, transport and some other fields, and the concentrated solution of a number of major scientific and technological problems in the 1980's. Therefore, it will not be possible for the national economy to develop very fast in this decade. But if we complete the above tasks, we can solve the problems left over from the past and build a relatively solid basis for economic growth in the decade to follow. The 1990's will witness an all-round upsurge in China's economy which will definitely grow at a much faster rate than in the 1980's. If we publicize and explain this strategic plan adequately to the people, they will see the bright future more clearly and be inspired to work with greater drive to usher in the new period of vigorous economic growth.

In the 5 years between this party congress and the next, we shall complete the Sixth Five-Year Plan and start on the seventh. To strive for a fundamental turn for the better in China's financial and economic situation in this period means that we must, under the strategic plan outlined above, achieve significantly better economic results, a steady basic balance in finance and credit and basic stability in commodity prices. Clearly, it is of paramount importance to China's long-term economic development that we do our economic work well in these 5 years.

To bring about an all-round upsurge of China's socialist economy, we must continue to carry out in all our economic work the 10 principles for economic construction approved by the Fifth National People's Congress at its fourth session, paying special attention to solving the following major questions of principle.

First, concentrating funds on key development projects and continuing to improve the people's living standards.

To attain our strategic objective for the coming 20 years, the state must concentrate needed funds on key development projects in their order of importance and urgency. For this purpose, while endeavoring to overcome undue decentralization in the use of funds, we must bring into play the initiative of all concerned to expand production and achieve better economic results, so that the national income may rise more rapidly. In recent years, state revenues have somewhat decreased and there has been a shortage of funds for urgently needed key projects. On the other hand, funds at the disposal of local authorities and enterprises have grown greatly and have been used for many projects which may seem badly needed from a local point of view; but this inevitably makes it difficult to adequately meet the national needs and to prevent and overcome the tendency toward blindness in construction. We must realize that if key national projects are not guaranteed and if such parts of the infrastructure as energy and transport are not developed, the national economy as a whole will not prosper and the individual sectors are bound to be greatly restricted in their development. Even if there should be some growth in a given locality at a given time, it would not last because of difficulties in striking a balance between supply, production and marketing. We must firmly implant the idea of coordinating all the activities of the nation like moves on a chessboard. While continuing to enforce the present financial system and ensure the decisionmaking powers of enterprises, we must appropriately readjust, in the light of the actual conditions of the different localities and trades, the distribution of national and local revenues and the proportion of profits retained by enterprises, and we must encourage local authorities, departments and enterprises to make their funds available for the key projects most urgently needed by the state. While thus pooling funds, we must of course continue to take into consideration the needs of the localities and enterprises. If appropriate financial reserves are left at the disposal of local authorities and enterprises, it will help give scope to their initiative and enable them to embark on those projects which they are best fitted to undertake, especially as regards the technical transformation of existing enterprises. Our country has abundant resources of labor power, so we must pay close attention to increasing the investment of labor. In the rural areas, we must put their rich manpower to good use in agricultural capital construction according to their local conditions. In mining, transport and other fields, we must also stress the role of the investment of labor.

The fundamental aim of socialist production and construction is to meet continuously the growing material and cultural needs of the people. A basic principle guiding our economic work is "first, feed the people and second, build the country." The party and government have done a great deal to bring about a marked improvement in the people's livelihood in recent years. Yet on the whole the living standards remain fairly low. In some low-yield rural areas, or those hit by natural disasters, the peasants are still impoverished, and we must actively help them increase production and income. Urban people, too, still have many problems which call for solution—such as pay, employment, housing and public utilities. The state has decided to take effective measures to improve, steadily and group by group, the living and working conditions of middle-aged intellectuals, who play a backbone role in production, construction and all the other fields. Whether in town or country, living standards can rise only by increasing production, and not by cutting into funds indispensable to national construction, a course that would impair the fundamental and long-term interests of the people. Specifically, we can no longer increase peasant incomes mainly through raising the prices of farm produce or through lowering the fixed quotas of state purchases and enlarging the scope of negotiated prices. The increase of the average incomes of the workers and staff must necessarily be less than that of labor productivity. We must put a stop to the indiscriminate handing out of bonuses and subsidies without regard to the actual state of production and profit. As a matter of fact, a constant improvement in the living standards of the people is possible provided the workers and peasants enhance their understanding and make sustained efforts to raise labor productivity, lower consumption and eliminate waste. As for those problems concerning the people's daily life which can be solved by spending very little or even no money, leaders at all levels must take even more energetic measures to solve them. Concern for the well-being of the people is a fine tradition of our party, which we should never neglect.

Second, upholding the leading position of the state economy and developing diverse economic forms.

The socialist state sector occupies the leading position in the entire national economy. The consolidation and growth of the state sector are the decisive factors in ensuring that the collective economy of the working people will advance along the socialist road and that the individual economy will serve socialism. As the level of development of the productive forces in our country is on the whole still fairly low and uneven, it is necessary to maintain different economic forms for a long time to come. In rural areas, the principal economic form is the cooperative economy collectively owned by the working people. At present, the state sector alone cannot and should not run all handicrafts, industries, building industry, transport, commerce and the service trades in the cities and towns; a considerable part should be run by the collective. Cooperatives financed and run by young people and other residents have spread to many urban areas in the past few years and played a useful role. The party and government should support and guide them and forbid discrimination or attacks against them from any quarter. We must also encourage the appropriate development of the individual economy of urban and rural working people as a necessary and useful complement to the public economy, within limits prescribed by the state and under supervision by industrial and commercial administrations. Only through the rational distribution and development of diverse economic forms is it possible to invigorate the urban and rural economy and make life more convenient for the people.

To bring the initiative of enterprises and of the working people into play, we must earnestly implement a responsibility system in the operation and management of both state and collective enterprises. The responsibility system for production set up in various forms in the countryside in recent years has further emancipated the productive forces and it must be adhered to for a long time to come. The thing for us to do is to gradually perfect it on the basis of summing up the practical experience of the masses. In no case must we make rash changes against the will of the masses, still less must we backtrack. With the growth of agricultural production and the rising management ability of the peasants, demands for new types of combined management are bound to arise. We should promote various forms of interunit economic combination strictly in accordance with the principle of stimulating production and of voluntary participation and mutual benefit. It can be predicted that in the not too distant future, there will emerge in our rural areas an improved cooperative economy, with a diversity of forms, which will be able to make full use of the advantages in the light of local conditions and facilitate the large-scale adoption of advanced production measures. Recently, the economic responsibility system has also been initiated in industrial and commercial enterprises with some good results. Although industry and commerce are vastly different from agriculture, the application of the economic responsibility system (including the system of responsibility for profit or loss in some of the state enterprises) similarly helps to implement the Marxist principle of material benefit, to heighten the workers' sense of responsibility as masters of the country and to promote production. We should adopt a positive attitude to this system, earnestly sum up experience and discover and devise a set of specific rules and methods which are suited to the characteristics of industrial and commercial enterprises and which can both ensure unified leadership by the state and bring into full play the initiative of enterprises and their workers and staff members.

It is impermissible to undermine the public ownership of the means of production, which is our basic economic system. Of late, there have been cases in certain rural areas of damage to farm irrigation works, destructive lumbering and doing away with the accumulation and retention of common funds by the collective, while in some state-owned industrial and commercial enterprises, there have been such acts as violation of unified state plans, arbitrary holding back of materials earmarked for unified distribution, withholding of profits that should be turned over to the state, evasion of taxes, willful inflation of prices and blocking the flow of commodities. All such things, though done by only a small number of people, seriously impair the public economy and the interests of the state and the people, and they must be resolutely corrected.

Third, correctly implementing the principle of the leading role of the planned economy and the supplementary role of market regulation.

China has a planned economy based on public ownership. Planned production and circulation cover the main body of our national economy. At the same time, the production and circulation of some products are allowed to be regulated through the market without being planned, that is, by letting the law of value spontaneously play a regulatory role within the limits circumscribed by the state's unified plan and in the light of the specific conditions at different periods. This serves as a supplement to planned production and circulation, subordinate and secondary to it but essential and useful nonetheless. The state ensures proportionate and coordinated growth of the national economy through overall balancing by economic planning and the supplementary role of market regulation. In the past few years, we have initiated a number of reforms in the economic system by extending the powers of enterprises in planning and by giving scope to the role of market regulation. This orientation is correct and its gains are apparent. However, as some reform measures have not been well coordinated with each other and the corresponding forms of administrative work have lagged behind, cases of weakening and hampering the state's unified planning have been on the increase. This is not good for the normal growth of the national economy. Hereafter, while continuing to give play to the role of market regulation, we must on no account neglect or relax unified leadership through state planning.

In order to make the development of the economy centralized and unified as well as flexible and diversified, planning should take different forms in different circumstances. Plans of a mandatory nature must be enforced in regard to the production and distribution of capital goods and consumer goods in the state sector which are vital to the national economy and the people's livelihood, and especially in key enterprises vital to the whole economy. This is a major manifestation of China's socialist ownership by the whole people in the organization and management of production. For the sector of the economy which is owned by collectives, mandatory targets should also be assigned where necessary, as in the purchase of grain and other important agricultural and sideline products by the state on fixed quota. In addition to plans of a mandatory nature, guidance plans, whose implementation is mainly ensured by means of economic levers, should be used in regard to many products and enterprises. This is because diverse economic forms still exist in China and it is difficult to make precise estimates of the multifold and complex demands of society and of the productive capacity of a vast number of enterprises. But whether in mandatory planning or in guidance planning, we must strive to make it conform to the objective reality, constantly study changes in market supply and demand, consciously make use of the law of value and such economic levers as pricing, taxation and credits to guide the enterprises in fulfilling state plans, and give them varying degrees of powers to make decisions as they see fit. Only in this way can state plans be supplemented and improved as required and in good time in the course of their implementation. As for a number of small commodities which are low in output value, great in variety and produced and supplied only seasonally and locally, it is neither necessary nor possible for the state to control them all by planning. Enterprises may be allowed to arrange their production flexibly in accordance with the changes in market supply and demand. The state, on its part, should exercise control through policies, decrees and administration by industrial and commercial offices and should help those enterprises with the supply of certain important raw and semifinished materials.

Correct application of the principle of ensuring the leading role of planned economy supplemented by market regulation is of fundamental importance to the reform of China's economic systems. We must correctly define the respective scope and limits of mandatory plans, guidance plans and market regulation and, on the premise that basic stability of commodity prices is maintained, gradually reform the pricing system, price control measures and the labor and wage systems, and establish an economic administrative system suited to China's conditions so as to ensure the healthy growth of the national economy.

Whether commercial work is done well or badly has a direct bearing on industrial and agricultural production and the people's standard of living, and the importance of this truth has become increasingly manifest in China's economic growth. At present, our commercial networks, establishments and facilities are far from adequate, there are too many intermediate links, market forecasting is weak, and many problems related to ideas about business operation and to management remain to be solved. After acquiring all relevant information and earnestly summing up experience, we must effectively improve our commercial work and unclog, broaden and multiply the channels of circulation so that commodities can flow freely, materials are put to good use and commerce can play its full role in stimulating and guiding production and in ensuring supply and invigorating the economy.

Fourth, persevering in self-reliance while expanding economic and technological exchanges with foreign countries.

It is our firm strategic principle to carry out the policy of opening to the outside world and expand economic and technological exchanges with foreign countries in accordance with the principles of equality and mutual benefit. We must speed the entry of Chinese products into the world market and vigorously expand foreign trade. We must as far as possible make more use of foreign funds available for our national construction. To this end, it is necessary to do all the required preparatory work well and make proper arrangements with regard to the necessary domestic funds and supporting measures. We must actively import advanced technologies suited to our national conditions, particularly those helpful to the technical transformation of our own enterprises, and strive to absorb and develop them in order to promote our production and construction.

In our efforts for socialist modernization, we must take a self-reliant stand, relying mainly on our own hard work. There must be no wavering whatsoever in this respect. Our aim in expanding economic and technological exchanges with foreign countries is to enhance our ability to be self-reliant and to promote, and certainly not to impair, the development of our national economy. We must refrain from indiscriminate import of equipment, and particularly of consumer goods that can be manufactured and supplied at home. In our economic relations with foreign countries, on the premise of unified planning and policy and coordinated action, we must stimulate the initiative of various localities, departments and enterprises in their foreign business dealings while at the same time opposing all acts detrimental to the interests of our country and people. In no circumstances must we forget that capitalist countries and enterprises will never change their capitalist nature simply because they have economic and technological exchanges with us. While pursuing the policy of opening to the outside, we must guard against, and firmly resist, the corrosion of capitalist ideas and we must combat any worship of things foreign or fawning on foreigners.

Comrades! Lenin said that living creative socialism is the product of the masses themselves.[1] Beyond all doubt, it would be impossible for the cause of socialist construction to forge ahead without the soaring labor enthusiasm of the masses in their hundreds of millions, without the initiative of thousands of production units and without the hard work of various localities and departments. To yield the best results, all our economic work, principles, policies, plans and measures must be based on overall arrangement, on taking into consideration the interests of the state, the collective and the individual and on fully arousing and scientifically organizing the initiative of the central authorities, the localities, departments, enterprises and the working people. This is the most important way to bring about an all-round upsurge in the socialist economy. We are confident that the people of all our nationalities will surely exert themselves with one heart and one mind for the realization of the great goal of our country's economic development.

III. Strive To Build a High Level of Socialist Spiritual Civilization

From the time that the party shifted the focus of its work to the modernization of China's economy, the Central Committee has proclaimed on many occasions that while working for a high level of material civilization, we must strive to build a high level of socialist spiritual civilization. This is a strategic principle for building socialism. The history of socialism and the present situation in China both tell us that the success or failure of socialism depends on whether or not we adhere to this principle.

Spiritual civilization is closely interrelated with material civilization in socialist construction. As Marx put it, in their productive activity to transform the world, "the producers themselves change, they evolve new qualities, by producing they develop and transform themselves, acquire new powers and new conceptions, new modes of intercourse, new needs, and new speech."[2] Comrade Mao Zedong, too, pointed out that the proletariat and other revolutionary people face a twofold task in their struggle for the transformation of the world: "To change the objective world and, at the same time, their own subjective world."[3] The objective world comprises nature and society. The transformation of society results in the establishment and development of new relations of production as well as a new sociopolitical system. The transformation of nature results in material civilization, as manifested in improved conditions for material production and in a better material life for the people. In the process of transforming the objective world, people also transform their subjective world, and the production of spiritual values and the spiritual life of society also develop. The latter achievement is what we call the spiritual civilization, as manifested in a higher educational, scientific and cultural level and in higher ideological, political and moral standards. The transformation of society or the progress of a social system will ultimately find expression in both material and spiritual civilization. As our socialist society is still in its initial stage, it is not yet highly developed materially. However, the establishment of the socialist system makes it possible for us to build a high level of socialist spiritual civilization while striving for a high level of material civilization, just as the development of a modern economy to a certain level and the appearance of the most advanced class of our time, the working class, and its vanguard, the Communist Party, make it possible to succeed in socialist revolution. Material civilization provides an indispensable foundation for socialist spiritual civilization which, in its turn, gives a tremendous impetus to the former and ensures its correct orientation. Each is the condition and objective of the other.

Socialist spiritual civilization constitutes an important characteristic of the socialist system and a major aspect of its superiority. In the past, when referring to the characteristics of socialism, people laid stress on the elimination of the system of exploitation, public ownership of the means of production, distribution according to work, planned and proportionate development of the national economy, and political power of the working class and other working people. They also laid stress on another characteristic of socialism, the high development of the productive forces and a labor productivity higher than that under capitalism as both a necessity and the end result of the development of socialism. All this is undoubtedly true, but it does not cover all the characteristics. Socialism must possess one more characteristic, that is, socialist spiritual civilization with communist ideology at its core. Without this, the building of socialism would be out of the question.

Communism as a social system can be completely realized in our country only through the protracted, arduous struggle of several generations. However, communism is above all a movement. Marx and Engels said: "We call communism the real movement which abolished the present state of things."[4] The final objective of this movement is the realization of communism as a social system. In our country, the spread of communist ideas and the movement for the ultimate realization of the ideal of communism began long ago when the Communist Party of China was founded, and continued during the new-democratic revolution which it led. This movement has now brought about a socialist society, which is the first phase of communism. As far back as the democratic revolution, Comrade Mao Zedong pointed out that the program of the Chinese Communist Party in regard to China's social system comprised two stages, the present and the future. "For the present period, new democracy, and for the future, socialism; these are two parts of an organic whole guided by one and the same communist ideology." He added: "Communism is at once a complete system of proletarian ideology and a new social system.... Without communism to guide it, China's democratic revolution cannot possibly succeed, let alone move on to the next stage."[5] Therefore, communist ideas and actions have long been part of our actual life. The view that communism is but a "dim illusion" and that it "has not been tested in practice" is utterly wrong. There is communism everywhere in our daily life, of which it forms an inseparable part. Inside and outside our party, there are so many heroic and exemplary people, so many who are ready to give their all, including their very lives, for the realization of revolutionary ideals. Do they do all this for material rewards? Does not a lofty communist spirit guide them? Socialism is advancing steadily toward the goal of its higher phase--communism. This advance depends not only on the increase of material wealth but also on the steady growth of peoples' communist consciousness and revolutionary spirit.

True, at the present stage, we must in our economic and social life persist in the system of "to each according to his work" and other socialist systems, and we cannot of course expect every member of our society to be a communist, but we must demand that the party members, the Communist Youth League members and all other advanced elements acquire communist ideology, and we must, through their instrumentality, educate and influence the broad masses. If the great task of building a socialist spiritual civilization guided by communist ideology is overlooked, people will fall into a one-sided understanding of socialism and direct their attention exclusively to the building of material civilization or even only to the pursuit of material gains. In that case, we will not be able to safeguard the socialist orientation of China's modernization, and our socialist society will lose its ideals and objectives, its spiritual motivation and fighting will, lose the ability to resist the inroad of corrupt influences and even develop distortedly and degenerate. Comrades, this is not just alarmist talk but a conclusion drawn from present realities at home and abroad. It is from this high theoretical and political vantage point that we must recognize the significance and role of socialist spiritual civilization and make up our minds to do our utmost to ensure the building of both a material and a spiritual civilization so that our socialist cause will forever retain its revolutionary youth and vigor.

Roughly speaking, socialist spiritual civilization consists of two aspects, the cultural and the ideological, permeating and promoting each other.

The cultural aspect refers to the development of undertakings such as education, science, art and literature, the press and publication, broadcasting and television, public health and physical culture, and libraries and museums, as well as the raising of the level of general knowledge of the people. It is an important requisite both for the building of a material civilization and for the raising of people's political consciousness and moral standards. Cultural development also includes mass recreational activities which are healthy, pleasant, lively and varied so that, after a spell of hard work, people may refresh themselves with entertainments that are in good taste. All our cultural construction must, of course, be guided by communist ideology. In the past, owing to the influence of "left" ideas and the small-producer mentality, erroneous views such as underestimation of the importance of education, science and culture and discrimination against intellectuals were rife in our party over a fairly long time. They seriously hindered the building of material and spiritual civilization in our country. In recent years, we have made great efforts to eliminate these wrong views. We are determined gradually to step up cultural development so that it will no longer lag behind economic growth. We have worked hard to carry out the party's policy concerning intellectuals and to enable the whole party and all society to realize that, like workers and peasants, intellectuals are a force we must rely on in building socialism. We are determined to do everything possible to create favorable conditions in which the mass of intellectuals can work with ease of mind and in high spirits in the interest of the people. In this regard, there is still a good deal of painstaking ideological and organizational work to do.

Universal education is an important precondition for building material and spiritual civilization. In 1980, the party's Central Committee and the State Council took the decision that universal primary education in various forms must in the main be achieved by 1990 and, in areas where the economy and education are more developed, this should be done earlier. In China's vast rural areas, this is an arduous task, but it can be done through unremitting efforts, and must be done, for the sake of the development of agriculture and of the rural areas. Teachers in schools of all levels, and especially rural primary school teachers, are engaged in extremely arduous but truly noble work. On their efforts depends the moral, intellectual and physical development of the next generation of our citizens. We must make sure that the whole society respects and energetically supports them in their noble endeavors. Development plans and goals for other cultural undertakings covering the next 5 to 10 years should also be worked out.

The socialist character of our spiritual civilization is determined by ideological education. This consists mainly of the following: The working-class world outlook and scientific theory of Marxism; communist ideals, beliefs and moral values; the outlook of being masters of the country and collectivism which correspond with the system of socialist public ownership; a concept of rights and duties and a sense of organization and discipline which correspond with the socialist political system; devoted service to the people and a communist attitude toward work; and socialist patriotism and internationalism. In essence, it consists of, above all, revolutionary ideals, morality and discipline. All party members and other advanced persons in our society must continuously propagate advanced ideas and set an example by their own deeds so as to inspire more and more members of our society to become working people with lofty ideals, moral integrity, education and a sense of discipline.

We must try not only to help every member of our society to acquire a broader mental outlook but also to establish and develop throughout its ranks the new type of social relations which embody socialist spiritual civilization. These relations find expression in solidarity, friendship and mutual assistance in common struggle and common progress among all our nationalities, between the workers, peasants and intellectuals, the cadres and the masses, the army and the people, the army and the government, and among the people in general. Lenin has pointed out that it will take many decades to create new forms of social ties between people and that this is a most noble work.[6] We can say with full confidence that, relying on our long revolutionary tradition and proceeding from the foundations already laid for this work, we shall certainly be able to foster and develop such new social ties.

To build a socialist spiritual civilization is a task for the whole party and the common task of our people in all fields of endeavor. Ideological education in the party is the pillar of the building of spiritual civilization in the whole society, and party members should, first of all, play an exemplary role morally and ideologically. Ideological and political workers, workers in culture, in the sciences and in education of all types and levels from kindergartens to graduate schools--all shoulder especially heavy responsibilities in building a socialist spiritual civilization. In particular, the Communist Party members among them must unite in thought and deed so as to organize a mighty contingent of militant ideological workers able to persuade and act as a magnet for others. It is necessary to do more to educate the masses of the people, and first of all the cadres and youth, in Marxism-Leninism and Mao Zedong Thought, in the history of our motherland, and especially its modern history, in the program, history and revolutionary tradition of our party; and in the constitution of our country, the rights and duties of citizens and civic morality. It is necessary to do more to educate people of all trades and lines of work in professional responsibility, ethics and discipline. Education in all the areas enumerated above should be closely related to reality and conducted in vivid and varied ways. In formulating and implementing policies and in all their work, leading cadres in the economic field at various levels should concern themselves not only with the development of production but also with the building of a socialist spiritual civilization. In production and construction, we should try not only to turn out more and better material products, but also train successive generations of socialist-minded people of a new type. We must not allow our policies or work in any field to impede or, still worse, to undermine the building of a socialist spiritual civilization. In the past year or so, mass activities for building such a civilization have been unfolded in the People's Liberation Army and among the people in general. Relevant rules have been formulated for students in schools and for workers and staff members in enterprises, and written pledges have been drawn up by city residents, rural commune members and people in various trades and professions. All these activities have begun to yield gratifying results. We call on every locality and department to promote and persist in them. We must explore all possible ways and adopt all possible effective measures to promote education in ideals, morality and discipline among the entire population, and first of all among the youth, within the next 5 years. This is essential to our endeavor to bring about a fundamental turn for the better in standards of social conduct. From now on, when checking up on the work of any locality, department or unit, the Central Committee and the local party committees at all levels must take into consideration not only its material side, but also its spiritual side. Every citizen should perform his duties and abide by social morality and professional ethics. Every working person should contribute his share to the building of socialist spiritual civilization.

To build it is no easy task, particularly at the present moment. In the years of the revolutionary wars and those immediately following the founding of the People's Republic, our material life was much harder than it is today, but all party members and the people as a whole were full of vigor. The decade of domestic turmoil confounded the criteria of right and wrong, good and evil, and beauty and ugliness. It is much more difficult to undo its grave spiritual consequences than its material ones. For this and other reasons, many serious problems concerning standards of social conduct now exist in our country. The Central Committee of the party is determined to effect a fundamental turn for the better in standards of social conduct in the next 5 years. This includes, in the main, the achievement of markedly better public order, generally improved attitudes toward all types of work and a marked decline in the crime rate. It also means putting an effective check on, and arousing universal contempt for, such unhealthy tendencies and practices as benefiting oneself at others' expense, pursuing private interests at the expense of public interests, loving ease and despising work, putting money first in everything, unscrupulous pursuit of personal enjoyment, and attempting to isolate and attack advanced elements. It also includes resolutely eliminating all the vile social evils which had been stamped out long ago by new China but have now cropped up again. We must do our utmost to adapt ourselves to the new conditions and developments in the period of construction, do a good job of building socialist spiritual civilization and arouse, with revolutionary ideas and revolutionary spirit, the immense enthusiasm of the broad masses for building socialism.

IV. Strive To Attain a High Level of Socialist Democracy

The steady development of socialist democracy provides the guarantee and support for the building of socialist material and spiritual civilization. To attain a high level of socialist democracy is therefore one of our fundamental goals and tasks.

Our state system is the people's democratic dictatorship. On the one hand, it ensures that the working people, the overwhelming majority of the population, are the masters of the state; on the other, it exercises dictatorship over a tiny minority of hostile elements who try to undermine socialism. Socialism is the common cause of the whole people. Only with a high level of socialist democracy will it be possible to develop all our undertakings in accordance with the will, interests and needs of the people, to enhance the people's sense of responsibility as masters and give full play to their initiative and enthusiasm, and to exercise effective dictatorship over the handful of hostile elements, in order to ensure the smooth progress of socialist construction.

Socialist democracy is incomparably superior to bourgeois democracy. Much time and work are needed to establish the system of socialist democracy and foster democratic ways. What we did in this respect was far from adequate and, moreover, was seriously undermined during the "Cultural Revolution." In recent years, socialist democracy has been restored and developed to some extent in our country. We must continue to reform and improve our political institutions and system of leadership in accordance with the principle of democratic centralism so that the people are better able to exercise state power and the state organs can lead and organize the work of socialist construction more effectively. Socialist democracy should be extended to all spheres of life: political, economic, cultural and social; and it is necessary to extend democratic management to all enterprises and institutions and encourage self-management of community affairs by the masses at the grassroots level. Democracy should serve as a means by which the masses educate themselves. It is necessary to establish a relationship of equality between man and man and a correct relationship between the individual and society in accordance with the principles of socialist democracy. The state and society guarantee legitimate freedom and rights to the citizens, who should in turn perform their duties to the state and society. While exercising their freedom and rights, citizens must not impair the interests of the state, society and the collective, or the freedom and rights of others. While we strive to develop socialist democracy, all our measures must help to consolidate the socialist system and promote social production and work in other fields. On no account will hostile, antisocialist elements be given any freedom to carry out sabotage.

We must closely link the building of socialist democracy with that of the socialist legal system so that socialist democracy is institutionalized and codified into laws. In the past few years, notable progress has been made in building our legal system. Under the party's leadership, the state has enacted a series of important laws, including the criminal law, the law of criminal procedure, the draft law of civil procedure for trial implementation and the new marriage law. It is especially noteworthy that the draft constitution, soon to be submitted to the National People's Congress for adoption, contains many new and very important stipulations formulated in the light of the achievements scored and the principles worked out in developing socialist democracy since the 3d Plenary Session of the 11th Central Committee. The adoption of this constitution will mark a new stage in the development of China's socialist democracy and legal system. The problems facing us today are that not only a sizable number of nonparty people but also many party members, including some leading cadres, do not have an adequate understanding of the importance of building the legal system and that laws already enacted are in some cases not fully observed or enforced. This situation must be resolutely corrected. The party will continue to lead the people in making and improving various laws, strengthen its leadership over the work of public security, the procuratorate and the judiciary and ensure in every way that these departments enforce the laws strictly. Moreover, through our publicity work we should repeatedly educate the whole people in the importance of the legal system and include instructions in the laws in all the teaching programs from primary schools to colleges, so that every citizen may know the laws and abide by them. In particular, party members should be educated and urged to take the lead in observing the constitution and laws. The stipulation in the new party constitution that "the party must conduct its activities within the limits permitted by the constitution and the laws of the state" embodies a most important principle. It is impermissible for any party organization or member, from the Central Committee down to the grassroots, to act in contravention of the constitution and laws. The party is part of the people. It leads them in making the constitution and laws which, once adopted by the supreme organ of state power, must be strictly observed by the whole party.

Further promotion of the socialist relations of equality, unity and mutual assistance among all our nationalities constitutes an important aspect of the building of socialist democracy in our country. The Central Committee has in the past few years made a number of significant decisions on the nationalities question and achieved marked successes in correcting "left" errors committed during and before the "Cultural Revolution" and in restoring good relations among China's nationalities. In the light of conditions in this new historical period and the specific circumstances of various nationalities, the Central Committee has adopted many policies helpful to economic and cultural development in the minority nationality areas, to the realization of their right to regional autonomy, and to strengthening of unity among all our nationalities. These policies will have to be further improved and developed. Unity, equality and common prosperity among the nationalities are of vital importance to the destiny of China as a multinational country. The whole party must acquire a better understanding of the nationalities question, oppose great-nation chauvinism, primarily Han chauvinism, and at the same time oppose local-nationality chauvinism. We must educate all party members to strive to fulfill the task of the party in regard to the nationalities.

In the period of the democratic revolution, the united front was an important "magic weapon" for winning victory in our revolution. In the period of socialist construction it still plays a major role. With regard to all China's democratic parties, nonparty democrats, national minority personages and patriots in the religious circles, our party will continue to adhere to the policy of "long-term coexistence and mutual supervision" and the principle of "treating each other with all sincerity and sharing weal or woe," and strengthen our cooperation with them. We must do everything possible to strengthen the broadest patriotic united front embracing all socialist working people and all patriots who support socialism or who support the reunification of the motherland, including our compatriots in Taiwan, Xianggang (Hong Kong) and Aomen (Macao) and Chinese nationals residing abroad.

Correct understanding and handling of the class struggle that still exists in China today is the key to guaranteeing the democratic rights of the overwhelming majority of the people and exercising effective dictatorship over the handful of hostile elements. Hostile elements of different shades are still attempting to undermine or overthrow our socialist system in the economic, political, ideological, cultural and other social spheres. The class struggle at the present stage chiefly takes the form of struggle by the people against these hostile elements. The Central Committee has repeatedly pointed out that following the elimination of the exploiting classes as such, most contradictions in our society do not have the nature of class struggle, and class struggle no longer constitutes the principal contradiction. It is wrong, in a socialist society where the system of exploitation has been abolished and the exploiting classes have been eliminated, to declare and act on the principle of "taking class struggle as the key link." We must be very careful in distinguishing and handling contradictions between the enemy and the people and those within the ranks of the people, so as to avoid repeating the past mistake of enlarging the scope of class struggle. However, within certain limits, class struggle will continue to exist for a long time and may even sharpen under certain conditions. This is not only because pernicious influences left over by the exploitative systems and classes cannot be eradicated within a short time, but also because we have not yet achieved our goal of reunifying our motherland and still live in a complicated international environment in which the capitalist forces and other forces hostile to our socialist cause will seek to corrupt us and harm our country. Our economy and culture are still quite backward and our young socialist system is imperfect in many ways, so that it is not yet possible to prevent in all cases the degeneration of some members of our society and party or block the emergence of a few exploiting and hostile elements. Therefore, we must prepare ourselves mentally for a long-term struggle, see to it that the state of the people's democratic dictatorship exercises its function of dictatorship over enemies, and uphold the Marxist class viewpoint in handling the current social contradictions and other social phenomena that have the nature of class struggle. This is the basic principle of the Central Committee with regard to the question of the class struggle in China at the present stage.

Our struggle against grave criminal offenses in the economic sphere is now being intensified. Among those guilty of such crimes, apart from lawbreakers in society at large, are a tiny number of degenerates in party and government organizations and in the armed forces who have been corrupted by capitalist ideology. They cause tremendous damage to economic construction, upset social stability, debase the standards of social conduct and corrupt people's minds and life. They are termites undermining the edifice of socialism. Similar destructive activities occur in the political and cultural spheres as well. We must on no account rank all these things with the common run of offenses or antisocial acts, because they are important manifestations of class struggle under the new historical conditions in which we are pursuing a policy of opening to the outside and taking flexible measures to invigorate our economy domestically. Such destructive elements must be severely punished by law. We have won some initial successes in this struggle. The whole party must enhance its understanding of this struggle, take a firm stand in it and unswervingly carry it through to the end. This will be an important guarantee for our adherence to the socialist road.

In the new period of the development of our socialist cause, we must attend, both in ideology and in action, to two aspects. On the one hand, we must persist in the policy of opening to the outside as well as in our policies for invigorating the economy domestically and, on the other, we must resolutely strike at the grave criminal activities in the economic, political and cultural spheres that endanger socialism. It would be wrong to attend only to the latter aspect and be skeptical about the former, and it would be dangerous to stress the former aspect to the neglect of the latter. All party comrades must have a clear understanding of this principle without the slightest ambiguity.

Our socialist construction is taking place in a very unstable world in which our national security is under grave threat. In these circumstances, we must never relax our vigilance, but must strengthen our national defense on the basis of vigorous economic development. We must work hard to turn the People's Liberation Army into a regular, modern and powerful revolutionary armed force and enhance its defense capabilities in modern warfare. We must continue to maintain and carry forward the fine traditions of our peoples' armed forces, and strengthen and improve their ideological and political work, so that every member will have a lofty spirit of self-sacrifice, strong sense of discipline and revolutionary style of work and that our army will serve not only as a Great Wall of steel guarding our socialist motherland but also as an important force in building our socialist material and spiritual civilization. We must continue to strengthen the militia. The Chinese People's Liberation Army is a people's armed force created and led by the Chinese Communist Party. After the new draft constitution is discussed and adopted by the forthcoming National People's Congress, the Central Committee will continue to exercise leadership over our armed forces through the State Central Military Commission which is due to be set up. We must stick to the successful practices which the party has long followed in leading the armed forces. This conforms to the supreme interests of the whole nation. We are convinced that, under the leadership of the Central Committee and through the efforts of all the commanders and fighters and the people of all nationalities, our national defense will become still stronger, thus providing a surer guarantee that the whole nation will be able to devote its full energy to socialist construction.

V. Adhering to an Independent Foreign Policy

China's future is closely bound up with that of the world as a whole. The successes China has achieved in its revolution and construction provide a powerful support to the world's movement for progress and a bright future, and conversely, our successes would have been impossible without the struggles of the people of other countries for a bright future. China has received help from other countries and peoples, and in turn has helped others. In the early years of our People's Republic, Comrade Mao Zedong pointed out: "Our general task is to unite the whole people and win the support of all our friends abroad in the struggle to build a great socialist country, defend world peace and advance the cause of human progress."[7] Integration of patriotism with internationalism has always been our basic point of departure in handling our external relations.

Being patriots, we do not tolerate any encroachment on China's national dignity or interests. Being internationalists, we are deeply aware that China's national interests cannot be fully realized in separation from the overall interests of mankind. Our adherence to an independent foreign policy accords with the discharging of our lofty international duty to safeguard world peace and promote human progress. In the 33 years since the founding of our People's Republic, we have shown the world by deeds that China never attaches itself to any big power or group of powers, and never yields to pressure from any big power. China's foreign policy is based on the scientific theories of Marxism-Leninism and Mao Zedong Thought, and it proceeds from the fundamental interests of the people of China and the rest of the world. It follows an overall long-term strategy, and is definitely not swayed by expediency or by anybody's instigation or provocation. Because we have firmly applied the basic principles of our foreign policy formulated by the late Comrades Mao Zedong and Zhou Enlai, socialist new China has gained prestige, made friends throughout the world and maintained its dignity in its relations with foreign countries.

The five principles of mutual respect for sovereignty and territorial integrity, mutual nonaggression, noninterference in each others' internal affairs, equality and mutual benefit, and peaceful coexistence have consistently guided China in its effort to develop relations with other countries. Having suffered aggression and oppression for over a century, the Chinese people will never again allow themselves to be humiliated as they were before, nor will they subject other nations to such humiliation. The founding of our People's Republic has removed the social causes both of China's submission to foreign aggression and of any possibility of China committing aggression abroad. Frederick Engels said: "A nation cannot become free and at the same time continue to oppress other nations."[8] This is an incontestable truth. We Marxist-Leninists are convinced that communism will ultimately be realized throughout the world. However, revolution cannot be exported but can occur only by the choice of the people of the country concerned. It is on the basis of this understanding that we have always abided by the five principles of peaceful coexistence. We do not station a single soldier abroad, nor have we occupied a single inch of foreign land. We have never infringed upon the sovereignty of another country, or imposed an unequal relationship upon it. In no circumstances will we seek hegemony.

The five principles of peaceful coexistence are applicable to our relations with all countries, including socialist countries. On the basis of these principles we have in the past 33 years established diplomatic relations with 125 countries. With the friendly socialist countries of Korea, Romania and Yugoslavia, we maintain close cooperation and are steadily strengthening and developing ties of unity and friendship. China and many other developing countries in Asia, Africa and Latin America sympathize with and support one another, and have enhanced their cooperation in all fields. Many Western countries have social systems different from China's, yet we share a common desire to safeguard world peace and a common interest in developing our economic and cultural cooperation, for which the potentials are great, and we have maintained good relations over the years. The past few years have also seen some development in our relations with East European countries.

Japan is China's neighbor. Since ancient times, there have been frequent exchanges and a profound friendship between the Chinese and Japanese peoples. But, during a hundred years of modern history, the Japanese militarists unleashed one war of aggression after another against China, inflicting colossal calamities on the Chinese people and grievous damage on the Japanese people themselves. Thanks to long years of joint efforts made by the Chinese and Japanese peoples, state relations were eventually normalized 10 years ago. The development of relations of peace and friendship, equality and mutual benefit, and prolonged stability between China and Japan is in accord with the long-term interests of the two peoples and conducive to the peace and stability of the Asian-Pacific region. Now some forces in Japan are whitewashing the past Japanese aggressions against China and other east Asian countries and are carrying out activities for the revival of Japanese militarism. These dangerous developments cannot but put the people of China, Japan and other countries sharply on the alert. Together with the Japanese people and with far-sighted Japanese public figures in and out of government, we will work to eliminate all hindrances to the relations between our two countries and make the friendship between our two peoples flourish from generation to generation.

Since the establishment of diplomatic ties between China and the United States of America in 1978, relations between the two countries have developed in the interests of the two peoples. We have always hoped that these relations will continue to grow, and consider this beneficial to our two peoples and to world peace. However, a cloud has all along hung over the relations between the two countries. This is because the United States, despite having recognized that the Government of the People's Republic of China is China's sole legal government and that there is only one China and Taiwan is part of China, has passed the Taiwan Relations Act which contravenes the principles embodied in the joint communique on the establishment of diplomatic relations, and it has continued to sell arms to Taiwan, treating Taiwan as an independent political entity. As the Chinese Government has repeatedly stated, these are acts of infringement on China's sovereignty and of interference in China's internal affairs. Not long ago, after nearly a year of talks, the Chinese and U.S. Governments issued a joint communique providing for a step-by-step solution of the question of U.S. arms sales to Taiwan, leading to a final thorough settlement.

We hope that these provisions will be strictly observed. Sino-U.S. relations can continue to develop soundly only if the principles of mutual respect for sovereignty and territorial integrity and noninterference in each other's internal affairs are truly adhered to.

The relations between China and the Soviet Union were friendly over a fairly long period. They have become what they are today because the Soviet Union has pursued a hegemonist policy. For the past 20 years, the Soviet Union has stationed massive armed forces along the Sino-Soviet and Sino-Mongolian borders. It has supported Vietnam in the latter's invasion and occupation of Kampuchea, acts of expansion in Indochina and Southeast Asia and constant provocations along China's border. Moreover, it has invaded and occupied Afghanistan, a neighbor of China, by force of arms. All these acts constitute grave threats to the peace of Asia and to China's security. We note that Soviet leaders have expressed more than once the desire to improve relations with China. But deeds, rather than words, are important. If the Soviet authorities really have a sincere desire to improve relations with China and take practical steps to lift their threat to the security of our country, it will be possible for Sino-Soviet relations to move toward normalization. The friendship between the Chinese and Soviet peoples is of long standing, and we will strive to safeguard and develop this friendship, no matter what Sino-Soviet state relations are like.

The main forces jeopardizing peaceful coexistence among nations today are imperialism, hegemonism and colonialism. True, the old system of colonialism has disintegrated with the successive winning of independence by nearly a hundred former colonial and semicolonial countries. Yet its remnants are far from being eliminated. The superpowers that practice hegemonism pose a new threat to the people of the world. In their pursuit of global domination, the superpowers have been contending on a worldwide scale with military power far exceeding that of any other countries. This is the main source of instability and turmoil in the world. The most important task for the people of the world today is to oppose hegemonism and safeguard world peace. Due to the rivalry between the superpowers, the danger of a world war is growing ever greater. However, experience shows that the people of the world, by persevering in struggle, can upset the strategic plans of the superpowers. World peace can be safeguarded, provided the people truly unite and fight resolutely against all expressions of hegemonism and expansionism. We have always firmly opposed the arms race between the superpowers, stood for the prohibition of the use of nuclear weapons and for their complete destruction and demanded that the superpowers be the first to cut their nuclear and conventional arsenals drastically. We are against the world war being fomented by the superpowers and also against all the local wars of aggression which they instigate or back. We have always firmly supported all victim countries and peoples in their struggle against aggression. We support the Korean people in their struggle to reunify their fatherland. We support the Kampuchean people led by the Coalition Government of Democratic Kampuchea in their struggle against Vietnamese aggression. We support the people of Afghanistan in their struggle against Soviet aggression. We support the African people in their struggle against South Africa's racism and expansionism. We strongly condemn Israel for its heinous aggression and atrocities against the people of Palestine and Lebanon. With support and protection from the U.S. hegemonists, Israel has outrageously occupied Palestine and carried out repeated armed aggression against Arab countries, posing a grave threat to peace in the Middle East and the world as a whole. We continue our resolute support for the Palestinian people in their struggle to return to their homeland and to found their own state and for other Arab peoples in their struggle against Israeli expansionism.

Socialist China belongs to the Third World. China has experienced the same sufferings as most other Third World countries, and it is faced with similar problems and tasks. China regards it as its sacred international duty to struggle resolutely against imperialism, hegemonism and colonialism together with the other Third World countries.

The emergence of the Third World on the international arena after World War II is a primary event of our time. It has changed the United Nations from a mere voting machine manipulated by certain big powers into a forum where imperialism, hegemonism and expansionism are often justly condemned. The struggle initiated by Latin American countries against the maritime hegemony of the superpowers and the struggles of the petroleum exporting countries and other raw material producing countries for permanent sovereignty over their own natural resources, the struggle of the non-aligned countries against power politics and bloc politics and the struggles of the developing countries for the establishment of a new international economic order--all these struggles have converged into a mighty current of forces upholding justice in our time and greatly changed the situation in which the superpowers could willfully manipulate the fate of the world.

The common task confronting the Third World countries is, first and foremost, to defend their national independence and state sovereignty and actively develop their national economies so that they can back up the political independence they have already won with economic independence. Here, mutual aid among Third World countries is of particular importance. We Third World countries have vast territories, large populations, immense resources and extensive markets. Some of us have accumulated considerable funds, and many have acquired their own distinctive technologies and gained experience in developing their national economies which the others can learn from. Our mutual economic cooperation, commonly known as "South-South cooperation," is no less effective than our cooperation with developed countries so far as some kinds of our technology and equipment are concerned in meeting mutual needs. Such cooperation is of great strategic significance, as it helps us to break out of the existing unequal international economic relations and establish the new international economic order.

China is still a developing country, but we have always done our best to help other Third World countries, with whom we share a common destiny. The Chinese people have always spurned attitudes and actions of despising the poor and currying favor with the rich, bullying the weak and fearing the strong. Our friendship with other Third World countries is sincere. Whether in providing aid or cooperating for mutual benefit, we have always strictly respected the sovereignty of the other party, attaching no strings and demanding no privileges. As our economy grows, we will steadily expand our friendly cooperation with other countries and peoples of the Third World.

We are deeply disturbed by the discords, going as far as armed conflicts, that have occurred between some Third World countries. They often cause heavy losses to both sides and at times allow the hegemonists to pick up easy gains. We always work for increased unity among the Third World countries in the hope that the parties to such disputes will resolve them through consultations and avoid any results that grieve friends and gladden enemies.

Here I would especially like to discuss the question of relationships between the Communist Party of China and those of other countries. Our party develops its relations with other communist or working-class parties in strict conformity with Marxism and the principles of independence, complete equality, mutual respect and noninterference in each other's internal affairs.

The success of the revolution in any country depends on the ripeness of conditions for it and the people's support for the line and policies of that country's communist party. Communist parties should of course help each other, but it is absolutely impermissible for any of them to issue orders or run things for others from the outside. Any attempt by one party to impose its views on other parties or interfere in their internal affairs can only lead to setbacks or failures in the revolutions of the countries concerned. As for the practice of one party compelling other parties to make their policies serve its own party and state policies, or even resorting to armed intervention in other countries, it can only undermine the very foundation of the international communist movement.

The communist parties of all countries are equal. Whether large or small, long or short in their history, in power or out of power, they cannot be divided into superior and inferior parties. Our party has suffered from the attempt of a self-elevated paternal party to keep us under control. As is commonly known, it is through resisting such control that our independent external policy has won its successes.

We hold that all communist parties should respect each other. Each party has its strong and weak points. Being situated in different circumstances, all parties cannot be expected to hold completely identical views on the assessment of situations and on their own tasks. Their differences of opinion can only be resolved gradually through friendly consultations and patiently giving each other time. We are in favor of all communist parties learning from each other's successes and failures, believing that this will help the international communist movement to grow and flourish.

On the principles mentioned above, our party has maintained friendly relations with many other communist parties. We sincerely appreciate their support and help and are conscientiously learning from their experience whatever can be of help to our revolution and construction. And we wish to establish similar contacts with a greater number of progressive parties and organizations. Setting store by their friendship with the people of other countries, the Chinese people have developed extensive contacts with them. In the final analysis, steadily increasing understanding and cooperation among the people of all countries is the basic guarantee of progress and a bright future for the world.

Being a large country with a population of 1 billion, China ought to make a greater contribution to the world community, and it is only natural that people place hopes on us. Yet what we have accomplished falls far short of what we ought to have done. We will redouble our efforts to step up our construction so as to play our due role in safeguarding world peace and promoting human progress.

VI. Make the Party a Strong Leading Core, the Cause of Socialist Modernization

History has entrusted our party with heavy responsibilities in the great undertaking of China's socialist modernization. In order to step up party building in the new period, we have made many fundamental changes in the party constitution adopted by the 11th national congress. The general principle guiding the revision of the party constitution is to set more exacting demands on party members, enhance the fighting capacity of the party organizations and uphold and improve party leadership, all in conformity with the characteristics and needs of the new historical period. As required by the new constitution, we must strive to build the party and make it a strong leading core for the cause of socialist modernization.

The draft of the revised party constitution now submitted to this congress for its consideration has discarded the "left" errors in the constitution adopted by the 11th congress, and carries forward the merits of the party constitutions passed respectively by the 7th and 8th congresses. The general program section in the draft constitution includes Marxist definitions concerning the character and guiding ideology of the party, the principal contradiction in our society at the present stage and the general task of the party, and the correct way for the party to play its leading role in the life of the state. The ideological, political and organizational requirements this draft constitution sets for party members and cadres are stricter than those in all our previous constitutions. In stipulating the duties of party members, the draft absolutely forbids them to use public office for personal gain or to benefit themselves at the expense of the public interests, and requires that they firmly oppose factionalism and be bold in backing good people and good deeds and in opposing bad people and bad deeds. It sets forth as basic requirements for leading cadres at all levels that they correctly implement the party's line, principles and policies, oppose erroneous tendencies inside and outside the party, have the professional knowledge and organizational ability needed for competent leadership, and adhere to party principles in struggling against all abuses of power and pursuit of personal gain. Most of these are additions, not found in the previous constitutions. In the light of our historical experience and lessons, the draft constitution emphasizes that all party organizations from the central down to the primary level must strictly observe the principles of democratic centralism and collective leadership, and it explicitly stipulates that the party "forbids all forms of personality cult." It makes many new provisions for improving the systems of the central and local organizations, tightening party discipline, reinforcing the discipline inspection organs and strengthening the primary party organizations. According to the draft constitution, the Central Committee is to have no chairman but only a general secretary, who will convene meetings of the Political Bureau and its Standing Committee and preside over the work of the Secretariat. Advisory committees are to be established at the central and provincial levels to give our many veteran comrades rich in political experience a role of consultants in the service of the party's cause. Commissions for discipline inspection are to be elected by party congresses at the respective levels and, within limits prescribed by the party constitution, they are to supervise party committees and their members at the respective levels below the Central Committee, and they may report to the Central Committee any breach of party discipline by any of its members. Party organizations at all levels must pay great attention to party building and must regularly discuss and check up on the party's work in propaganda, education, organization and discipline inspection, and its mass work and united front work. All these stipulations should help to reinforce the party's collective leadership, enhance its fighting capacity and strengthen its ties with the masses. It should be said that the present draft is an improvement on all the previous constitutions and is fuller in content. Being a precious crystallization of the party's historical experience and collective wisdom, it is an important guarantee for making our party still stronger in the new historical period.

All party members must study and strictly observe the new constitution after its adoption by this congress. Whether or not a party member really meets the requirements set by the constitution and can fully discharge the duties of membership will be the fundamental criterion for judging whether he or she is qualified to be a party member.

Before the present revision of the constitution, our party worked out the Guiding Principles for Inner-Party Political Life, a document which has played a salutary role in that regard.

The Guiding Principles will remain in full effect as an important complement to the constitution. In light of the present conditions in the party and in the spirit of our new party constitution, we must now concentrate on solving the following problems in party building.

First, improve the party's system of democratic centralism and further normalize inner-party political life.

The history of our party shows that, in the period from its founding to the early years after the establishment of the People's Republic, except for a few years when the party fell into grave right or "left" errors, it implemented the principles of democratic centralism relatively well, and inner-party political life was fairly vigorous and lively. But from the late 1950's, the personality cult gradually appeared and developed, and political life in the party and state, and particularly the Central Committee, grew more and more abnormal, leading eventually to the decade of domestic turmoil. The grave twists and turns of history have taught us that whether there is normal political life in the party, and above all in the Central Committee and other leading bodies of the party at different levels, is indeed a fundamental issue bearing on the destiny of the party and state.

Now, the Central Committee is happy to report to the congress that, thanks to efforts made since the 3d Plenary Session of the 11th Central Committee, political life in the party, and first of all in the Central Committee, after being seriously abnormal for so many years, has now gradually returned to the correct path, the path of Marxism. Generally speaking, the Central Committee, its Political Bureau, the bureau's Standing Commiteee and the Secretariat have proved able to follow principles of democratic centralism and collective leadership. The practices of "what one person says goes" and of each going his own way are no longer allowed. When important differences of opinion arise, unity in thinking and action can be achieved through full reasoning and criticism and self-criticism. The present Central Committee is a united and harmonious leading body and a strong core able to cope with complicated situations. There has also been marked improvement in the political life of many local party organizations.

While affirming this major progress, we must also realize that in the party as a whole, undemocratic practices and patriarchal ways have still not been eradicated in many organizations, and cases of decentralism and liberalism exist to a serious extent. All this hinders the implementation of the party's line, principles and policies and weakens its fighting capacity. In order to carry forward the normalization of political life throughout the party, we must resolutely get rid of such unhealthy phenomena. All party members, and especially the leading cadres at various levels, must bear the principle of democratic centralism firmly in mind, see to it that collective leadership is established and strengthened first of all in the party committees at various levels, and strive to develop inner-party democracy while ensuring centralism and unity on the basis of democracy.

Party discipline must be strengthened in order to improve the functioning of democratic centralism. A grave problem at present is that in quite a number of organizations party discipline has slackened, right and wrong are confounded, rewards and punishments are misused and there is failure to criticize or punish when necessary. This is a problem of long standing, which has become exacerbated after the decade of domestic turmoil, and no marked improvement has yet occurred in some places. In the last few years the Central Committee, local party committees and party commissions for discipline inspection at all levels have attained notable results in their major efforts to uphold party discipline and correct the style of the party. But they have met considerable, and in some cases shocking, obstruction in their work. If such things are allowed to spread, what will remain of the party's fighting capacity? Party organizations at all levels and all party members must be mobilized to fight resolutely to uphold party discipline. We are confident that after this congress, through concerted efforts by all party organizations and members, we shall certainly be able to fully restore the inviolability of discipline throughout the party before too long and thus win the full trust of the people throughout the country.

Second, reform the leading bodies and the cadre system and ensure that the ranks of the cadres become more revolutionary, younger in average age, better educated and more professionally competent.

The main aim of reforming the system of leadership and the leading organs of the party and state is to eliminate such defects as overconcentration of power, proliferation of concurrent and deputy posts, organizational overlapping, lack of clear-cut job responsibility, overstaffing and failure to separate party work from government work, and in these ways overcome bureaucracy and increase work efficiency. The first stage of reform of the party and government organs at the central level has been basically completed, and the reform in the provinces, municipalities and autonomous regions is scheduled to start in the second half of this year or in the coming year. This reform is of far-reaching significance, being an important political guarantee for the success of China's modernization and adherence to the socialist road.

To solve correctly the question of party leadership over government organs and over enterprises and institutions is a highly important task in the organizational reform. It is necessary to achieve a proper division of labor between the party and the government and between party work and administrative and production work in enterprises and institutions. The party is not an organ of power which issues orders to the people, nor is it an administrative or production organization. The party should, of course, exercise leadership over production, construction and work in all other fields, and for this leadership to be fully effective it must be exercised in close connection with professional work by cadres who are professionally competent in such work. But party leadership is mainly political and ideological leadership in matters of principle and policy and in the selection, allocation, assessment and supervision of cadres. It should not be equated with administrative work and the direction of production by government organizations and enterprises. The party organizations should not take everything into their own hands. Only in this way can the party ensure that the government organs and enterprises do their work independently and effectively, and can the party itself concentrate its efforts on the study and formulation of major policies, the inspection of their implementation and the strengthening of ideological and political work among cadres and the rank and file both inside and outside the party. For long-standing historical reasons, some members of our party committees think that there will be nothing for them to do if they don't handle concrete administrative work--this is an erroneous idea that impairs party building and weakens the party's leading role. From now on, party committees at all levels should frequently study and discuss the party's major policies and principles regarding socialist construction, matters involving the ideology and education of cadres, party members and the masses, the ideological tendencies of cadres and their observance of discipline, the improvement of the party organization and the recruitment of new members, and so on. Of course, while the division of labor between party and government is emphasized, major policy decisions concerning government and economic work must still be made by the party, and all party members working in government organizations, enterprises and institutions must resolutely submit themselves to party leadership and carry out the party's policies.

To ensure that the ranks of the cadres become more revolutionary, younger in average age, better educated and more professionally competent is a long-established principle of the Central Committee of the party. During the organizational reform, we will relieve our many veteran cadres who are advanced in age of their heavy responsibilities in "front line" posts and at the same time enable them to continue their service to the party, the state and society by utilizing their rich experience in leadership work. We will promote large numbers of energetic young and middle-aged cadres who possess both political integrity and ability to various leading posts in good time, so that they can be tempered over a longer period practically and effectively by working with older cadres and taking over responsibilities from them and so that the leading bodies at all levels can continuously absorb new life-blood and talent to maintain their vigor. As for persons who rose to prominence by "rebellion," who are seriously factionalist in their ideas, who have indulged in beating, smashing and looting, who oppose the line followed by the party's Central Committee since its third plenary session, or who have seriously violated the law and discipline, we must remove with a firm hand those among them who are still in leading posts. Persons who have violated criminal law must be investigated and dealt with according to law. Such people, of course, must never be put up as candidates for promotion to leading posts. The cooperation between old and new cadres and the succession of the new to the old are matters important to the continuation of our socialist cause. We believe that all our party comrades, especially our old comrades, will certainly be able to accomplish this historic task with a high revolutionary sense of responsibility.

We must work strenuously to strengthen the education and training of cadres in order to prepare large numbers of specialized personnel needed for socialist modernization. In the future, in our use and promotion of cadres, we must attach importance to educational background and academic records as well as to experience and achievements in work. Party schools at all levels, cadre schools run by government organizations and enterprises, and especially designated institutions of higher learning and specialized secondary schools should all, as required by socialist modernization and in their different capacities, revise their teaching plans and shoulder the regular training of cadres. All functionaries on the job should be trained in rotation. After such training, appropriate adjustments can be made in their jobs through assessment of their actual performance. The training of all cadres in rotation is an important strategic measure for enhancing their quality. All party members and all cadres should have a full understanding of the needs of our modernization program and be active in study.

Third, strengthen the party's work among the workers, peasants and intellectuals and establish close ties between the party and the masses.

Our party is powerful because it represents the interests of the broadest masses of the people. The party's leading position in the life of the state determines that its activities vitally affect the interests of the masses, and at the same time involves the danger that party members, and party cadres in particular, may become isolated from the masses. This requires that we strive all the more consciously to preserve and carry forward the party's fine tradition of applying the mass line and effectively strengthen the party's close ties with the people of all strata of society.

Our party is a party of the working class, and it must make a point of relying on the masses of workers. The composition of the working class in China has undergone a big change in recent years, with large numbers of new workers replacing old ones. Many old workers who are party members have retired, many young people have joined the ranks of the working class, and group after group of workers who are party members have been transferred to managerial jobs. As a result, there are fewer party members on the production front, and the harder the labor, the smaller the number of party members. This grave situation has weakened the direct link between the party and the industrial workers. From now on, we must greatly strengthen party work on the production front, encourage party members fitted for working there to do so, and at the same time admit into the party outstanding workers who are qualified for membership. The party's work in the trade unions must be greatly strengthened so that they become a strong transmission belt between the party and the masses of workers. The system of congresses of workers and staff must be implemented in earnest so that these congresses and the trade unions can both play an important role in ideological education, enterprise management and the improvement of the workers' living standards.

Effective party work among China's 800 million peasants is a major prerequisite for its modernization. In a number of rural areas at present, some party members are interested only in their own productive activities and neglect the interests of the party and the masses, and some party branches have relinquished leadership among the masses. Effective measures must be taken to check this unhealthy tendency. Party committees at all levels should face up to such new developments, further strengthen the rural party organizations as well as the economic and administrative units and mass organizations at the grassroots and intensify ideological education among the peasants of different ages and in different localities, so that the political, economic and cultural life in the rural areas may develop soundly in the socialist direction.

In order to create a new situation in all fields of socialist modernization, we must lay special stress on the role of the intellectuals, improve the work of ideological and political education among them to suit their special characteristics, and actively recruit into the party intellectuals who are qualified for membership.

China has now 200 million young people, who form the most active force in every field of work. Although the "Cultural Revolution" did them immense harm during their formative years, the overwhelming majority of them are good politically and they have made marked progress in the past few years; the negative features displayed by a small number of the young people can be changed through education. The problem now is that work among the young people falls short of the needs of real life. Party and youth league organizations at all levels should establish closer ties with the masses of young people, become their close friends, show sincere concern for them and give them help politically, ideologically and in their work, study and personal life. The party should be on the lookout for advanced young people, help them to become qualified for membership and then admit them to its ranks so as to bring new blood into the party organizations. It should further strengthen its leadership over the Communist Youth League, support the league in the efforts to suit its work to the characteristics of the young people and help it play to the full its role as the party's assistant and reserve force, so that the league can truly become a school where large numbers of young people will learn about communism through practice.

Women are not only an important force in national economic construction; they also have a particularly significant role to play in building socialist spiritual civilization. Owing to traditional prejudices, many women often do not receive due attention, protection and education. The party must strengthen its work among women, concern itself with their special interests, pay attention to the training, selection and promotion of women cadres, and guide and support the women's federations at all levels in carrying out their tasks. The women's federation should become a prestigious mass organization, representing the interests of women and protecting and educating women and children.

Fourth, consolidate the party organizations step by step in a planned way so as to effect a fundamental turn for the better in the style of the party.

Our party is the vanguard of the Chinese working class; it has been nurtured over the years by Marxism-Leninism and Mao Zedong Thought and has matured through repeated tempering by successes and failures. Rallied in its ranks are outstanding elements of the Chinese working class and the Chinese people. The main body of our party remains politically pure and strong despite the serious damage inflicted by the "Cultural Revolution." After recovery and consolidation in the past few years, the situation in our party is now much improved, and its prestige is being restored and is rising. In these years, outstanding communists on all fronts have led the masses in working hard to implement the party's line, principles and policies and in many acts of heroism. Everywhere, in production and other work, in battles in defense of our motherland and against natural and other calamities, and in struggles against unhealthy tendencies and crimes, party members have written soul-stirring paeans to communism through their own exemplary deeds. All the splendid successes of the party and the people have been achieved precisely through the inspiring example given by such a fine core members of the party. This is the principal aspect of our party, and whoever fails to see it, or deliberately denies it, is committing a grave error.

However, the pernicious influences of the 10 years of domestic turmoil have not yet been eradicated, and there has been some increase in the corrosive inroads of exploiting-class ideologies under new conditions. It is true that impurities in ideology, style and organization still exist within the party and that no fundamental turn for the better has as yet been made in our party style. In the leadership work of some party organizations, signs of flabbiness and lack of unity abound. Some primary party organizations lack the necessary fighting capacity, and some are even in a state of paralysis. A small number of party members and cadres have become extremely irresponsible or seriously bureaucratic; or live a privileged life and abuse the powers entrusted to them to seek personal gain; or commit acts of anarchism and ultra-individualism in violation of party discipline; or obdurately indulge in factional activities to the detriment of the party's interests. A few party members and cadres have even sunk to corruption, embezzlement and other malpractices, committing serious economic crimes. In addition, a small remnant of the followers of the Lin Biao and Jiang Qing counterrevolutionary cliques still usurp some leading positions and are waiting for a chance to stir up trouble. All these phenomena have greatly impaired our party's prestige. While we must not allow any exaggeration of this dark aspect of our party, on no account should we be afraid to expose it. For ours is a staunch party; we have ample healthy forces on our side to wage an uncompromising struggle against the dark aspects and are confident of our victory in the struggle.

The style of a political party in power determines its very survival. To achieve a fundamental turn for the better in the style of our party, the Central Committee has decided on an overall rectification of party style and consolidation of party organizations, which will proceed by stages and by groups over a period of 3 years beginning from the latter half of 1983. This task will undoubtedly be of primary importance to the party, and it requires very careful attention and preparation and should be carried out step by step in a planned way. The key link in accomplishing this work must be thoroughgoing ideological education throughout the party. In conjunction with the study and implementation of the report and the new party constitution to be adopted by this party congress, the whole party should study the "Resolution on Certain Questions in the History of Our Party Since the Founding of the PRC" and the Guiding Principles for Inner-Party Political Life and carry on an education in the basic theories of Marxism-Leninism and Mao Zedong Thought, in the ideal of communism and the party's line, principles and policies and in essential knowledge concerning the party and the requirements for party membership. We must lay stress on getting every member to understand clearly the character, position and role of the party and to realize that all party members have only the duty to serve the people diligently and conscientiously, and no right whatsoever to take advantage of their power and positions to "fatten" on the state and on the masses. In matters of organization and leadership, the consolidation will start with the leading organs and cadres and then proceed, from top to bottom, with the leading bodies at different levels which have already been consolidated leading the consolidation of the subordinate and primary organizations. Bad elements must on no account be permitted to take this as an opportunity to frame and attack good people. We must act in, and develop further, the spirit of the Yanan rectification movement of 1942, follow its principle of "learning from past mistakes to avoid future ones and curing the sickness to save the patient" and its twofold objective of "clarity in ideology and unity among comrades" in unfolding earnest criticism and self-criticism, and take appropriate measures to solicit opinions from the masses outside the party. In the final stage, there will be a re-registration of all party members and, in strict accordance with the provisions of the new party constitution, those who still fail to meet the requirements for membership after education shall be expelled from the party or asked to withdraw from it. At the same time, concrete measures should be worked out to strengthen and improve party leadership so as to effect an improvement in the work of party organizations at all levels.

Through the proposed consolidation of the party, we must further normalize inner-party political life, place an effective check on unhealthy tendencies and greatly strengthen the ties between the party and the masses. In this way, we will certainly achieve a fundamental turn for the better in our party style.

Comrades! Our Central Committee has explained to this congress the fighting tasks that confront the whole party. We have proposed that in the coming 5 years a fundamental turn for the better should be made in the financial and economic situation, in standards of social conduct and in party style. Can these tasks be accomplished? The Central Committee is confident that the unanimous reply by our congress will be: Yes, the tasks can and definitely shall be accomplished!

The principles and tasks to be defined by this congress will enrich and develop the correct line followed since the 3d Plenary Session of the party's 11th Central Committee. Richer in content and closer to reality, they will be even more persuasive in unifying the thinking of the entire party and the people of all our nationalities and become an even more accurate guide to our action.

At this point, it should be emphasized that our party faces yet another historic task, that of joining hands with all our patriotic fellow-countrymen in a common endeavor to accomplish the sacred task of reunifying our motherland. Taiwan is part of the sacred territory of our motherland, and the people in Taiwan are our kith and kin. The return of Taiwan to the embrace of our great and indivisible motherland with its history of 5,000 years, population of 1 billion and territory of 9.6 million square kilometers is the common desire of all our compatriots; it will be an evitable outcome of historical development, which no political party or individual can resist. It is China's internal affair with which no foreign country has the right to interfere. We hope that our compatriots in Taiwan, Xianggang (Hong Kong) and Aomen (Macao) and Chinese nationals residing abroad will urge the Kuomintang authorities to take a realistic view of the situation and put the future of our country and the interests of the nation above all else, instead of persisting in their obdurate stand, so that talks between the Kuomintang and the Communist Party may be held at an early date and, together, we can bring about the peaceful reunification of our motherland.

Socialist modernization is the common will, and is in the fundamental interests, of the people of all our nationalities. Remember what hardships and miseries the Chinese nation went through in the century or more between the Opium War of 1840 and liberation! Long years of historical experience have inevitably turned the hearts and minds of all members of our party, army and people to the fundamental goal of the prosperity of the country under socialism and of reunification, particularly the return of Taiwan to the motherland. Socialist China's political situation is stable, and the prospect is that our modernization and reunification will definitely succeed. This prospect accords with the desires of the people and the tide of history. So long as we firmly trust and rely on the overwhelming majority of the masses, maintain close ties with the people and work conscientiously for their interests, our cause will be invincible.

We are, of course, soberly aware that we will come upon all kinds of obstacles and difficulties on the path of socialist modernization. At present, the major problems calling for urgent solution are the unhealthy phenomena in our party style and lowered standards of social conduct, which are the aftermath of the "Cultural Revolution"; the continuance of serious criminal activities undermining the socialist economy, politics and culture; and the unwieldiness, overstaffing and inefficiency in leading bodies at various levels, and the failure of our economic systems to fully meet the needs of the expansion of the productive forces. Consequently, as already said above, in the period to come we must systematically complete the organizational reform and reforms in the economic systems, go all out in building socialist spiritual civilization, hit hard at the serious criminal activities undermining our socialist economy and socialist system, and rectify the party style and consolidate the party organizations. Fulfillment of these four tasks will provide an important guarantee that we can adhere to the socialist system and succeed in socialist modernization. The whole party, particularly party committees at all levels, must lay great stress on these tasks and work unswervingly to accomplish them.

Our comrades should take a correct approach toward difficulties. It is entirely wrong to see only the bright and not the difficult side of the situation, to the point of mistaking one's subjective desires for objective reality and rushing blindly ahead. We suffered greatly from such an approach in the past and should always remember the lessons learned. On the other hand, it is likewise entirely wrong to fear and cower before difficulties, lose faith in the strength of the party and the masses, and waver and procrastinate even after the Central Committee has correctly analyzed the situation and formulated principles and tasks accordingly. Things today are far different from those in past periods when our party encountered tremendous difficulties. When our Red Army was compelled to go on the Long March, it was vastly outnumbered by the enemy, yet we overcame that difficulty. During the "Cultural Revolution" the Lin Biao and Jiang Qing counterrevolutionary cliques ran rampant and the whole country was thrown into chaos, yet we turned the tide. So can there be any difficulties today which we cannot overcome? The correct attitude for Marxists in the face of difficulties, the revolutionary style for communists striving to create a new situation is to throw themselves enthusiastically into the great work of socialist modernization and, going among the masses and digging into the actual work, forge ahead in the struggle with added vigor, indomitably and indefatigably.

Comrades! The historical experience of the party during the past 60-odd years teaches us that the fundamental reason why the party has been able to lead the Chinese people in winning one great victory after another is its integration of the universal truth of Marxism with the concrete practice of the Chinese revolution. The supreme historical contribution of Comrade Mao Zedong and the other proletarian revolutionaries of the older generation is that they succeeded in making such an integration. To turn China with its backward economic and cultural base into a modern and powerful socialist country in this new historical period is one of the most gigantic creative undertakings in human history. Many problems involved in it were not, and would not have been, raised or solved by Marxists in the past. In such an undertaking, ideological and political deviations of one kind or another or deviations in concrete work may occur within our ranks. This is not strange, nor can it be entirely avoided. What is important is that the whole party, party committees at all levels in particular, must uphold the four cardinal principles, adhere to the correct line followed since the 3d Plenary Session of the 11th Central Committee and oppose both the "left" tendency of trying to revert to the erroneous theories and policies which prevailed during and before the "Cultural Revolution" and the right tendency of bourgeois liberalization as reflected in distrust or rejection of the four cardinal principles. We must resolutely take over and learn to use the stand, viewpoint and method of Marxism-Leninism and Mao Zedong Thought, acquire a deeper understanding of the actual work in all fields, make systematic investigations and studies, and be good at conducting appropriate criticism and education and waging necessary struggles against wrong tendencies.

Provided we persist in doing this, we can certainly accumulate new experience, break new ground in theory and carry forward Marxism-Leninism and Mao Zedong Thought under new historical conditions and in great new fields of practice.

Comrades! For several decades beginning with the 1920's, China's forerunners in the communist cause and millions of other glorious revolutionary fighters and martyrs shed their blood and gave their lives in heroic struggles to bring China to its present state of progress. In the new historical period, let us carry out the behest of our martyrs and accomplish, in this vast land of ours, the great undertaking never attempted before.

In terms of experience of struggles, our contingent of party cadres consists of people of four generations: those who joined the revolution in the party's early days, during the agrarian revolutionary war, during the war of resistance against Japan and the war of liberation, and after the founding of the People's Republic. This testifies that our cause is of long standing and is assured of successors. The ranks of our party will advance incessantly like the flowing waters of the Chang Jiang. This congress of ours will go down in the party's history as one which has defined the party's principles and tasks for the new period politically and achieved the cooperation of old and new cadres and the succession of the new to the old organizationally, and one which creates a new situation in all fields of socialist modernization.

Let the whole party rally still more closely under the great banner of Marxism-Leninism and Mao Zedong Thought! Let our party unite still more closely with the people of all nationalities in the country, with the democratic parties and all patriotic fellow-countrymen at home and abroad, and with all the progressive forces and friendly public figures in other countries who support our cause! Let us march forward dauntlessly and with one heart and one mind! No force on earth can deter us. Our triumph is certain!

CONSTITUTION OF THE COMMUNIST PARTY OF CHINA (ADOPTED BY THE 12TH NATIONAL CONGRESS OF THE COMMUNIST PARTY OF CHINA ON 6 SEPTEMBER 1982)

Beijing RED FLAG in Chinese No 18, 16 Sep 82 pp 31-43

[Text] General Program

The Communist Party of China is the vanguard of the Chinese working class, the faithful representative of the interests of the people of all nationalities in China, and the force at the core leading China's cause of socialism. The party's ultimate goal is the creation of a communist social system.

The Communist Party of China takes Marxism-Leninism and Mao Zedong Thought as its guide to action.

Applying dialectical materialism and historical materialism, Marx and Engels analyzed the laws of development of capitalist society and founded the theory of scientific socialism. According to this theory, with the victory of the proletariat in its revolutionary struggle, the dictatorship of the bourgeoisie is inevitably replaced by the dictatorship of the proletariat, and capitalist society is inevitably transformed into socialist society in which the means of production are publicly owned, exploitation is abolished and the principle "from each according to his ability and to each according to his work" is applied; with tremendous growth of the productive forces and tremendous progress in the ideological, political and cultural fields, socialist society ultimately and inevitably advances into communist society in which the principle "from each according to his ability and to each according to his needs" is applied. Early in the 20th century, Lenin pointed out that capitalism had developed to the stage of imperialism, that the liberation struggle of the proletariat was bound to unite with that of the oppressed nations of the world, and that it was possible for socialist revolution to win victory first in countries that were the weak links of imperialist rule. The course of world history during the past half century and more, especially the establishment and development of the socialist system in a number of countries, has borne out the correctness of the theory of scientific socialism.

The development and improvement of the socialist system is a long historical process. Fundamentally speaking, the socialist system is incomparably superior to the capitalist system, having eliminated the contradictions inherent in the capitalist system, which the latter itself is incapable of overcoming. Socialism enables the people truly to become masters of the country, gradually to shed the old ideas and ways formed under the system of exploitation and private ownership of the means of production, and steadily to raise their communist consciousness and foster common ideals, common ethics and a common discipline in their own ranks. Socialism can give full scope to the initiative and creativeness of the people, develop the productive forces rapidly, proportionately and in a planned way, and meet the growing material and cultural needs of the members of society. The cause of socialism is advancing and is bound gradually to triumph throughout the world along paths that are suited to the specific conditions of each country and are chosen by its people of their own free will.

The Chinese communists, with Comrade Mao Zedong as their chief representative, created Mao Zedong Thought by integrating the universal principles of Marxism-Leninism with the concrete practice of the Chinese revolution. Mao Zedong Thought is Marxism-Leninism applied and developed in China; it consists of a body of theoretical principles concerning the revolution and construction in China and a summary of experience therein, both of which have been proved correct by practice; it represents the crystallized, collective wisdom of the Communist Party of China.

The Communist Party of China led the people of all nationalities in waging their prolonged revolutionary struggle against imperialism, feudalism and bureaucrat-capitalism, winning victory in the new democratic revolution and establishing the People's Republic of China--a people's democratic dictatorship. After the founding of the People's Republic, it led them in smoothly carrying out socialist transformation, completing the transition from new democracy to socialism, establishing the socialist system, and developing socialism in its economic, political and cultural aspects.

After the elimination of the exploiting classes as such, most of the contradictions in Chinese society do not have the nature of class struggle, and class struggle is no longer the principal contradiction. However, owing to domestic circumstances and foreign influences, class struggle will continue to exist within certain limits for a long time, and may even sharpen under certain conditions. The principal contradiction in Chinese society is that between the people's growing material and cultural needs and the backward level of our social production. The other contradictions should be resolved in the course of resolving this principal one. It is essential to strictly distinguish and correctly handle the two different types of contradictions--those contradictions between the enemy and ourselves and those among the people.

The general task of the Communist Party of China at the present stage is to unite the people of all nationalities in working hard and self-reliantly to achieve, step by step, the modernization of our industry, agriculture, national defense and science and technology and make China a culturally advanced and highly democratic socialist country.

The focus of the work of the Communist Party of China is to lead the people of all nationalities in accomplishing the socialist modernization of our economy. It is necessary vigorously to expand the productive forces and gradually perfect socialist relations of production, in keeping with the actual level of the productive forces and as required for their expansion. It is necessary to strive for the gradual improvement of the standards of material and cultural life of the urban and rural population, based on the growth of production and social wealth.

The Communist Party of China leads the people, as they work for a high level of material civilization, in building a high level of socialist spiritual civilization. Major efforts should be made to promote education, science and culture, imbue the party members and the masses of the people with communist ideology, combat and overcome decadent bourgeois ideas, remnant feudal ideas and other nonproletarian ideas, and encourage the Chinese people to have lofty ideals, moral integrity, education and a sense of discipline.

The Communist Party of China leads the people in promoting socialist democracy, perfecting the socialist legal system, and consolidating the people's democratic dictatorship. Effective measures should be taken to protect the people's right to run the affairs of the state and of society, and to manage economic and cultural undertakings; and to strike firmly at hostile elements who deliberately sabotage the socialist system, and those who seriously breach or jeopardize public security. Great efforts should be made to strengthen the People's Liberation Army and national defense so that the country is prepared at all times to resist and wipe out any invaders.

The Communist Party of China upholds and promotes relations of equality, unity and mutual assistance among all nationalities in the country, persists in the policy of regional autonomy of minority nationalities, aids the areas inhabited by minority nationalities, aids the areas inhabited by minority nationalities in their economic and cultural development, and actively trains and promotes cadres from among the minority nationalities.

The Communist Party of China unites with all workers, peasants and intellectuals, and with all the democratic parties, nonparty democrats and the patriotic forces of all the nationalities in China in further expanding and fortifying the broadest possible patriotic united front embracing all socialist working people and all patriots who support socialism or who support the reunification of the motherland. We should work together with the people throughout the country, including our compatriots in Taiwan, Xianggang (Hong Kong) and Aomen (Macao) and Chinese nationals residing abroad, to accomplish the great task of reunifying the motherland.

In international affairs, the Communist Party takes the following basic stand: It adheres to proletarian internationalism and firmly unites with the workers of all lands, with the oppressed nations and oppressed peoples and with all peace-loving and justice-upholding organizations and personages in the common struggle against imperialism, hegemonism and colonialism and for the defense of world peace and promotion of human progress. It stands for the development of state relations between China and other countries on the basis of the five principles of mutual respect for sovereignty and territorial integrity, mutual nonaggression, noninterference in each other's internal affairs, equality and mutual benefit, and peaceful coexistence. It develops relations with communist parties and working-class parties in other countries on the basis of Marxism and the principles of independence, complete equality, mutual respect and noninterference in each other's internal affairs.

In order to lead China's people of all nationalities in attaining the great goal of socialist modernization, the Communist Party of China must strengthen itself, carry forward its fine traditions, enhance its fighting capacity and resolutely achieve the following three essential requirements:

First, a high degree of ideological and political unity. The Communist Party of China makes the realization of communism its maximum program, to which all its members must devote their entire lives. At the present stage, the political basis for the solidarity and unity of the whole party consists in adherence to the socialist road, to the people's democratic dictatorship, to the leadership of the party, and to Marxism-Leninism and Mao Zedong Thought and in the concentration of our efforts on socialist modernization. The party's ideological line is to proceed from reality in all things, to integrate theory with practice, to seek truth from facts, and to verify and develop the truth through practice. In accordance with this ideological line, the whole party must scientifically sum up historical experience, investigate and study actual conditions, solve new problems in domestic and international affairs, and oppose all erroneous deviations, whether "left" or right.

Second, wholehearted service to the people. The party has no special interest of its own apart from the interests of the working class and the broadest masses of the people. The program and policies of the party are precisely the scientific expressions of the fundamental interests of the working class and the broadest masses of the people. Throughout the process of leading the masses in struggle to realize the ideal of communism, the party always shares weal and woe with the people, keeps in closest contact with them, and does not allow any member to become divorced from the masses or place himself above them. The party persists in educating the masses in communist ideas and follows the mass line in its work, doing everything for the masses, relying on them in every task, and turning its correct views into conscious action by the masses.

Third, adherence to democratic centralism. Within the party, democracy is given full play, a high degree of centralism is practiced on the basis of democracy and a sense of organization and discipline is strengthened, so as to ensure unity of action throughout its ranks and the prompt and effective implementation of its decisions. In its internal political life, the party conducts criticism and self-criticism in the correct way, waging ideological struggles over matters of principle, upholding truth and rectifying mistakes. Applying the principle that all members are equally subject to party discipline, the party duly criticizes or punishes those members who violate it and expels those who persist in opposing and harming the party.

Party leadership consists mainly in political, ideological and organizational leadership. The party must formulate and implement correct lines, principles and policies, do its organizational, propaganda and educational work well and make sure that all party members play their exemplary vanguard role in every sphere of work and every aspect of social life. The party must conduct its activities within the limits permitted by the constitution and the laws of the state. It must see to it that the legislative, judicial and administrative organs of the state and the economic, cultural and people's organizations work actively and with initiative, independently, responsibly and in harmony. The party must strengthen its leadership over the trade unions, the Communist Youth League, the women's federation and other mass organizations, and give full scope to their roles. The party members are a minority in the whole population, and they must work in close cooperation with the masses of nonparty people in the common effort to make our socialist motherland ever stronger and more prosperous, until the ultimate realization of communism.

Chapter I. Membership

Article 1

Any Chinese worker, peasant, member of the armed forces, intellectual or any other revolutionary who has reached the age of 18 and who accepts the party's program and constitution and is willing to join and work actively in one of the party organizations, carry out the party's decisions and pay membership dues regularly may apply for membership of the Communist Party of China.

Article 2

Members of the Communist Party of China are vanguard fighters of the Chinese working class imbued with communist consciousness.

Members of the Communist Party of China must serve the people wholeheartedly, dedicate their whole lives to the realization of communism, and be ready to make any personal sacrifices.

Members of the Communist Party of China are at all times ordinary members of the working people. Communist Party members must not seek personal gain or privileges, although they are allowed personal benefits and job functions and powers as provided for by the relevant regulations and policies.

Article 3

Party members must fulfill the following duties:

(1) To conscientiously study Marxism-Leninism and Mao Zedong Thought, essential knowledge concerning the party, and the party's line, principles, policies and decisions; and acquire general, scientific and professional knowledge.

(2) To adhere to the principle that the interests of the party and the people stand above everything, subordinate their personal interests to the interests of the party and the people, be the first to bear hardships and the last to enjoy comforts, work selflessly for the public interest, and absolutely never use public office for personal gain or benefit themselves at the expense of the public.

(3) To execute the party's decisions perseveringly, accept any job and fulfill actively any task assigned them by the party, conscientiously observe party discipline and the laws of the state, rigorously guard party and state secrets and staunchly defend the interests of the party and the state.

(4) To uphold the party's solidarity and unity, to firmly oppose factionalism and all factional organizations and small-group activities, and to oppose double-dealing and scheming of any kind.

(5) To be loyal to and honest with the party, to match words with deeds and not to conceal their political views or distort facts; to earnestly practice criticism and self-criticism, to be bold in exposing and correcting shortcomings and mistakes in work, backing good people and good deeds and fighting against bad people and bad deeds.

(6) To maintain close ties with the masses, propagate the party's views among them, consult with them when problems arise, listen to their views and demands with an open mind and keep the party informed of these in good time, help them raise their political consciousness, and defend their legitimate rights and interests.

(7) To play an exemplary vanguard role in production and other work, study all social activities, take the lead in maintaining public order, promote new socialist ways and customs and advocate communist ethics.

(8) As required by the defense of the motherland and the interests of the people, to step forward and fight bravely in times of difficulty and danger, fearing neither hardship nor death.

Article 4

Party members enjoy the following rights:

(1) To attend pertinent party meetings and read pertinent party documents, and to benefit from the party's education and training.

(2) To participate in the discussion, at party meetings and in party newspapers and journals, of questions concerning the party's policies.

(3) To make suggestions and proposals regarding the work of the party.

(4) To make well-grounded criticism of any party organization or member at party meetings; to lay information or charges against any party organization

or member concerning violations of discipline and of the law to the party in a responsible way, and to demand disciplinary measures against such a member, or to demand the dismissal or replacement of any cadre who is incompetent.

(5) To vote, elect and stand for election.

(6) To attend, with the right of self-defense, discussions held by party organizations to decide on disciplinary measures to be taken against themselves or to appraise their work and behavior, while other party members may also bear witness or argue in their behalf.

(7) In case of disagreement with a party decision or policy, to make reservations and present their views to party organizations at higher levels up to and including the Central Committee, provided that they resolutely carry out the decision or policy while it is in force.

(8) To put forward any request, appeal or complaint to higher party organizations up to and including the Central Committee and ask the organizations concerned for a responsible reply.

No party organization, up to and including the Central Committee, has the right to deprive any party member of the above-mentioned rights.

Article 5

New party members must be admitted through a party branch, and the principle of individual admission must be adhered to. It is impermissible to drag into the party by any means those who are not qualified for membership, or to exclude those who are qualified.

An applicant for party membership must fill in an application form and must be recommended by two full party members. The application must be accepted by a general membership meeting of the party branch concerned and approved by the next higher party organization, and the applicant should undergo observation for a probationary period before being transferred to full membership.

Party members who recommend an applicant must make genuine efforts to acquaint themselves with the latter's ideology, character and personal history, to explain to each applicant the party's program and constitution, qualifications for membership and the duties and rights of members, and must make a responsible report to the party organization on the matter.

The party branch committee must canvass the opinions of persons concerned, inside and outside the party, about an applicant for party membership and, after establishing the latter's qualifications following a rigorous examination, submit the application to a general membership meeting for discussion.

Before approving the admission of applicants for party membership, the next higher party organization concerned must appoint people to talk with them, so as to get to know them better and help deepen their understanding of the party.

In special circumstances, the Central Committee of the party or the party committee of a province, an autonomous region or a municipality directly under the central government has the power to admit new party members directly.

Article 6

A probationary party member must take an admission oath in front of the party flag. The oath reads: "It is my will to join the Communist Party of China, uphold the party's program, observe the provisions of the party constitution, fulfill a party member's duties, carry out the party's decisions, strictly observe party discipline, guard party secrets, be loyal to the party, work hard, fight for communism throughout my life, be ready at all times to sacrifice my all for the party and the people, and never betray the party."

Article 7

The probationary period of a probationary member is 1 year. The party organization should make serious efforts to educate and observe the probationary members.

Probationary members have the same duties as full members. They enjoy the rights of full members except those of voting, electing or standing for election.

When the probationary period of a probationary member has expired, the party branch concerned should promptly discuss whether he is qualified to be transferred to full membership. A probationary member who conscientiously performs his duties and is qualified for membership should be transferred to full membership as scheduled; if continued observation and education are needed, the probationary period may be prolonged, but by no more than 1 year; if a probationary member fails to perform his duties and is found to be really unqualified for membership, his probationary membership shall be annulled. Any decision to transfer a probationary member to full membership, prolong a probationary period, or annul a probationary membership must be made through discussion by the general membership meeting of the party branch concerned and approved by the next higher party organization.

The probationary period of a probationary member begins from the day the general membership meeting of the party branch admits him as a probationary member. The party standing of a member begins from the day he is transferred to full membership on the expiration of the probationary period.

Article 8

Every party member, irrespective of position, must be organized into a branch, cell or other specific unit of the party to participate in the regular activities of the party organization and accept supervision by the masses inside and outside the party. There shall be no privileged party members who do not participate in the regular activities of the party organization and do not accept supervision by the masses inside and outside the party.

Article 9

Party members are free to withdraw from the party. When a party member asks to withdraw, the party branch concerned shall, after discussion by its general membership meeting, remove his name from the party rolls, make the removal publicly known and report it to the next higher party organization for the record.

A party member who lacks revolutionary will, fails to fulfill the duties of a party member, is not qualified for membership and remains incorrigible after repeated education should be persuaded to withdraw from the party. The case shall be discussed and decided by the general membership meeting of the party branch concerned and submitted to the next higher party organization for approval. If the party member being persuaded to withdraw refuses to do so, the case shall be submitted to the general membership meeting of the party branch concerned for discussion and decision on a time limit by which the member must correct his mistakes or on the removal of his name from the party rolls, and the decision shall be submitted to the next higher party organization for approval.

A party member who fails to take part in regular party activities, pay membership dues or do work assigned by the party for six successive months without proper reason is regarded as having given up membership. The general membership meeting of the party branch concerned shall decide on the removal of such a person's name from the party rolls and report the removal to the next higher party organization for approval.

Chapter II. Organizational System of the Party

Article 10

The party is an integral body organized under its program and constitution, on the principle of democratic centralism. It practices a high degree of centralism on the basis of a high degree of democracy. The basic principles of democratic centralism as practiced by the party are as follows:

(1) Individual party members are subordinate to the party organization, the minority is subordinate to the majority, the lower party organizations are subordinate to the higher party organizations, and all the constituent organizations and members of the party are subordinate to the national congress and the Central Committee of the party.

(2) The party's leading bodies of all levels are elected except for the representative organs dispatched by them and the leading party members' groups in nonparty organizations.

(3) The highest leading body of the party is the national congress and the Central Committee elected by it. The leading bodies of local party

organizations are the party congresses at their respective levels and the party committees elected by them. Party committees are responsible, and report their work, to the party congresses at their respective levels.

(4) Higher party organizations shall pay constant attention to the views of the lower organizations and the rank-and-file party members, and solve in good time the problems they raise. Lower party organizations shall report on their work to, and request instructions from, higher party organizations; at the same time, they shall handle, independently and in a responsible manner, matters within their jurisdiction. Higher and lower party organizations should exchange information and support and supervise each other.

(5) Party committees at all levels function on the principle of combining collective leadership with individual responsibility based on division of labor. All major issues shall be decided upon by the party committees after democratic discussion.

(6) The party forbids all forms of personality cult. It is necessary to ensure that the activities of the party leaders be subject to supervision by the party and the people, while at the same time to uphold the prestige of all leaders who represent the interests of the party and the people.

Article 11

The election of delegates to party congresses and of members of party committees at all levels should reflect the will of the voters. Elections shall be held by secret ballot. The lists of candidates shall be submitted to the party organizations and voters for full deliberation and discussion. There may be a preliminary election in order to draw up a list of candidates for the formal election. Or there may be no preliminary election, in which case the number of candidates shall be greater than that of the persons to be elected. The voters have the right to inquire into the candidates, demand a change or reject one in favor of another. No organization or individual shall in any way compel voters to elect or not to elect any candidate.

If any violation of the party constitution occurs in the election of delegates to a local party congress, the party committee at the next higher level shall, after investigation and verification, decide to invalidate the election and take appropriate measures. The decision shall be reported to the party committee at the next higher level for checking and approval before it is formally announced and implemented.

Article 12

When necessary, party committees of and above the county level may convene conferences of delegates to discuss and decide on major problems that require timely solution. The number of delegates to such conferences and the procedure governing their election shall be determined by the party committees convening them.

Article 13

The formation of a new party organization or the dissolution of an existing one shall be decided upon by the higher party organizations.

Party committees of and above the county level may send out their representative organs.

When the congress of a local party organization at any level is not in session, the next higher party organization may, when it deems it necessary, transfer or appoint responsible members of that organization.

Article 14

When making decisions on important questions affecting the lower organizations, the leading bodies of the party at all levels should, in ordinary circumstances, solicit the opinions of the lower organizations. Measures should be taken to ensure that the lower organizations can exercise their functions and powers normally. Except in special circumstances, higher leading bodies should not interfere with matters that ought to be handled by lower organizations.

Article 15

Only the Central Committee of the party has the power to make decisions on major policies of a nationwide character. Party organizations of various departments and localities may make suggestions with regard to such policies to the Central Committee, but shall not make any decisions or publicize their views outside the party without authorization.

Lower party organizations must firmly implement the decisions of higher party organizations. If lower organizations consider that any decisions of higher organizations do not suit actual conditions in their localities or departments, they may request modification. If the higher organizations insist on their original decisions, the lower organizations must carry out such decisions and refrain from publicly voicing their differences, but have the right to report to the next higher party organization.

Newspapers and journals and other means of publicity run by party organizations at all levels must propagate the line, principles, policies and decisions of the party.

Article 16

Party organizations must keep to the principle of subordination of the minority to the majority in discussing and making decisions on any matter. Serious consideration should be given to the differing views of a minority. In case of controversy over major issues in which supporters of the two opposing views are nearly equal in number, except in emergencies where action must be taken in accordance with the majority view, the decision should be put off to allow for further investigation, study and exchange of opinions followed by another discussion. If still no decision can be made, the controversy should be reported to the next higher party organization for ruling.

When, on behalf of the party organization, an individual party member is to express views on major issues beyond the scope of existing party decisions, the content must be referred to the party organization for prior discussion and decision, or referred to the next higher party organization for instructions. No party member, whatever his position, is allowed to make decisions on major issues on his own. In an emergency, when a decision by an individual is unavoidable, the matter must be reported to the party organization immediately afterwards. No leader is allowed to decide matters arbitrarily on his own or to place himself above the party organization.

Article 17

The central, local and primary organizations of the party must all pay great attention to party building. They shall regularly discuss and check up on the party's work in propaganda, education, organization and discipline inspection, its mass work and united front work. They must carefully study ideological and political developments inside and outside the party.

Chapter III. Central Organizations of the Party

Article 18

The national congress of the party is held once every 5 years and convened by the Central Committee. It may be convened before the due date if the Central Committee deems it necessary or if more than one-third of the organizations at the provincial level so request. Except under extraordinary circumstances, the congress may not be postponed.

The number of delegates to the national congress of the party and the procedure governing their election shall be determined by the Central Committee.

Article 19

The functions and powers of the national congress of the party are as follows:

(1) To hear and examine the reports of the Central Committee;

(2) To hear and examine the reports of the Central Advisory Commission and the Central Commission for Discipline Inspection;

(3) To discuss and decide on major questions concerning the party;

(4) To revise the constitution of the party;

(5) To elect the Central Committee; and

(6) To elect the Central Advisory Commission and the Central Commission for Discipline Inspection.

Article 20

The Central Committee of the party is elected for a term of 5 years. However, when the next national congress is convened before or after its due date, the term shall be correspondingly shortened or extended. Members and alternate members of the Central Committee must have a party standing of 5 years or more. The number of members and alternate members of the Central Committee shall be determined by the national congress. Vacancies on the Central Committee shall be filled by its alternate members in the order of the number of votes by which they were elected.

The Central Committee of the party meets in plenary session at least once a year, and such sessions are convened by its Political Bureau.

When the national congress is not in session, the Central Committee carries out its decisions, directs the entire work of the party and represents the Communist Party of China in its external relations.

Article 21

The Political Bureau, the Standing Committee of the Political Bureau, the Secretariat and the general secretary of the Central Committee of the party are elected by the Central Committee in plenary session. The general secretary of the Central Committee must be a member of the Standing Committee of the Political Bureau.

When the Central Committee is not in session, the Political Bureau and its Standing Committee exercise the functions and powers of the Central Committee.

The Secretariat attends to the day-to-day work of the Central Committee under the direction of the Political Bureau and its Standing Committee.

The general secretary of the Central Committee is responsible for convening the meetings of the Political Bureau and its Standing Committee and presides over the work of the Secretariat.

The members of the Military Commission of the Central Committee are decided on by the Central Committee. The chairman of the Military Commission must be a member of the Standing Committee of the Political Bureau.

The central leading bodies and leaders elected by each Central Committee shall, when the next national congress is in session, continue to preside over the party's day-to-day work until the new central leading bodies and leaders are elected by the next Central Committee.

Article 22

The party's Central Advisory Commission acts as political assistant and consultant to the Central Committee. Members of the Central Advisory Commission must have a party standing of 40 years or more, have rendered considerable service to the party, have fairly rich experience in leadership and enjoy fairly high prestige inside and outside the party.

The Central Advisory Commission is elected for a term of the same duration as that of the Central Committee. It elects, at its plenary meeting, its Standing Committee and its chairman and vice chairmen, and reports the results to the Central Committee for approval. The chairman of the Central Advisory Commission must be a member of the Standing Committee of the Political Bureau. Members of the Central Advisory Commission may attend plenary sessions of the Central Committee as nonvoting participants. The vice chairmen of the Central Advisory Commission may attend plenary meetings of the Political Bureau as nonvoting participants and, when the Political Bureau deems it necessary, other members of the Standing Committee of the Central Advisory Commission may do the same.

Working under the leadership of the Central Committee of the party, the Central Advisory Commission puts forward recommendations, on the formulation and implementation of the party's principles and policies and gives advice upon request, assists the Central Committee in investigating and handling certain important questions, propagates the party's major principles and policies inside and outside the party, and undertakes such other tasks as may be entrusted to it by the Central Committee.

Article 23

Party organizations in the Chinese People's Liberation Army carry on their work in accordance with the instructions of the Central Committee. The General Political Department of the Chinese People's Liberation Army is the political-work organ of the Military Commission; it directs party and political work in the army. The organizational system and organs of the party in the armed forces will be prescribed by the Military Commission.

Chapter IV. Local Organizations of the Party

Article 24

A party congress of a province, autonomous region, municipality directly under the autonomous region, municipality directly under the central government, city divided into districts, or autonomous prefecture is held once every 5 years.

A party congress of a county (banner), autonomous county, city not divided into districts, or municipal district is held once every 3 years.

Local party congresses are convened by the party committees at the corresponding levels. Under extraordinary circumstances, they may be held before or after their due dates upon approval by the next higher party committees.

The number of delegates to the local party congresses at any level and the procedure governing their election are determined by the party committees at the corresponding levels and should be reported to the next higher party committees for approval.

Article 25

The functions and powers of the local party congresses at all levels are as follows:

(1) To hear and examine the reports of the party committees at the corresponding levels;

(2) To hear and examine the reports of the commissions for discipline inspection at the corresponding levels;

(3) To discuss and decide on major issues in the given areas; and

(4) To elect the party committees and commissions for discipline inspection at the corresponding levels and delegates to the party congresses at their respective next higher levels.

The party congress of a province, autonomous region, or municipality directly under the central government elects the party advisory committee at the corresponding level and hears and examines its reports.

Article 26

The party committee of a province, autonomous region, or municipality directly under the central government, city divided into districts, or autonomous prefecture is elected for a term of 5 years. The members and alternate members of such a committee must have a party standing of 5 years or more.

The party committee of a county (banner), autonomous county, city not divided into districts, or municipal district is elected for a term of 3 years. The members and alternate members of such a committee must have a party standing of 3 years or more.

When local party congresses at various levels are convened before or after their due dates, the terms of the committees elected by the previous congresses shall be correspondingly shortened or extended.

The number of members and alternate members of the local party committees at various levels shall be determined by the next higher committees. Vacancies on the local party committees at various levels shall be filled by their alternate members in the order of the number of votes by which they were elected.

The local party committees at various levels meet in plenary session at least once a year.

Local party committees at various levels shall, when the party congresses of the given areas are not in session, carry out the directives of the next higher party organizations and the decisions of the party congresses at the corresponding levels, direct work in their own areas and report on it to the next higher party committees at regular intervals.

Article 27

Local party committees at various levels elect, at their plenary sessions, their standing committees, secretaries and deputy secretaries and report the results to the higher party committees for approval. The standing committees at various levels exercise the powers and functions of local party committees when the latter are not in session. They continue to handle the day-to-day work when the next party congresses at their levels are in session, until the new standing committees are elected.

Article 28

The party advisory committee of a province, autonomous region or municipality directly under the central government acts as political assistant and consultant to the party committee at the corresponding level. It works under the leadership of the party at the corresponding level and in the light of the relevant provisions of Article 22 of the present constitution. The qualifications of its members shall be specified by the party committee at the corresponding level in the light of the relevant provisions of Article 22 of the present constitution and the actual conditions in the locality concerned; it serves a term of the same duration as the party committee at the corresponding level.

The advisory committee of a province, autonomous region or municipality directly under the central government elects, at its plenary meeting, its standing committee and its chairman and vice chairmen, and the results are subject to endorsement by the party committee at the corresponding level and should be reported to the Central Committee for approval. Its members may attend plenary sessions of the party committee at the corresponding level as nonvoting participants, and its chairman and vice chairmen may attend meetings of the standing committee of the party committee at the corresponding level as nonvoting participants.

Article 29

A prefectural party committee, or an organization analogous to it, is the representative organ dispatched by a provincial or an autonomous regional party committee to a prefecture embracing several counties, autonomous counties or cities. It exercises leadership over the work in the given region as authorized by the provincial or autonomous regional party committee.

Chapter V. Primary Organizations of the Party

Article 30

Primary party organizations are formed in factories, shops, schools, offices, city neighborhoods, people's communes, cooperatives, farms, townships, towns, companies of the People's Liberation Army and other basic units, where there are three or more full party members.

In primary party organizations, the primary party committees, and committees of general party branches or party branches, are set up respectively as the work requires and according to the number of party members, subject to approval by the higher party organizations. A primary party committee is elected by a general membership meeting or a delegate meeting. The committee of a general party branch or a party branch is elected by a general membership meeting.

Article 31

In ordinary circumstances, a primary party organization which has set up its own committee convenes a general membership meeting or delegate meeting once a year; a general party branch holds a general membership meeting twice a year; a party branch holds a general membership meeting once in every 3 months.

A primary party committee is elected for a term of 3 years, while a general party branch committee or a party branch committee is elected for a term of 2 years. Results of the election of a secretary and deputy secretaries by a primary party committee, general branch committee or branch committee shall be reported to the higher party organizations for approval.

Article 32

The primary party organizations are militant bastions of the party in the basic units of society. Their main tasks are:

(1) To propagate and carry out the party's line, principles and policies, the decisions of the Central Committee of the party and other higher party organizations, and their own decisions; to give full play to the exemplary vanguard role of party members, and to unite and organize the cadres and the rank and file inside and outside the party in fulfilling the tasks of their own units.

(2) To organize party members to conscientiously study Marxism-Leninism and Mao Zedong Thought, study essential knowledge concerning the party, and the party's line, principles and policies, and acquire general, scientific and professional knowledge.

(3) To educate and supervise party members, ensure their regular participation in the activities of the party organization, see that party members truly fulfill their duties and observe discipline, and protect their rights for encroachment.

(4) To maintain close ties with the masses, constantly seek their criticisms and opinions regarding party members and the party's work, value the knowledge and rationalization proposals of the masses and experts, safeguard the legitimate rights and interests of the masses, show concern for their material and cultural life and help them improve it, do effective ideological and political work among them, and enhance their political consciousness. They must correct, by proper methods, the erroneous ideas and unhealthy ways and customs that may exist among the masses, and properly handle the contradictions in their midst.

(5) To give full scope to the initiative and creativeness of party members and the masses, discover advanced elements and talented people needed for the socialist cause, encourage them to improve their work and come up with innovations and inventions, and support them in these efforts.

(6) To admit new party members, collect membership dues, examine and appraise the work and behavior of party members, commend exemplary deeds performed by them, and maintain and enforce party discipline.

(7) To promote criticism and self-criticism, and expose and overcome shortcomings and mistakes in work. To educate party and nonparty cadres; see to it that they strictly observe the law and administrative discipline and the financial and economic discipline and personnel regulations of the state; see to it that none of them infringe the interests of the state, the collective and the masses; and see to it that the financial workers including accountants and other professionals who are charged with enforcing laws and regulations in their own units do not themselves violate the laws and regulations, while at the same time ensuring and protecting their right to exercise their functions and powers independently in accordance with the law and guarding them against any reprisals for so doing.

(8) To educate party members and the masses to raise their revolutionary vigilance and wage resolute struggles against the criminal activities of counterrevolutionaries and other saboteurs.

Article 33

In an enterprise or institution, the primary party committee or the general branch committee or branch committee, where there is no primary party committee, gives leadership in the work of its own unit. Such a primary party organization discusses and decides on major questions of principle and at the same time ensures that the administrative leaders fully exercise their functions and powers, but refrains from substituting itself for, or trying to take over from, the administrative leaders. Except in special circumstances, the general branch committees and branch committees under the leadership of a primary party committee only play a guarantory and supervisory role to see that the production targets or operational tasks assigned to their own units are properly fulfilled.

In party or government offices at all levels, the primary party organizations shall not lead the work of these offices. Their task here is to exercise supervision over all party members, including the heads of these offices who are party members, with regard to their implementation of the party's line, principles and policies, their observance of discipline and the law, their contact with the masses, and their ideology, work style and moral character; and to assist the office heads to improve work, raise efficiency and overcome bureaucratic ways, keep them informed of the shortcomings and problems discovered in the work of these offices, or report such shortcomings and problems to the higher party organizations.

Chapter VI. Party Cadres

Article 34

Party cadres are the backbone of the party's cause and public servants of the people. The party selects its cadres according to the principle that they should possess both political integrity and professional competence, persists in the practice of appointing people on their merits and opposes favoritism; it calls for genuine efforts to make the ranks of the cadres more revolutionary, younger in average age, better educated and more professionally competent.

Party cadres are obliged to accept training by the party as well as examination and assessment of their work by the party.

The party should attach importance to the training and promotion of women cadres and cadres from among the minority nationalities.

Article 35

Leading party cadres at all levels must perform in an exemplary way their duties as party members prescribed in Article 3 of this constitution and must meet the following basic requirements:

(1) Have a fair grasp of the theories of Marxism-Leninism and Mao Zedong Thought and the policies based on them, and be able to adhere to the socialist road, fight against the hostile forces disrupting socialism and combat all erroneous tendencies inside and outside the party.

(2) In their work as leaders, conduct earnest investigations and study, persistently proceed from reality and properly carry out the line, principles and policies of the party.

(3) Be fervently dedicated to the revolutionary cause and imbued with a strong sense of political responsibility, and be qualified for their leading posts in organizational ability, general education and vocational knowledge.

(4) Have a democratic work style, maintain close ties with the masses, correctly implement the party's mass line, conscientiously accept criticism and supervision by the party and the masses, and combat bureaucratism.

(5) Exercise their functions and powers in the proper way, observe and uphold the rules and regulations of the party and the state, and combat all acts of abusing power and seeking personal gain.

(6) Be good at uniting and working with a large number of comrades, including those who hold differing opinions, while upholding the party's principles.

Article 36

Party cadres should be able to cooperate with nonparty cadres, respect them and learn open-mindedly from their strong points.

Party organizations at all levels must be good at discovering and recommending talented and knowledgeable nonparty cadres for leading posts, and ensure that the latter enjoy authority commensurate with their posts and can play their roles to the full.

Article 37

Leading party cadres at all levels, whether elected through democratic procedure or appointed by a leading body, are not entitled to lifelong tenure, and they can be transferred from or relieved of their posts.

Cadres no longer fit to continue working due to old age or poor health should retire according to the regulations of the state.

Chapter VII. Party Discipline

Article 38

A Communist Party member must consciously act within the bounds of party discipline.

Party organizations shall criticize, educate or take disciplinary measures against members who violate party discipline, depending on the nature and seriousness of their mistakes and in the spirit of "learning from past mistakes to avoid future ones, and curing the sickness to save the patient."

Party members who violate the law and administrative discipline shall be subject to administrative disciplinary action or legal action instituted by administrative or judicial organs. Those who have seriously violated criminal law shall be expelled from the party.

Article 39

There are five measures of party discipline: warning, serious warning, removal from party posts and proposals for their removal from nonparty posts to the organizations concerned, placing on probation within the party, and expulsion from the party.

The period for which a party member is placed on probation shall not exceed 2 years. During this period, the party member concerned has no right to vote, elect or stand for election. A party member who during this time proves to have corrected his mistake shall have his rights as a party member restored. Party members who refuse to mend their ways shall be expelled from the party.

Expulsion is the ultimate party disciplinary measure. In deciding on or approving an expulsion, party organizations at all levels should study all the relevant facts and opinions and exercise extreme caution.

It is strictly forbidden, within the party, to take any measures against a member that contravene the party constitution or the laws of the state, or to retaliate against or frame up comrades. Any offending organization or individual must be dealt with according to party discipline or the laws of the state.

Article 40

Any disciplinary measures against a party member must be discussed and decided on at a general membership meeting of the party branch concerned, and reported to the primary party committee concerned for approval. If the case is relatively important or complicated, or involves the expulsion of a member, it shall be reported, on the merit of that case, to a party commission for discipline inspection at or above the county level for examination and approval. Under special circumstances, a party committee or a commission for discipline inspection at or above the county level has the authority to decide directly on disciplinary measures against a party member.

Any decision to remove a member or alternate member of the Central Committee or a local committee at any level from posts within the party, to place such a person on probation within the party or to expel him from the party must be taken by a two-thirds majority vote at a plenary meeting of the party committee to which he belongs. Such a disciplinary measure against a member or alternate member of a local party committee is subject to approval by the higher party committees.

Members and alternate members of the Central Committee who have seriously violated criminal law shall be expelled from the party on decision by the Political Bureau of the Central Committee; members and alternate members of local party committees who have seriously violated criminal law shall be expelled from the party on decision by the standing committees of the party committees at the corresponding levels.

Article 41

When a party organization decides on a disciplinary measure against a party member, it should investigate and verify the facts in an objective way. The party member in question must be informed of the decision to be made and of the facts on which it is based. He must be given a chance to account for himself and speak in his own defense. If the member does not accept the decision, he can appeal, and the party organization concerned must promptly deal with or forward his appeal, and must not withhold or suppress it. Those who cling to erroneous views and unjustifiable demands shall be educated by criticism.

Article 42

It is an important duty of every party organization to firmly uphold party discipline. Failure of a party organization to uphold party discipline must be investigated.

In case a party organization seriously violates party discipline and is unable to rectify the mistakes on its own, the next higher party committee should, after verifying the facts and considering the seriousness of the case, decide on the reorganization or dissolution of the organization, report the decision to the party committee further above for examination and approval, and then formally announce and carry out the decision.

Chapter VIII. Party Organs for Discipline Inspection

Article 43

The party's Central Commission for Discipline Inspection functions under the leadership of the Central Committee of the party. Local commissions for discipline inspection at all levels function under the dual leadership of the party committees at the corresponding levels and the next higher commissions for discipline inspection.

The party's central and local commissions for discipline inspection serve a term of the same duration as the party committees at the corresponding levels.

The Central Commission for Discipline Inspection elects, in plenary session, its Standing Committee and secretary and deputy secretaries and reports the results to the Central Committee for approval. Local commissions for discipline inspection at all levels elect, at their plenary sessions, their respective standing committees and secretaries and deputy secretaries. The results of the elections are subject to endorsement by the party committees at the corresponding levels and should be reported to the higher party committees for approval. The first secretary of the Central Commission for Discipline Inspection must be a member of the Standing Committee of the Political Bureau. The question of whether a primary party committee should set up a commission for discipline inspection or simply appoint a discipline inspection commissioner shall be determined by the next higher party organization in the light of the specific circumstances. The committees of general party branches and party branches shall have discipline inspection commissioners.

The party's Central Commission for Discipline Inspection shall, when its work so requires, accredit discipline inspection groups or commissioners to party or state organs at the central level. Leaders of the discipline inspection groups or discipline inspection commissioners may attend relevant meetings of the leading party organizations in the said organs as nonvoting participants. The leading party organizations in the organs concerned must give support to their work.

Article 44

The main tasks of the central and local commissions for discipline inspection are as follows: to uphold the constitution and the other important rules and regulations of the party, to assist the respective party committees in rectifying party style, and to check up on the implementation of the line, principles, policies and decisions of the party.

The central and local commissions for discipline inspection shall carry out constant education among party members on their duty to observe party discipline; they shall adopt decisions for the upholding of party discipline, examine and deal with relatively important or complicated cases of violation of the constitution and discipline of the party or the laws and decrees of the state by party organizations or party members; decide on or cancel disciplinary measures against party members involved in such cases; and deal with complaints and appeals made by party members.

The central and local commissions for discipline inspection should report to the party committees at the corresponding levels on the results of their handling of cases of special importance or complexity, as well as on the problems encountered. Local commissions for discipline inspection should also present such reports to the higher commissions.

If the Central Commission for Discipline Inspection discovers any violation of party discipline by any member of the Central Committee, it may report such an offense to the Central Committee, and the Central Committee must deal with the case promptly.

Article 45

Higher commissions for discipline inspection have the power to check up on the work of the lower commissions and to approve or modify their decisions on any case. If decisions so modified have already been ratified by the party committee at the corresponding level, the modification must be approved by the next higher party committee.

If a local commission for discipline inspection does not agree with a decision made by the party committee at the corresponding level in dealing with a case, it may request the commission at the next higher level to reexamine the case; if a local commission discovers cases of violation of party discipline or the laws and decrees of the state by the party committee at the corresponding level or by its members, and if that party committee fails to deal with them properly or at all, it has the right to appeal to the higher commissions for assistance in dealing with such cases.

Chapter IX. Leading Party Members Groups

Article 46

A leading party members group shall be formed in the leading body of a central or local state organ, people's organization, economic or cultural institution or other nonparty unit. The main tasks of such a group are: to see to it that the party's principles and policies are implemented, to unite with the nonparty cadres and masses in fulfilling the tasks assigned by the party and the state, and to guide the work of the party organization of the unit.

Article 47

The members of a leading party members group are appointed by the party committee that approves its establishment. The group shall have a secretary and deputy secretaries.

A leading party members group must accept the leadership of the party committee that approves its establishment.

Article 48

The Central Committee of the party shall determine specifically the functions, powers and tasks of the leading party members groups in those government departments which need to exercise highly centralized and unified leadership over subordinate units; it shall also determine whether such groups should be replaced by party committees.

Chapter X. Relationship Between the Party and the Communist Youth League

Article 49

The Communist Youth League of China is a mass organization of advanced young people under the leadership of the Communist Party of China; it is a school where large numbers of young people will learn about communism through practice; it is the party's assistant and reserve force. The Central Committee of the Communist Youth League functions under the leadership of the Central Committee of the party. The local organizations of the Communist Youth League are under the leadership of the party committees at the corresponding levels and of the higher organizations of the league itself.

Article 50

Party committees at all levels must strengthen their leadership over the Communist Youth League organizations and pay attention to the selection and training of league cadres. The party must firmly support the Communist Youth League in the lively and creative performance of its work to suit the characteristics and needs of young people, and give full play to the league's role as a shock force and as a bridge linking the party with the broad masses of young people.

Those secretaries of league committees, at or below the county level or in enterprises and institutions, who are party members may attend meetings of party committees at the corresponding levels and of their standing committees as nonvoting participants.

SPEECH AT THE 12TH CPC CONGRESS (6 SEPTEMBER 1982)

Beijing RED FLAG in Chinese No 18, 16 Sep 82 pp 44, 46, 47

[Speech by Ye Jianying]

[Text] Comrades:

Our present party congress is well prepared, and it is proceeding smoothly. I fully agree with the opening speech made by Comrade Deng Xiaoping. Comrade Hu Yaobang has made a very important report on behalf of the Central Committee, and the revision of the party constitution has been well done. I fully agree with both.

Our party is full of vigor and vitality. After this congress, a good number of comrades who are in their prime will take up leading positions in the Central Committee and elsewhere. This is a major sign that our party's cause is flourishing, which pleases us old comrades greatly.

The Tang dynasty poet Li Shangyin wrote the line "The phoenix chick sings sweeter than the older birds" in praise of the poetic talent of a young man. It means that late-comers surpass old-timers, and the young will excel the old. This can be said to be a basic law in the development of history and the progress of society. I hope that the newly promoted young comrades will work in close cooperation with the old comrades, shouldering heavy responsibilities and forging courageously ahead. Man's ability to acquire knowledge is unlimited, but the knowledge of any individual is limited. Hence, one must be good at learning. We believe that, so long as our comrades strive to arm themselves with communist ideology, the party's historical experience and modern science, and so long as they unite with the masses, work hard, know their subordinates well and make good use of them and readily follow good advice, they will certainly be able to do a remarkable job in their leading positions and accomplish glorious feats befitting this great epoch on the march toward China's modernization.

Following this congress, many old comrades will retire from their leading posts, as required by the development of our party's cause. Having worked diligently for scores of years, these old comrades are meritorious contributors to the revolution. The party and the people will never forget their services. The retiring comrades should not retire ideologically.

They should, by their deeds, write the last chapter of their lives well, that is to say, they should always keep the interests of the party and the people at heart and continue to do some work that is within their strength.

I am now 85, failing in health and unable to do as much as I would like. For the sake of our party's cause, I have time and again asked to retire from my leading position. However, until the Central Committee decides to grant this, I will do the best I can and devote my all to the party.

After the 12th national party congress, we shall strive to create a new situation in all fields of socialist modernization. It will be an arduous task. The new Central Committee must do still better in practicing democratic centralism and upholding the principle of collective leadership. When the wisdom and strength of the masses are pooled, all affairs become easier to deal with, difficulties are overcome, dangers averted and errors minimized--this has been repeatedly borne out by the past experience of the party. The Political Bureau and the Secretariat of the Central Committee have done fairly well in this respect, and achieved notable results in recent years. All party committees from the central down to the local levels should henceforth do likewise in order to ensure the normal functioning and correct leadership of the party and prolong the political stability in our country. I hope that this fundamental principle in running the affairs of the party and the state will be maintained and passed on from generation to generation.

That is all I want to say today. I wish this congress complete success.

SPEECH AT THE 12TH CPC CONGRESS (6 SEPTEMBER 1982)

Beijing RED FLAG in Chinese No 18, 16 Sep 82 pp 45, 46, 47

[Speech by Chen Yun]

[Text] Comrades:

I fully agree with the report delivered to this congress by Comrade Hu Yaobang on behalf of the Central Committee, with the draft of the revised party constitution, the opening speech made by Comrade Deng Xiaoping and with the speech made by Comrade Ye Jianying.

After the smashing of the "gang of four," our party set right its course at the 3d Plenary Session of its 11th Central Committee and then, step by step through the 4th, 5th and 6th plenary sessions, it brought the nation's political life and socialist construction onto the correct path of sound development.

However, we must be soberly aware that for various reasons, the ranks of our party's cadres have long faced the problem of aging to varying degrees, and a gap between the old and the young. Unless this problem is solved now, and satisfactorily, the cause of communism may suffer a setback in China. All comrades, particularly the old comrades, should realize the gravity and urgency of this problem.

Therefore, the satisfactory solution of the problem of the smooth succession from old cadres to younger ones is an important task facing the whole party.

The first step in solving this problem is for the old cadres to retire successively from the leading bodies.

In the recent organizational reform of the party central organs and the State Council, some old comrades vacated their "front line" leading posts. And at the recent 7th Plenary Session of the 11th Central Committee a large number of other old comrades expressed the wish to leave the Central Committee and other leading posts. This shows that our old cadres have a strong sense of revolutionary responsibility.

When the old cadres withdraw from the "front line," does it mean that they have come to the end of their revolutionary career? No, it does not. Whether they withdraw to the second line to do such work as they have the strength for or completely retire, they should support the young and middle-aged cadres in their work and take upon themselves the task of helping and guiding the latter and passing on experience to them. Only when the old cadres have fulfilled this task can it be said that they have done their bit to the last for the party and the revolutionary cause.

Besides, since the ranks of our cadres now show a gap between the old and the young, the old comrades cannot leave the leading bodies all at once. As dictated by the actual situation, some old comrades will have to remain at "front line" posts for the time being. Even so, they should devote most of their energy not to the heavy day-to-day work as before, but to helping and guiding younger people, passing on experience to them, giving advice and checking to see that major issues are handled correctly.

To effect the smooth succession from old cadres to younger ones, young and middle-aged cadres must be promoted to the leading bodies at all levels.

In connection with this question, I would like to make two points:

One is that not just a few dozen or a few hundred, but thousands and tens of thousands must be promoted. Why? Because only thus will there be enough people to take over the work of the large numbers of old comrades who retire from the leading bodies; only thus will we have a greater choice and find truly reliable successors; and only thus will it be possible to prevent the troublemakers who were promoted to leading posts during the "Cultural Revolution" from stirring up any serious disturbances in the future.

In order to promote thousands and tens of thousands of young and middle-aged cadres, we must take a developmental view in judging them and not just see that they are yet inexperienced. To be sure, the young and middle-aged cadres do not have the high working experience of the old cadres. But we should ask ourselves the question: Where does experience come from? The answer is, only from tempering in practical work. Placed in posts of responsibility and given a heavy load, the young and middle-aged cadres can certainly gain experience and gradually mature through tempering in 3 or 5 years, or at most 8 or 10 years. In addition, we can create more "assistant" posts. This would help to reduce possible resistance to the promotion of young and middle-aged cadres to full leadership. At the same time, it would enable the party organization to judge their actual leading and organizational ability before they are formally appointed as leaders.

The other point I want to make on the question of promoting young and middle-aged cadres is that none of the following three types of people should be promoted: people who rose to prominence during the "Cultural Revolution" by following Lin Biao, Jiang Qing and their like in "rebellion"; people who are seriously factionalist in their ideas; and people who indulged in beating, smashing and looting. Any of them who have already been promoted must be resolutely removed from the leading bodies.

Why should none of these people be promoted? Because if they are recruited into leading bodies, they will surface to make trouble and again harm the nation and the people when after a number of years, the political climate is right for them, when the party faces any storms.

Of course, we should realize that only a minority of the young and middle-aged people who committed mistakes during the "Cultural Revolution" belong to these three types, while the majority of them merely drifted along. As regards the latter, so long as they have really acknowledged their mistakes, made a clean break with those three types and given a good account of themselves ever since the smashing of the "gang of four," the party should trust and use them, and continue to observe and help them in the course of work.

We must also note that there are plenty of young and middle-aged people who behaved well or basically well during the "Cultural Revolution." It is mainly from among them that we should select cadres for promotion.

Apart from the three types mentioned above, there are two other types of people whom we should also not promote to leading posts. I mean people who are opposed to the line followed by the Central Committee of the party since its third plenary session, and people who have seriously violated the law and discipline in the economic and other spheres.

In short, we should on the one hand be bold and quick in promoting young and middle-aged cadres and, on the other, we should strictly insist on the political criteria. As between political integrity and professional competence, we should pay more attention to the former. In other words, we should be sure to promote people who have a strong party spirit, are honest and upright, and dare to stick to principle.

I am convinced that so long as we solve well the problem of succession from old cadres to younger ones, there will be no lack of successors to carry on the cause of our party.

CLOSING SPEECH AT THE 12TH CPC CONGRESS (11 SEPTEMBER 1982)

Beijing RED FLAG in Chinese No 18, 16 Sep 82 pp 48-49

[Speech by Li Xiannian]

[Text] Comrades:

The 12th national congress of our party has now successfully fulfilled its historic mission, thanks to the common effort of all the delegates.

This congress, after fully democratic discussions, has unanimously endorsed the report delivered by Comrade Hu Yaobang on behalf of the 11th Central Committee of the party and adopted a resolution to this effect. Applying the basic principles of Marxism-Leninism and Mao Zedong Thought, the report of the Central Committee sums up the great successes we have achieved in setting things to rights in all fields of endeavor in the past 6 years, particularly since the 3d Plenary Session of the 11th Central Committee, analyzes the current political and economic situation in our country and puts forth the tasks and principles for creating a new situation in all fields of socialist modernization. We believe that, by firmly advancing in the direction indicated by the 12th congress, the Chinese people, led by our party, will certainly win great new victories in the socialist cause.

After careful discussion by all the delegates, this congress has unanimously adopted the new constitution of the party, which has removed the "left" mistakes in the constitution adopted by the 11th congress and which inherits and develops the strong points of the constitutions adopted by the 7th and 8th congresses. The new constitution is a crystallization of the party's historical experience and collective wisdom, and a powerful weapon for building a stronger party, both ideologically and organizationally, in the new historical period. It should be pointed out that, while it has been relatively easy to formulate the new party constitution, it will not be as easy to implement it strictly throughout the party. We must carry on ideological education and organizational work in real earnest, resolutely rectify the party style and consolidate all party organizations as the constitution requires and fight against all words and actions that contravene the constitution, so that members of our party may truly act as good examples to the masses and that our party may truly become a strong leading core for the cause of socialist modernization.

After full deliberations and democratic election at this congress a new Central Committee and also a Central Advisory Commission and a Central Commission for Discipline Inspection have come into being. Thus a major organizational guarantee is provided for the realization of the principles and tasks set forth by the 12th congress. The new Central Committee consists both of old and long-tested comrades and of a great number of younger comrades. They will assuredly work together in close unity and cooperation and make the new Central Committee an even stronger command headquarters than its predecessor. The newly formed Central Advisory Commission consists of many old comrades of high integrity and prestige. It will assuredly serve as a good political assistant and consultant to the Central Committee and contribute to the cause of the party by helping and guiding younger comrades and passing on experience to them. The Central Commission for Discipline Inspection, now elected by the national congress of the party, is entrusted with greater responsibilities than its predecessor. It will play an important role in ensuring implementation of the new party constitution, upholding party discipline and maintaining the communist purity of the party. Here, on behalf of the presidium of this congress, and the old comrades on it in particular, I would like to express our warm welcome to the young and middle-aged comrades who have been elected to the central leading organs. We hope that they will guard against conceit and impetuosity, be modest and prudent, study diligently, shoulder with courage the tasks assigned them by the party and achieve outstanding results in their work.

Comrades! How well our party will do its work in the 5 years between the present congress and the next will be a matter of key importance to the realization of the general task set for the new period. This congress has proposed that we should, in these 5 years, bring about a fundamental turn for the better in three spheres, namely, the financial and economic situation of our country, the standards of social conduct, and the style of our party. At the same time, we must work together with our compatriots in Taiwan, Xianggang (Hong Kong) and Aomen (Macao) and Chinese nationals residing abroad to promote the reunification of our motherland. And we must wage a common struggle with the people of all countries to safeguard world peace. These are great, solemn and arduous fighting tasks, and we must not in the least slacken our effort. As soon as this congress is over, we must bestir ourselves and intensively propagate the spirit of the congress throughout the party and among the people of all nationalities. We will organize all party members, Communist Youth League members, workers, peasants, intellectuals, Liberation Army commanders and fighters, cadres and all other patriotic citizens to conscientiously study the report of the Central Committee to this congress, the new party constitution, Comrade Deng Xiaoping's opening speech and the important speeches made by Comrades Yi Jianying and Chen Yun, so that the principles and tasks set forth by the congress will be made known to everybody and will strike root in the hearts of the people. In the meantime, we must, in the light of the specific conditions in different localities and departments, adopt practical and effective measures for the full realization of these principles and tasks.

Comrades! While striving to accomplish the various fighting tasks set by the 12th party congress, we must further strengthen the great unity of the whole party and of the people of all nationalities in our country. Our great socialist cause is advancing victoriously along the correct path of Marxism. We are convinced that, so long as we rally closely round the Central Committee, rouse ourselves and work assiduously, we shall be able to steer the great ship of our revolution and construction steadily toward our great goal.

Throughout the congress, all the comrades working for it, including the secretarial staff, those in charge of general affairs and those engaged in security, medical care and other daily services, in drafting and translating the documents and covering the congress, in communications and liaison services, and in printing the documents--all these comrades have been working hard day and night to help make the congress a success. People of the Beijing municipality have also made their contributions. Here, on behalf of the presidium of the congress, I would like to convey our heartfelt thanks to them.

Now, I declare the successful conclusion of the 12th National Congress of the Communist Party of China.

CSO: 4004/7

HOLD HIGH THE BANNER OF COMMUNISM, ADVANCE BRAVELY ALONG THE ROAD CHARTED BY THE 12TH CPC CONGRESS

Beijing RED FLAG in Chinese No 18, 16 Sep 82 pp 50-54

[Editorial]

[Text] The victorious opening of the 12th CPC National Congress is an important event in the political life of our whole party throughout the country. It has made great achievements by fully realizing its target; this has encouraged the whole party, army and all nationalities and fired them with enthusiasm.

As Comrade Deng Xiaoping pointed out in his opening speech at the 12th CPC Congress, this is the most important conference since the 7th CPC National Congress. It is a milestone in the history of the socialist revolution and the construction of the country. Its great significance and profound influence is bound to be increasingly displayed in the process of the country's socialist and communist construction.

The great achievements of the congress are as follows:

Having made a scientific summary of historical experiences and a profound analysis of the present situation, the congress has enriched and developed the correct Marxist line reestablished since the 3d Plenary Session of the 11th CPC Congress, laid down a new fighting program and task and posed a series of more complete and mature principles, policies and measures to continue to eliminate the negative influence caused by the 10 years of internal disorder and to create a new situation in all fields of socialist modernization. It has thus charted the correct road for continuing the advance and has provided a precise guide for action.

It suits the character and needs of this historical period in all fields of socialist construction; it concentrates the knowledge of the whole party; it has summed up the experience of building a proletarian party in power; and it has drawn up a new party constitution which is more substantial and complete than any other in our party's history. Thus, it has provided a brilliant guide and powerful weapon for making our party into a solid core leading the construction of socialist modernization.

After full deliberations and democratic voting, a new Central Committee was elected; at the same time, a Central Advisory Commission and a Central Commission for Discipline Inspection were also elected. In the new central leading organ, there are seasoned proletarian revolutionaries of the older generation who act as its mainstay and a great number of younger cadres full of vigor, ability and political integrity acting as its vital force. This has been a great step in the cooperation between the young and old cadres and in the process of handing over responsibility. It has fully demonstrated that the ranks of our party's cadres are of long standing and well established and that there is no lack of successors to carry out the communist cause of our party. This new party Central Committee will undoubtedly become a fighting and vigorous command post trusted by the people of all nationalities of our country.

History is the fairest mirror. If we say that the 7th CPC National Congress, convened and presided over by Comrade Mao Zedong in 1945, summarized the historical experiences of the tortuous, 20-year-long development of the democratic revolution, formulated a correct program, line and strategy and unified party thinking on the basis of Marxism-Leninism and Mao Zedong Thought, and thus laid the foundations for the national victory of the new democratic revolution, then the 12th CPC Congress, by drawing up the correct line, strategy and corresponding general and specific policies for continued advance after that great historical turning point, will lay a solid foundation for making a complete new breakthrough in the socialist modernization drive.

Historical experiences merit our attention. Seven years after the founding of the People's Republic of China, and after the transition from new democratism to socialism in our country, our party convened the eighth national congress in 1956. This congress made a correct analysis of the class, economic and political situations after the completion of socialist transformation, and clearly pointed out that in our country, the exploitative system and the exploiting classes had already been abolished, the principal contradiction in the country being no longer the contradiction between the working class and the bourgeoisie but the contradiction between economic and cultural development and the daily increasing demands of the people. It pointed out that the principal task of the whole people was no longer to conduct class struggle but to concentrate our energy on developing social production forces, to carry out the state's industrialization and to gradually meet the increasing material and cultural demands of the people.

The congress has adopted correct resolutions on building a proletarian party in power, particularly in terms of strengthening the party's democratic centralism and collective leadership and opposing personality cults. It has proved that the line of the Eighth CPC Congress is correct and it has charted the right way to socialist construction and the building of the party in the new era of the country. However, although a series of correct policies was put forward by the Eighth CPC Congress, these policies were not made concrete or profoundly understood by the whole party due to lack of practical experience in, and ideological preparation for, socialist construction. Consequently, they were not properly implemented or developed.

For more than 20 years from the 8th CPC Congress until the 10 years of turmoil, although our people made various important achievements in socialist construction, they suffered distressing setbacks and fell far short of achieving what had previously been hoped for.

Now the situation at the time of the 12th CPC Congress is completely different from that of the 8th CPC Congress. The CPC has learned a profound lesson from the tortuous historic development of the socialist revolution and construction over the 20 years after the 8th CPC Congress, just as it learned a profound lesson from the tortuous historic development of the 20-year-long democratic revolution prior to the 7th CPC Congress. For the past 6 years, after smashing the Jiang Qing counterrevolutionary clique, particularly since the 3d Plenary Session of the 11th CPC Central Committee, after exposing and criticizing the crimes of the Lin Biao-Jiang Qing counterrevolutionary cliques, scientifically criticizing the "Cultural Revolution" and its previous "left" tendency errors, bringing order out of chaos and taking measures for thoroughgoing reform, the party's ideological line has been brought back onto the track of Mao Zedong Thought. Our party has not only resumed various correct policies which had been effectively implemented for many years in the past, but has also formulated a series of new and correct policies in its new practice by conscientiously studying new conditions and summing up fresh experiences. Apart from restoring the true face of Mao Zedong Thought, our party has upheld and developed it under new historical conditions. Although there exist various unsatisfactory aspects in the party's work, style and organization, our party has, in general, reached a higher level than at any time since the founding of the state, in terms of comprehending the objective laws of socialist construction, conscientiously and firmly implementing the Marxist line, policies and principles, grasping the overall situation and strategically and farsightedly creating a new situation in all fields. The current CPC Central Committee is a solid, harmonious, united and militant collective body and is a leading core able to direct a complicated situation. History and reality have fully proved that by taking the precise guide to action provided by the 12th CPC Congress, we will certainly be capable of steering the vessel of Chinese socialism and communism along the correct channel, advancing step by step toward the great goal set for us.

The report made by Comrade Hu Yaobang at this congress demonstrates the spirit of the 12th CPC Congress. Having summarized the great achievements and rich experiences gained by our party through its efforts to bring about a great and historic change over the past 6 years, the report posed the overall task for the CPC in the new historical period, that is, to unite the people of all nationalities, to be self-reliant, to work hard and to gradually realize industrial, agricultural, national defense, scientific and technical modernizations in order to build a highly civilized, democratic socialist country. Precisely according to the requirement of the general task and based on the current situation of the country, the report puts forward to the entire party, army and people of the whole nation both the long-term target for endeavor and the most pressing current demands; stresses the central task to be realized by concentrated forces and the various tasks the execution of which is the guarantee for this central task. Thus, it has worked out a scientific blueprint for creating a new situation in all fields in line with our country's actual conditions.

The economic construction of socialist modernization is our central task. The outcome of economic work and construction will finally decide the result of other endeavors as well as the future and fate of our nation. Based on the comprehensive analysis of the actual national economic situation and the future trend of its development, the CPC Central Committee has precisely worked out the target for increasing the total annual industrial and agricultural output by 300 [as published] percent over the 20 years from 1981 to the end of this century. This is a magnificent goal and one which can be achieved through hard work. In order to achieve this goal, looking at the overall national economy, during the next 20 years we must tightly grasp the key links of agriculture, energy, transportation, education and science, seeing them as strategic points in our national economic development. In order to achieve this goal, our strategic plan must consist of two steps, first to put stress on laying a solid foundation in the first decade, to accumulate forces and to create conditions, and second, to enter a new period of vigorous economic development in the second decade. During the 5-year period from the current CPC Congress to the next congress, in order to smoothly carry out this strategic plan, economic work in all fields should lay stress on raising economic results, further implementing readjustment, reform and restructuring, improving all policies and measures of the national economy, markedly improving economic results in all national economic departments and steadily maintaining a fundamental balance in the areas of finance, credit and price. This is the basic policy and task for the current and coming economic work determined by the 12th CPC Congress.

Socialist practice over the past several decades has proved that the building of material civilization must go hand in hand with the building of a high level of socialist spiritual civilization. For these two civilizations, in a socialist society, are interdependent, each taking the other as its own aim, and neither should be overemphasized at the expense of the other. Apart from abolishing exploitation and realizing the system of public ownership, practicing distribution according to work, making the people the masters and implementing a planned economy with the ultimate aim of developing productive forces and labor productivity greater than those in capitalist society, socialist spiritual civilization, which takes communist ideology as its core, also constitutes an important symbol of socialist society. Practice has proved that it is impossible to carry on socialist construction without this spiritual civilization. If we overlook the building of socialist spiritual civilization, people might well have only a one-sided understanding of socialism, the building of material civilization will quite possibly diverge from the socialist road and socialism will be in danger of degenerating. Based on the theoretical and political viewpoints of Marxism, the 12th CPC Congress' report has made a correct exposition and scientific explanation of the relations between socialist material and spiritual civilization and of the importance, purpose, content and requirements of strengthening the building of socialist spiritual civilization. This is an important characteristic of the 12th CPC Congress' report. In order to develop the building of socialist material and spiritual civilizations in a manner of mutual promotion, we must strive to create a high level of socialist democracy, further improve the socialist legal system and consolidate and strengthen the people's democratic dictatorship. We must, on the one hand, guarantee that working people are the true masters and, on the other, guarantee the exercise of dictatorship over all those hostile elements, who sabotage and adopt a hostile attitude toward socialism. As for the first guarantee, socialist democracy should be expanded to political, economic, cultural and social life. Equal relations between people and correct relations between the individual and society are established on the basis of the principles of socialist democracy. As to the second guarantee, at present, we must resolutely and thoroughly carry out the struggle against important criminal activities in the economic, political and cultural fields which endanger socialism. Only in this way can we safeguard the building of socialist material and spiritual civilizations.

In addition, we should strive to strengthen national defense and safeguard the security and independence of the motherland; we should strive for the reunification of the motherland with our compatriots in Taiwan, Hong Kong and Macao as well as with Chinese residents abroad; we must uphold the foreign policy of independence, oppose imperialism and hegemonism, safeguard world peace and promote the progress of mankind by allying ourselves with the people of the whole world, particularly with Third World countries and people. Only in this way can we nationally complete reunification of the motherland and internationally strive for lasting peace in our environment so that the people of the country can concentrate their attention on the endeavor for socialist modernization.

On no account can all of the above-mentioned aims be easily realized. In order to attain them, it is necessary to persevere to the end with the reform of the party and government organs in which initial achievements have already been made, and to further ensure that the ranks of the cadres become more revolutionary, younger in average age, better educated and more competent. It is especially important to do our best in building our party in accordance with the new party constitution. The current 12th CPC Congress has decided in the next 3 years to complete the all-round rectification of our party style, the consolidation of its organizations and the reregistration of all its members. This is an important resolution which will win the full trust of the party and people.

The content of the congress' report is very wide-ranging. Its basic content can be summarized as follows: It has one central task which must be grasped from beginning to end and four important jobs which must be grasped at present. The one central task is: socialist economic construction. The four important jobs are: 1) the continuation of reforms of organs and economic systems; 2) great efforts to build socialist spiritual civilization; 3) a resolute attack on all types of important criminal activities which damage socialism; and 4) the rectification of party style, the restructuring of organizations and the support and improvement of party leadership. The proper execution of these four types of work will provide the fundamental political guarantee for smoothly carrying out modernization construction and persevering in the direction of socialism. In order to effectively concentrate the will and the actions of the whole party and the people of all nationalities of the country, and in accordance with the above-mentioned central task and important work, the 12th CPC Congress has raised the slogan for attaining three fundamental turns for the better. That is to say, in the coming 5 years from the current congress to the next congress, it is essential to achieve a fundamental turn for the better in the state's financial economy, in the social mood and in the party style. Having made these three fundamental turns for the better, and in 5 years' time when our party convenes its 13th national congress, an encouraging new situation will emerge before us in the construction of socialist modernization, and the whole party and people of all nationalities will be more confident of winning even greater victory in the cause of socialism and communism.

The ultimate aim of the CPC is to realize its lofty ideal of communism. For the past half century, each victory won by the Chinese people under the party in revolution and construction has been a victory gained under the guidance of the communist ideological system and a practical step toward the long-range goal of communism. Although the complete realization of communism, which is the most rational, complete and perfect social system in the history of mankind, can only come about after a long process of endeavor by several generations, as a means of propagating a scientific ideological and theoretical system and of putting communist ideology into practice in carrying on the revolutionary movement, the system of communist ideology has been in existence since the birth of the Communist Party in China and the new democratic revolution under its leadership. Today, communism not only exists in the daily life of the country but has also been developed through the establishment of socialist society, as an initial stage of communist society. Therefore, it should on no account be considered, as it is by some people, as an "idle dream," within sight but beyond reach, as an abstract ideological concept that has never been tested in practice.

Therefore, whether in periods of democratic revolution or socialist transformation or, needless to say, in the period of comprehensive socialist construction, all lines and general and specific policies of our party, and all its revolutionary struggles and practices, are based on the communist ideological system and take the realization of the lofty ideal of communism as their direction and goal. The scientific proofs and theoretical expositions set forth by the 12th CPC Congress in its report on this question constitute the basic governing ideology of the congress. Of course, it does not mean to lump together the communist system to be realized after a long period of time in our country with the existing socialist system. It does not mean to replace the current socialist policy with the communist policy that is to be realized in the future and it does not mean that we should unrealistically urge every member of society in our country to become communist. We should not rush blindly into communist transition. We have in the past learned a profound lesson in this respect. At the present stage, we must stick to the system of distribution according to labor and to other socialist systems in economic and social life. However, in the new historical period of comprehensive socialist construction, we must further urge all

Communist Party members, Communist Youth League members and progressive elements to be guided in their actions by communist ideals, faith and morality, to resist the corrosive influence of bourgeois ideology and lifestyle and always to maintain the communist purity of the party. At the same time, we should also persist in educating and influencing the masses of people with communist ideology and bring up every social member as an idealist, moral, cultured and disciplined laborer so that social relations between members of society in our country are formed and developed with the reflection of socialist spiritual civilization as their principal content. In this regard, all communist members and progressive elements, particularly leading cadres at all levels, must take the lead and set an example to influence and unite the broad masses of people and to unite them under the banner of the 12th CPC Congress. Only in this way will our country's socialist society be able to resist the corrosive influence of bourgeois decadent ideology, remaining feudal ideology and other nonproletarian ideologies and always be able to keep its revolutionary spirit young and vigorous. Only by doing so will our party be able to display its new outlook and powerful fighting force, to reflect the desires of the whole people and their fundamental interests. And only by doing so will our whole party, army and people of all nationalities be able to fully carry out the militant program and task put forward by the 12th CPC Congress and promote the cause of socialism and communism.

The opening speech made by Comrade Deng Xiaoping constitutes the general governing ideology of the spirit of this congress. He said that by summing up our basic experience, "we must proceed from China's realities, integrate the universal truth of Marxism with the concrete realities of China, blaze a path of our own and build socialism with Chinese characteristics." Comrade Deng Xiaoping added that "China's affairs must be handled in the light of China's conditions and based on the Chinese people's strength." The source of the energy resides in the broad masses of Chinese people and Chinese workers, peasants, intellectuals and all other patriotic elements. Today, the CPC is a big party of 39 million members, shouldering the heavy burden of guiding the cause of socialism and communism. However, Communist Party members always constitute a minority among the Chinese people. Just as our party in the past exercised leadership in the democratic revolution but gained final victory only by depending on the hard struggle of the broad masses of people, today, only by depending on the hard struggle of the people will our party be able to achieve the construction of socialist modernization. Now, our party heads the regime and occupies the leading position in state life; this is the difference from the democratic revolution. Comrade Hu Yaobang specially pointed out in his report that the party's leading position "determines that its activities will vitally affect the interests of the masses, but at the same time means that party members, and party cadres in particular, may easily be in danger of becoming isolated from the masses." All party members and leading party cadres must be highly aware of this danger.

We must conscientiously adhere to and carry on the party's fine tradition of the mass line and effectively strengthen the close relations between the party and the masses of people. All party members and cadres must, in light of the strict demands set forth by the new party constitution, listen to the voice of the masses of people, attach importance to their interests, subject themselves to supervision by the masses and on no account must they take advantage of party and state power as an instrument for seeking their own interests. We have only the duty to serve the people and never the right to "profit" at the expense of the masses and the state. As party members we must be qualified party members, as cadres we must be qualified cadres, and as citizens we must be Chinese people with national dignity and pride. To love the motherland, to work honestly and to devote ourselves to the socialist drive of the motherland is a glorious and lofty cause. And it is shameful and contemptible to harm the dignity and honor of the motherland, the cause of socialism and the interests of the people and state. Only by setting an example in the glorious and lofty undertaking and resolutely resisting and fighting against shameful and contemptible deeds, will all of us, party members and cadres, fulfill our duty.

The successful opening of the 12th CPC Congress and its great achievements have indicated the bright prospect of the socialist and communist undertakings of the country. All party members, army and people of all nationalities, and party cadres in particular, must conscientiously study the congress' documents, deepen our understanding of the congress' spirit, effectively put it into action and resolutely and enthusiastically devote ourselves to creating a new situation in all fields of the socialist drive. Filled with revolutionary pride and under the guidance of Marxism-Leninism and Mao Zedong Thought, let us unite around the CPC Central Committee, hold high the banner of communism and boldly and resolutely march forward along the road charted by the 12th CPC Congress with one heart and mind!

THE CORRECT PROGRAM FOR CREATING A NEW SITUATION

Beijing RED FLAG in Chinese No 18, 16 Sep 82 pp 55-60

[Article by RED FLAG commentator]

[Text] The party's historical experience shows us that it is not an easy job to use Marxism as a weapon, understand the laws governing the development of the Chinese revolution and correctly solve problems in the revolution according to China's specific conditions. It is a long process to go from incomplete knowledge to fairly complete knowledge, from the understanding of things by a few people to understanding by the whole party and from the understanding of principles to the formulation and practical implementation of specific principles and policies. In this long process, setbacks and failures are hard to avoid because of mistakes made. It took more than 20 years for the party to grasp the laws governing the democratic revolution. Following the failure of the great revolution in 1927, the Sixth CPC National Congress, held in 1928, determined the nature and tasks of the Chinese revolution, which were correct in principle but neither complete nor specific. So the Chinese revolution still took a difficult, tortuous course after the congress. The whole party did not gradually gain a unified, correct understanding of the basic problems in the Chinese revolution until the war of resistance against Japan. The Seventh CPC National Congress, convened in 1945, summed up the experiences of the democratic revolution and, on the basis of a grasp of the objective law governing the Chinese democratic revolution, formulated a comprehensive, correct program and tactics, thus laying a foundation for the nationwide victory of the new democratic revolution.

Following the nationwide victory of the revolution, our party was faced with new historic tasks. The transition from new democracy to socialism and the socialist transformation of private ownership of the means of production were made rather smoothly. The party held its eighth national congress in 1956 after the socialist transformation was mainly complete. The analysis of the situation then and the task set by the congress to build socialism in an all-round way were correct. At that time, however, the party was still far from being able to say that it had grasped the laws governing the development of the socialist revolution and construction in China. As the democratic revolution did after the Sixth CPC National Congress, so our socialist cause took a difficult, tortuous course after the Eighth CPC

National Congress. We made many achievements, but the setbacks we met with were extremely serious. The 12th CPC National Congress was held 26 years after the 8th CPC National Congress. The former inherited some correct ideas of the latter and greatly developed and enriched those ideas. Now the party is far more mature and its grasp of the laws governing the socialist cause is far more profound than at the time when the Eighth CPC National Congress was held. In his opening speech at the 12th CPC National Congress, Comrade Deng Xiaoping regarded this congress as the most important meeting since the Seventh CPC National Congress. He said: "Just as the 20-odd years of tortuous development of our democratic revolution before the seventh congress taught the whole party how to grasp the laws governing that revolution in China, so the 20-odd years of tortuous development of our socialist revolution and construction after the eighth congress taught the whole party profound lessons."

On behalf of the 11th CPC Central Committee, Comrade Hu Yaobang made a report on the basis of a summing-up of the rich experiences of the socialist revolution and construction over the past 30 years. These experiences include successful ones as well as lessons in setbacks and failures. It is of particularly great significance to learn from past mistakes and experiences in setbacks and failures. The question here is whether or not we are good at doing so. The practice since the 3d Plenary Session of the 11th CPC Central Committee proves that our party has the courage and ability to engage in such study.

In the past 4 years, the policies implemented by the party in the economic, political, cultural and other fields have made it possible to revive our correct traditions, to correct and prevent both "leftist" and rightist deviations and to make many new creations on the basis of studying new situations and experiences. Without the practical experiences gained in the past 4 years, it would have been impossible to formulate the comprehensive program embodied in this report. This report fully reflects our party's profound knowledge of the laws governing China's socialist construction. It also shows that our party is able to conscientiously and resolutely implement our correct program. We can certainly bring about a new situation in socialist modernization provided the whole party and the people throughout the country make concerted efforts to carry out the program adopted by the 12th CPC National Congress.

What are the important characteristics of the contents of the report to the 12th CPC National Congress?

First, in the light of the actual situation in our country, the report has laid down strategic goals, principles and policies for the development of our socialist economy.

Comrade Deng Xiaoping said in his opening speech at the 12th CPC National Congress: "In our modernization program, we must proceed from China's realities. Both in our revolution and construction, we should learn from foreign countries and draw on their experience. But mechanical copying and application of foreign experience and models will get us nowhere. We have had many lessons in this respect. To integrate the universal truth of Marxism with the concrete realities of China, blaze a path of our own and build socialism with Chinese characteristics--this is the basic conclusion we have reached in summing up long, historical experience." The modernization program is, of course, not limited to economic construction, but first of all we must promote economic construction.

Since the convocation of the 3d Plenary Session of the 11th CPC Central Committee, our party has firmly shifted the focus of the work of the party and state to economic construction. This is completely necessary and correct. The report to the 12th CPC National Congress pointed out that, in creating a new situation of socialist modernization, the primary task is to bring about an all-round upsurge in the socialist economy.

The Eighth CPC National Congress in 1956 had, in fact, decided to make economic construction the central task of our country. It was a strategic shift, geared to the actual situation of that time, and should have been implemented. However, summing up the mistakes made by our party following the 8th CPC National Congress through the period of the "Great Cultural Revolution," we can see that, "in the final analysis, the mistake we made in the past was that we failed to persevere in making this strategic shift," as pointed out in the "Resolution on Certain Questions in the History of Our Party Since the Founding of the PRC" adopted by the 6th Plenary Session of the 11th CPC Central Committee. It was mainly because we failed in properly handling the relationship between economic and political work and the party did not fully understand the necessity for this strategic shift. In addition, the party implemented some impractical principles running counter to objective law. In reviewing the prolonged "left" mistakes in our past economic work, the resolution of the 6th Plenary Session of the 11th CPC Central Committee pointed out that they consisted chiefly in "departing from Chinese realities, trying to exceed our actual capabilities and ignoring the economic returns of construction and management as well as the scientific confirmation of our economic plans, policies and measures, with their concomitants of colossal waste and losses." Therefore, although we made some great achievements in economic construction during the 10 years following the 8th CPC National Congress, we acted blindly to a great extent. Our targets could often not be realized and we even suffered setbacks.

After a profound summing-up of past experiences and lessons, our party has now gradually eradicated the prolonged "left" mistakes and has formulated a series of principles and policies in conformity with the actual current conditions of our country. Thus our economy has passed the most difficult period and is now on the healthy track of steady development.

The report to the 12th CPC National Congress has set strategic targets, emphasis and steps for the economic construction of our country in the two decades between 1981 and the end of this century and has explained a number of important, principled questions which should now be meticulously solved. Accordingly, it has formed a relatively complete economic program. This program calls for striving to quadruple the gross annual value of industrial and agricultural production from 710 billion yuan in 1980 to 2,000 billion yuan or so in 2000 on the basis of constantly raising economic results.

This is a grand goal. However, this program is not purely one of speed. In the first half of the next two decades, it only calls for making attainable progress slowly. During this 10 years, it is necessary to improve operation and management of various enterprises, carry out readjustment and reorganization of various enterprises, renovate equipment and facilities and introduce technical innovation. In addition, it is necessary to make reasonable adjustments in the system of economic management and in the economic structure of various fields.

In the first decade the state, while continuing to improve the people's living standards, should appropriately concentrate funds on key construction projects, such as those in energy and communications. By doing all such work well, we will be able to lay a solid foundation, accumulate strength and create conditions for economic construction in the second decade. Then, our economy will be able to develop faster and enter a period of vigorous development. In the coming 20 years, it is necessary to firmly grasp these basic links--agriculture, energy, communications and science--to bring about a faster development of the production of consumer goods, to promote the development of industry as a whole and all other production undertakings and to ensure improvement in the people's living standards.

In socialist economic construction, there are many new questions, including specific ones concerning the reform of the economic structure, which we should continue to explore. However, it should be recognized that the economic program set out in the report to the 12th party congress is one that reflects, to a considerable extent, the objective laws governing our country's economy. This program makes it possible for us not to repeat past mistakes of losing contact with reality and blindly making a rash advance, or hesitating to make a move in the face of problems and difficulties calling for a solution. Great efforts have to be made to carry out this program, but it can be carried out. With this program ensuring that our party and state lay the stress of their work on economic construction, we will be able to advance steadily toward the grand goal of economic construction in the last two decades of this century.

Second, the report to the 12th party congress correctly handles the relationship between economics and politics, particularly calls for building a high level of socialist spiritual civilization, while striving for a high level of modern material civilization and emphatically points out that socialist material and spiritual civilization must be built with the support and safeguards of socialist politics.

How to correctly handle the relationship between economics and politics, or between economic work on the one hand and ideological and political work on the other, is a matter of great importance in socialist construction. We suffered many losses in the past because we failed to correctly handle this relationship.

Put forward in the "Great Cultural Revolution" was the slogan that politics must overwhelm everything. Those who put forward this slogan actually regarded politics and economics as separate things which categorically oppose each other.

They held that when attention was paid to economic work, politics would be forgotten and that to attach importance to politics, it was necessary to oppose the so-called "theory of productive forces." This actually means opposing the development of production and the economy. Of course, putting economics in the wrong relationship with politics was not the only mistake made in the "Great Cultural Revolution" (here we are not dealing with the counterrevolutionary activities by the Lin Biao and Jiang Qing cliques during the "Great Cultural Revolution"). The ideological and political guiding principle for the "Great Cultural Revolution"--"taking class struggle as the key link" and "continuing the revolution under the dictatorship of the proletariat"--are fundamentally wrong. This was clearly explained in the resolution of the 6th Plenary Session of the 11th CPC Central Committee. The wrong ideological and political guiding principles naturally can only bring damage to the socialist economy and even play a disruptive role in this regard.

The report to the 12th party congress calls for bringing about a fundamental turn for the better in three aspects--in the country's financial and economic situation, in the general mood of society and in the party's work style. The three aspects are related, and the latter two fall into the ideological category. A fundamental turn for the better in the financial and economic situation depends on one in the party's work style and the general mood of society.

Carrying out economic construction as the central task of the party and the state, of course, does not mean doing away with or weakening ideological and political work. What is important is that all our political and ideological work, in the final analysis, is conducive to bringing the people's enthusiasm and initiative into full play in socialist construction and to carrying out socialist construction by them in an organized way.

The socialist system has not emerged and developed spontaneously. The factors which have promoted the development of the capitalist economy and society are the capitalists' profit-seeking and the laboring people's desire to earn a living. The contradiction and contention between the bourgeoisie and the proletariat cannot be solved by the capitalist system itself.

The socialist system has liberated the laboring people from the exploiting system and has also liberated them spiritually. It has formed a society in which the interests and will of the overwhelming majority of people are the same. The report to the 12th CPC National Congress cited Lenin's words: "The vigorous and creative socialism is created by the people themselves."

Ideological and political work cannot replace economic work of course and socialist construction must rely on hundreds of millions of people with political consciousness. Socialism can develop gradually and successfully only when the masses willingly work for the public interest of the collective, make efforts to master professional skills, take part in various socialist reforms and consciously fight against the remnant forces and ideology of the old society and against all factors which are harmful to socialism.

When we talk about the political life of our country, we must first see that we have already established the socialist system, that the laboring people are now the masters of the country and that the exploiting class has already been wiped out as a class. Our society is now different from the historical class society in principle. In a class society ruled by the exploiting class, social contradictions were mainly expressed in terms of struggle between the opponent classes and most social contradictions had a class nature. The laboring people must overthrow the rule of the exploiting class and reject and destroy the legal system of a country ruled by the exploiting class in order to win liberation. In our country at present, however, class struggle is no longer the main contradiction in society and most of the social contradictions do not have a class nature. Fundamentally speaking, most social contradictions can be solved in accordance with democratic principles. Therefore, the main task of political construction in our society is to develop the established socialist democracy step by step and in an orderly manner, and to closely integrate the building of democracy with the building of socialist legal system.

It is completely wrong for us not to see the difference between our country's society and the past class society and carry on the so-called "revolution of one class overthrowing another." It is also totally wrong for us not to see that the masses of people are the builders of socialism and masters of the country and that they overlook the building of socialist democracy and the socialist legal system.

On the other hand, we must see that in the life of our country we still cannot eliminate dictatorship and have democracy alone. The hostile elements that want to undermine our socialist system are still in existence and may emerge in the future. The report to the 12th CPC National Congress pointed out: "The class struggle at the present stage chiefly takes the form of struggle by the people against these hostile elements." Class struggle will continue to exist within a certain scope for a long time and may even sharpen under certain conditions. Therefore, our society at present is different from the future socialist-communist society in which class struggle will cease completely. It is also completely wrong for us not to see this difference and to discard the function of dictatorship of the state and lower our guard in fighting against class enemies.

The report to the 12th CPC National Congress has indicated the principles for building a high level of socialist democracy and handling class struggle in accordance with our country's system of people's democratic dictatorship. The proper solution of these kinds of problems has a significant bearing on our socialist construction.

The report to the 12th CPC National Congress has theoretically discussed the question concerning the building of socialist spiritual civilization as a strategic matter. In a socialist society, material civilization is an indispensable foundation for socialist spiritual civilization. The building of socialist spiritual civilization will become empty talk if we do not strive for progress in material production and for improvement in people's material life in society. Under the socialist system, socialist spiritual civilization does not automatically develop with the development of material civilization, nor does a high level of spiritual civilization occur only after material civilization becomes highly developed. We should strive to build a high level of spiritual civilization while building material civilization. The report pointed out: "Socialist spiritual civilization gives tremendous impetus to material civilization and ensures its correct orientation." Therefore, we should never overlook the building of spiritual civilization and pay attention only to material civilization. Socialist spiritual civilization, with communist ideology at its core, is a characteristic that socialism must possess. Without such spiritual civilization, the building of socialism would be out of the question and material civilization would go astray even if it were developed. This is a very important conclusion we have reached by summing up historical experience.

According to Marxist-Leninist theory, a socialist cultural revolution is a revolution to criticize all old thinking, which is the product of the exploitation system and is incompatible with socialism, and to enable the broad masses of working people to grasp culture which is monopolized by the minority of people in the exploiting classes. After the October Revolution, Lenin often pointed out the tasks of the cultural revolution in this sense. He attached great importance to educating the masses in communist ideology and to cultural popularization work, beginning with the elimination of illiteracy. He also emphatically pointed out that socialism must absorb and transform all valuable things yielded in the development of thinking and culture of mankind in the past 2,000 or 3,000 years. The 10 years of internal strife confused the meaning of cultural revolution. The "Great Cultural Revolution" even became anticultural. It, of course, had nothing at all in common with the cultural revolution mentioned by Lenin. The building of socialist spiritual civilization, which we are talking about, includes communist ideological building and cultural establishment under the guidance of communist ideology. It, of course, also includes the contents of Marxist-Leninist cultural revolution and cultural establishment. The report says: "All party members and other advanced persons in our society must continuously propagate advanced ideas and set an example by their own deeds to inspire more and more members of our society to become working people with lofty ideals, moral integrity, education and a sense of discipline." This is an important component part of our socialist construction program.

Third, the report to the 12th party congress suits the character and demands of the new historical period and puts forward the principles for strengthening party building and improving party leadership.

The 12th CPC National Congress adopted the new party constitution. The report to the congress has raised the important question of party building. In a speech delivered in January 1980, Comrade Deng Xiaoping called for "upholding and improving party leadership." He pointed out: "We uphold the four basic principles--that is, to uphold socialism, the dictatorship of the proletariat, Marxism-Leninism and Mao Zedong Thought, and the party leadership. The core of the four upholds is to uphold the party leadership." He also said: "In order to uphold the party leadership, we must strive to improve the party leadership." Both the new party constitution and the report to the 12th party national congress are permeated with the spirit of striving to improve the party leadership.

The leadership exercised by the CPC has been established through a long period of revolutionary struggle. Without the Communist Party's leadership, there would have been no victory in the Chinese revolution, no unity among the people of the country and no socialist new China, and it would be impossible to achieve the four modernizations and lead the country onto the path of prosperity. It is certainly wrong to think that the Communist Party's leadership is of no importance and can be dispensed with. But on the other hand, it is one-sided to think that, as far as our party is concerned, there is no problem in upholding the party's leadership and that the question lies merely in asking the masses outside our party to recognize our party's leadership. It is true that upholding the party's leadership is a principle commonly recognized by the people of our country, but the principle itself is, above all, a strict demand placed on our party.

How to uphold party leadership is not a simple question. If our party's stand is not correct and if our party cannot pool together the correct views of the masses, reflect their fundamental interests and make the correct stand acceptable to the masses through propaganda, education and practice and transform it into their conscious actions, how can we uphold the party's leadership? If our party itself has no high degree of ideological and political consensus and no strict organization and discipline, how can we unite and lead our 1 billion people to take common action? If the Communist Party members themselves lack the spirit of dedicating their whole lives to the communist ideal, if they cannot serve the people wholeheartedly and if they think only of their personal interest, how can we talk about leading the people in building socialist spiritual civilization? If our party is amateurish in its various undertakings and is not good at asking professionals concerned for advice and at rallying them to work together, how can we lead socialist construction?

It is true that the party made mistakes in the past and that it is possible to make mistakes in everything it does in the future. However, the party should be able to correct whatever mistakes it makes. History shows that the party has the courage and the ability to correct its own mistakes. The reason why the party has been able to uphold its leadership lies, first of all, in the fact that it exercises correct leadership, is able to combine the universal truth of Marxism-Leninism with China's concrete practice, to present a correct program, principles and policies and to lead the broad masses in carrying out the program, principles and policies. A leadership can be upheld only if it is exercised well. The new historical period of socialist construction has set a higher demand on our party. Therefore, we must take a serious attitude toward the trauma inflicted on our party during the 10 years of turmoil, earnestly improve party leadership and strengthen party building. If we do so, we can certainly shoulder our heavy historical responsibility.

This is why the new party constitution establishes the general principle of setting strict demands on party members and cadres and calling for raising the fighting capacity of the party's organizations. This is why the report to the 12th CPC Congress regards efforts to strive for a fundamental improvement of party style as a most pressing task. The report points out the several questions that must be resolved, in particular, in party building.

It also puts forward the significant measure of conducting overall rectification of party style and consolidation of party organizations in stages and group by group over a period of 3 years beginning from the latter half of 1983.

In addition to rectification of party style, the congress also raised in particular the resolution of the question of cooperation between the old and the young among the cadre ranks and the succession of the young from the old. Comrade Chen Yun said: "The style of a party in power determines its very survival." He again said in his speech to the congress: "The satisfactory solution of the problem of the smooth succession of the younger cadres from the old ones is an important task facing the whole party." The continuous satisfactory solution of the question of party style and that of cadres in accordance with the spirit of the congress in order to build our party better is a major task that is of decisive significance in promoting socialist construction.

Fourth, the report to the 12th party congress deals with all external relations from the standpoint of independence and self-reliance.

In the section "Adhering to an Independent Foreign Policy," the report to the 12th party congress points out: "Integration of patriotism with internationalism has always been our basic point of departure in handling our external relations," and "our adherence to an independent foreign policy accords with the discharging of our lofty international duty to safeguard world peace and promote human progress."

The report also discusses in another section the question of persevering in self-reliance while expanding economic and technological exchanges with foreign countries. The report points out: "It is our firm strategic principle to carry out the policy of opening to the outside world and expand economic and technological exchanges with foreign countries in accordance with the principles of equality and mutual benefit," and "our aim in expanding economic and technological exchanges with foreign countries is to enhance our ability to be self-reliant and to promote, and certainly not to impair, the development of our national economy."

China was once a semicolony, or a semi-independent country. During that time, China's affairs were admittedly not run by the oppressed and exploited Chinese people, but neither were they run by the reactionary forces. They were run rather by the imperialist powers. From the late Qing dynasty to the Kuomintang period, the government was not only slavishly dependent on imperialism in foreign policy, but it also adjusted its domestic policies according to the wishes of imperialism. The opening of China's "door" then was forced by imperialism, and the result of the opening was the enslavement of the Chinese people and the destruction of China's national economy. It was only after the Chinese people became the masters of their country that China was turned into a truly independent and sovereign state standing magnificently in the East and has been able to implement an independent foreign policy, control its own "door" and adopt an open-door policy on the basis of safeguarding national interest.

We must bear firmly in mind the following words in Comrade Deng Xiaoping's opening speech to the 12th party congress: "Independence and self-reliance have always been and will forever be our basic stand. While we Chinese people value our friendship and cooperation with other countries and people, we value even more our hard-won independence and sovereign rights. No foreign country can expect China to be its vassal, or expect China to swallow any bitter fruit detrimental to China's interests. We will unservingly follow a policy of opening to the outside world and actively increase exchanges with foreign countries on the basis of equality and mutual benefit. At the same time, we will keep a clear head, firmly resist corrosion by decadent ideas from abroad and never permit the bourgeois way of life to spread in our country. We Chinese people have our own national self-respect and pride. We deem it the highest honor to love our country and contribute our all to its socialist construction, and we deem it the deepest disgrace to impair the interests, dignity and honor of our socialist motherland." All Chinese with high aspirations should take such an attitude and possess such a spirit. We must unite together, work hard and successfully build our country under the guidance of the program of the 12th CPC National Congress in order to make our due contribution to the world, as expected of a large country with a population of 1 billion.

A GREAT HISTORICAL CHANGE AND ITS BASIC EXPERIENCE

Beijing RED FLAG in Chinese No 18, 16 Sep 82 pp 61-66

[Article by Yuan Mu [5913 2606]; passages within slantlines published in boldface]

[Text] The convening of the 12th CPC National Congress marks the fact that our party has led the people in successfully realizing another great historical change. It has opened a brilliant chapter in initiating our socialist modernization in an all-round way. Correct appraisal and full understanding of the far-reaching significance and basic experience of this historical change and unifying the ideology of the whole party, the whole army and the people of all nationalities of the whole country on this basis are quite imperative and important for forging ahead courageously and in solidarity along the road of the 12th national congress of the party and for energetically seizing new and greater victories.

I

It was just 1 month short of 6 years from the smashing of the Jiang Qing counterrevolutionary clique in October 1976 to the convening of this congress. In the ordinary conception of the people, a period of 6 years is not a short time, but in the long river of human history, it is short and only an instant. However, in those 6 years, our party has corrected the course through the 3d Plenary Session of the 11th CPC Central Committee, and finally brought our country's political life and socialist cause onto a correct and healthy road of development through the 4th, 5th and 6th plenary sessions. No matter how many difficulties we may have before us, and no matter how many shortcomings there may be in our work, this historical change has shown and will show more and more fully its great significance and far-reaching influence.

At the very beginning of his report made on behalf of the party Central Committee at the 12th national congress, Comrade Hu Yaobang briefly pointed out the sign for realizing this historical change from the seven aspects of ideology, politics, organization, economy, culture, military and the party, that is from the various major aspects of our country's political life and socialist construction. Through our efforts made to bring order out of chaos in the past 6 years, particularly in the past 4 years since the third plenary session, we have, in our new practice, adhered to and developed the ideological line of seeking truth from facts. This has dispelled the apathetic atmosphere on various fronts in which "10,000 horses were all muted" and enabled these fronts to obtain vigorous creative strength. The political situation of stability and unity we have rapidly realized and gradually consolidated has enabled the lively scene of the best historical period since the founding of the PRC to appear. The gradual readjustment, reorganization and consolidation of the leading groups have enabled the leading power of the party and state organizations at all levels to be basically controlled by the cadres who are loyal to the party and the people. The gradual correction of the "leftist" erroneous tendency which affected the guiding principle in our economic construction for a long time has enabled our country's economy to tide over the most difficult period and take the healthy road of steady development. The gradual elimination of the erroneous concept of despising cultural construction and of discriminating against intellectuals has enabled our educational, scientific and cultural cause to undergo a new course of development and obtain preliminary prosperity. The military and political quality of the PLA has been enhanced under new historical conditions. The tests and remolding which the party has undergone in leading the various fronts in bringing order out of chaos have made the party stronger and more matured in the course of struggle. All this shows that the political situation in socialist China is stable, the revolutionary and construction causes are continuously developing and the leadership of the CPC is firm and strong. In various aspects, we have sufficient conditions for ushering in an all-round way a new situation for socialist modernization. This is the base and starting point of the new and great tasks put forward by the 12th CPC National Congress, as well as the base and starting point for confidently achieving new victories. Before such objective facts which are obvious to all, all pessimistic and apathetic ideas and feelings must be eliminated.

Looking back on the momentous course of the struggle over the past years, we can see the profound changes that have taken place in our country. It should be said that of all these changes, the most fundamental and far-reaching one is that the party's understanding of the law governing our socialist construction has greatly increased. Just as Comrade Deng Xiaoping pointed out in his opening speech at the 12th national congress: "Our party now has a much deeper understanding of the law governing our socialist construction. Our experience is much richer. Our consciousness and firmness in implementing correct principles have been greatly strengthened."

As everyone knows, after the 3d Plenary Session of the 11th CPC, our party completely abandoned the erroneous slogan of "taking class struggle as the key link," and began to put the stress of our work on the socialist modernization of economic construction. This is a strategic decision adopted after drawing on past historical lessons and scientifically reanalyzing the principal contradictions of our society. In the meantime, the party pointed out that China's modernization must conform with the national condition of China and take the road of the Chinese type of socialist modernization. This is an important manifestation of the party's realistic ideological line in guiding economic construction. Under the guidance of the spirit of the third plenary session, the party correctly put forward the principle of readjusting, restructuring, reorganizing and upgrading the national economy according to the profound analysis of the serious imbalance of the major ratio of the national economy caused by the 10 years of internal disorder. The proposition and implementation of this principle was the fundamental change in the guiding principles of our country's economic work. They have enabled our economic front to witness a good situation which has rarely been seen since the founding of the PRC. During the large-scale economic readjustment in the past 3 years, we have not only maintained a certain speed of development in our economy, but also changed the imbalance in the major ratio. Our economic structure is becoming more and more rational. Such a level of enhancement of the livelihood of the people in the cities and the countryside, particularly of the livelihood of the peasants, has not been seen since the 1960's. What is encouraging is that, when adhering to the public ownership system, the rural areas throughout the country have gradually exercised various forms of the responsibility system in production and that they have basically realized a major reform in the management system. This major reform has fundamentally corrected the serious "leftist" erroneous tendency which existed since the cooperative movement in the rural areas throughout the country. It has enabled our country's agriculture, which was stagnant for a very long time, to prosper and flourish. The great vitality of this major change is understood by more and more people. By the end of last year, through summing up the experience in readjusting the economy since the third plenary session, the party further proposed that the whole economic work should be shifted to the orbit which centered on raising the economic results. According to this fundamental purpose, the party also put forward 10 principles for economic construction. These 10 principles are the crystallization of the combination of Marxism-Leninism-Mao Zedong Thought with China's new situation and new practice. They show that our party's understanding and mastery of the laws governing socialist economic construction have reached a new scientific level. The proposition and gradual implementation of the 10 principles began to make their mark in China's economic development this year. Because of all this, at the 12th national congress, our party was able to put forward the strategic aim, strategic key points and strategic measures for China's economic construction for the coming 20 years. In this case, we are provided with a blueprint for construction which is suited to the national condition of China.

Since the 3d Plenary Session of the 11th CPC Central Committee, our party has profoundly studied the problems emerging in practice according to the basic principles of Marxism. It has gradually understood that the building of a high level of socialist spiritual civilization and of a high level of socialist democracy should be regarded as a strategic problem. This is an important development for scientific socialist theory. In socialist society, when building material civilization, we must work hard to build a high level of socialist spiritual civilization. When restructuring and perfecting our socialist economic system and socialist political system, we must work hard to build a high level of socialist democracy. The building of socialist material civilization and the building of socialist spiritual civilization are mutually dependent on one taking the other as its purpose. If we only pay attention to the building of material civilization but neglect the building of socialist spiritual civilization, which is based on communist ideology, then, socialist society will go astray and become morally degenerate. This is, as pointed out by Comrade Mao Zedong, seeing only material factors to the neglect of human ones. In the final analysis, developing the socialist economy must rely on human factors, and its purpose is to improve the livelihood of the people. If the people are morally degenerate, what is the point of having material wealth? Material wealth can enable people to live a happy life. It can also make people degenerate. The crux is that it is imperative to enable the members of a socialist society to correctly handle the relations between individuals and society and the relations between immediate and long-term interests. We must energetically strengthen the building of socialist spiritual civilization so that our people can have aspirations, morality, culture and discipline. In building material civilization or socialist spiritual civilization, we must bring into full play the initiative and creativeness of the people. Here we must energetically build a high level of socialist democracy so as to fully protect the rights of the people to being the masters of their own country, to effectively exercise dictatorship over a small number of hostile elements who undermine socialist society and to consolidate and strengthen the state system of the people's democratic dictatorship. On the basis of these fundamental viewpoints, our party has simultaneously made the realization of the four modernizations, the realization of a high level of civilization and the realization of a high level of democracy the three fundamental objectives for building a socialist modernized country, and has entered them in the new party constitution. These are obviously the application and development of Marxism-Leninism-Mao Zedong Thought in China's new socialist practice. They will effectively guide and bring forward the socialist practice of the Chinese people, and will continue to enrich and develop themselves in practice.

It is obvious that in this historical change, our party's understanding of socialism and of the law governing socialist construction is becoming deeper and deeper. Although this understanding is not yet perfect, it is quite different from and much higher than that existing during the 8th national congress of the party. Now, our party has not only restored the correct policies which were effectively carried out before the "Cultural Revolution," and has not only restored the original features of Marxism-Leninism-Mao Zedong Thought, but has also solved new problems and bravely carried out investigations and innovations through conscientiously studying the new situation. Our party has firmly established a correct line, worked out a series of new and correct principles and policies and developed Marxism-Leninism-Mao Zedong Thought in various aspects. We can say that this is the greatest achievement of the historical change. It is also the most precious spiritual wealth created by the whole party and people of the whole country. Engels put it well: "No great historical disaster is not supplemented by historical progress." ("Collected Works of Marx and Engels," Vol 39, p 149) Our practice in the past years has proved the correctness of Engels' relevation of this historical law. Under the guidance of the party's correct line and policies, we are carrying out new practice to usher in a new situation in an all-round way. We will certainly prove more fully the correctness of this historical law.

II

When explaining the basic reason for having realized this historical change, the 12th national congress of the party clearly pointed out: "Our victory was hard-won. It was won by the whole party and the people of all nationalities all over the country under the leadership of the party Central Committee after overcoming all kinds of great difficulties." This is a historical conclusion that is in conformity with objective reality. Practice has irrefutably proved that our present party Central Committee is resolutely implementing a correct Marxist line. It is a united, harmonious and militant leading collective. It is also a firm nucleus that can tackle any complicated situation.

In the course of leading the whole party and the people of all nationalities in the country in realizing this historical change, in order to guarantee that the party's correct line and various basic principles can be implemented, the party Central Committee correctly and in a timely manner launched a two-way ideological attack against the "leftist" and rightist erroneous tendencies. As a result, the party Central Committee could politically and ideologically maintain the unity of the party. This was an important guarantee for achieving historical success. It will also be an important guarantee for ushering in a new situation. In order to have a deeper understanding of this point, it may possibly be beneficial for the party to briefly expound the general situation and correct conclusions for combating these two erroneous tendencies in several principle problems.

/The problem of ideological line./ The guiding principle of "emancipating the mind, using the brain, seeking truth from facts and adopting a united, forward-looking attitude" which was issued at the 3d Plenary Session of the 11th CPC Central Committee was, under new historical conditions, the application and development of the party's and Comrade Mao Zedong's consistent propagation of the ideological line of combining theory with practice. If we do not emancipate our minds, nor break away from the personality cult and the trammels of dogmatism, we will not be able to bring order out of chaos, nor will we be able to usher in a new situation. Distorting the principle of emancipating the mind to saying what one likes and advocating bourgeois liberalization, will also have negative effects on our cause. These two tendencies must be opposed. In emancipating the mind, we must follow Marxist guidance, adhere to the party's ideological line and base ourselves on studying the new situation and solving new problems. Emancipating the mind must be beneficial to maintaining unity and to adopting a forward-looking attitude. In short, emancipating the mind must be in conformity with the four basic principles. It must not violate these four basic principles.

/The problem of adhering to the four basic principles./ Persisting on the socialist road, persisting in the people's democratic dictatorship, persisting in the leadership of the Communist Party and adhering to Marxism-Leninism-Mao Zedong Thought have been our consistent basic principles since the founding of the PRC. In further exposing and denouncing the Lin Biao and Jiang Qing counterrevolutionary cliques, our party pointed out that in the final analysis, our struggle against them was the struggle between our adhering to and their undermining the four basic principles. We wanted to adhere to the four basic principles, so we had to wipe out the Lin Biao and Jiang Qing counterrevolutionary cliques' pernicious influence in distorting and altering the four basic principles. Following the correction of the mistakes of the "Cultural Revolution" and the "leftist" tendency, the rightist tendency which deviated from the four basic principles emerged. Now if we want to unswervingly adhere to the four basic principles, we must continue to prevent and oppose the above two erroneous tendencies.

/The problem of correctly appraising Comrade Mao Zedong and Mao Zedong Thought./ Comrade Mao Zedong was the great leader and teacher of our party and the people of all nationalities of our country. He made immortal and great contributions to the Chinese revolution. He committed serious mistakes in his later years, but his merits far outweighed his errors. If we lack the Marxist courage to make self-criticism of the party's mistakes which include Comrade Mao Zedong's past mistakes, and if we do not conscientiously correct these mistakes in practice, we cannot bring order out of chaos, nor can we realize a historical change. If we negate Comrade Mao Zedong's whole life because he committed serious mistakes in his later years, then the whole of the revolutionary history of the Chinese people will be negated, and we will make even greater mistakes. Mao Zedong Thought is the correct summation, proved in practice, of theoretical principles and experience with regard to the Chinese revolution. It is the crystallization of the collective wisdom of the CPC. We must strictly distinguish between Mao Zedong Thought and Comrade Mao Zedong's mistakes in his later years, and continue to uphold and develop Mao Zedong Thought. If we do not make such a distinction, or if we think that whatever Comrade Mao Zedong said is an unalterable truth, or if we try to negate the guiding role of Mao Zedong Thought in China's revolution and construction and abandon the banner of Mao Zedong Thought because Comrade Mao Zedong committed mistakes in his later years, this is an erroneous tendency that seriously violates the objective truth and is detrimental to the interests of the party and the people.

/The problem of class struggle in the socialist period./ The "Resolution on Certain Questions in the History of Our Party Since the Founding of the PRC" adopted at the 6th Plenary Session of the 11th CPC Central Committee pointed out: "When the exploiting class is eliminated as a class, class struggle will no longer be the principal contradiction. Due to domestic factors and international influence, class struggle will exist for a long time in certain spheres and become acute under certain circumstances." This was a scientific conclusion the party drew with regard to the question of China's current class struggle after bringing order out of chaos since the third plenary session and after profoundly analyzing the real conditions of China's society. This tells us the following: We must not only resolutely oppose returning to the erroneous idea and concrete manifestation of "taking class struggle as the key link," but also prevent the loss of revolutionary vigilance concerning class struggle under new historical conditions.

/The problem of socialist democracy./ Building a high level of socialist democracy is one of our fundamental aims and tasks. We must energetically develop socialist democracy so as to protect the people's right of fully running the state and various economic and cultural undertakings and to guarantee the smooth carrying out of the building of socialist material and spiritual civilization. In addition, we must draw a line of demarcation between socialist democracy and bourgeois democracy so that the building and perfecting of China's democratic system and democratic life can be beneficial to the consolidation of our socialist system and to resolutely and effectively exercising dictatorship over a small number of hostile elements who undermine our socialist system.

/The problem of economic results and speed in development./ This is a major problem that is concerned with the guiding principles of economic construction. According to our experience of building during the past 30-odd years since the founding of the PRC, we must center our economic work on improving economic results. Under this prerequisite, we must try to acquire a speed of development that can be obtained through hard work. If we do not try to obtain such a speed, it will be detrimental to strengthening national power, to improving the people's livelihood and to the four modernizations. If we try to obtain an exaggerated speed through high consumption, regardless of economic results and the material benefit of the people and without taking into account raising the quality of the products, this would be merely bringing disaster through seeking an undeserved reputation. These two tendencies must be prevented and avoided.

/The problem of dual tactics for developing the socialist cause./ In the new historical period, in order to develop the socialist cause, we must persist in using dual tactics ideologically and in action. On the one hand, we must persist in carrying out an open-door foreign policy and an internal policy of stimulating the economy. On the other hand, we must deal resolute blows to the serious criminal activities that undermine socialist society in the economic, political and cultural spheres. It is dangerous just to pay attention to the latter and doubt the former, or just to emphasize the former to the neglect of the latter.

Historical experience tells us that fundamentally speaking, in order to adhere to the party's correct Marxist line, we must oppose not only the "leftist" tendency of erroneous theory and policies advocated during and before the "Cultural Revolution," but also the rightist tendency of bourgeois liberalization which doubts and negates the four basic principles. When and where to oppose an erroneous tendency depends on the specific conditions concerned. When opposing a tendency, we must guard against forming another tendency. Since the third plenary session, in waging the two front ideological struggle against the "leftist" and rightist erroneous tendencies, the party has persistently held firm to its principles and stand, and tried to handle matters comprehensively according to their scientific law. In this way, the party's past correct principles for waging ideological struggles have been further applied and developed under new historical conditions to achieve the aim of "thrashing out the rights and wrongs and uniting our comrades." As a result, many complicated ideological problems and social and political contradictions have been handled in a comparatively proper manner. Of course, here we are referring to the general situation in the whole party, particularly the leadership of the party Central Committee. It will require a great effort by party organizations at all levels, by all party members and all cadres of the party to materialize the above points.

The general program of the new party constitution adopted at the 12th congress of the party, points out that if the party wants to lead the people of all nationalities in realizing the magnificent goal of socialist modernization, it must fulfill three basic requirements, of which the first one is that the party must maintain "a high level of unanimity in ideology and politics." This is the summary of the party's experience in its past protracted struggles. We must emphasize that conscientiously maintaining unanimity with the party Central Committee in politics and ideology should become a political disciplinary principle all party members must strictly observe. Energetically and conscientiously propagating the party's ideology, theory, line, policies and propositions to the masses of the people should be the duty of every party member to the party and the people. But some party members do not act in such a way. They even do something different or act on their own with regard to important principles and policies which have been decided on by the party. Honest and loyal party members do not adopt such an attitude, and this phenomenon must resolutely be stopped and corrected. We believe that under the banner of the party's 12th national congress, the whole party will certainly reach a high level of unanimity in ideology and politics, and the victory of the struggle for ushering in a new situation will be most reliably guaranteed.

III

Marxism has always maintained that history is created by the masses of the people. In the final analysis, the reason why the party could achieve such a great success in the historical change was that it had firm faith in the people, relied on them and followed their demands and the trends of historical development. As pointed out in the report of the party's 12th national congress: "It is because the party has centralized the will of the people and worked out a correct line, principles and policies that the socialist cause of our motherland has embarked on a broad road. The people's confidence in and support for the party are the key points by which we can constantly achieve success in our cause." We must always bear in mind this fundamental experience.

The CPC is the loyal representative of the interests of the people of all nationalities of our country. The party has no special interests of its own beyond the interests of the working class and the broad masses of the people. Wholeheartedly serving the people has been the fundamental purpose of our party. Since the Communist Party seized political power throughout the country and became the governing party, its position has changed. But this change should not in the least alter the purpose of the party, nor should it change the position of party members as ordinary working people. After the party became the governing party, some people became cadres and had power in their hands. But facts have shown that they failed to use their power to serve the people. On the contrary, they have used it to seek personal gain at the "expense" of the people, of the collective and of the state. As a result, from being the public servants of the people, they became the "masters" of the people. All kinds of unhealthy tendencies have emerged from this. If we want to have faith in and rely on the masses and to win the masses' confidence and support in a better way, we must resolutely correct this unhealthy phenomenon. We believe that under the guidance of the spirit of the party's 12th national congress and the new party constitution, this phenomenon will be corrected rapidly.

Comrade Chen Yun has emphasized that party style is a life and death matter for the governing party. We can understand Comrade Chen Yun's important thesis as follows: The party style affects the relations between the party and the masses. It affects the will of the people, and the will of the people is the crux that determines the future and destiny of the party. We must answer the call of the 12th national congress, conscientiously rectify party style and party organizations, strive to realize a fundamental change for the better with regard to the party style, better serve the people and wholeheartedly work for the interests of the majority. In this way, we will carry out our cause victoriously.

If we want to work for the interests of the people in a better and more effective way, we must make a great change in our methods of thinking and style of thinking, strive to submerge ourselves in the masses and go deeply into the realities of life, carry out systematic and scientific investigations, correctly feel the pulse of the masses and understand well what they think. In this historical change, a great deal of facts have proved that this question is of great importance. The party's great achievements in readjusting the rural policies in the past years are a most convincing example. It is because the party firmly believes that the peasants in our country have the initiative of resolutely taking the socialist road, and it is because the party, by basing itself on a great deal of investigation and study, knows well what the peasants are for and what they are against, that it has been able to grasp the two major links of implementing various kinds of production responsibility system and of energetically developing a diversified economy under the prerequisite of paying close attention to grain production. It is because of this also that we have the guidance of the party's policies from above and the warm support of the peasant masses from below. In this way, the situation in the countryside has rapidly changed for the better, and an encouraging excellent situation has emerged. If we do not go deep into the realities of life, if we do not submerge ourselves in the masses, if we are not bold in and good at carrying out practice, if we cannot master the scientific working method of grasping the major links to bring forward other work, even if we have the enthusiasm to serve the people, it will be very difficult to turn it into a hard reality of working for the interests of the people. In order to open up a new situation in an all-round way and in order to boldly carry out creative work for the people, we are required to make greater efforts in submerging ourselves in the masses, in going deep into the realities of life, in carrying out scientific and systematic investigation and study and in continuing to improve our methods of thinking and work style.

In short, fully understanding the great significance and far-reaching influence of this historical change so as to be more confident in our advance, having firm faith in the party and the party Central Committee and conscientiously maintaining unanimity with the party Central Committee in politics and ideology, having firm faith in the people, relying on the people and improving our methods of thinking and work style for the interests of the people are our major experience drawn from this historical change. In initiating a new situation for socialist construction in an all-round way, we should continue to apply and develop this major experience to achieve new and greater success.

CSO: 4004/7

LAY A GOOD FOUNDATION TO USHER IN NEW VIGOROUS ECONOMIC GROWTH

Beijing RED FLAG in Chinese No 18, 16 Sep 82 pp 67-72

[Article by Wang Renzhi [3769 1804 0037]]

[Text] In his report to the 12th party congress, Comrade Hu Yaobang solemnly announced: In the 20 years from 1981 to the end of this century, our country's fighting target in economic construction, under the logical premise of improving the economic effect, is to strive for quadrupling the annual value of the national industrial and agricultural output by the year 2000. Realization of this target will be in two stages: In the first 10 years, a good foundation will be laid and our strength will be accumulated; and in the remaining 10 years, a new period to usher in new vigorous economic growth will be created. This economic construction strategy has been gradually formulated by our party in the course of the implementation of the eight-character policy of readjustment, restructuring, reorganization and upgrading, following the summing up of historical experiences and a thorough investigation and research of the actual conditions. It has thoroughly combined together reality with farsightedness and a rigid scientific attitude with a high degree of revolutionary spirit and has thus pointed out the direction and correct road for our country's economic construction in socialist modernization.

The general plan for economic construction in our country in the next 20 years embodies the following special features:

Concurrently with determining the speed of economic development, it stresses uplifting the economic effect. In the past, the theme envisioned for a long time under the guidance of "leftist" thought was frequently and solely striving for a rapid growth rate in the volume and value of output. As a consequence, a high price was paid for the production of commodities which did not conform to actual social needs, and while production was increased in name, stockpiling and waste were the actual damages resulting. Of course, we must strenuously strive for a relatively high growth rate in the national economy. In the next 20 years, we must, through extensively adopting advanced production technology and reforming the economic system and management methods of the enterprises, uplift the economic effect or, otherwise, it will not be possible to achieve the anticipated growth rate in economic development. This is precisely the reason why the "report" demanded that all economic work be oriented toward the central track of uplifting the economic effect and pointed out that uplifting the economic effect constituted the logical premise to achieve the objective of quadrupling the annual value of the national industrial and agricultural output by the end of this century.

It clearly stipulated that the people's standard of living must be improved on the basis of developing production. Improving the living conditions of the entire populace is the fundamental aim of socialist production and should constitute the starting point as well as the ultimate objective in the long-term planning for industrial development. However, in the past, the long-term planning that was indulged in frequently stressed production and construction, neglected the development of social enterprises and also neglected the improvement of the people's standard of living. As a result, although a relatively high economic growth rate was achieved, the people's standard of living was not correspondingly improved. Under such circumstances, the "report," when announcing the fighting target for economic construction in the next 20 years, emphatically pointed out that the realization of this target would double the people's income in the urban and rural areas and enable the people's material and cultural life to reach a prosperous level.

The "report" not only brought up the target for economic construction but also pointed out the key strategic points which must be grasped and the strategic steps which must be taken. The national economy is an organic whole. Its component parts are mutually related and keep each other in check. The problems arising in the course of economic and social development are many and extremely complicated. From this chaotic array of baffling problems, we must sort out the leading ones, determine which are more important and which less important, which are more urgent and which less urgent and then take them up in a gradual and progressive manner. This indeed constitutes an important lesson which we must do well when contemplating, on a long-term basis, planned economic development. After making a thorough analysis and study of the entire situation of the national economy, the "report" pointed out the importance and urgency of solving the problems concerning agriculture, energy and communications, education and science and added that these problems should be considered as the strategic and key problems in economic development hereafter. It then proceeded to analyze many of the existing deterrent factors to economic development and stated that we must take 10 years' time to lay a good foundation to usher in an overall upsurge of our country's economy in the next 10 years. Having a clear understanding now of the strategic and important points and the strategic procedure in economic construction, we can systematically and without confusion solve one by one the various problems and proceed in the direction of the fixed targets.

The strategic targets in capital construction in our country are gigantic ones. Turning first to the economic growth rate, to quadruple, in 20 years' time, the annual value of industrial and agricultural output requires an average annual growth rate of over 7 percent. Of this, the annual growth rate in the first 10 years will be slightly lower than this average, while in the second 10 years it will be higher. This average, when compared with other countries in the world, is rather on the high side. Thus, for the 20 years between 1960 and 1980, the annual growth rate in the gross national product of the major countries of the world was as follows: United States, 3.5 percent; Soviet Union, 6.3 percent; Japan, 8 percent; West Germany, 3.8 percent; France, 4.6 percent; Britain, 2.4 percent; and India, 3.8 percent. Judging from the development trend in the world's economy from now on, for these nations to again achieve in the last 20 years of this century their respective economic growth rate of the past 20 years, it will be a rather difficult task for some and a basically impossible task for others. However, our case is different. We have a superior socialist system. Our economic growth cannot be interrupted by economic crises which are unavoidable in the capitalist system. We should be able, after efforts made in 20 years' time, to make our gross national product and the output volume of the principal industrial and agricultural commodities be placed in the world's front ranks. We should be able to achieve great development in the course of the modernization of our entire national economy and thereby shorten the disparity in economic technology between our country and the economically developed countries.

Realization of the gigantic tasks in economic construction involves extremely difficult tasks. However, seen from the vast political power in our various quarters, the targets are by no means unattainable. Countless facts in actual life have demonstrated that if we can fully arouse the enthusiasm of the laborers and fully tap the hidden potentials of the communes and the production brigades in the countryside and other production units, then our socialist economic construction can surely achieve surprisingly good results. Moreover, in the next 20 years, we shall be favored with some even better conditions for developing the economy. The many years of disturbance in our country have now been terminated. Peace and unity have been realized in the country. As a result, there is now a better social and political environment for economic construction. The pivotal work of our party and government has been shifted to socialist modernization construction centering on economic construction. We have earnestly liquidated past "leftist" errors in economic work and a basic change has taken place in the guiding thought and guiding policy concerning economic work. Our closed door policy has come to an end. By means of intercourse in economic technology with the outside world, we can make use of the world's strong points to compensate our weak points. In general, the factual conditions and objective feasibility for realizing the gigantic economic construction targets are undoubtedly in existence. To make full use of these conditions so that they can become realities depends on the party's superior and effective leadership and also on the workers, peasants, intelligent elements and all patriotic citizens exerting their common efforts. The strategic targets for economic construction in the next 20 years can surely be accomplished if only we can firmly and irrevocably carry out the series of correct guidelines and policies set by the party, further display the superiority of the socialist system, fully mobilize the enthusiasm of the various quarters and rationally utilize our plentiful natural resources as well as the material and technical foundation already laid by our enormous labor force.

In the course of realizing the 20 years' fighting targets, the key lies in doing a good job of the work in the first 10 years. Whether or not new and vigorous growth can emerge in the 1990's depends on whether or not a good foundation has been laid in preparation work in the 1980's. The "report" offered a convincing expostulation on why 10 years' time must be required to prepare the conditions for economic growth. It fully demonstrated the scientific attitude of studying and handling problems in a practical and realistic way.

Following several years' readjustment, our national economy has begun to step on the road to healthy development, but there are still many existing problems and difficulties. The country's fiscal receipts and expenses have been basically balanced, but this has been realized by means of a large-scale curtailment of expenditures. The foundation thus laid is still not a solid one. Due to the tense situation in energy supply, communications and transportation capacity is not consistent with the increase in the volume of transport. In particular, frightful waste and extravagance in manpower, material resources and finances in the production, construction and circulation sectors have intensified the unbalanced state in energy supply and demand, impeded improvement in financial conditions and restricted the rapid growth of the economy. According to statistics, the amount of national income derived from each ton of energy consumed was 1,167 yuan at the time of the first 5-year plan period but was reduced to 576 yuan in 1981; the amount of profits and taxes realized from each 100 yuan of capital invested in industrial enterprises under the system of ownership by the whole people was 31.9 yuan during the first 5-year plan period but went down to 23.8 yuan in 1981; the construction time required for large and medium-sized projects was 6.5 years during the first 5-year plan period but was extended to 9.4 years in 1981; and the amount of circulation funds required for the production of each 100 yuan in the value of output in industrial enterprises under the system of ownership by the whole people was 19.5 yuan in 1957 but was increased to 30.2 yuan in 1981. It is true that herein certain incomparable objective factors may be found but, generally speaking, these conditions denote the downward trend of the economic effect, and this is a serious and an undeniable fact. In the face of these circumstances, our Communist Party members and the vast masses of cadres and people certainly cannot remain motionless or fear to step forward. Rather, they should devote their utmost efforts to effect changes and to tap the enormous potentialities of increasing production and practicing economy.

The "report" pointed out the reasons for the poor showing in economic effect as follows: "Principally, factors caused by past 'leftist' errors such as blind development, irrational economic structure, defects in the economic management system and distribution system, confusion in management and control and backward technology." Of these many problems pointed out in the "report," some had already emerged during the last period of the 1950's but had remained unsolved for a prolonged period of time; some had appeared during the 10 years of disturbance and since then had spread and extended. We must, of course, note that in more recent years, we have done much work in the solution of these problems and have achieved certain results. At the same time, the experience gained from actual practice in these few years has shown that the full solution of these complicated problems of so many years' standing will take a rather lengthy period of time. The party has decided to continue to firmly and irrevocably implement the policy of readjustment, restructuring, reorganization and upgrading and not to seek too high a growth rate during the entire 1980's but, rather, to devote efforts to solving the problems left over from history and to laying a good foundation. This is truly correct and important policymaking. Instead of looking at the matter as being only a simple one or being anxious for results despite the obvious infeasibility, we should rather make a sufficient estimation of the existing difficulties, take firm steps forward and proceed in an orderly manner and according to rules. At the early stage of national construction, Comrade Chen Yun already said: "Between making haste but committing errors and playing safe but being slow, I prefer the latter. In particular, in tackling economic problems concerning the country as a whole, we should bear this point in mind." The party's policy on the strategic procedure in economic construction from now on reflects well this important guiding principle pointed out by Comrade Chen Yun.

On the basis of our country's current economic conditions and the existing problems, the "report" pointed out the various kinds of economic work that emphatically must be done well during the 1980's. They comprise mainly the following six sectors:

I. Continued readjustment of the production structure and the product structure.

Since implementing in 1979 the policy of readjusting the national economy, the serious state of imbalance in the proportional relationships between agriculture and industry and between light industry and heavy industry have greatly changed and the readjustment task in this sector may be said to have been basically completed. However, many irrationalities may still be found in the internal structure and in the structure of products of agriculture, light industry and heavy industry. Readjustment must therefore be continued in this regard.

In agriculture, internally the major task is to stabilize the grain sowing area and to ensure a sustained growth rate in grain production. Under this logical premise, the next step is to actively promote the development of economic crops and diversified operations. All the areas fit for grain planting must be devoted to the development of grain production. Only in this way can the state acquire the needed quantity of grain to support areas which are not suited to grain production and enable the localities to develop economic crops, forestry, animal husbandry or other lines of business or operation in accordance with their respective superior conditions. At present, the gross output value of forestry, animal husbandry, subsidiary production and fisheries occupies only a small proportion of the gross value of agricultural output, being, say, around one-third. Simultaneously with grasping grain production, we should utilize all barren hills, grassland, waterways and reservoirs that are available for use to develop in an overall manner various kinds of agricultural sideline production and should never be lax the slightest bit. Only in so doing can we meet the demand for industrial development and for meeting the people's livelihood needs.

In the industrial sector, certain products have not conformed to actual social needs and, hence, a large quantity of them has to be stockpiled. In the case of some commodities, they are urgently needed by society but their supply lags behind demand. Some products have a high rate of consumption of energy and raw materials in production but are extremely poor in quality and in function. In regard to both light industry and heavy industry, we must, following the principles of conforming to social demand and upgrading economic effect, strictly control the output of the so-called "longline" products and actively increase the output of the "shortline" products. In addition, we should step up the replacement of old products with new products and make use of those products which consume less energy and less raw materials in production to replace the backward products. If we follow this direction in improving the structure of the industries and trades and the structure of the products, then we can effectively utilize our various material resources and create more wealth for the state.

II. Overall reorganizing and rebuilding existing enterprises.

The number of industrial enterprises in our country increased from 195,000 units to 382,000 units between the years 1970 and 1981. The increase was nearly 100 percent. While this has promoted the development of production, the element of blind development has existed to a great extent. Many of the enterprises have suffered from an insufficient rate of operation, while some have not been able to start operations altogether. In the case of many enterprises, the operation procedure in production is irrational, consumption of materials is much too high and the quality of the products is poor. In the case of many enterprises, a confused state is found in management and control, and even the rudiments of business accounting are lacking. One of the basic measures of tapping hidden potentials and upgrading economic effect is to differentiate between different conditions and effect an overall reorganization and rebuilding of the enterprises.

In reorganizing the enterprises, we must boldly solve the major contradictions within the enterprises and must not allow the work to be half done. The prevalent defects of many enterprises are: a weak and loosely organized leadership group, overstaffing and not enough work to go around, lax observance of labor discipline and financial regulations, and so on. Reorganization will be hardly worth its name if we do not dare to solve these problems or do not dare to promote to leadership posts intelligent, young or middle-aged cadres who are vigorous and capable of tackling issues at hand or do not dare to sort out the surplus personnel from the enterprises and give them renewed training or do not dare to require the strict observance of rules and discipline and implementation of the organizational rules. If the leadership can make a firm resolution and, relying on the masses, earnestly and quickly solve certain delicate problems, then reorganization can easily pursue its course and production, management and control will be on the right track.

Simultaneously with reorganizing the enterprises, we must firmly and steadily readjust and rebuild the existing enterprises and should never be indecisive or hesitant in taking the necessary steps. First of all, we must close or merge a number of backward enterprises which have a high consumption rate of raw materials, whose products are poor in quality and which have suffered losses for a protracted period. This will save a certain quantity of energy and raw materials for use by the advanced units to operate in full capacity. Afterward, we should, conforming with the practice of coordination and division of work in specialization and with rational economic principles, perform a good job of gradually organizing together the remaining enterprises and rationalizing their organizational structure. Our socialist economic system and economic policy will never permit us to give way to or protect backward enterprises or curtail or harm advanced enterprises. On the contrary, we must encourage and promote the progressive enterprises and spur on or even liquidate the backward ones. It is clear that following changes in social demand, progress in production technology and development of division of labor and coordination, naturally new enterprises will gradually replace the old and dilapidated enterprises. In this connection, the socialist system is superior to the capitalist system in that it can afford to follow the unified plan of the state and spontaneously carry out the readjustment and rebuilding of the enterprises. We should never consider the readjustment and rebuilding of enterprises as measures that are only temporary in nature or passive ones. On the contrary, we should treat them as regular features in the course of the development of social production. They should be treated as positive measures for upgrading the economic effect of all of society.

III. Developing technical rebuilding in a planned and systematic manner.

A very small proportion of the production technology of our existing enterprises has reached the world's present advanced level. By far, the greater part subsists at the level at which the advanced countries used to be in the 1950's and the early 1960's. Thus, in order to gradually realize the modernization of the national economy, we must pass through a necessary stage of extensive technical rebuilding. Naturally, we should continue to establish a number of new enterprises but the principal road to expanded reproduction is the technical rebuilding and renewal of equipment of existing enterprises.

The various industries and trades should study and formulate their own technological policy and plan for technical rebuilding and gradually carry them out after having laid a good foundation of reorganization and rebuilding. Due to insufficiency in technological power and funds, in the next few years technical rebuilding will be confined to only the key projects. As for the area to be covered in technical rebuilding, first of all we should tightly grasp the backbone enterprises and the central cities and towns and then follow up on a much larger scale. Technical rebuilding of the machine-building industry should come first so as to manufacture advanced technical equipment to arm the various departments of the national economy. As for the contents in technical rebuilding, first of all we should tightly grasp the promotion of those production techniques which have already produced good economic benefits. Good technological results must be organized for transfer from the coastal areas to the interior, from being purely for military use to joint military-civilian use and from outside the country to within the country. Finally, we should adopt even more new and advanced technology and artcraft. The various kinds of technical rebuilding should not be confined merely to increasing the quantity of output or to one-sidedly striving for a rise in the degree of automation. Rather, they should revolve around such concepts as practicing economy in energy consumption and use of raw materials, raising the quality and function of products and reducing the cost of production. An extensive development of technical rebuilding requires an enormous amount of work. We do not have sufficient experience and fall short in methodology. Hence, first, we must exert great efforts to formulate a policy, a plan and some concrete measures to promote technical rebuilding and, second, we must pay due attention to the study and solution of new problems that have arisen during the course of technical rebuilding in order to ensure that technical rebuilding can progress smoothly.

IV. Concentration of funds and strengthening construction of key projects.

Readjusting the economic structure, reorganizing existing enterprises and undertaking technical rebuilding work can play an exceedingly important role in lowering energy consumption and facilitating transport. However, taking a long view of the development of the national economy, we still need to step up the opening up of energy resources and the construction of communication and transportation facilities in order to ease the tense situation in energy supply and in communications and transport. The building of large coal mines, oilfields and power stations and the construction of railroads and seaports generally require a rather protracted period of time. The scale of the development of energy resources and of the construction of communication and transportation facilities in the 1980's will, to a very large extent, determine the growth rate in energy production and in communications and transportation capacity in the 1990's. Opening up energy resources and developing communication facilities requires large capital outlays and will be principally taken care of by the state. Therefore, in order to prepare for vigorous economic growth in the 1990's, the state must, beginning now, concentrate the necessary funds and speed up construction in the energy and communications sectors.

One of the principal demonstrations of the superiority of the socialist system is that the state can concentrate its financial and material resources for use in those sectors which are the most urgently needed and can produce high economic benefits. In our country, which is economically backward and has limited national power, appropriately concentrating capital funds for undertaking key construction projects is particularly necessary. Comrade Chen Yun once said: "In order to progress on a poor economic foundation, we must do the utmost to concentrate material and financial resources and make use of them in a unified way...." "If only we can concentrate our forces and use them on the necessary projects, it will be entirely possible to accomplish several big ones. We should never be so shortsighted as to engage in confusion in a number of projects without any plan." During the first 5-year plan period, we concentrated our main forces on undertaking the construction of 156 backbone and key projects, and very speedily the initial foundation for industrialization was laid. Subsequently, due to the concentration of too much financial power on the part of the state, the enthusiasm of the localities, enterprises and workers was restricted. Following the readjustment and restructuring work done in the last few years, in the distribution of national revenue a large proportion was devoted to improving the standard of living of people in the urban and rural areas while, at the same time, the mobile financial power owned by the enterprises increased rather rapidly. Generally speaking, this procedure is necessary and correct and has contributed much to promoting the development of production. Nevertheless, in the course of this procedure, distribution of capital funds appeared to be much too wide. This is seen in an increase in the absolute amount of national spending and in a decrease in the absolute amount of the state's financial receipts. Concurrently, fiscal deficit appeared and there was no guarantee that funds would be available for key construction projects. From now on, we should appropriately readjust the distribution of the national revenue so that the financial receipts of the state can have a relatively larger annual increase, but this must be done on a foundation of developing production and vigorously increasing social wealth as well as observing the conditions of protecting the rational interests of the workers, enterprises and localities. In so doing, we can reduce and overcome the character of blindness in construction work undertaken by certain localities and enterprises. We can also enable the state to control the absolutely necessary funds for strengthening key construction and thus realize a proportionate and stable development of the national economy. This is in conformity with the basic and long-term interests of people of the whole country.

V. Energetically training qualified personnel and promoting scientific and technological research and studies.

Workers in our country have a low cultural level; trained and experienced workers, scientific and technical personnel and people versed in management and administration are extremely scarce. Moreover, of the available qualified personnel at present, many are unable to fully display their talents. These conditions have seriously impeded development of the economy. Man is the main factor in the creation, handling and utilization of advanced production methods and production technique. Progress in science and technology and a rise of the management and administration level are based on the training of talented personnel. Statistics from abroad and our own experiences have amply shown that the higher the cultural and scientific level of the workers, the higher the labor productivity rate and the more rational proposals, creations and inventions they can produce. Actually, the training of qualified personnel cannot be done in a single day's time. Only through tightly grasping the training of personnel in the 1980's can we expect a general rise in the scientific and cultural level of the entire body of workers in the 1990's and expect a sizable increase in the ranks of various kinds of specialized personnel. Hence, we must do our best to increase the expenditures allocated to education, vigorously develop various grades and categories of educational enterprises and adopt various measures to raise the workers' degree of competence and their level of knowledge and also train a sufficient number of various kinds of specialized personnel who can meet the quality requirements. We must organize our existing scientific and technical forces to tackle key scientific and research topics and strive for early and quick results. We should make good use of the existing intelligent elements and select and place the better ones in important posts on the various front lines and in various enterprise units. As for those young people and intelligent elements who play a backbone role in production and construction, we should adopt concrete measures to gradually improve their treatment and work conditions so that they can render even better services.

VI. Gradually implement the restructuring of the economic system.

In doing various kinds of economic work and solving various economic problems, what is most fundamental is to arouse the positivism and enthusiasm of the vast masses of people, of the production units and of the localities and departments and to scientifically organize them together with due consideration of the interests of all of society and the requirements of specialized large-scale production. In order to realize this objective, we must restructure the economic system. For a prolonged period of time, our economic system has suffered from the defect of an overconcentration of power and of having exercised a too vast and too rigid control. In consequence, the power, responsibility and interests of the various quarters have not been joined together well and this, in turn, has affected the display of their positivism and enthusiasm. In the last few years, the economic system has been restructured to a certain extent. The decision-making power of the enterprises has been enlarged and due attention has been paid to linking together the production and operation results of the workers with the material benefits accorded to them. As a result, there have been obvious signs of an enlivening of the economy. Naturally, this restructuring is still in its initial stage. Much important restructuring work still needs to be done in order to set up, with due consideration of our country's actual conditions and based on socialist principles, an economic system which can, under a centralized and united leadership, fully arouse the positivism of the various quarters.

The "report" specified a series of important principles covering the future restructuring of the economic system and further pointed out the basic direction of the restructuring work. These principles are: Under the logical premise of firmly insisting on the state-run economy occupying the leadership position, developing the cooperative economy of the collective ownership system and the individual economy of the workers and making the various economic forms rationally fit in with each other and promote each other's development; within the state-run enterprises and the collective enterprises, earnestly implementing the responsibility system in management and control and carrying out, in an even better way, the Marxist principle of material interests; firmly insisting on planned economy as the main body and regulation by market mechanism as the supplementary part and, in the control of economic activities, adopting the three different forms of planning of the directive type, planning of a guidance nature and regulation by market mechanism so that while employing administrative measures, attention will be simultaneously paid to letting economic levers fully play their role. Overall realization of these principles will make it possible to join together in a satisfactory manner the enthusiasm and positivism of the various quarters with the united and planned nature of the country's economic activities. This will propel the national economy to proceed along the socialist road in a lively and proportionate manner and achieve the best economic benefits. We must, following this direction and based on investigation, research and the summing up of experiences, tightly grasp the formulation of the general plan for restructuring and the procedure of implementation, actively carry out the preparatory work for restructuring and push the restructuring work forward step by step.

In the 1980's, the tasks facing the economic front are enormous. Of the six categories of tasks mentioned above, each and every one of them requires us to exert great efforts and to perform a large amount of difficult and tedious work. In mentioning that in the 1980's we cannot seek too high a growth rate, we do not mean that we can afford to be lax or dilatory in our work. On the contrary, we must firm up our spirit, actively press forward and strenuously but tenaciously engage in the struggle. Only in this way will it be possible for us to solve one by one the various problems left over by history, raise the economic effect on various sides, effect in the near future a basic improvement in the financial and economic situation and then proceed forthwith to lay a firm foundation for the subsequent vigorous economic growth. By the 1990's, as a result of the readjustment of our economic structure--including the production structure--product structure and organizational structure of the enterprises having been completed, the economic control system having become in the main rationalized, the management level and level in production technique of the enterprises having been generally raised, and the fundamental sectors such as agriculture, energy, communications, education and science having been strengthened, an overall new state of upsurge will assuredly appear in the economic construction in socialist modernization of our country. The growth rate will be definitely much higher than in the 1980's. Pressing forward along the correct road designated by the 12th party congress, the time for new vigorous economic growth in our country will surely be ushered in. This is definite and there is no doubt about it.

CSO: 4004/3

STUDY THE REPORT TO THE 12TH CPC CONGRESS FROM THE HIGH PLANE OF COMMUNIST IDEOLOGY

Beijing RED FLAG in Chinese No 18, 16 Sep 82 pp 73-76

[Article by Xiong Fu [3574 1788]]

[Text] In his report delivered at the 12th CPC Congress, Comrade Hu Yaobang took the communist ideological system as a guide to make an analysis of the present reality in our country and put forth the great task of creating a new situation in all fields of socialist modernization and formulated a series of guiding principles and policies in order to accomplish this great task after summing up the experience which brought about a historical change through the practice of bringing order out of chaos. In other words, the 12th CPC Congress has definitely assigned to the whole party, the entire army and people of various nationalities throughout the country a new combat task and program in the new historical period. How should we study the report and implement it well in practice? This is the first thing which we should pay attention to when studying the report to the 12th CPC Congress.

We all know that the present struggle which we are carrying out for building China into a socialist and modernized country is a practice of the communist movement in China characterized by the development of socialism and an inevitable stage in the great historical process for the realization of communism in China. The program for creating a new situation in all fields of socialist modernization put forth by the report to the 12th CPC Congress is actually our party's program for profoundly and extensively developing step by step the Chinese communist movement in the socialist society, the first phase of communism. This is the basic spirit of the report to the 12th CPC Congress, or its general spirit.

Comrade Mao Zedong said that people need a bit of spirit. Leading comrades of the central authorities have also told us repeatedly that we should inspire our spirit. To our Communist Party members and party cadres, this spirit means communist spirit. Only by using communist ideology to inspire our spirit can we effectively study the report to the 12th CPC Congress and implement it well.

When we talk about communism, it seems that all of us understand it because when we joined the party, we pledged to struggle for communism all our lives.

Do we really understand communism? Perhaps the answer is not in the affirmative. When all of our party members and cadres think over this matter deeply, they will find that a number of our comrades, including ourselves, have a vague understanding, or even a muddled idea, on communism, not to mention those who have degenerated into and become the captives of the capitalist ideology and shameful renegades of the communist cause. Some people regard communism as a visionary fantasy or an abstract concept which has not been tested by practice. Some people think that all revolutionary struggles carried out in the past had nothing to do with communism. Some people do not acknowledge that communist factors have existed and are developing in our socialist society. Some people even deny that we have entered the stage of socialist society--the first phase of communism. Through the study of the report to the 12th CPC Congress, we should, first of all, clean the dust and remove the dirt stains on the great banner of communism in our minds so that it will become brighter and more splendid. In so doing, we will strengthen our belief in communism, raise our communist consciousness, purify our communist values and consciously use the communist ideological system to guide and standardize our actions so that we will become qualified communist fighters.

Comrade Mao Zedong said a long time ago: Communism in which we believe refers to the communist social system and the communist ideological system. Now articles published in our newspapers and periodicals stress the two implications of communism: the communist social system and the communist movement. This idea is actually identical with that of Comrade Mao Zedong. The so-called communist social system means the brightest and most beautiful future social system discovered and delineated by the communist ideological system. The society of mankind will inexorably evolve into this social system. The name and Marxist world outlook of our party have explicitly pointed out that we should struggle hard to realize this lofty ideal. The so-called communist movement means the practical activities and process carried out under the guidance of the communist ideological system with the lofty ideal of realizing communism as their ultimate aim. Since the founding of the CPC, all revolutionary struggles and practices carried out by our party have been the communist movement guided by the communist ideological system. During the period of the new democratic revolution, Comrade Mao Zedong already explicitly pointed out: "The Chinese revolutionary movement led by the Communist Party embraces the two stages, that is, the democratic and the socialist revolutions, which are two essentially different revolutionary processes." ("Selected Works of Mao Zedong," Vol 2, p 330) He also said: "For the present period, new democracy, and for the future, socialism; these are two parts of an organic whole, guided by one and the same communist ideology." (Ibid., p 361) Comrade Mao Zedong went on to say: "When every Communist Party member joins the party, he has two definite aims in mind: to strive for the new democratic revolution and for the future socialism and communism." (Ibid., Vol 3, p 232) At that time, our party program explicitly stipulated that the realization of new democracy was the party's minimum program whereas the realization of socialism and communism was the maximum program. It also stressed that the party's utlimate aim was to realize communism. Since we have joined the party's ranks, we should accept the party program. In other words, all Communist Party members and advanced elements should stick to the ultimate aim of realizing communism and should be willing to struggle all their lives or even shed their blood and lay down their lives for the realization of this great aim.

The ultimate aim of communism cannot be successfully attained immediately after the outbreak of revolution. It has to undergo various stages of development. This has been proved by practice in China and all countries in the world. Although the starting points in various countries might be different and the stages of development might not be the same, they belong to the general historical process marching toward communism. Our starting point began with the semicolonial and semifeudal China. However, from the very beginning, the revolutionary struggle and practice carried out by our party have been a part of the historical process of the development of communism. As early as in the period of the new democratic revolution, Comrade Mao Zedong had already pointed out: "If any communist or communist sympathizer talks about socialism and communism but fails to fight for this objective, if he belittles this bourgeois-democratic revolution, relaxes or slows down even so slightly and shows the least disloyalty and coolness or is reluctant to shed his blood or give his life for it, then wittingly or unwittingly, such a person is betraying socialism and communism to a greater or lesser extent and is certainly not a politically conscious and staunch fighter for communism." ("Selected Works of Mao Zedong," Vol 3, p 232) Here, what Comrade Mao Zedong meant was that to realize communism, we should attach importance to the present revolutionary struggle and practice, otherwise socialism and communism would merely become "empty talk." In other words, to realize communism, we should undergo revolutionary struggle and practice representing various stages of development. Revolutionary struggle and practice at each stage always regards the realization of communism as the ultimate goal. They are an inevitable flight of stairs getting nearer and nearer to and marching toward the goal of communism. In a word, they are the practice and development of the communist movement under the guidance of the communist ideological system. Only by passing through and relying on the practice and development of the communist movement under different historical conditions can the communist system be eventually established.

At present, the Chinese communist movement led by our party is at a very important stage of development. We have not only won a complete victory in the new democratic revolution and successfully brought about a transition from new democracy to socialism in our country's society, but have also established the socialist social system which is the first phase of communism. In spite of the fact that we suffered great setbacks in the process of carrying out socialist construction, we have, after all, established a powerful, independent and comparatively complete material base for this brandnew social system. We now have entered a new historical period of extensively carrying out socialist modernization and the 12th CPC Congress has formulated a program for creating a new situation in all fields of socialist modernization. In other words, the communist movement in our country has developed into a socialist society which is the first phase of communism and a communist movement with socialist construction as its content and form. Although the ultimate realization of the communist social system in our country is in the distant future, we are getting closer and closer to the lofty ideal of communism because our communist movement under socialist conditions has fully developed and matured. It might well be said that each and every Communist Party member and advanced element is not allowed to relax and slow down even so slightly or show the least disloyalty and coolness for the communist movement at the present stage. We have no right to do so. It is our sacred duty and responsibility to fight bravely and wholeheartedly or even shed our blood or give our lives for the realization of the loftiest ideal of communism. During the period of the new democratic revolution, tens of thousands of martyrs died a heroic death for the communist cause. They proved themselves to be great communist fighters. We, Communist Party members and advanced elements, should learn from them forever. At present, in our ranks of Communist Party members and cadres, there are tens of thousands of advanced figures who are fighting untiringly for the defense and construction of our socialist motherland. A number of comrades have even shed their blood and given their lives. We, Communist Party members and advanced elements, should also learn from them. We should bear in mind the teaching of Marx and Engels: "Communists are fighting for the immediate goals and interests of the working class. But in the present movement, they also represent the future of the movement." ("Selected Works of Marx and Engels," Vol 1, p 284) In other words, we should fight to attain the aim and accomplish the task of the present stage. At the same time, we should further promote this struggle in order to attain the eventual goal. This means we should continue to carry out revolutionary struggle under socialist conditions, vigorously expand social productive forces and continuously improve and develop socialist production relations and the superstructure and, on such basis, gradually eliminate all class differences and all social differences and social inequality resulting mainly from the inadequate development of social productive forces. Hence, we will be able to make preparations with respect to material and spiritual conditions for the transition to and eventual realization of communism. To accomplish this great historical task, people of many generations should carry out unswerving, heroic and arduous struggle and strictly observe discipline. Therefore, all Communist Party members and advanced elements should continue to maintain their communist purity and preserve revolutionary ideals and a vigorous revolutionary fighting will to carry through to the end this great revolution unprecedented in the history of mankind.

In this struggle, we should pay attention to making a distinction between communism and socialism, the two stages of development which are both interrelated and distinctive. In other words, we should adopt different programs for action and policies. It is, of course, wrong not to acknowledge socialism as the first phase of communism. However, it is equally wrong to confuse these two stages and implement the program of action suitable for the higher stage at the present socialist stage. With regard to this problem, the most important thing which we should do is to correctly understand and handle the relations between the communist ideological system and present policies. In his "On New Democracy," Comrade Mao Zedong said: "Beyond all doubt, now is the time to spread communist ideas more widely and put more energy into the study of Marxism-Leninism, otherwise, we shall not only be unable to lead the Chinese revolution forward to the future stage of socialism, but also unable to guide the present democratic revolution to victory." ("Selected Works of Mao Zedong," Vol 2, p 379) Equally, we can say that without the guidance of the communist ideological system, we will neither be able to attain the goal of communism in the future nor guarantee the victory of socialism and the implementation of the program of the 12th CPC Congress aimed at creating a new situation in all fields of socialist modernization. With regard to relations between the communist ideological system and present policies, Comrade Mao Zedong was right in saying: "We must keep the spreading of communist ideas and propaganda about the communist social system distinct from the practical application of the new-democratic program of action; we must also keep communist theory and method of investigating problems, undertaking research, handling work and training cadres distinct from the new-democratic line for national culture as a whole. It is undoubtedly inappropriate to intermix the two." (Ibid., p 380) What Comrade Mao Zedong meant here was the relationship between the communist ideological system and the revolutionary practice of the new democracy in history and revolutionary policies. The spirit and principle of his idea is equally applicable to our correct understanding and handling of the relations between the communist ideological system and the revolutionary practice of socialist modernization in the present stage and revolutionary policies. The differences are: Due to the fact that ours is now a ruling party and communist factors have constantly occurred and developed under socialist system, that material and spiritual preparation for the transition to communism is a basic content of the socialist period; and that we have resisted and defeated the rotten capitalist ideology and the corrosion and corruption of the remnant feudal ideology are still characterized by the nature of class struggle; it is absolutely necessary to expand and strengthen the study and propaganda of communist ideological system.

With regard to the program of action and present policies, it is beyond any doubt that we should implement the practice of distribution according to work and other socialist policies. However, we should also realize that to build and develop socialist spiritual civilization, with communist ideology as its nucleus, has been put on the agenda. This is a significant matter of preserving the socialist nature and orientation of the development of our social system. This is because a great number of persons holding a private ownership mentality and the ideas of the exploiting class left over from the old society will not disappear of their own accord, although material civilization continues to develop. The development of material productive conditions and material living conditions will not automatically give rise to communist ideology, morals and values, let alone establishing and developing new social relations between people characterized by socialist spiritual civilization. It is just as the report pointed out: If we neglect the building of socialist spiritual civilization, we will not be able to maintain the socialist orientation of our modernization. As a result, our socialist society will lose its ideals and goals, spiritual motive force and combat effectiveness. If this is the case, we will not be able to resist the corrosion of various corruptive factors, or will even embark on the reckless course of abnormal development and degeneration. Of course, we once committed "leftist" mistakes when we implemented our program of action and policies. We once pursued the practice of the so-called "poor transition" and "communist wind" characterized by equalitarianism and indiscriminate transfer of resources. The nature of these mistakes was that production relations were divorced from or even exceeded the development of productive force. We should bear this lesson in mind and avoid committing similar mistakes. At the present stage, we should stick to the system of distribution according to work and other socialist systems. However, we should not, for this reason, think that it is no longer necessary to take the communist ideological system as the guide of our action and advocate communist revolutionary spirit of the years of revolutionary wars and that communist morals, value and work attitude are "supraclass" things. All these viewpoints and thinking are obviously wrong and harmful. We should realize that at the present stage of social development in our country, that is, the first phase of communist society, the objective conditions and social basis for advocating and promoting communist spirit already exist. In a socialist society, socialist spiritual civilization is the ideological basis for relations among all members of society. In addition, communist ideology is a powerful pillar for socialist spiritual civilization. We should not demand that all members of society be communists. However, our Communist Party members and party cadres should be communists. Our Communist Party members and advanced elements should, first of all, set an example in both their thinking and acts and use the communist ideological system to guide and standardize their actions and become people with ideals and morals and who observe discipline. Only in so doing can they use their own exemplary behavior to influence the masses, unite with and educate them and train all members of society to be laborers with ideals and morals and who observe discipline. Only thus can they establish and develop new social relations among all members of society which embody socialist spiritual civilization. This is the most glorious, sacred and loftiest mission of all Communist Party members and advanced elements.

The 12th CPC Congress has shown that our party has become even more mature politically and ideologically and that it is able to have the complicated situation well in hand and continue to push forward our communist cause. All our Communist Party members and party cadres should become more mature politically and ideologically so that we will be able to consciously master the orientation of communism and make due contributions to the accomplishment of the great tasks put forth by the 12th CPC Congress. This is the ideological preparation, ideological level and level of political consciousness which we should attain in order to study well the report to the 12th CPC Congress and effectively implement its spirit.

HOW TO STUDY THE FIRST PART OF THE 12TH CPC CONGRESS REPORT

Beijing RED FLAG in Chinese No 18, 16 Sep 82 pp 77-80

[Article by the Editorial Office for Theoretical Education]

[Text] The first part of the report delivered by Comrade Hu Yaobang at the 12th CPC Congress scientifically summed up the victorious experiences in effecting a great and historic change since the smashing of the Jiang Qing counterrevolutionary clique and, in particular, since the 3d Plenary Session of the 11th CPC Central Committee. It clearly pointed out the party's general task of pushing forward the socialist cause in the new historical period. The contents comprise the following four main points:

1. The main indicators of the great and historic change that has been brought about.

2. The basic experiences in effecting the great and historic change.

3. The far-reaching significance of this historic change in the light of historical experience.

4. The party's general task in the new historical period.

All these four points have rich contents which should be conscientiously mastered and profoundly comprehended in the light of actual conditions while studying them.

While studying the first main point, namely, the main indicators of the great and historic change that has been brought about, it is advisable to deepen our understanding in two aspects. One is to fully understand the tremendous achievements gained in the seven fields, namely, ideology, politics, organization, economy, culture and the work of the army and party in the last 6 years and, in particular, since the 3d Plenary Session of the 11th CPC Central Committee; the other is correctly to understand the present exceptionally good situation with a scientific method of thinking.

The report deals with our great achievements in the last 6 years and in particular since the 3d Plenary Session of the 11th CPC Central Committee, in broad outline. In our study, we must acquire a full understanding of the rich and concrete contents in the seven fields, in accordance with actual conditions, through reviewing the past and contrasting it with the present and we must realize that these successes were won only after we made arduous efforts and overcame obstacles of all kinds. They were indeed hard-won.

In looking back at the past, we see that during the decade of domestic turmoil, Marxism-Leninism-Mao Zedong Thought was seriously distorted and like the "incarnation of the golden hoop," "leftist" ideology fettered peoples' minds. Society was for a long time in a state of turmoil and the socialist democracy and socialist legal system were sabotaged. The leadership of quite a few party and government organizations was usurped by scoundrels. These scoundrels waged ruthless struggle against and struck merciless blows at the vast numbers of cadres and the masses and fabricated a heap of unjust, false and wrong cases. Socialist construction was obstructed and sabotaged and as a result, a large batch of industrial and mining enterprises had to stop work and production and the national economy suffered enormous losses. Educational, scientific and cultural undertakings were trampled underfoot and vast numbers of intellectuals were discriminated against and attacked. Our endeavors to build a modern and regular army were interfered with and the army's political work was undermined. The party organizations and the principles of democratic centralism and the fine traditions and style of the party were seriously damaged.

In contrasting the past with the present, we can more clearly see that the successes we have scored are tremendous and that an exceedingly favorable situation full of vitality and prosperity has emerged on all fronts of endeavors since order was brought out of chaos and the Marxist ideological, political and organizational lines reaffirmed.

In the spheres of ideology, politics and organization, large numbers of cadres and other people have freed themselves from the spiritual shackles of personality cult and dogmatism that prevailed in the past. This has stimulated thinking and ensured ease of mind inside and outside the party, giving rise to a lively situation where people try their best to study new things and seek solutions to new problems in the light of actual conditions. The principle of correctly distinguishing and handling the contradictions, which fall into two different categories, and the "double hundred" principle and the principle of "three don'ts" which were encouraged by Comrade Mao Zedong have been correctly implemented. The democratic system of the party and the state has become more and more perfect, the democratic life has been increasingly extended and the building of the legal system has been intensified in successive years. For example, the system of voters directly electing the people's representatives at the county level or below has been widely practiced. At present, about 300 new laws, decrees and administrative rules and regulations have been promulgated, including the criminal law and the law of criminal procedure which were never previously enacted after the founding of the PRC. The party's policies concerning the nationalities, religion, the united front, the intellectuals and others have been gradually implemented and the unity of the people throughout the country has been unprecedentedly strengthened. The unjust, false and wrong cases which occurred during the "Great Cultural Revolution" and the historical mishandled cases before it, have been basically redressed and righted, and large numbers of contradictions within the party and among the people have been properly handled. The merits and demerits, the rights and wrongs of some prominent leaders of the party and the state have been fairly evaluated, they have been rehabilitated and the contributions they made in history have been reaffirmed. On the basis of exposing and criticizing the factionalist setups of the "gang of four," the leading bodies of organizations at various levels throughout the country have been readjusted, reorganized and strengthened. Large numbers of outstanding young and middle-aged cadres are being promoted to leading posts and the leading comrades at all levels have, step by step, become more revolutionary, younger and more knowledgable and specialized.

Take economic work for example. First, we have realized the shift of the focus of work and brought about a turn for the better in the major disproportions in the national economy through the implementation of the policy of readjustment, restructuring, reorganization and upgrading. We have tried our best to make our economic construction suit China's national condition and tally with economic and natural laws and have enthusiastically carried out economic cooperation and technical exchanges with other countries, while maintaining independence and achieving self-reliance through rejuvenation. Guided by these principles, fairly rapid advances have been scored in industry and agriculture. From 1979-1981 the average annual increase in light industrial output value was 14 percent. The structure of industry is becoming more rational and coordinated. Agriculture has quickened its rate of growth, the annual average increase in the total agricultural output value between 1979 and 1981 was 5.6 percent. Export trade has grown at a rapid pace and the total volume of import and export trade in 1981 was 100 percent more than the 1978 figure. Remarkable improvements have been achieved in the living standards of urban and rural people. The net income of peasant families from 1979-1981 showed an average yearly increase of 18 percent, compared with 1978. In 1981 the average income of staff members and workers throughout the nation increased by 25.7 percent, and the average per capita increase in the real disposable income of staff and worker families was 30.8 percent. A total floor space of 220 million square meters of housing for staff members and workers was completed all over the country between 1979 and 1981, which was equivalent to the total sum of the 12 years from 1966 to 1977. More than 26 million people were given jobs between 1979 and 1981. What we have stated above is some instances of the general situation throughout the country. In our study, it is advisable to acquire a more detailed comprehension of the tremendous changes which have taken place since the 3d Plenary Session of the 11th CPC Central Committee in the light of the actual conditions on all fronts and in various localities so as to deepen our understanding of the great and historic change.
